> Next, WEPCO argues that if Illinois can impose a transit fee, other jurisdictions can and will do so; and the cumulative effect will be far greater than that of the Illinois requirement alone. To some extent, this echoes language which the Department has used in prior inconsistency rulings. (See e.g.—IR–6, 48 FR 760, 765 "If the approach taken by Covington were deemed an appropriate local activity, it would be no less so for Covington's neighbors * * *"; also IR–10, 49 FR 46645, 46647 ["] * * * if one State may use insurance requirements to deflect interstate carriers of hazardous materials into other jurisdictions, then all States may [do] so."] The Department, however, has never relied on the potential cumulative effect of a requirement as a basis for finding inconsistency. Rather, the Department has used this device to illustrate more effectively the adverse impact of a requirement already found to be inconsistent. In its first inconsistency ruling (IR–1, 43 FR 16954, April 20, 1978), the Department found no Federal requirement under the HMTA with which to compare a New York City transportation ban for inconsistency and acknowledged the great likelihood that other jurisdictions would enact similar restrictions, the cumulative effect of which could seriously impact transportation safety. Because of the potential cumulative effect, the Department announced that it would initiate rulemaking to address the problem. This, and not a finding of inconsistency, was the response to anticipated cumulative effect.

51 FR 20934. I agree with and affirm that language.

Furthermore, IR–15 and IR–17 are not irreconcilable. The virtually identical Vermont transit fee found inconsistent in IR–15 (49 FR 46660; Nov. 27, 1984) was used to fund a state program permeated with requirements found to be inconsistent with the HMTA and the HMR. The transit fee at issue here, conversely, is used to fund a state program which, as found in IR–17 and affirmed below, is consistent with the HMTA and the HMR. As discussed in IR–17, Illinois requires the transporter simply to pay a fee; but Vermont, on the other hand, had a permitting system involving a detailed application, administrative processing by the State and affirmative action by the State to grant written approval, provisions which were inconsistent under the obstacle test. 51 FR 20932.

Therefore, because the multiplicity issue is irrelevant to a determination of inconsistency and IR–15 is distinguishable, I find no merit in appellants' first argument.

(2) *OHMT allegedly failed to examine the extent to which Illinois is uniquely burdened with respect to spent fuel shipments and the implications of singling out spent fuel shipments from all other hazardous materials shipments for discriminatory treatment.*

(a) Appellants' Arguments

The Group contends that there has been no showing that Illinois is unique among the states with respect to the transportation of spent nuclear fuel, and also no justification for imposition of the transit fee on spent fuel but not on other hazardous materials.

DOE argues that Illinois unfairly has singled out radioactive materials transportation, which DOE contends presents risks less than those for other hazardous materials. Duke Power also complains of discrimination against a particular type of hazardous waste transportation.

In support of its position that there is no rational basis for Illinois' singling out radioactive materials for different treatment, the Group quotes IR–15: "On the basis of both shipment frequency and accident history, spent nuclear fuel poses a much lower risk of transportation accident than do any number of common chemicals * * *" 49

FR 46664. It also quotes a Congressional Office of Technology Assessment report on "Transportation of Hazardous Materials," which concluded that "* * * technical evidence and cask performance in service indicate that NRC performance standards yield spent fuel shipping cask design specifications that provide for a very high level of public protection—much greater than that afforded in any other current hazardous materials shipping activity."

(b) Appellees' Arguments

Illinois responds that its "unique" status in terms of exposure to radiological risk is totally irrelevant to the decision; it says that "no analysis of Illinois' uniqueness is required to support IR–17, because the opinion is not based on a finding that Illinois constitutes a 'unique exception' ".

New York City DEP and Pennsylvania EMA contend that Illinois' uniqueness should not be an issue since RSPA has long recognized (citing IR–2, 44 FR 75566 at 75568; Dec. 20, 1979) that states and localities must have flexibility to tailor their emergency response programs to their individual needs.

Illinois' response to the arguments concerning alleged discrimination against radioactive materials transportation is that the state's program rests upon a rational distinction between radioactive waste in particular and hazardous materials generally. It contends that the U.S. Supreme Court has permitted states to establish rational classifications and cites a Federal court decision for the proposition that a "State is not required to address all of the problems inherent in hazardous materials transportation in order for its enactments to be given effect." *National Tank Truck Carriers, Inc. v. Burke*, 535 F. Supp. 509, 521 (R.I. 1982), aff'd 698 F.2d 559 (1st Cir. 1983). It points out that Federal laws and regulations similarly treat radioactive materials differently than hazardous materials generally.

New York DEP asserts that the issue of which category of materials a state chooses to regulate is immaterial and that the issue is whether the fee itself is consistent with Congress' objectives in enacting the HMTA.

Colorado, on the other hand, turns the appellants' argument around and contends that Illinois' addressing "the unique problems raised by the transportation of nuclear materials" is not unlike the HMR. It says:

> DOT has implicitly, if not explicitly, recognized these problems by mandating specific requirements for radiological materials in the HMR. E.g., Subpart I, Part 173 of 49 C.F.R., and 49 C.F.R. Section 173.825. Rather than being inconsistent with the HMTA or the HMR, Illinois' program furthers its goals.

(c) Administrator's Decision

Illinois' uniqueness and its distinct treatment of spent fuel shipments are both irrelevant to the issue at hand: consistency of Illinois' transit fee with the HMTA and the HMR.

Although exceptional or special circumstances are required to be demonstrated by a state or local government seeking a waiver of preemption for an inconsistent and otherwise preempted requirement, Nonpreemption Determination No. 1 (NPD–1, 50 FR 37308 (Sept. 12, 1985), affirmed 51 FR 47182 (Dec. 30, 1986), there is no such issue or burden in inconsistency proceedings. There is no requirement that Illinois demonstrate exceptional or unique circumstances in order for its requirements to be found consistent with the HMTA and the HMR.

Illinois' selectivity in imposing a transit fee on spent nuclear fuel shipments, while not imposing a similar fee on other hazardous materials shipments, likewise is not a relevant issue in this proceeding. The State uses the fee to support its radioactive materials transportation inspection, escort and emergency response programs, which, as discussed below, are consistent with the HMTA and the HMR.

As numerous commenters aptly indicated, there is ample precedent for separate and more rigorous regulation of the transportation of radioactive materials. For example, Subpart I of Part 173 of the HMR (49 CFR 173.401 *et seq.*) prescribes numerous detailed requirements specifically and solely for the transportation of radioactive materials. These include such requirements as those for radiation level limitations (§ 173.441), thermal limitations (§ 173.442), and contamination control (§ 173.443). In addition, § 173.22 requires shippers of fissile radioactive materials and of Type B or highway route controlled quantity packages of radioactive materials to notify consignees of the dates of shipment and expected arrival of such materials. Section 177.825 specifies general routing requirements for all placarded radioactive materials and a specific routing rule for highway route controlled quantity shipments, such as spent fuel; it also contains specific driver training requirements applicable when highway route controlled quantity radioactive materials are being transported. For shipments of highway route controlled quantities of radioactive materials, the shipper must file with RSPA a route plan (including changes thereto); information on the shipper, carrier and consignee; and a copy of the shipping paper. § 173.22(d). All of these requirements are unique to radioactive materials, some of them unique to the type of radioactive materials regulated by Illinois.

The transportation of radioactive materials is regulated by both RSPA and the NRC, and RSPA's incorporation by reference of many NRC requirements creates a distinctive regulatory regime with respect to their transportation. For example, § 173.22(c) requires the shipper of irradiated reactor fuel to provide physical protection in compliance with a plan established under NRC requirements or equivalent requirements approved by RSPA. Section 177.825(e) allows variation from the requirements of § 177.825 when necessary to meet requirements imposed by the NRC in 10 CFR Part 73. The uniqueness of the regulation of radioactive materials transportation is further demonstrated by the existence of a DOT/NRC Memorandum of Understanding on the subject. In fact, it is probable that the existence of all these unique requirements is a significant reason for the lower risk of accidents involved in the transportation of radioactive materials which was referred to in IR–15 (49 FR 46664) and cited by the Group. Although the existence of these requirements may result in greater Federal preemption of substantive requirements regarding radioactive materials transportation than of hazardous materials transportation generally, their existence does not result in preemption of state requirements which enhance their enforcement. In carrying out its radioactive materials inspection and escort programs in consonance with RSPA's and NRC's regulations, therefore, Illinois is acting in a rational and legal manner.

In summary, neither the uniqueness of radioactive materials transportation in Illinois nor Illinois' treatment of that transportation in a manner distinct from that of other hazardous materials to transportation is relevant to a determination of consistency. These arguments do not demonstrate how any goal of the HMTA or the HMR is being impaired and thus provide no basis for reversal of IR–17.

(3) *OHMT allegedly did not adequately explore the potential for delay inherent in the duplicative and time-consuming Illinois inspection and escort programs, such delay being inconsistent with the provisions of the*

HMTA and the HM–164 rule on highway routing of radioactive materials.

(a) Appellants' Arguments

Both the Group and DOE assert that the Ruling below improperly failed to consider the potential as well as observed delaying effects of Illinois' fee, inspection and escort requirements, as well as the potential delays associated with multiple inspections and escort programs conducted by other states along multi-state routes. DOE says that OHMT has not reconciled how the fee can support time-consuming and duplicative inspections and still not result in delays; it questions the validity of the inspections.

The University of Missouri indicates its shipments experience a delay at each Illinois inspection of 1.5 to 2 hours, or 30% of its scheduled 5-hour transit of Illinois. DOE cites other delayed shipments (including those from Surrey, Virginia) due to delays in the arrival of escorts.

In support of its position, DOE quotes from the preamble to HM–164:

> Lastly, because of the importance of expediting radioactive materials shipments, due to the risk and added normal dose attendant to delay, other forms of State and local regulation that affect motor carriers of radioactive materials should not result in unnecessary delay (see 177.853(a)). A delay is unnecessary unless it is required by an exercise of State and local regulatory authority over a motor vehicle that so clearly supports public health and safety as to justify the safety detriment and burden on commerce caused by the delay (such as in an emergency). 46 F.R. 5315, January 19, 1981.

DOE indicates that Illinois is conducting two inspections of Three Mile Island (TMI) spent waste shipments in addition to five-party inspections at TMI; state inspections in Ohio, Indiana, and Missouri; and destination inspections in Idaho by DOT and DOE. It concludes that the Illinois inspections are duplicative and unnecessary and do not meet the quoted standard. It also argues that the escort requirements carry the potential for forbidden delays.

(b) Appellees' Arguments

Illinois responds that IR–17 properly examined the actual workings of the Illinois program and properly concluded that it does not delay shipments but is consistent with the goals and requirements of the HMTA. It cites a "well established principle of law" that a statute is interpreted in accordance with how it is actually enforced and cites *Jones* v. *Rath Packing Co.*, 430 U.S. 519 (1977) for that proposition. EDF cites an HMTA case for the same principle (*National Tank Truck Carriers, Inc., and Ritter Transportation, Inc.*, v. *City of New York*, 677 F.2d 270, 274 (2d Cir. 1982), *cert. den.* 104 S. Ct. 1403 (1982)).

Illinois also cites a DOE spokesman's public statement that Illinois has "a very effective inspection program."

Wisconsin asserts that appellants' arguments on delay are speculative and essentially are unsupportable contentions that fees supporting state regulatory programs are inconsistent *per se*. In response to the University of Missouri's statements about delays its shipments have experienced, Illinois states that the delays were partially due to failure of those shipments to comply with Federal notification and documentation requirements. It says that these violations were discovered as a result of the Illinois inspection program supported by its transit fee and adds that these types of reasonable delays guarantee compliance with the HMTA's objectives. Similarly, it states that the Surrey, Virginia shipment delays involved shipment documentation problems and discrepancies and "major violations." Illinois cites the following IR–17 language:

> From an examination of the record, it appears that the only highway shipments where movement is restricted in Illinois are those which have been found to be in violation of applicable Federal safety standards. This is not the sort of significant restriction which the Department considers to be inconsistent with the HMTA. Rather, it is precisely the sort of state action which the Department endorses as sound enforcement policy.
>
> 51 FR 20929.

Concerning DOE's assertions that Illinois was conducting two inspections of each TMI shipment, Illinois says that it conducted only a single entry inspection, that the East St. Louis, Illinois inspections were done by Missouri as its entry inspection, and that Illinois provided Missouri with instruments, data and technical health physics assistance. It concludes that "Illinois' cooperation and assistance to another state to ensure safe, speedy, and accurate inspections should not be used to argue that Illinois program causes delay, confusion, and multiplicity."

Pennsylvania EMA also says the "potential delay" argument is speculative. It also contends that the Illinois statute and the possibility of other states' enactment of similar laws create an incentive for DOT and DOE to develop a Federal/state partnership in the area of hazardous materials transportation inspections.

New York City DEP cites 49 CFR 177.853 for the proposition that RSPA is concerned about "unnecessary" delays rather than delays or potential for delays generally. EDF agrees with this conclusion.

New York City DEP compares the Illinois situation with Tucson's 48-hour advance notice for short-lived radioactive materials shipments addressed in IR-16 (50 FR 20872; May 20, 1985) and concludes:

> Unlike short-lived radioactive materials, the nature of spent fuel shipments is such that transporters have ample lead time to arrange for payment of the fee. Moreover, the delay which the Department found does occur—from twenty to sixty minutes—is not disproportionate to other delays such as rest, food, and fuel stops . . . . Consequently, appellant's claim that the OHMT failed to adequately explore the potential for delay inherent in the Illinois inspection and escort program must be rejected.

EDF contends that there is neither evidence that Illinois' transit fee will result in consistently longer shipping times nor that any inspection or escort-related delays are unreasonable. It argues that delays caused by Illinois' inspections and escorts are reasonable and do not conflict with any regulation in the HMR; it adds that inconsistencies must be with actual regulations, not with preamble language or policy statements (such as Appendix A to Part 177).

(c) Administrator's Decision

The delays inherent in Illinois' inspection and escort programs are relevant because the transit fee's consistency depends upon the consistency of the programs it supports. These are not, however, the types of "significant" delays which are inconsistent with the HMTA and the HMR. See Appendix A to 49 CFR Part 177.

I have found nothing in the record indicating that the Illinois programs deviate from the regulatory scheme contemplated by RSPA and NRC. As accurately indicated in IR–17, DOT encourages states to adopt and enforce the HMR under the Cooperative Hazardous Materials Enforcement Development Program (and its predecessor, the State Hazardous Materials Enforcement Development Program), and Illinois' inspection program is an excellent example of carrying out such an effort at the state level. IR–17 also addressed the alleged delays arising out of Illinois' escorts:

> Since the HMR require all shipments of spent fuel to comply with a physical protection plan [49 CFR 173.22(c)] which

VOL
52
ISS
186
SE
25
1987
UMI

provides for escorts capable of communicating with local law enforcement agencies, the operational impact of notifying Illinois of shipment arrival time would not appear to involve any significant transportation delay.

51 FR 20930

There is no evidence of unnecessary or unreasonable delays; to the contrary, the evidence is that the delays have been limited to the times necessary to inspect for violations, to take corrective action concerning violations and to arrange for appropriate escorts. These delays, because they support compliance with Federal regulations, are consistent with the HMTA and the HMR.

In summary, I find that the Illinois fee and the programs it supports do not cause unreasonable or unnecessary delays and thus do not constitute obstacles to the accomplishment of the objectives of the HMTA and the HMR. Therefore, I affirm the findings in IR–17 that the Illinois fee does not result in unreasonable delays in the transportation of spent nuclear fuel in Illinois.

(4) *OHMT's decision allegedly undercuts the ability of the DOE to negotiate appropriate arrangements with states under the Nuclear Waste Policy Act (NWPA).*

(a) Appellants' Arguments

The Group's argument is that IR–17 creates a disincentive for states to cooperate with DOE, DOT, and other states in developing uniform national programs for inspections, escorts, and prenotification. They contend that individual states' inspection and fee programs will result in delays, restrictions and multiplicity constituting obstacles to the accomplishment of the HMTA's objectives. They argue that RSPA should consider the impact of its ruling on DOE's implementation of the NWPA.

DOE adds: "If the Illinois transit fee is allowed to stand, other states would be encouraged to enact similar fees supporting inspection programs, undermining both DOE and DOT's goal of a uniform national enforcement system through a Federal/state partnership." It urges consideration of the potential effect of this ruling on the large number of future shipments under the NWPA.

DOE states that it has executed a cooperative agreement with the Commercial Vehicle Safety Alliance (CVSA) to study inspection and enforcement needs under the NWPA as a first step in developing a national program. It contends that a "national inspection program that eliminates unnecessary duplication would reduce costs while enhancing safety by eliminating the unnecessary delays caused by multiple inspections."

DOE further contends that the NRC's apparent endorsement of Illinois' regulatory program, in NRC's denial of a Wisconsin rulemaking petition, did not constitute endorsement of the Illinois transit fee. DOE also says NRC was not familiar with DOE's experience with its Surrev or TMI shipments.

(b) Appellees' Arguments

Illinois contends that appellants have presented no evidence of actual undercutting of DOE's ability to make arrangements with the states under the NWPA. It points to Illinois' chairmanship of the DOE-funded and CVSA-created High Level Nuclear Waste Task Force to coordinate state activities and establish a uniform inspection and escort program for spent fuel shipments. The State also cites NRC recognition of the Illinois inspection and escort program as providing an added measure of assurance without, apparently, imposing burdensome procedures on licenses and carriers. 51 FR 36824 (Oct. 16, 1986).

Wisconsin and Pennsylvania EMA argue that the appellants' NWPA argument is outside the scope of this proceeding, which is limited to a determination of consistency with the HMTA. Colorado speaks in terms of the issue being outside RSPA's jurisdiction.

Even if this issue were relevant, Pennsylvania EMA contends, Illinois' transit fee would be offset by numerous incentives for states to cooperate with DOE, DOT, and each other in establishing a uniform national progam with respect to inspections, escorts, and prenoticication—sharing of limited resources, elimination of duplication of effort, exchange of information and expertise, and emergency management compacts among the states.

Colorado argues that DOE's contract with CVSA and follow-through cooperation with the states, all following the issuance of IR–17, demonstrate that "DOT's ruling has not and will not affect DOE's ability to negotiate with the states."

Washington NWB contends that appellants' argument is speculative and concerns distantly future matters. It also points out that the NWPA provides: "Nothing in this Act shall be construed to affect Federal, State, or local laws pertaining to the transportation of spent nuclear fuel or high-level radioactive waste" (42 USC 10108). Thus, the NWB argues, neither the HMTA nor the NWPA gives DOE special authority over this transportation. and the Group's "undercutting of DOE" argument is irrelevant.

(c) Administrator's Decision

Like arguments (1) and (2), the issue of the transit fee's impact on DOE's ability to negotiate with states under the NWPA is irrelevant to a determination of the transit fee's consistency with the HMTA and the HMR. Furthermore, the arguments concerning the alleged effect of the Illinois transit fee on DOE's ability to negotiate with states under the NWPA are speculative and, as such, do not merit consideration in determining the consistency of the Illinois fee with the HMTA and the HMR.

DOE's negotiating ability under the NWPA is not one of the goals or objectives of the HMTA or the HMR which I must consider in making a decision on the transit fee's consistency. Therefore, I find no basis in this argument for reversing any of the findings in IR–17.

(5) *The Illinois transit fee allegedly fails the "obstacle" test by redirecting, restricting, and delaying shipments of spent fuel, thereby undermining the national transportation safety system carefully developed by DOT.*

DOE contends that the Illinois fee fails the "obstacle" test for consistency by redirecting, restricting, and delaying spent fuel shipments. It argues that the Illinois transit fee both restricts and redirects transport and that redirection would be eliminated only if every state enacted an identical fee. The University of Missouri supports the redirection argument; it apparently is going to bypass Illinois because of the costs and delays associated with a transit of Illinois. DOE further contends that Illinois' requirement that the transit fee "shall be paid * * * prior to the movement of such shipments within this State" constitutes a forbidden permit requirement—especially in light of the statement in IR–16 that "the actual language of the law must govern." 50 FR 20872 at 20877 (May 20, 1985).

The Group says that private shippers must either pay the transit fee or risk an enforcement action; they add that the risk of litigation in the sensitive area of radioactive materials transportation constitutes a significant deterrent to shipments through Illinois.

Duke Power cites IR–16 and IR–15 as relevant precedents for a finding of inconsistency and contends that the Illinois fee requirement has the potential effect of redirecting highway shipments of spent fuel "away from preferred routes." It concludes that "the Department of Transportation can encourage coordinated state emergency

preparedness programs without tying such programs to transport fees * * *."

(b) Appellees' Arguments

Pennsylvania EMA says that there is no hard evidence or facts to support this "redirect/restrict/delay" argument.

Illinois asserts that IR–17 finds that rerouting "on a pure cost basis" is not possible because it is not allowed under the HMTA. EDF says that such rerouting is illegal under the HMTA. It further claims that DOE's own shipments through Illinois without its thus far paying the transit fee demonstrate that the fee does not restrict spent fuel shipments.

Concerning the University of Missouri's consideration of rerouting to avoid Illinois, Illinois asserts that such a diversion over a route "not significantly longer" than the one through Illinois would not extend the time in transit and thus is not the type of rerouting which would be occasioned by a prohibited "routing rule." EDF agrees that if Missouri reroutes for permissible reasons, then the transit fee has not caused impermissible rerouting.

EDF contends that DOE's argument that the transit fee redirects transportation is inconsistent with its concerns about the possible enactment of fees by other states, which would make redirection to avoid fees impossible or impractical. EDF says that the only Illinois restrictions are permissible ones, i.e., those prohibiting shipments not in compliance with Federal regulations. It also argues that sophisticated parties like DOE and utility operators of nuclear power plants are not delayed or restricted by the requirement for advance payment of the transit fee.

EDF also argues that DOE's citation of IR–16, for the principle that the law's actual language controls, is not relevant here. In IR–16, a City of Tucson ordinance provided exceptions to its applicability, and the City had instructed its Fire Chief to expand the exceptions; IR–16 stated that the actual language of the ordinance governed. EDF says that IR–16 involved a question of whether legislative intent modified the clear language of the Tucson ordinance, but that the issue here is whether RSPA should consider Illinois' actual interpretation and administration of the statute of DOE's theoretically possible construction of the law.

Although the Illinois inspection and escort programs (as distinguished from the transit fee) are not the subject of this proceeding, Wisconsin contends that they are supported by the fee and are a reasonable exercise of Illinois' emergency response responsibility, a responsibility it says RSPA has recognized in IR–2 (44 FR 75566, 75568; Dec. 20, 1979), IR–8 (49 FR 46637, 46640–1; Nov. 27, 1984), and IR–15 (49 FR 46660, 46662–3; Nov. 27, 1984). Colorado opines that Illinois' inspection and escort program furthers the purposes of the HMTA and the HMR, particularly § 177.825(a).

(c) Administrator's Decision

Along with the "delay" argument in (3) above, this argument goes to the heart of the issue before me. If the Illinois transit fee resulted in unreasonable or unnecessary redirection, restriction, or delay of spent nuclear fuel shipments, it would fail the "obstacle" test and be inconsistent.

In (3) above, I determined that the record does not contain evidence of unreasonable transportation delays engendered by the Illinois programs. Nor does the record reflect unreasonable redirections or restrictions of spent nuclear fuel shipments caused by the Illinois programs funded by the transit fee.

As indicated in the Ruling below, the Tucson ordinance found inconsistent in IR–16 imposed requirements on short-lived radioactive materials shipped upon short notice as contrasted with the Illinois transit fee's applicability solely to long-lived spent nuclear fuel shipments, all of which involve long lead times. IR–16, therefore, is distinguishable with respect to the issue of delay.

Similarly distinguishable is the statement in IR–16 that "the actual language of the law must govern." That statement was made in the context of determining whether the clear language of an ordinance or the alleged *ex post facto* legislative intent controlled. That issue is not present here. In the case at hand, the Illinois requirement that the transit fee "shall be paid . . . prior to the movement of shipments" within Illinois may properly be analyzed in light of its actual application. Illinois has not delayed any shipments because of failure to pay its transit fee.

Unlike the situation in IR–15 (49 FR 46660, Nov. 27, 1984), where the Vermont transit fee and related program were shown to have caused actual diversions around Vermont, there is no showing here of any actual diversions around Illinois. The threatened diversion around Illinois of its highway shipments of spent fuel by the University of Missouri, by virtue of the requirement in § 177.825 to use preferred routes and reduce time in transit, would not be a diversion of such magnitude as to constitute an obstacle to implementation of the HMTA and the HMR.

Furthermore, the types of restrictions involved in the Illinois program do not impose unreasonable burdens on shippers or carriers. They involve submission to state inspections for compliance with Federal or consistent requirements and acceptance of state-provided escorts consistent with NRC's safeguards requirements. Illinois' state-provided escorts and notice requirements related to them, like the front and rear escort requirements considered in IR–14 (49 FR 46656, Nov. 27, 1984), impose no substantial burdens beyond those already required by the HMR (through incorporation of the NRC's safeguards requirements) and thus are consistent with the HMTA and the HMR. They are distinguishable from the requirements for additional or special escorts found inconsistent in IR–11 (49 FR 46647; Nov. 27, 1984), IR–13 (49 FR 46653; Nov. 27, 1984), IR–15(A) (52 FR 13062; Apr. 20, 1987), and IR–18 (52 FR 200; Jan. 2, 1987). Reasonable delays arising out of state inspections for compliance with substantive Federal or consistent state requirements are a necessary concomitant of state enforcement of Federal standards and are presumptively valid.

In conclusion, because of the absence of evidence of unreasonble or unnecessary delays, restrictions, or redirections resulting from the Illinois transit fee or the programs funded by it, I find no basis for determining that the transit fee fails the "obstacle" test or is inconsistent with the HMTA or the HMR. Therefore, I affirm the findings to that effect contained in IR–17.

V. Other Issues

Comments in this case raised two additional issues which need to be addressed because of their potential relevance in future inconsistency cases.

(1) Issue of Required Conflict With the HMTA or the HMR

Colorado contends that appellants cannot now argue that the transit fee is inconsistent with 49 CFR 177.825 because WEPCO failed to identify that rule in its original application for an inconsistency ruling.

It points out that WEPCO alleged that the transit fee is inconsistent with Appendix A to 49 CFR Part 177, which itself is not a regulation but a policy statement. Thus, Colorado contends, WEPCO failed to meet the 49 CFR 107.203(b)(3) requirement to specify either an HMTA or HMR provision with which the challenged provision is inconsistent. It urges that this failure should result in IR–17 being affirmed.

VOL
52
ISS
186
SE
25
1987
UMI

While this procedural objection by Colorado might have had some merit had it been raised in a timely manner, this objection has been waived because it was not raised until after the Director, OHMT had issued an inconsistency ruling comparing the challenged requirement with the HMTA and § 177.825. In any event, the Director, OHMT, had the authority to issue an inconsistency ruling on this matter *sua sponte*—i.e., with no application for same. 49 CFR 107.209(b); see, e.g., IR–12 through IR–15, 49 FR 46650 *et seq.* (Nov. 27, 1984). Therefore, I have considered the merits of appellants' arguments concerning alleged inconsistencies between the Illinois transit fee and § 177.825.

(2) The "Silence Equals Consent" Issue

DEP points out that there is no RSPA rule on transit fees, and it and the New York City DEP contend that RSPA could issue a rule on the issue if it wanted to preempt state and local transit fees. Wisconsin says that in the absence of such a rule there is no basis for arguing that a fee system is inconsistent *per se*.

In opposition, the Group contends that there is a relevant Federal rule and that even if there were not the states would not be free to enact any regulations they desire on the subjects they desire. The Group cite the following language from *State of Wisconsin* v. *Northern States Power Co.* #85 CV 0032 (Dane County Circuit Court, June 6, 1985):

> The State argues that because the DNR order addresses a subject matter not specifically addressed by current federal regulations (the environment) the order is not inconsistent with the federal regulations and no pre-exemption exists. Again, the State deals in semantics. If a State can pass statutes or impose regulations not specifically detailed in present Federal regulations, the States would be free to re-regulate the entire field of hazardous materials transportation. Each State could impose its own requirements, different from the federal requirements and different from each other, and thereby block interstate transportation altogether. In other words, the States could accomplished by "not inconsistent" regulations what federal pre-emption is designed to prohibit. Slip op. at 8–9.

The fact that there is no Federal regulation addressing the same subject as a challenged state or local requirement is not determinative of the issue of that requirement's consistency. In some instances the absence of a specific relevant Federal provision may indicate a Federal intent that state or local requirements may occupy that field. In other cases, however, the absence of a specific relevant Federal provision may reflect a Federal intent that the particular field not be occupied at all. Each individual case must be examined on its own merits. In this instance, the Illinois transit fee has not occupied a field intended to be completely occupied by RSPA; the absence of a transit fee in the HMTA and the HMR does not preclude the Illinois transit fee.

V. Conclusion

For the reasons indicated above and for the reasons set forth in IR–17 itself, I affirm the determination by the Director of the Office of Hazardous Materials Transportation in IR–17 that the transit fee of $1,000 per cask imposed by Illinois Revised Statutes, Chapter 111½, section 4304(7) upon owners of spent nuclear fuel traversing the State of Illinois is consistent with the HMTA and the HMR. This decision does not preclude a contrary ruling in the future if the HMTA or the HMR is amended in a manner rendering such transit fees inconsistent.

This decision on appeal constitutes the final administrative action in this proceeding.

Issued in Washington, DC, on September 18, 1987.

M. Cynthia Douglass,

Administrator, Research and Special Programs Administration.

[FR Doc. 87–22128 Filed 9–24–87; 8:45 am]

BILLING CODE 4910–60–M

Friday
September 25, 1987

Part VII

The President

Title 3—

The President

Proclamation 5706 of September 23, 1987

Emergency Medical Services Week, 1987

By the President of the United States of America

A Proclamation

We can all be extremely proud of and grateful for those who staff our Nation's emergency medical services (EMS). They make a tremendous difference in our land as they save lives and care for the injured and the critically ill. Dedicated physicians, nurses, paramedics, park rangers, fire fighters, law enforcement officers, and countless devoted volunteers form a system that works daily for the safety and well-being of all Americans. Many perform their tasks under severe conditions, and many risk their lives to rescue accident victims; all of them make EMS a national success.

Most of us can tell from personal experience of quick, efficient EMS teams who have saved the lives of people we know and love. Despite these many successes, however, more than 750,000 Americans continue to lose their lives from emergencies each year. That is why EMS teams across our country strive constantly to improve their remarkable lifesaving record. They work to upgrade their training and skills, to find new methods and better equipment, and to establish nationwide standards for EMS training and the delivery of care. Additionally, they work to teach citizens what to do when emergencies confront us in our homes, places of work, or on the street.

We can all recognize, appreciate, encourage, and support our local emergency medical services teams. We can also improve the current EMS system by developing awareness of accident prevention, by following good health practices, and by learning CPR (cardiopulmonary resuscitation). These personal efforts can help make life safer for all of us.

The Congress, by House Joint Resolution 134, has designated the week of September 20 through September 26, 1987, as "National Emergency Medical Services Week" and authorized and requested the President to issue a proclamation in observance of this event.

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby proclaim the week of September 20 through September 26, 1987, as National Emergency Medical Services Week, and I call upon all Americans to participate in appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of September, in the year of our Lord nineteen hundred and eighty-seven, and of the Independence of the United States of America the two hundred and twelfth.

Ronald Reagan

Proclamation 5707 of September 23, 1987

Veterans Day, 1987

By the President of the United States of America

A Proclamation

For decades America has paused on the 11th of November, the anniversary of the armistice that concluded World War I, to remember and to honor our veterans of military service. We do so in proud and grateful recognition of the hardships and sacrifices demanded from and faithfully accepted by the millions of men and women who have defended our land in war and in peace.

Our observance of Veterans Day this year, the Bicentennial of the Constitution, reminds us in a special way of the service men and women who have made liberty's cause their own. Our fundamental charter lives on because through the years countless brave Americans have gladly willed to "provide for the common defence." No one is more responsible for securing the "Blessings of Liberty to ourselves and our Posterity" than our veterans. That is why, this November 11 and always, we let veterans know that their service is not forgotten, that their sacrifices are appreciated, and that America salutes its defenders.

In order that we may pay fitting homage to those who have served in our Armed Forces, the Congress has provided (5 U.S.C. 6103(a)) that November 11 of each year shall be set aside as a legal public holiday to honor America's veterans.

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby proclaim Wednesday, November 11, 1987, as Veterans Day. I urge all Americans to recognize the valor and sacrifice of our veterans through appropriate public ceremonies and private prayers. I also call upon Federal, State, and local government officials to display the flag of the United States and to encourage and take part in patriotic activities throughout our country. I invite the business community, churches, schools, unions, civic and fraternal organizations, and the media to support this national observance with suitable commemorative expressions and programs.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of September, in the year of our Lord nineteen hundred and eighty-seven, and of the Independence of the United States of America the two hundred and twelfth.

Ronald Reagan

Executive Order 12609 of September 23, 1987

President's Commission on Compensation of Career Federal Executives

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to extend the period within which the President's Commission on Compensation of Career Federal Executives may complete its work, it is hereby ordered that Section 2(b) of Executive Order No. 12592 of April 10, 1987, is amended by striking out "August 1, 1987" and inserting in lieu thereof "February 28, 1988".

Ronald Reagan

THE WHITE HOUSE,
September 23, 1987.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340.00 per year, or $170.00 for 6 months, payable in advance. The charge for individual copies is $1.50 for each issue, or $1.50 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

How To Cite This Publication: Use the volume number and the page number. Example: 52 FR 12345.

Title 3—

The President

Proclamation 5708 of September 24, 1987

National Historically Black Colleges Week, 1987

By the President of the United States of America

A Proclamation

Setting aside a week in recognition of our country's historically Black colleges and universities is most appropriate because they are truly valuable national resources. During more than a century and a quarter they have educated hundreds of thousands of Americans who have gone on to contribute substantially to our Nation in every walk of life. Their alumni have included some of our most outstanding leaders and scholars.

This year, commemoration of the role of historically Black colleges and universities falls during our Nation's observance of the Bicentennial of the Constitution. That cherished document is the guarantor of liberty, union, and self-government for all Americans. Thanks to it we remain a strong people united in the richness of our diversity. We can all be proud of the role of historically Black colleges and universities in strengthening our country. Keeping these fine institutions a vital force in American education is a worthy national goal.

To acknowledge the accomplishments of historically Black colleges and universities and the appropriateness of focusing national attention on their contributions, the Congress, by Senate Joint Resolution 22, has designated the week of September 21 through September 27, 1987, as "National Historically Black Colleges Week" and authorized and requested the President to issue a proclamation in observance of this commemoration.

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby proclaim the week of September 21 through September 27, 1987, as National Historically Black Colleges Week. I urge all Americans to observe this week with appropriate ceremonies and activities to express our respect and appreciation for the outstanding academic and social accomplishments of our Nation's historically Black institutions of higher learning.

IN WITNESS WHEREOF, I have hereunto set my hand this 24th day of September, in the year of our Lord nineteen hundred and eighty-seven, and of the Independence of the United States of America the two hundred and twelfth.

Ronald Reagan

Rules and Regulations

Federal Register
Vol. 52, No. 187
Monday, September 28, 1987

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 910

[Lemon Regulation 580]

Lemons Grown in California and Arizona; Limitation of Handling

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: Regulation 580 establishes the quantity of fresh California-Arizona lemons that may be shipped to market at 265,000 cartons during the period September 27 through October 3, 1987. Such action is needed to balance the supply of fresh lemons with market demand for the period specified, due to the marketing situation confronting the lemon industry.

DATES: Regulation 580 (§ 910.880) is effective for the period September 27 through October 3, 1987.

FOR FURTHER INFORMATION CONTACT: Ronald L. Cioffi, Chief, Marketing Order Administration Branch, F&V, AMS, USDA, Room 2523, South Building, P.O. Box 96456, Washington, DC 20090-6456, telephone; (202) 447-5697.

SUPPLEMENTARY INFORMATION: This final rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1 and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

The purpose of the RFA is to fit regulatory action to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Agricultural Marketing Agreement Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

This regulation is issued under Marketing Order No. 910, as amended (7 CFR Part 910) regulating the handling of lemons grown in California and Arizona. The order is effective under the Agricultural Marketing Agreement Act (the "Act", 7 U.S.C. 601 through 674), as amended. This action is based upon the recommendation and information submitted by the Lemon Administrative Committee and upon other available information. It is found that this action will tend to effectuate the declared policy of the Act.

This regulation is consistent with the marketing policy for 1987-88. The committee met publicly on September 22, 1987, in Los Angeles, California, to consider the current and prospective conditions of supply and demand and recommended by a 9 to 2 vote a quantity of lemons deemed advisable to be handled during the specified week. The committee reports that the market is good for large sized lemons, poor for smaller sizes.

Pursuant to 5 U.S.C. 553, it is further found that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice, and engage in further public procedure with respect to this action and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because of insufficient time between the date when information became available upon which this regulation is based and the effective date necessary to effectuate the declared purposes of the Act. Interested persons were given an opportunity to submit information and views on the regulation at an open meeting. It is necessary to effectuate the declared purposes of the Act to make these regulatory provisions effective as specified, and handlers have been apprised of such provisions and the effective time.

List of Subjects in 7 CFR Part 910

Marketing agreements and orders, California, Arizona, Lemons.

For the reasons set forth in the preamble, 7 CFR Part 910 is amended as follows:

PART 910—LEMONS GROWN IN CALIFORNIA AND ARIZONA

1. The authority citation for 7 CFR Part 910 continues to read as follows:

Authority: Secs. 1-19, 48 Stat. 31, as amended; 7 U.S.C. 601-674.

2. Section 910.880 is added to read as follows:

§ 910.880 Lemon regulation 580.

The quantity of lemons grown in California and Arizona which may be handled during the period September 27 through October 3, 1987, is established at 265,000 cartons.

Dated: September 23, 1987.

Robert C. Keeney,

Deputy Director, Fruit and Vegetable Division, Agricultural Marketing Service.

BILLING CODE 3410-02-M

NUCLEAR REGULATORY COMMISSION

10 CFR Part 2

Policy and Procedure for Enforcement Actions: Policy Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Revised policy statement.

SUMMARY: The NRC is publishing minor revisions to its Enforcement Policy to further explain enforcement actions involving individuals, to describe the criteria to be used for reopening closed enforcement actions, to provide for the exercise of discretion to refrain from issuing a Notice of Violation or a proposed civil penalty under certain limited circumstances, and to make minor deletions and language changes. The policy statement is intended to inform licensees, vendors, and the public of the bases for taking various enforcement actions. The policy is codified as Appendix C to 10 CFR Part 2.

DATES: This revised statement of policy is effective September 28, 1987 while comments on the changes are being received. Submit comments on or before November 27, 1987.

ADDRESSES: Send comments to: Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555. ATTN: Docketing and Service Branch. Hand deliver comments to: Room 1121, 1717 H Street, NW., Washington, DC between 7:30 a.m. to 4:15 p.m.

Copies of comments may be examined at the NRC Public Document Room, 1717 H Street, NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: James Lieberman, Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555 (301–492–8214).

SUPPLEMENTARY INFORMATION:

Background:

The criteria used by the Commission to conduct its enforcement activities were first published on October 17, 1972 (37 FR 21962). These criteria were subsequently modified on January 3, 1975 (40 FR 820) and on December 3, 1979 (44 FR 77135). In late 1979, the Commission directed the staff to prepare a comprehensive statement of enforcement policy. This staff effort was given added urgency by the enactment of Pub. L. 96–295 (signed June 30, 1980), that, among other things, amended section 234 of the Atomic Energy Act to raise the maximum civil penalty the NRC can impose from $5,000 to $100,000 per violation per day and eliminated the provision limiting the total civil penalties for any 30-day period to $25,000. On September 4, 1980, the Commission approved a proposed general statement of policy on enforcement. Comments were solicited on the policy and a series of public meetings was held. On March 9, 1982, the Commission published a final version of the policy (47 FR 9987). After the policy had been in effect for about two years, the Commission determined that certain minor revisions should be made. These revisions were published in the **Federal Register** (49 FR 8583) and became effective on March 8, 1984. The criteria were further revised to describe how the NRC Enforcement Policy applies to vendors of products or services on November 20, 1985 (50 FR 47716). In conjunction with approving the March 1984 revision to the Enforcement Policy, the Commission decided to establish a committee of outside experts to review the Enforcement Policy and provide the Commission with recommendations on any changes it believed advisable. The committee was established on August 31, 1984 and issued its report on November 22, 1985. The Commission subsequently decided that the Enforcement Policy should be revised to include some of the recommendations of the committee and other changes. Accordingly, the Commission has approved the following revisions to the Enforcement Policy which explain enforcement actions involving individuals, add a section regarding the criteria to be used for reopening closed enforcement actions, provide for the exercise of discretion to refrain from issuing a Notice of Violation or a proposed civil penalty under certain limited conditions, and make language deletions and changes in other sections.

Revisions to the Enforcement Policy

Revisions to the policy now being made are described in the following paragraphs. Only the sections to which changes were made are discussed here. The numbering of the sections tracks the section numbers in the policy.

I. Introduction and Purpose

Profiting from Violation

The Commission is deleting the following sentence in the second paragraph under Section I of the Enforcement Policy. "It is the Commission's intent that sanctions should be designed to ensure that a licensee does not deliberately profit from violations of NRC requirements." The Commission believes that the wording is ambiguous and that, in fact, few violations are the result of a calculated judgment to profit from noncompliance. Other wording in the policy clearly states that sanctions and severity levels may be increased for deliberate violations.

V. Enforcement Actions

Notice of Violation for Certain Severity Level IV and V Violations

Section V.A., Notice of Violation, previously discussed circumstances under which the NRC will not generally issue a Notice of Violation for Severity Level IV or V violations. Because this could be regarded as a type of discretionary enforcement, the discussion has been moved to the new Section V.F., Exercise of Discretion.

Enforcement Actions Against Individuals

The NRC has taken actions against individual licensed operators in certain instances where misconduct occurred. Generally, the staff policy has been that the NRC should defer to the licensee in the supervision of operators but should take action directly against licensed operators when their actions result in significant violations of NRC requirements involving incompetence or willfulness or where it appears operators are not competent to safely perform their duties. Such an approach places primary responsibility for operator errors where it belongs—with the facility licensee which is responsible for operator training and for developing adequate procedures to govern facility operations.

Despite this philosophy, the NRC does issue licenses to operators and has many regulations that recognize that timely actions by NRC-licensed individuals are an important part of safety. Specifically, the regulations state that:

- Generally, only licensed operators are permitted to manipulate the controls that directly affect reactivity (10 CFR 50.54(i));
- Licensed operators must be present at the controls at all times during the operation of the facility (10 CFR 50.54(k));
- Mechanisms and apparatus, other than controls, the operation of which may indirectly affect the power level or reactively of a reactor, may be manipulated only with the knowledge and consent of an operator licensed in accordance with Part 55 (10 CFR 50.54(j));
- Licensed senior operators must be present at the facility during specified conditions, and available or on call at other times during operation (10 CFR 50.54(m)); and
- An NRC licensed individual must observe all applicable rules, regulations and orders of the Commission, whether or not stated in the license (10 CFR 55.31(d)).

Because of the importance the Commission places on high standards of performance by facility staff, the guidance on when enforcement action against an individual will be considered has been expanded in renumbered Section V.E.

Allowing Mitigation of Civil Penalties for Severity Level I Violations

The Commission believes that mitigation of a civil penalty for a Severity Level I violation should be available on the same basis as for Severity Level II and III violations since the practical justifications for allowing mitigation of these violations is the same; i.e., to encourage self-identification and reporting, extensive corrective actions, and good performance by a licensee. The second paragraph under V.B. of the Enforcement Policy is modified as follows:

"Civil penalties are imposed absent mitigating circumstances for Severity Level I and II violations, are considered for Severity

Level III violations, and may be imposed for Severity Level IV violations that are similar to the previous violations for which the licensee did not take effective corrective action.

Reopening Closed Enforcement Actions

The agency's enforcement program does not address the criteria for reopening closed enforcement actions. There have been rare instances where it was appropriate to reopen an enforcement action to correct an inappropriately applied action. A new paragraph on Reopening Closed Enforcement Actions is added to Section V.

The Commission believes that reopening a previously closed enforcement action may be appropriate under certain circumstances. If significant new information is received by the NRC which indicates that an enforcement sanction was incorrectly applied, that action could be reopened to correct the record. Reopening should occur only (1) if remedial action, e.g., in the form of an order, is necessary to abate the continued harm of a violation to the public health and safety, the common defense and security, or the environment or (2) if new information shows that a violation was less serious than originally believed or that it did not occur. Enforcement action would normally not be reopened where the only change to the prior action would be to increase the severity level of a violation or to impose or increase a civil penalty. Reopening an enforcement action is expected to occur only rarely and would require specific approval of the Deputy Executive Director for Regional Operations.

Exercise of Discretion

As discussed in Section I above, the discussion of circumstances under which the NRC will not generally issue a Notice of Violation for Severity Level IV or V violations has been moved to new Section V.G., Exercise of Discretion.

Additionally, discussion of other circumstances under which a Notice of Violation or proposed civil penalty might not be issued by the NRC is added. Although strict application of the escalating and mitigating factors set forth in the enforcement policy would suggest that issuance of a civil penalty in a particular case would be appropriate, the benefits to be gained from issuing a civil penalty are doubtful for violations identified by a licensee during a forced shutdown where a licensee is diligently and aggressively addressing the causes of the violations. In particular, it is questionable whether such an action would provide incentives to meet the objectives set forth in the enforcement policy: specifically, encouraging prompt correction of existing violations and adverse conditions; deterring future violations and adverse conditions, and encouraging improved performance by the licensee and, by example, that of the industry; and at the same time, not discouraging aggressive and comprehensive implementation of a structured program to identify and correct problems.

In view of this, the Commission has decided that discretion may be exercised, provided there is prior staff consultation, to refrain from issuing a Notice of Violation and a proposed civil penalty for violations that meet all of the following criteria which are listed in a new paragraph in Section V:

1. (a) NRC has taken significant enforcement action based upon a major safety event contributing to an extended shutdown of an operating reactor or a material licensee (or a work stoppage at a construction site), or the licensee is forced into an extended shutdown or work stoppage related to generally poor performance over a long period; (b) the licensee has developed and is aggressively implementing during the shutdown a comprehensive program for problem identification and correction; and (c) NRC concurrence is needed by the licensee prior to restart;

2. Non-willful violations are identified by the licensee (as opposed to the NRC) as the result of its comprehensive program, or the violations are identified as a result of an employee allegation to the licensee. If the NRC identifies the violations, the NRC should determine whether enforcement action is necessary to achieve remedial action;

3. The violations are based upon activities of the licensee prior to the events leading to the shutdown; and

4. The non-willful violations would normally not be categorized as higher than Severity Level III violations under the NRC's Enforcement Policy.

Notwithstanding the above, a civil penalty may be proposed in a case where multiple Severity Level III violations are discovered. This action would be taken when judgment warrants it on the circumstances of the individual case.

The reason for the first condition is to limit the circumstances under which such discretion would be exercised to cases in which the incentives for problem identification and correction are the greatest and the deterrent effects of civil penalty enforcement action are likely to be fewest—when the licensee is in an extended shutdown caused by a major event or period of poor performance so significant that the NRC will not allow restart until it is sure that major problems have been satisfactorily resolved.

The reason for the second condition is to provide an incentive for licensee identification of violations. If the NRC finds the problem, and believes that the licensee's corrective action program is not working adequately, civil penalty enforcement action may be appropriate.

The reason for the third condition is that if violations are identified associated with work performed after the event or shutdown, this may also indicate that the incentives for conducting an adequate program are not sufficient and the deterrent effects of civil penalty enforcement may be necessary.

The reason for the fourth condition is to distinguish less significant violations from more significant violations. Although the rationale for refraining from civil penalty enforcement action may be the same for Severity Level I and II violations that meet the other three criteria, with violations at this level, it may be important to convey a message to other licensees regarding the significance and consequences of such violations.

Supplement VII

The reference to section 210 of the Energy Reorganization Act, which prohibits discrimination against employees for engaging in certain protected activities, has been replaced with a reference to 10 CFR 50.7 and similar NRC regulations prohibiting discriminations against employees. The requirements of § 50.7 apply to Part 50 licensees, but similar requirements appear in other parts of NRC regulations governing other types of licensed activity. Harassment and intimidation of quality assurance workers may constitute violations of the independence criterion for quality assurance programs, such as is required under 10 CFR Part 50, Appendix B. The replacement of the reference in Supplement VII to Section 210 with a reference to NRC regulations is appropriate because NRC regulations, not section 210, form the basis for violations and enforcement actions related to wrongful discrimination or harassment.

List of Subjects in 10 CFR Part 2

Administrative practice and procedure, Antitrust, Byproduct material, Classified information, Environmental protection, Nuclear materials, Nuclear power plants and reactors, Penalty, Sex discrimination,

Source material, Special nuclear material, Waste treatment and disposal.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974, as amended, and 5 U.S.C. 553, the NRC is adopting the following statement of policy as Appendix C to 10 CFR Part 2.

PART 2—RULES OF PRACTICE FOR DOMESTIC LICENSING PROCEEDINGS

1. The authority citation for Part 2 is revised to read as follows:

Authority: Secs. 161, 181, 68 Stat. 948, 953, as amended (42 U.S.C. 2201, 2231); sec. 191, as amended, Pub. L. 87–615, 76 Stat. 409 (42 U.S.C. 2241); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); 5 U.S.C. 552.

Section 2.101 also issued under secs. 53, 62, 63, 81, 103, 104, 105, 68, Stat. 930, 932, 933, 935, 936, 937, 938, as amended (42 U.S.C. 2073, 2092, 2093, 2111, 2133, 2134, 2135); sec. 102, Pub. L. 91–190, 83 Stat. 853, as amended (42 U.S.C. 4332); sec. 301, 88 Stat. 1248 (42 U.S.C. 5871). Sections 2.102, 2.103, 2.104, 2.105, 2.721 also issued under secs. 102, 103, 104, 105, 183, 189, 68 Stat. 936, 937, 938, 954, 955, as amended (42 U.S.C. 2132, 2133, 2134, 2135, 2233, 2239). Section 2.105 also issued under Pub. L. 97–415, 96 Stat. 2073 (42 U.S.C. 2239). Sections 2.200–2.206 also issued under secs. 186, 234, 68 Stat. 955, 83 Stat. 444, as amended (42 U.S.C. 2236, 2282); sec. 206, 88 Stat. 1246 (42 U.S.C. 5846). Sections 2.600–2.606 also issued under sec. 102, Pub. L. 91–190, 83 Stat. 853 as amended (42 U.S.C. 4332). Sections 2.700a, 2.719 also issued under 5 U.S.C. 554. Sections 2.754, 2.760, 2.770 also issued under 5 U.S.C. 557. Section 2.790 also issued under sec. 103, 68 Stat. 936, as amended (42 U.S.C. 2133) and 5 U.S.C. 552. Sections 2.800 and 2.808 also issued under 5 U.S.C. 553. Section 2.809 also issued under 5 U.S.C. 553 and sec. 29, Pub. L. 85–256, 71 Stat. 579, as amended (42 U.S.C. 2039). Subpart K also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239); sec. 134, Pub. L. 97–425, 96 Stat. 2230 (42 U.S.C. 10154). Appendix A also issued under sec. 6, Pub. L. 91–580, 84 Stat. 1473 (42 U.S.C. 2135). Appendix B also issued under sec. 10, Pub. L. 99–240, 99 Stat. 1842 (42 U.S.C. 2021b *et seq.*).

2. Appendix C to Part 2 is revised to read as follows:

Appendix C—General Statement of Policy and Procedure for NRC Enforcement Actions

The following statement of general policy and procedure explains the enforcement policy and procedures of the U.S. Nuclear Regulatory Commission and its staff in initiating enforcement actions, and of presiding officers, the Atomic Safety and Licensing Appeal Boards, and the Commission in reviewing these actions. This statement is applicable to enforcement in matters involving the public health and safety, the common defense and security, and the environment.[1]

I. Introduction and Purpose

The purpose of the NRC enforcement program is to promote and protect the radiological health and safety of the public, including employees' health and safety, the common defense and security, and the environment by:

- Ensuring compliance with NRC regulations and license conditions;
- Obtaining prompt correction of violations and adverse quality conditions which may affect safety;
- Deterring future violations and occurrences of conditions adverse to quality; and
- Encouraging improvement of licensee and vendor [b] performance, and by example, that of industry, including the prompt identification and reporting of potential safety problems.

Consistent with the purpose of this program, prompt and vigorous enforcement action will be taken when dealing with licensees or vendors who do not achieve the necessary meticulous attention to detail and the high standard of compliance which the NRC expects. Each enforcement action is dependent on the circumstances of the case and requires the exercise of discretion after consideration of these policies and procedures. In no case, however, will licensees who cannot achieve and maintain adequate levels of protection be permitted to conduct licensed activities.

II. Statutory Authority and Procedural Framework

A. Statutory Authority

The NRC's enforcement jurisdiction is drawn from the Atomic Energy Act of 1954, as amended, and the Energy Reorganization Act (ERA) of 1974, as amended.

Section 161 of the Atomic Energy Act authorizes NRC to conduct inspections and investigations and to issue orders as may be necessary or desirable to promote the common defense and security or to protect health or to minimize danger to life or property. Section 186 authorizes NRC to revoke licenses under certain circumstances (e.g., for material false statements, in response to conditions that would have warranted refusal of a license on an original application, for a licensee's failure to build or operate a facility in accordance with the terms of the permit or license, and for violation of an NRC regulation). Section 234 authorizes NRC to impose civil penalties not to exceed $100,000 per violation per day for the violation of certain specified licensing provisions of the Act, rules, orders, and license terms implementing these provisions, and for violations for which licenses can be revoked. In addition to the enumerated provisions in section 234, sections 84 and 147 authorize the imposition of civil penalties for violations of regulations implementing those provisions. Section 232 authorizes NRC to seek injunctive or other equitable relief for violation of regulatory requirements.

Section 206 of the Energy Reorganization Act authorizes NRC to impose civil penalties for knowing and conscious failures to provide certain safety information to the NRC.

Chapter 18 of the Atomic Energy Act provides for varying levels of criminal penalties (i.e., monetary fines and imprisonment) for willful violations of the Act and regulations or orders issued under sections 65, 161(b), 161(i), or 161(o) of the Act. Section 223 provides that criminal penalties may be imposed on certain individuals employed by firms constructing or supplying basic components of any utilization facility if the individual knowingly and willfully violates NRC requirements such that a basic component could be significantly impaired. Section 235 provides that criminal penalties may be imposed on persons who interfere with inspectors. Section 236 provides that criminal penalties may be imposed on persons who attempt to or cause sabotage at a nuclear facility or to nuclear fuel. Alleged or suspected criminal violations of the Atomic Energy Act are referred to the Department of Justice for appropriate action.

B. Procedural Framework

Subpart B of 10 CFR Part 2 of NRC's regulations sets forth the procedures the NRC uses in exercising its enforcement authority. 10 CFR 2.201 sets forth the procedures for issuing notices of violation.

The procedure to be used in assessing civil penalties is set forth in 10 CFR 2.205. This regulation provides that the appropriate NRC Office Director initiates the civil penalty process by issuing a notice of violation and proposed imposition of a civil penalty. The licensee is provided an opportunity to contest in writing the proposed imposition of a civil penalty. After evaluation of the licensee's response, the Director may mitigate, remit, or impose the civil penalty. An opportunity

[1] Antitrust enforcement matters will be dealt with on a case-by-case basis.

[b] The term "vendor" means a supplier of products or services to be used in an NRC-licensed facility or activity.

is provided for a hearing if a civil penalty is imposed.

The procedure for issuing an order to show cause why a license should not be modified, suspended, or revoked or why such other action should not be taken is set forth in 10 CFR 2.202. The mechanism for modifying a license by order is set forth in 10 CFR 2.204. These sections of Part 2 provide an opportunity for a hearing to the affected licensee. However, the NRC is authorized to make orders immediately effective if the public health, safety or interest so requires or, in the case of an order to show cause, if the alleged violation is willful.

III. Severity of Violations

Regulatory requirements[2] have varying degrees of safety, safeguards, or environmental significance. Therefore, the relative importance of each violation must be identified as the first step in the enforcement process.

Consequently, violations are categorized in terms of five levels of severity to show their relative importance within each of the following eight activity areas:

I. Reactor Operations;
II. Facility Construction;
III. Safeguards;
IV. Health Physics;
V. Transportation;
VI. Fuel Cycle and Materials Operations;
VII. Miscellaneous Matters; and
VIII. Emergency Preparedness.

Licensed activities not directly covered by one of the above listed areas, e.g., export license activities, will be placed in the activity area most suitable in light of the particular violation involved. Within each activity area, Severity Level I has been assigned to violations that are the most significant and Severity Level V violations are the least significant. Severity Level I and II violations are of very significant regulatory concern. In general, violations that are included in these severity categories involve actual or high potential impact on the public. Severity Level III violations are caused for significant concern. Severity Level IV violations are less serious but are of more than minor concern; i.e., if left uncorrected, they could lead to a more serious concern. Severity Level V violations are of minor safety or environmental concern.

Camparisons of significance between activity areas are inappropriate. For example, the immediacy of any hazard to the public associated with Severity Level I violations in Reactor Operations is not directly comparable to that associated with Severity Level I violations in Reactor Construction.

While examples are provided in Supplements I through VIII for determining the appropriate severity level for violations in each of the eight activity areas, the examples are neither exhaustive nor controlling. These examples do not create new requirements. Each is designed to illustrate the significance which the NRC places on a particular type of violation of NRC requirements. Each of the examples in the supplements is predicated on a violation of a regulatory requirement.

In each case, the severity of a violation will be characterized at the level best suited to the significance of the particular violation. In some cases, violations may be evaluated in the aggregate and a single severity level assigned for a group of violations.

The severity level of a violation may be increased if the circumstances surrounding the matter involve careless disregard of requirements, deception, or other indications of willfulness. The term "willfulness" as used here embraces a spectrum of violations ranging from deliberate intent to violate or falsify to and including careless disregard for requirements. Willfulness does not include acts which do not rise to the level of careless disregard, i.e., inadvertent clerical errors in a document submitted to the NRC. In determining the specific severity level of a violation involving willfulness, consideration will be given to such factors as the position of the person involved in the violation (e.g., first-line supervisor or senior manager), the significance of any underlying violation, the intent of the violator (i.e., negligence not amounting to careless disregard, careless disregard, or deliberateness), and the economic advantage, if any, gained as a result of the violation. The relative weight given to each of these factors in arriving at the appropriate severity level will be dependent on the circumstances of the violation.

The NRC expects licensees to provide full, complete, timely, and accurate information and reports. Accordingly, unless otherwise categorized in the Supplements, the severity level of a violation involving the failure to make a required report to the NRC will be based upon the significance of and the circumstances surrounding the matter that should have been reported. A licensee will not normally be cited for a failure to report a condition or event unless the licensee was actually aware of the condition or event which it failed to report. However, the severity level of an untimely report, in contrast to no report, may be reduced depending on the circumstances surrounding the matter.

IV. Enforcement Conferences

Whenever the NRC has learned of the existence of a potential violation for which a civil penalty or other escalated enforcement action may be warranted, or recurring nonconformance on the part of a vendor, the NRC will normally hold an enforcement conference with the licensee or vendor prior to taking enforcement action. The NRC may also elect to hold an enforcement conference for other violations, e.g., Severity Level IV violation which, if repeated, could lead to escalated enforcement action. The purpose of the enforcement conference is to (1) discuss the violations or nonconformance, their significance and causes, and the licensee's or vendor's corrective actions, (2) determine whether there are any aggravating or mitigating circumstances, and (3) obtain other information which will help determine the appropriate enforcement action.

In addition, during the enforcement conference, the licensee or vendor will be given an opportunity to explain to the NRC what corrective actions (if any) were taken or will be taken following discovery of the potential violation or nonconformance. Licensees or vendors will be told when a meeting is an enforcement conference. Enforcement conferences will not normally be open to the public.

When needed to protect the public health and safety or common defense and security, escalated enforcement action, such as the issuance of an immediately effective order modifying, suspending, or revoking a license, will be taken prior to the enforcement conference. In such cases, an enforcement conference may be held after the escalated enforcement action is taken.

V. Enforcement Actions

This section describes the enforcement sanctions available to NRC and specifies the conditions under which each may be used. The basic sanctions are notices of violation, civil penalties, and orders of various types. Additionally, related administrative mechanisms such as bulletins and confirmatory action letters, notices of nonconformance and notices of deviation are used to supplement the enforcement program. In selecting the enforcement sanctions to be applied,

[2] The term "requirement" as used in this policy means a legally binding requirement such as a statute, regulation, license condition, technical specification, or order.

NRC will consider enforcement actions taken by other Federal or State regulatory bodies having concurrent jurisdiction, such as in transportation matters. With very limited exceptions, whenever a violation of NRC requirements is identified, enforcement action is taken. The nature and extent of the enforcement action is intended to reflect the seriousness of the violation involved. For the vast majority of violations, action by an NRC regional office is appropriate in the form of a Notice of Violation requiring a formal response from the recipient describing its corrective actions. In situations involving nonconformance on the part of vendor, a Notice of Nonconformance will be issued. The relatively small number of cases involving elevated enforcement action receives substantial attention by the public, and may have significant impact on the licensee's operation. These elevated enforcement actions include civil penalties; orders modifying, suspending or revoking licenses; or orders to cease and desist from designated activities.

A. Notice of Violation

A notice of violation is a written notice setting forth one or more violations of a legally binding requirement. The notice normally requires the recipient to provide a written statement describing (1) corrective steps which have been taken and the results achieved; (2) corrective steps which will be taken to prevent recurrence; and (3) the date when full compliance will be achieved. NRC may require responses to notices of violation to be under oath. Normally, responses under oath will be required only in connection with civil penalties and orders.

NRC uses the notice of violation as the standard method for formalizing the existence of a violation. A notice of violation is normally the only enforcement action taken, except in cases where the criteria for civil penalties and orders, as set forth in Sections V.B and V.C, respectively, are met. In such cases, the notice of violation will be issued in conjunction with the elevated actions.

Licensees are not ordinarily cited for violations resulting from matters not within their control, such as equipment failures that were not avoidable by reasonable licensee quality assurance measures or management controls. Generally, however, licensees are held responsible for the acts of their employees. Accordingly, this policy should not be construed to excuse personnel errors.

B. Civil Penalty

A civil penalty is a monetary penalty that may be imposed for violation of (a) certain specified licensing provisions of the Atomic Energy Act or supplementary NRC rule or orders, (b) any requirement for which a license may be revoked, or (c) reporting requirements under Section 206 of the Energy Reorganization Act. Civil penalties are designed to emphasize the need for lasting remedial action and to deter future violations.

Civil penalties are imposed absent mitigating circumstances for Severity Level I and II violations, are considered for Severity Level III violations, and may be imposed for Severity Level IV violations that are similar [3] to previous violations for which the licensee did not take effective corrective action.

In applying this guidance for Severity Level IV violations, NRC normally considers civil penalties only for similar Severity Level IV violations that occur after the date of the last inspection or within two years, whichever period is greater.

Civil penalties will normally be assessed for knowing and conscious violations of the reporting requirements of section 206 of the Energy Reorganization Act, and for any willful violation of any Commission requirement including those at any severity level.

NRC imposes different levels of penalties for different severity level violations and different classes of licensees. Tables 1A and 1B show the base civil penalties for various reactor, fuel cycle, and materials programs. The structure of these tables generally takes into account the gravity of the violation as a primary consideration and the ability to pay as a secondary consideration. Generally, operations involving greater nuclear material inventories and greater potential consequences to the public and licensee employees receive higher civil penalties. Regarding the secondary factor of ability of various classes of licensees to pay the civil penalties, it is not the NRC's intention that the economic impact of a civil penalty be such that it puts a licensee out of business (orders, rather than civil penalties, are used when the intent is to terminate licensed activities) or adversely affects a licensee's ability to safely conduct licensed activities. The deterrent effect of civil penalties is best served when the amounts of such penalties take into account a licensee's "ability to pay." In determining the amounts of civil penalties for licensees for whom the tables do not reflect the ability to pay, NRC will consider as necessary an increase or decrease on a case-by-case basis.

NRC attaches great importance to comprehensive licensee programs for detection, correction, and reporting of problems that may constitute, or lead to, violation of regulatory requirements. This is emphasized by giving credit for effective licensee audit programs when licensees find, correct, and report problems expeditiously and effectively. To encourage licensee self-identification and correction of violations and to avoid potential concealment of problems of safety significance, application of the adjustment factors set forth below may result in no civil penalty being assessed for violations which are identified, reported (if required), and effectively corrected by the licensee.

On the other hand, ineffective licensee programs for problem identification or correction are unacceptable. In cases involving willfulness, flagrant NRC-identified violations, repeated poor performance in an area of concern, or serious breakdown in management controls, NRC intends to apply its full enforcement authority where such action is warranted, including issuing appropriate orders and assessing civil penalties for continuing violations on a per day basis, up to the statutory limit of $100,000 per violation, per day. In this regard, while management involvement, direct or indirect, in a violation may lead to an increase in the civil penalty, the lack of such involvement may not be used to mitigate a civil penalty.

Allowance of mitigation could encourage lack of management involvement in licensed activities and a decrease in protection of the public health and safety.

NRC reviews each proposed civil penalty case on its own merits and adjusts the base civil penalty values upward or downward appropriately. Tables 1A and 1B identify the base civil penalty values for different severity levels, activity areas, and classes of licensees. After considering all relevant circumstances, adjustments to these values may be made for the factors described below:

1. Prompt Identification and Reporting

Reduction of up to 50% of the base civil penalty may be given when a licensee identifies the violation and promptly reports the violation to the NRC. In weighing this factor,

[3] The word "similar," as used in thos policy, refers to those violations which could have been reasonably expected to have been prevented by the licensee's corrective action for the previous violation.

consideration will be given to, among other things, the length of time the violation existed prior to discovery, the opportunity available to discover the violation, the ease of discovery and the promptness and completeness of any required report. No consideration will be given to this factor if the licensee does not take immediate action to correct the problem upon discovery.

2. Corrective Action to Prevent Recurrence

Recognizing that corrective action is always required to meet regulatory requirements, the promptness and extent to which the licensee takes corrective action, including actions to prevent recurrence, may be considered in modifying the civil penalty to be assessed. Unusually prompt and extensive corrective action may result in reducing the proposed civil penalty as much as 50% of the base value shown in Table 1. On the other hand, the civil penalty may be increased as much as 50% of the base value if initiation of corrective action is not prompt or if the corrective action is only minimally acceptable. In weighing this factor, consideration will be given to, among other things, the timeliness of the corrective action, degree of licensee initiative, and comprehensiveness of the corrective action—such as whether the action is focused narrowly to the specific violation or broadly to the general area of concern.

3. Past Performance

Reduction by as much as 100% of the base civil penalty shown in Table 1 may be given for prior good performance in the general area of concern. On the other hand, the base civil penalty may be increased as much as 100% for prior poor performance in the general area of concern.

In weighing this factor, consideration will be given to, among other things, the effectiveness of previous corrective action for similar problems, overall performance such as Systematic Assessment of Licensee Performance (SALP) evaluations for power reactors, and prior enforcement history including Severity Level IV and V violations in the area of concern. For example, failure to implement previous corrective action for prior similar problems may result in an increase in the civil penalty.

4. Prior Notice of Similar Events

The base civil penalty may be increased as much as 50% for cases where the licensee had prior knowledge of a problem as a result of a licensee audit, or specific NRC or industry notification, and had failed to take effective preventive steps.

5. Multiple Occurrences

The base civil penalty may be increased as much as 50% where multiple examples of a particular violation are identified during the inspection period.

The above factors are additive. However, in no instance will a civil penalty for any one violation exceed $100,000 per day.

The duration of a violation may also be considered in assessing a civil penalty. A greater civil penalty may be imposed if a violation continues for more than a day. For example: (1) If a licensee is aware of the existence of a condition which results in an ongoing violation and fails to initiate corrective action, each day the condition existed may be considered as a separate violation and, as such, subject to a separate additional civil penalty.

(2) If a licensee is unaware of a condition resulting in a continuing violation, but clearly should have been aware of the condition or had an opportunity to correct the condition but failed to do so, a separate violation and attendant civil penalty may be considered for each day that the licensee clearly should have been aware of the condition or had an opportunity to correct the condition, but failed to do so.

(3) Alternatively, whether or not a licensee is aware or should have been aware of a violation that continues for more than one day, the civil penalty imposed for one violation may be increased to reflect the added significance resulting from the duration of the violation.

The Tables and the mitigating factors determine the civil penalties which may be assessed for each violation. However, the focus on the fundamental underlying causes of a problem for which enforcement action appears to be warranted, the cumulative total for all violations which contributed to or were unavoidable consequences of that problem may be based on the amount shown in the table for a problem of that Severity Level, as adjusted. If an evaluation of such multiple violations shows that more than one fundamental problem is involved, each of which, if viewed independently, could lead to civil penalty action by itself, then separate civil penalties may be assessed for each such fundamental problem. In addition, the failure to make a required report of an event requiring such reporting is considered a separate problem and will normally be assessed a separate civil penalty, if the licensee is aware of the matter that should have been reported.

TABLE 1A.—BASE CIVIL PENALTIES

	Plant operations, const, health physics and EP	Transportation		
		Safeguards	Greater than type A quantity [1]	Type A quantity or less [2]
a. Power Reactors	$100,000	$100,000	$100,000	5,000
b. Test Reactors	10,000	10,000	10,000	2,000
c. Research Reactors & Critical Facilities	5,000	5,000	5,000	1,000
d. Fuel Fabricators and Industrial Processors [3]	25,000	100,000 [4]	25,000	5,000
e. Mills and Uranium Conversion Facilities	10,000		5,000	2,000
f. Industrial Users of Material [5]	10,000		5,000	2,000
g. Waste Disposal Licensees	10,000		5,000	2,000
h. Academic or Medical Institutions [6]	5,000		2,500	1,000
i. Other Material Licensees	1,000		2,500	1,000

[1] Includes irradiated fuel, high level waste, unirradiated fissile material, and any other quantities requiring Type B packaging.
[2] Includes low specific activity waste (LSA), low level waste, Type A packages, and excepted quantities and articles.
[3] Large firms engaged in manufacturing or distribution of byproduct, source, or special nuclear material.

[4] This amount refers to Category 1 Licensees (as defined in 10 CFR 73.2 (bb)). Licensed fuel fabricators not authorized to possess Category 1 material have a base penalty amount of $50,000.
[5] Includes industrial radiographers, nuclear pharmacies, and other industrial users.
[6] This applies to nonprofit institutions not otherwise categorized under sections "a" through "g" in this table.

TABLE 1B.—BASE CIVIL PENALTIES

Severity level	Base civil penalty amount (percent of amount listed in table 1A)
I	100
II	80
III	50
IV	15
V	5

C. Orders

An order is a written NRC directive to modify, suspend, or revoke a license; to cease and desist from a given practice or activity; or to take such other action as may be proper (*see* 10 CFR 2.202 and 2.204). Orders may be issued as set forth below. Orders may also be issued in lieu of, or in addition to, civil penalties, as appropriate.

(1) License Modification Orders are issued when some change in licensee equipment, procedures, or management controls is necessary.

(2) Suspension Orders may be used:
(a) To remove a threat to the public health and safety, common defense and security, or the environment;
(b) To stop facility construction when (i) further work could preclude or significantly hinder the identification or correction of an improperly constructed safety-related system or component, or (ii) the licensee's quality assurance program implementation is not adequate to provide confidence that construction activities are being properly carried out;
(c) When the licensee has not responded adequately to other enforcement action;
(d) When the licensee interferes with the conduct of an inspection or investigation; or
(e) For any reason not mentioned above for which license revocation is legally authorized.

Suspensions may apply to all or part of the licensed activity. Ordinarily, a licensed activity is not suspended (nor is a suspension prolonged) for failure to comply with requirements where such failure is not willful and adequate corrective action has been taken.

(3) Revocation Orders may be used:
(a) When a licensee is unable or unwilling to comply with NRC requirements,
(b) When a licensee refuses to correct a violation,
(c) When a licensee does not respond to a notice of violation where a response was required,
(d) When a licensee refuses to pay a fee required by 10 CFR Part 170, or
(e) For any other reason for which revocation is authorized under Section 186 of the Atomic Energy Act (e.g., any condition which would warrant refusal of a license on an original application).

(4) Cease and Desist Orders are typically used to stop an unauthorized activity that has continued after notification by NRC that such activity is unauthorized.

Orders are made effective immediately, without prior opportunity for hearing, whenever it is determined that the public health, interest, or safety so requires, or when the order is responding to a violation involving willfulness. Otherwise, a prior opportunity for a hearing on the order is afforded. For cases in which the NRC believes a basis could reasonably exist for not taking the action as proposed, the licensee will ordinarily be afforded an opportunity to show cause why the order should not be issued in the proposed manner.

D. Escalation of Enforcement Sanctions

NRC considers violations of Severity Levels I, II, or III to be serious. If serious violations occur, NRC will, where necessary, issue orders in conjunction with civil penalties to achieve immediate corrective actions and to deter further recurrence of serious violations. NRC carefully considers the circumstances of each case in selecting and applying the sanction(s) appropriate to the case in accordance with the criteria described in Sections V.B and V.C, above.

Examples of enforcement actions that could be taken for similar Severity Level I, II, or III violations are set forth in Table 2. The actual progression to be used in a particular case will depend on the circumstances. However, enforcement sanctions will normally escalate for recurring similar violations.

Normally the progression of enforcement actions for similar violations will be based on violations under a single license. When more than one facility is covered by a single license, the normal progression will be based on similar violations at an individual facility and not on similar violations under the same license. However, it should be noted that under some circumstances, e.g., where there is common control over some facet of facility operations, similar violations may be charged even though the second violation occurred at a different facility or under a different license. For example, a physical security violation at Unit 2 of a dual unit plant that repeats an earlier violation at Unit 1 might be considered similar.

TABLE 2.—EXAMPLES OF PROGRESSION OF ESCALATED ENFORCEMENT ACTIONS FOR SIMILAR VIOLATIONS IN THE SAME ACTIVITY AREA UNDER THE SAME LICENSE

Severity of violation	Number of similar violations from the date of the last inspection or within the previous two years (whichever period is greater)		
	1st	2nd	3rd
I	[a]+[b]	[a]+[b]+[c]	[d]
II	[a]	[a]+[b]	[a]+[b]+[c]
III		[a]	[a]+[b]

[a] Civil penalty
[b] Suspension of affected operations until the Office Director is satisfied that there is reasonable assurance that the licensee can operate in compliance with the applicable requirements; or modification of the license, as appropriate.
[c] Show cause for modification or revocation of the license, as appropriate.
[d] Further action, as appropriate.

E. Enforcement Actions Involving Individuals

Enforcement actions involving individuals, including licensed operators, are significant personnel actions, which will be closely controlled and judiciously applied. An enforcement action will normally be taken only when there is little doubt that the individual fully understood, or should have understood, his or her responsibility; knew, or should have known, the required actions; and knowingly, or with careless disregard (i.e., with more than mere negligence), failed to take required actions which have actual or potential safety significance. Most transgressions of individuals at the level of Severity Level III, IV or V violations will be handled by citing only the facility licensee.

More serious violations, including those involving the integrity of an individual (e.g., lying to the NRC),

concerning matters within the scope of the individual's responsibilities, will be considered for enforcement action against the individual. Action against the individual, however, will not be taken if the improper action by the individual was caused by management failures. The following examples of situations illustrate this concept:

- Inadvertent individual mistakes resulting from inadequate training or guidance provided by the facility licensee.
- Inadvertently missing an insignificant procedural requirement when the action is routine, fairly uncomplicated, and there is no unusual circumstance indicating that the procedures should be referred to and followed step-by-step.
- Compliance with an express direction of management, such as the Shift Supervisor or Plant Manager, resulted in a violation unless the individual did not express his or her concern or objection to the direction.
- Individual error directly resulting from following the technical advice of an expert unless the advice was clearly unreasonable and the licensed individual should have recognized it as such.
- Violations resulting from inadequate procedures unless the individual used a faulty procedure knowing it was faulty and had not attempted to get the procedure corrected.

Examples of situations which could result in enforcement actions against individuals include, but are not limited to, violations which involve:

- Recognizing a violation of procedural requirements and willfully not taking corrective action.
- Willfully performing unauthorized bypassing of required reactor safety systems.
- Willfully defeating alarms which have safety significance.
- Unauthorized abandoning of reactor controls.
- Inattention to duty such as sleeping or being intoxicated while on duty.
- Willfully taking actions that violate TS Limiting Conditions for Operation.
- Falsifying records required for NRC regulations or by the facility licensee.
- Willfully failing to take "immediate actions" of emergency procedures.
- Willfully withholding safety significant information rather than making such information known to appropriate supervisory or technical personnel.

Any proposed enforcement action against individuals must be done with the concurrence of the Deputy Executive Director for Regional Operations. The opportunity for an Enforcement Conference with the individual will usually be provided.

Examples of sanctions that may be appropriate against NRC-licensed operators are:

- Issuance of a letter of reprimand to be placed in the operator's license file,
- Issuance of a Notice of Violation, and
- Suspension for a specified period, modification, or revocation of the license.

The sanctions are listed in escalating order of significance.[4] The particular sanction to be used should be determined on a case-by-case basis.

In the case of an unlicensed individual, an Order modifying the facility license to require the removal of the individual from all nuclear-related activities for a specified period of time or indefinitely may be appropriate.

F. Reopening Closed Enforcement Actions

If significant new information is received by the NRC which indicates that an enforcement sanction was incorrectly applied, that action could be reopened to correct the record. This should occur only (1) if remedial action, e.g., in the form of an Order, is necessary to abate the continued harm of a violation to the public health and safety, the common defense and security, or the environment, or (2) if new information shows that a violation was less serious than originally believed or that it did not occur. Enforcement actions would not normally be reopened where the only change to the prior action would be to increase the severity level of a violation or to impose or increase a civil penalty. Reopening an enforcement action is expected to occur only rarely and would require specific approval of the Deputy Executive Director for Regional Operations.

G. Exercise of Discretion

1. Because the NRC wants to encourage and support licensee initiative for self-identification and correction of problems, NRC will not generally issue a notice of violation for a violation that meets all of the following criteria:

a. It was identified by the licensee;

b. It fits in Severity Level IV or V;

c. It was reported, if required;

d. It was or will be corrected, including measures to prevent recurrence, within a reasonable time; and

e. It was not a violation that could reasonably be expected to have been prevented by the licensee's corrective action for a previous violation.

2. The NRC may also refrain from issuing a Notice of Violation or a proposed civil penalty for violations that meet all of the following criteria:

a. (i) NRC has taken significant enforcement action based upon a major safety event contributing to an extended shutdown of an operating reactor or a material licensee (or a work stoppage at a construction site), or the licensee is forced into an extended shutdown or work stoppage related to generally poor performance over a long period; (ii) the licensee has developed and is aggressively implementing during the shutdown a comprehensive program for problem identification and correction; and (iii) NRC concurrence is needed by the licensee prior to restart.

b. Non-willful violations are identified by the licensee (as opposed to the NRC) as the result of its comprehensive program, or the violations are identified as a result of an employee allegation to the licensee. If NRC identifies the violation, the NRC should determine whether enforcement action is necessary to achieve remedial action.

c. The violations are based upon activities of the licensee prior to the events leading to the shutdown, and

d. The non-willful violations would normally not be categorized as higher than Severity Level III violations under the NRC's Enforcement Policy.

Notwithstanding the above, a civil penalty may be proposed in a case where multiple Severity Level III violations are discovered. This action would be taken when judgment warrants it on the circumstances of the individual case.

H. Related Administrative Actions

In addition to the formal enforcement mechanisms of notices of violation, civil penalties, and orders, NRC also uses administrative mechanisms, such as bulletins, information notices, generic letters, notices of deviation, notices of nonconformance and confirmatory action letters to supplement its enforcement program. NRC expects licenses and vendors to adhere to any obligations and commitments resulting

[4] Except for individuals subject to civil penalties under section 206 of the Energy Reorganization Act of 1974, as amended, NRC will not normally impose a civil penalty against an individual. However, section 234 of the Atomic Energy Act (AEA) gives the Commission authority to impose civil penalties for violations on "any person." "Person" is broadly defined in Section 11s of the AEA to include individuals, a variety of organizations, and any representatives or agents. This gives the Commission authority to impose civil penalties on employees of licensees or on separate entities when a violation of a requirement directly imposed on them is committed.

VOL 52 ISS 187 SEP 28 1987 UMI

from these processes and will not hesitate to issue appropriate orders to licensees to make sure that such commitments are met.

(1) Bulletins, Information Notices and Generic Letters are written notifications to groups of licensees identifying specific problems and recommending specific actions.

(2) Notices of Deviation are written notices describing a licensee's failure to satisfy a commitment where the commitment involved has not been made a legally binding requirement. A notice of deviation requests a licensee to provide a written explanation or statement describing corrective steps taken (or planned), the results achieved, and the date when corrective action will be completed.

(3) Confirmatory Action Letters are letters confirming a licensee's or a vendor's agreement to take certain actions to remove significant concerns about health and safety, safeguards, or the environment.

(4) Notices of Nonconformance are written notices describing non-licensees' failures to meet commitments which have not been made legally binding requirements by NRC. An example is a commitment made in a procurement contract with a licensee as required by 10 CFR Part 50, Appendix B. Notices of Nonconformances request non-licensees to provide written explanations or statements describing corrective steps (taken or planned), the results achieved, the dates when corrective actions will be completed, and measures taken to preclude recurrence.

I. Referrals to Department of Justice

Alleged or suspected criminal violations of the Atomic Energy Act (and of other relevant Federal laws) are referred to the Department of Justice for investigation. Referral to the Department of Justice does not preclude the NRC from taking other enforcement action under this General Statement of Policy. However, such actions will be coordinated with the Department of Justice to the extent practicable.

VI. Public Disclosure of Enforcement Actions

In accordance with 10 CFR 2.790, all enforcement actions and licensees' responses are publicly available for inspection. In addition, press releases are generally issued for civil penalties and orders. In the case of orders and civil penalties related to violations at Severity Levels I, II, or III, press releases are issued at the time of the order or the proposed imposition of the civil penalty. Press releases are not normally issued for Notices of Violation.

VII. Responsibilities

The Deputy Executive Director for Regional Operations (DEDRO), as the principal enforcement officer of the NRC, has been delegated the authority to issue notices of violations, civil penalties, and orders.[5] Regional Administrators may also issue notices of violation for Severity Level IV and V violations and may sign notices of violation for Severity Level III violations with no proposed civil penalty and proposed civil penalty actions with the concurrence of the DEDRO. In recognition that the regulation of nuclear activities in many cases does not lend itself to a mechanistic treatment, the DEDRO or the Regional Administrator must exercise judgment and discretion in determining the severity levels of the violations and the appropriate enforcement sanctions, including the decision to impose a civil penalty and the amount of such penalty, after considering the general principles of this statement of policy and the technical significance of the violations and the surrounding circumstances.

The Commission will be provided written notification of all enforcement actions involving civil penalties or orders. The Commission will be consulted prior to taking action in the following situations (unless the urgency of the situation dictates immediate action):

(1) An action affecting a licensee's operation that requires balancing the public health and safety or common defense and security implications of not operating with the potential radiological or other hazards associated with continued operation;

(2) Proposals to impose civil penalties in amounts greater than 3 times the Severity Level I values shown in Table 1A;

(3) Any proposed enforcement action that involves a Severity Level I violation;

(4) Any enforcement action that involves a finding of a material false statement;

(5) Refraining from taking enforcement action for matters meeting the criteria of Section V.F.2;

(6) Any action the Office Director believes warrants Commission involvement; or

(7) Any proposed enforcement action on which the Commission asks to be consulted.

VIII. Vendor Enforcement

The Commission's enforcement policy is also applicable to non-licensees (vendors). Vendors of products or services provided for use in nuclear activities are subject to certain requirements designed to ensure that the products or services supplied that could affect safety are of high quality. Through procurement contracts with reactor licensees, vendors are required to have quality assurance programs that meet applicable requirements including 10 CFR Part 50, Appendix B, and 10 CFR Part 71, Subpart H. Vendors of reactor and materials licensees and Part 71 licensees are subject to the requirements of 10 CFR Part 21 regarding reporting of defects in basic components.

The NRC conducts inspections of reactor licensees to determine whether they are ensuring that vendors are meeting their contractual obligations with regard to quality of products or services that could have an adverse effect on safety. As part of the effort of ensuring that licensees fulfill their obligations in this regard, the NRC inspects reactor vendors to determine if they are meeting their obligations. These inspections include examination of the quality assurance programs and their implementation by the vendors through examination of product quality. The NRC may also inspect vendors, including suppliers of Part 71 and materials licensees, to determine whether they are complying with Part 21. When inspections determine that violations of NRC requirements have occurred, or that vendors have failed to fulfill contractual commitments that could adversely affect the quality of a safety significant product or service, enforcement action will be taken. Notices of Violation and civil penalties will be used, as appropriate, for licensee failure to ensure that their vendors have programs that meet applicable requirements including Part 21. Notices of Violation will be issued for vendors which violate Part 21. Civil penalties will only be imposed against individual directors or responsible officers of a vendor organization who knowingly and consciously fail to provide the notice required by 10 CFR 21.21(b)(1). Notices of Nonconformance will be used for

[5] The Director, Office of Enforcement, acts for the Deputy Executive Director for Regional Operations in the latter's absence or as directed. The Directors of the Offices of Nuclear Reactor Regulation, Nuclear Material Safety and Safeguards, and Special Projects have also been delegated authority to issue orders, but it is expected that normal use of this authority by NRR, NMSS, and OSP will be confined to actions necessary in the interest of public health and safety. The Director, Office of Administration and Resources Management, has been delegated the authority to issue orders where licensees violate Commission regulations by nonpayment of license fees. (It is planned to consider redelegation of some or all of these authorities to the Administrators of the NRC Regional Offices over the next several years.)

vendors which fail to meet committments related to NRC activities.

Supplement I—Severity Categories

Reactor Operations

A. Severity I.—Violations involving for example:

1. A Safety Limit, as defined in 10 CFR 50.36 and the Technical Specifications, being exceeded;

2. A system [6] designed to prevent or mitigate a serious safety event not being able to perform its intended safety function [7] when actually called upon to work;

3. An accidental criticality; or

4. Release of radioactivity offsite greater than ten (10) times the Technical Specifications limit [8]

B. Severity II—Violations involving for example:

1. A system designed to prevent or mitigate serious safety events not being able to perform its intended safety function; or

2. Release of radioactivity offsite greater than five (5) times the Technical Specifications limit.

C. Severity III—Violations involving for example:

1. A significant violation of a Technical Specification Limiting Condition for Operation where the appropriate Action Statement was not satisfied within the time allotted by the Action Statement, such as:

a. In a pressurized water reactor, in the applicable modes, having one high-pressure safety injection pump inoperable for a period in excess of that allowed by the action statement; or

b. In a boiling water reactor, one primary containment isolation valve inoperable for a period in excess of that allowed by the action statement.

2. A system designed to prevent or mitigate a serious safety event not being able to perform its intended function under certain conditions (e.g, safety system not operable unless offsite power is available; materials or components not environmentally qualified);

3. Dereliction of duty on the part of personnel involved in licensed activities;

4. Changes in reactor parameters which cause unanticipated reductions in margins of safety;

5. Release of radioactivity offsite greater than the Technical Specifications limit;

6. Failure to meet the requirements of 10 CFR 50.59 such that a required license amendment was not sought; or

7. Licensee failure to conduct adequate oversight of vendors resulting in the use of products or services which are of defective or indeterminate quality and which have safety significance.

D. Severity IV.—Violations involving for example:

1. A less significant violation of a Technical Specification Limiting Condition for Operation where the appropriate Action Statement was not satisfied within the time allotted by the Action Statement, such as:

a. In a pressurized water reactor, a 5% deficiency in the required volume of the condensate storage tank; or

b. In a boiling water reactor, one subsystem of the two independent MSIV leakage control subsystems inoperable.

2. Failure to meet the requirements of 10 CFR 50.59 that does not result in a Severity Level I, II, or III violation;

3. Failure to meet regulatory requirement that have more than minor safety or environmental significance; or

4. Failure to make a required Licensee Event Report.

E. Severity Level V.—Violations that have minor safety or environmental significance.

Supplement II—Severity Categories

Part 50 Facility Construction

A. Severity I.—Violations involving a structure or system that is completed [9] in such a manner that it would not have satisfied its intended safety related purpose.

B. Severity II.—Violations involving for example:

1. A breakdown in the quality assurance program as exemplified by deficiencies in construction QA related to more than one work activity (e.g., structural, piping, electrical, foundations). Such deficiencies normally involve the licensee's failure to conduct adequate audits or to take prompt corrective action on the basis of such audits and normally involve multiple examples of deficient construction or construction of unknown quality due to inadequate program implementation; or

2. A structure or system that is completed in such a manner that it could have an adverse effect on the safety of operations.

C. Severity III.—Violations involving for example:

1. A deficiency in a licensee quality assurance program for construction related to a single work activity (e.g., structural, piping, electrical or foundations). Such significant deficiency normally involves the licensee's failure to conduct adequate audits or to take prompt corrective action on the basis of such audits, and normally involves multiple examples of deficient construction or construction of unknown quality due to inadequate program implementation;

2. Failure to confirm the design safety requirements of a structure or system as a result of inadequate preoperational test program implementation; or

3. Failure to make a required 10 CFR 50.55(e) report.

D. Severity IV.—Violations involving failure to meet regulatory requirements including one or more Quality Assurance Criterion not amounting to Severity Level I, II, or III violations that have more than minor safety or environmental significance.

E. Severity V.—Violations that have minor safety or environmental significance.

Supplement III—Severity Categories

Safeguards

A. Severity I.—Violations involving for example:

1. An act of radiological sabotage or actual theft, loss, or diversion of a formula quantity of strategic special nuclear material [10] (SSNM);

2. Actual entry of an unauthorized individual into a vital area or material access area from outside the protected area (i.e., penetration of both barriers) that was not detected at the time of entry; or

3. Failure to promptly report knowledge of an actual or attempted theft or diversion of SSNM or an act of radiological sabotage.

B. Severity II.—Violations involving for example:

1. Actual theft, loss or diversion of special nuclear material (SNM) of moderate strategic significance;[11]

2. Failure to control access such that all three elements of access control (barrier, monitoring, and response) at the protected area or vital area are inadequate or two of three elements are inadequate in both the protected and vital area;

---

[6] "System" as used in these supplements, includes administrative and managerial control systems, as well as physical systems.

[7] "Intended safety function" means the total safety function, and is not directed toward a loss of redundancy. For example, considering a BWR's high pressure ECCS capability, the violation must result in complete invalidation of both HPCI and ADS subsystems. A loss of one subsystem does not defeat the intended safety function as long as the other subsystem is operable.

[8] The Technical Specification limit as used in this Supplement (Items A.4, B.2 and C.5) does not apply to the instantaneous release limit.

[9] "Completed" means completion of construction including review and acceptance by the construction QA organization.

[10] *See* 10 CFR 73.2(bb).

[11] *See* 10 CFR 73.2(x).

BEST COPY AVAILABLE

3. Failure to implement approved compensatory measures when the central and secondary alarm stations are inoperable;

4. Failure to establish or maintain safeguards systems designed or used to prevent or detect the unauthorized removal of a formula quantity of SNM from areas of authorized use or storage; or

5. Failure to use established transportation security systems designed or used to prevent the theft, loss, or diversion of a formula quantity of SNM or acts of radiological sabotage.

C. Severity III.—Violations involving for example:

1. Failure to control access such that two of the three elements of access control at the vital area or protected area barrier are inadequate;

2. Failure to control access to a transport vehicle or the SNM being transported that does not constitute a Severity I or II violation;

3. Failure to establish or maintain safeguards systems designed or used to prevent or detect the unauthorized removal of SNM of moderate strategic significance from areas of authorized use or storage;

4. Failure to implement approved compensatory measures when the central (or secondary) alarm station is inoperable;

5. Failure to conduct a proper search at the access control point that results in introduction to the site of firearms, explosives, incendiary devices, or other items which could be used for industrial sabotage; or

6. Failure to properly secure or protect classified or other sensitive safeguards information which would significantly assist an individual in an act of radiological sabotage or theft of special nuclear material.

D. Severity IV.—Violations involving for example:

1. Failure to establish or maintain safeguards systems designed or used to prevent or detect the unauthorized removal of SNM of low strategic significance [12] from areas of authorized use or storage;

2. Failure to implement 10 CFR Parts 25 and 95 and information addressed under section 142 of the Act, and the NRC approved security plan relevant to those parts;

3. Failure to control access to a vital area or material access area from inside the protected area or failure to control access to the protected area in that one of the three elements of access control is inadequate;

4. Failure to properly secure or protect classified or other sensitive safeguards information which would not significantly assist an individual in an act of radiological sabotage or theft of special nuclear material; or

5. Other violations, such as failure to follow an approved security plan, that have more than minor safeguards significance.

E. Severity V.—Violations that have minor safeguards significance.

Supplement IV—Severity Categories

Health Physics 10 CFR Part 20 [13]

A. Severity I.—Violations involving for example:

1. Single exposure of a worker in excess of 25 rems of radiation to the whole body, 150 rems to the skin of the whole body, or 375 rems to the feet, ankles, hands, or forearms;

2. Annual whole body exposure of a member of the public in excess of 2.5 rems of radiation;

3. Release of radioactive material to an unrestricted area in excess of ten times the limits of 10 CFR 20.106;

4. Disposal of licensed material in quantities or concentrations in excess of ten times the limits of 10 CFR 20.303; or

5. Exposure of a worker in restricted areas of ten times the limits of 10 CFR 20.103.

B. Severity II.—Violations involving for example:

1. Single exposure of a worker in excess of 5 rems of radiation to the whole body, 30 rems to the skin of the whole body, or 75 rems to the feet, ankles, hands or forearms;

2. Annual whole body exposure of a member of the public in excess of 0.5 rems of radiation;

3. Release of radioactive material to an unrestricted area in excess of five times the limits of 10 CFR 20.106;

4. Failure to make an immediate notification as required by 10 CFR 20.403(a)(1) and 10 CFR 20.403(a)(2);

5. Disposal of licensed material in quantities or concentrations in excess of five times the limits of 10 CFR 20.303; or

6. Exposure of a worker in restricted areas in excess of five times the limits of 10 CFR 20.103.

C. Severity III.—Violations involving for example:

1. Single exposure of a worker in excess of 3 rems of radiation to the whole body, 7.5 rems to the skin of the whole body, or 18.75 rems to the feet, ankles, hands or forearms;

2. A radiation level in an unrestricted area such that an individual could receive greater than 100 millirem in a one hour period or 500 millirem in any seven consecutive days;

3. Failure to make a 24-hour notification as required by 10 CFR 20.403(b) or an immediate notification required by 10 CFR 20.402(a);

4. Substantial potential for an exposure or release in excess of 10 CFR 20 whether or not such exposure or release occurs (e.g., entry into high radiation areas, such as under reactor vessels or in the vicinity of exposed radiographic sources, without having performed an adequate survey, operation of a radiation facility with a nonfunctioning interlock system);

5. Release of radioactive material to an unrestricted area in excess of the limits of 10 CFR 20.106;

6. Improper disposal of licensed material not covered in Severity Level I or II;

7. Exposure of a worker in restricted areas in excess of the limits of 10 CFR 20.103;

8. Release for unrestricted use of contaminated or radioactive material or equipment which poses a realistic potential for significant exposure to members of the public, or which reflects a programmatic (rather than isolated) weakness in the radiation control program;

9. Cumulative worker exposure above regulatory limits when such cumulative exposure reflects a programmatic, rather than an isolated weakness in radiation protection;

10. Conduct of licensee activities by a technically unqualified person; or

11. Significant failure to control licensed material.

D. Severity IV.—Violations involving for example:

1. Exposures in excess of the limits of 10 CFR 20.101 not constituting Severity Level I, II, or III violations;

2. A radiation level in an unrestricted area such that an individual could receive greater than 2 millirem in a one-hour period or 100 millirem in any seven consecutive days;

3. Failure to make a 30-day notification required by 10 CFR 20.405;

4. Failure to make a followup written report as required by 10 CFR 20.402(b), 20.408, and 20.409; or

5. Any other matter that has more than minor safety or environmental significance.

E. Severity V.—Violations that have minor safety or environmental significance.

[12] *See* 10 CFR 73.2(y).

[13] Personnel overexposures and associated violations, incurred during a life saving effort, will be treated on a case-by-case basis.

Supplement V—Severity Categories

Transportation [14]

A. Severity I.—Violations of NRC transportation requirements involving for example:

1. Annual whole body radiation exposure of a member of the public in excess of 0.5 rems of radiation; or

2. Breach of package integrity resulting in surface contamination or external radiation levels in excess of ten times the NRC limits.

B. Severity II.—Violations of NRC transportation requirements involving for example:

1. Breach of package integrity resulting in surface contamination or external radiation levels in excess of NRC requirements;

2. Surface contamination or external radiation levels in excess of five times NRC limits that did not result from a breach of package integrity; or

3. Failure to make required initial notification associated with Severity Level I or II violations.

C. Severity III.—Violations of NRC transportation requirements involving for example:

1. Breach of package integrity;

2. Surface contamination or external radiation levels in excess of, but less than a factor of five above NRC requirements, that did not result from a breach of package integrity;

3. Any noncompliance with labelling, placarding, shipping paper, packaging, loading, or other requirements that could reasonably result in the following:

a. Improper identification of the type, quantity, or form of material;

b. Failure of the carrier or recipient to exercise adequate controls; or

c. Substantial potential for personnel exposure or contamination, or improper transfer of material; or

4. Failure to make required initial notification associated with Severity Level III violations.

D. Severity IV.—Violations of NRC transportation requirements involving for example:

1. Package selection or preparation requirements which do not result in a breach of package integrity or surface contamination or external radiation levels in excess of NRC requirements; or

2. Other violations that have more than minor safety or environmental significance.

E. Severity V.—Violations that have minor safety or environmental significance.

Supplement VI—Severity Categories

Fuel Cycle and Materials Operations

A. Severity I.—Violations involving for example:

1. Radiation levels, contamination levels, or releases that exceed ten times the limits specified in the license;

2. A system designed to prevent or mitigate a serious safety event not being operable when actually required to perform its design function; or

3. A nuclear criticality accident.

B. Severity II.—Violations involving for example:

1. Radiation levels, contamination levels, or releases that exceed five times the limits specified in the license; or

2. A system designed to prevent or mitigate a serious safety event being inoperable.

C. Severity III.—Violations involving for example:

1. Failure to control access to licensed materials for radiation purposes as specified by NRC requirements;

2. Possession or use of unauthorized equipment or materials in the conduct of licensee activities which degrades safety;

3. Use of radioactive material on humans where such use is not authorized;

4. Conduct licensed activities by a technically unqualified person;

5. Radiation levels, contamination levels, or releases that exceed the limits specified in the license; or

6. Medical therapeutic misadministrations.

D. Severity IV.—Violations involving for example:

1. Failure to maintain patients hospitalized who have cobalt-60, cesium-137, or iridium-192 implants or to conduct required leakage or contamination tests, or to use properly calibrated equipment;

2. Other violations that have more than minor safety or environmental signficance; or

3. Failure to report medical diagnostic misadministrations.

E. Severity V.—Violations that have minor safety or environmental significance.

Supplement VII—Severity Categories

Miscellaneous Matters

A. Severity I.—Violations involving for example:

1. A Material False Statement (MFS) [15] in which the statement made was deliberately false;

2. Falsification of records which NRC requires be kept of significant information in which the records were deliberately falsified by or with the knowledge of management;

3. A knowing and intentional failure to provide the notice required by Part 21; or

4. Action by senior corporate management in violation of 10 CFR 50.7 or similar regulations against an employee.

B. Severity II.—Violations involving for example:

1. A MFS or a reporting failure, involving information which, had it been available to the NRC and accurate at the time the information should have been submitted, would have resulted in regulatory action or would likely have resulted in NRC seeking further information;

2. A MFS in which the false statement was made with careless disregard;

3. Deliberate falsification of records which NRC requires be kept involving significant information;

4. Action by plant management above first-line supervision in violation of 10 CFR 50.7 or similar regulations against an employee; or

5. A failure to provide the notice required by Part 21.

C. Severity III.—Violations involving for example:

1. A MFS not amounting to a Severity Level I or II violation.

2. Deliberate falsification, of falsification by or with the knowledge of management, of records which the NRC requires be kept that did not involve significant information.

3. Action by first-line supervision in violation of 10 CFR 50.7 or similar regulations against an employee; or

4. Inadequate review or failure to review such that, if an appropriate review had been made as required, a Part 21 report would have been made.

D. Severity IV.—Violations involving for example:

---

[14] Some transportation requirements are applied to more than one licensee involved in the same activity such as a shipper (10 CFR 73.20) and a carrier (10 CFR 70.20a). When a violation of such a requirement occurs, enforcement action will be directed against the responsible licensee which, under the circumstances of the case, may be one or more of the licensees involved.

[15] In essence, a Material False Statement is a statement that is false by omission or commission and is relevent to the regulatory process. As can be seen in the examples, in determing the specific severity level of a violation involving material false statements or falsification of records, consideration will be given to such factors as the position of the person involved in the violation (e.g., first line supervisor or senior manager), the significance of the information involved, and the intent of the violator (i.e., negligence not amounting to careless disregard, careless disregard, or deliberateness). The relative weight given to each of these factors in arriving at the appropriate severity level will be dependent on the circumstances of the violation.

1. Inadequate review or failure to review under Part 21 or other procedural violations associated with Part 21 with more than minor safety significance;

2. A false statement caused by an inadvertent clerical or similar error involving information which, had it been available to NRC and accurate at the time the information should have been submitted, would probably not have resulted in regulatory action or NRC seeking additional information; or

E. Severity V.—Violations of minor procedural requirements of Part 21.

Supplement VIII—Severity Categories

Emergency Preparedness

A. Severity I.—Violations involving for example:

In a general emergency, licensee failure to promptly (1) correctly classify the event, (2) make required notifications to responsible Federal, State, and local agencies, or (3) respond to the event (e.g., assess actual or potential offsite consequences, activate emergency response facilities, and augment shift staff).

B. Severity II.—Violations involving for example:

1. In a site area emergency, licensee failure to promptly (1) correctly classify the event, (2) make required notifications to responsible Federal, State, and local agencies, or (3) respond to the event (e.g., assess actual or potential offsite consequences, activate emergency response facilities, and augment shift staff); or

2. Licensee failure to meet or implement more than one emergency planning standard involving assessment or notification.

C. Severity III.—Violations involving for example:

1. In an alert, licensee failure to promptly (1) correctly classify the event, (2) make required notifications to responsible Federal, State, and local agencies, or (3) respond to the event (e.g., assess actual or potential offsite consequences, activate emergency response facilities, and augment shift staff); or

2. Licensee failure to meet or implement emergency planning standard involving assessment or notification.

D. Severity IV.—Violations involving for example:

Licensee failure to meet or implement any emergency planning standard or requirement not directly related to assessment and notification.

E. Severity V.—Violations that have minor safety or environmental significance.

Dated at Washington, DC, this 23d day of September 1987.

For the Nuclear Regulatory Commission.

Samuel J. Chilk,

Secretary of the Commission.

[FR Doc. 87-22314 Filed 9-25-87; 8:45 am]

BILLING CODE 7590-01-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 86-NM-202-AD; Amdt. 39-5734]

Airworthiness Directives; Airbus Industrie Model A310 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Airbus Model A310 series airplanes, which requires repetitive testing, inspection, and rework, if necessary, of the ram air turbine (RAT) uplock and roller, and provides an optional terminating action. This amendment is prompted by reports of failure of the RAT to deploy during ground testing because the uplock hook was dented and the roller seized. This condition, if not corrected, could result in loss of emergency standby hydraulic power to the flight controls.

EFFECTIVE DATE: October 30, 1987.

ADDRESSES: The applicable service information may be obtained from Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This information may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Ms. Judy Golder, Standardization Branch, ANM-113; telephone (206) 431-1967. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION: A proposal to amend Part 39 of the Federal Aviation Regulations to include an airworthiness directive, which requires testing, inspections, and rework of the ram air turbine (RAT) uplock and roller on certain Airbus Model A310 series airplanes, was published in the **Federal Register** on November 28, 1986 (51 FR 43010). The proposal was amended to clarify the terminating action and was published on July 14, 1987 (52 FR 26349).

Interested parties have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received in response to the amendment to NPRM. The commenter concurred with the proposal.

After careful review of the available data, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

It is estimated that 52 airplanes of U.S. registry will be affected by this AD, that it will take approximately 10 manhours per airplane to accomplish the required actions, and that the average labor cost will be $40 per man-hour. Based on these figures, the total cost impact of this AD to U.S. operators is estimated to be $20,800.

For the reasons discussed above, the FAA has determined that this regulation is not considered to be major under Executive Order 12291 or significant under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979) and it is further certified under the criteria of the Regulatory Flexibility Act that this rule will not have a significant economic effect on a substantial number of small entities because of the minimal cost of compliance per airplane ($400). A final evaluation has been prepared for this regulation and has been placed in the docket.

Aviation safety, Aircraft.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends § 39.13 of Part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. By adding the following new airworthiness directive:

Airbus Industrie: Applies to Model A310 series airplanes with serial numbers listed in Airbus Service Bulletin A310-29-2010, Revision 3, dated August 21, 1985, certificated in any category. Compliance is required within 700 hours time in service after the effective date of this AD, unless previously accomplished.

To prevent failure of the ram air turbine (RAT) extension system and ensure deployment of the RAT when necessary, accomplish the following:

A. Test, inspect, and rework, if necessary, the RAT uplock hook and roller in accordance with Airbus Industrie Service Bulletin A310–29–2019, Revision 3, dated August 21, 1985.

B. Repeat the tests, inspections, and necessary rework required by paragraph A., above, at intervals not to exceed 1,400 hours time in service.

C. Incorporation of both Modification AI–5876 described in Airbus Industrie Service Bulletin A310–29–2011, Revision 1, dated September 2, 1986, and Modification AI 5958 described in Airbus Industrie Service Bulletin A310–29–2012, Revision 1, dated September 2, 1986, constitutes terminating action for the repetitive inspection requirements of paragraph B of this AD.

D. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM–113, FAA, Northwest Mountain Region.

E. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base for the accomplishment of the modifications required by this AD.

All persons affected by this directive who have not already received the appropriate service document from the manufacturer may obtain copies upon request to Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This document may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

This amendment becomes effective October 30, 1987.

Issued in Seattle, Washington, on September 16, 1987.

Frederick M. Isaac,

Acting Director, Northwest Mountain Region.

14 CFR Part 39

[Docket No. 87–NM–07–AD; Amdt. 39–5603]

Airworthiness Directives; Pacific Scientific Company Technical Standard Order (TSO) C22f Lap Belt Assembly, Part Number 1107177 (All Dash Numbers)

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive, applicable to Pacific Scientific Company Technical Standard Order (TSO) C22f lap belt assemblies, which requires replacement of certain lap belt retractor shafts. This amendment is prompted by a report that some retractor shafts were installed which were not manufactured of the correct material. This condition, if not corrected, could lead to structural failure of the lap belt assembly during an emergency landing.

EFFECTIVE DATE: October 26, 1987.

ADDRESSES: The applicable service information may be obtained from Pacific Scientific Company, 1346 S. State College Boulevard, Anaheim, California 92803. This information may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or at the Western Aircraft Certification Office, 15000 Aviation Boulevard, Hawthorne, California.

FOR FURTHER INFORMATION CONTACT: Mr. Walter Eierman, Aerospace Engineer, Western Aircraft Certification Office, ANM–173W, FAA, Northwest Mountain Region, 15000 Aviation Boulevard, Hawthorne, California; telephone (213) 297–1388.

SUPPLEMENTARY INFORMATION: A proposal to amend Part 39 of the Federal Aviation Regulations to include an airworthiness directive which requires inspection for and replacement of certain incorrectly manufactured lap belt retractor shafts that do not provide adequate strength, was published in the **Federal Register** on March 12, 1987 (52 FR 7619).

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the single comment received.

The commenter requested extending the proposed compliance time of 90 days to 180 days. This was requested because the specific aircraft on which this type of lap belt are installed can not be identified, and some airlines with large fleets will require additional time to inspect all of their airplanes. The FAA concurs and has determined that an extension of the compliance time to 180 days after the effective date of this AD can be granted without compromising safety. The final rule has been changed accordingly.

In addition, paragraph A. of the final rule has been revised to clarify the requirement that incorrectly-manufactured lap belt retractor shafts must be replaced prior to further flight.

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the following rule with the change previously noted.

It is estimated that 4,800 shafts on lap belt assemblies of the affected type are installed in both large and small airplanes of U.S. registry and will be affected by this AD; approximately 880 of these shafts are made of the incorrect material and must be replaced. It will require one-quarter man-hour to inspect each of the 4,800 shafts, and an additional one-half man-hour to remove and replace each of the unacceptable shafts, for a total of 1,640 man-hours to accomplish the required action. The average labor cost will be $40 per man-hour. The lap belts with the unacceptable shafts can be returned to Pacific Scientific Company at no charge for replacement of the shafts. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $65,600.

For the reasons discussed above, the FAA has determined that this regulation is not considered to be major under Executive Order 12291 or significant under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and it further certified under the criteria of the Regulatory Flexibility Act that this rule will not have a significant economic effect on a substantial number of small entities, because of the minimal cost of compliance per airplane ($30). A final evaluation has been prepared for this regulation and has been placed in the docket.

List of Subjects in 14 CFR Part 39

Aviation safety, Aircraft.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) as follows:

PART 39—[AMENDED]

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. By adding the following new airworthiness directive:

Pacific Scientific Company: Applies to TSO C22f lap belt assemblies, part number 1107177 (all dash numbers), manufactured between September 1, 1984, and January 1, 1988.

Compliance required within 180 days after the effective date of this AD, unless previously accomplished.

To eliminate lap belt assemblies with belt retractor shafts which do not provide adequate strength, accomplish the following:

VOL
52
ISS
187
SE
28
1987
UMI

A. Inspect all Pacific Scientific TSO C22f lap belt assemblies, part number 1107177 (all dash numbers), in accordance with Pacific Scientific Company Safety Advisory Letter (on the Mark V Reel Lap Belt Assembly, which deals with this problem), to determine if they have part number 1106294–01 retractor shafts made of the correct material. This is determined by visual examination of the end of the shaft: If the color is gold anodize, the shaft is acceptable. If the color is a dull battleship grey anodize, the shaft must be replaced prior to further flight.

B. Alternate means of compliance which provide an acceptable level of safety may be used when approved by the Manager, Western Aircraft Certification Office, FAA, Northwest Mountain Region.

C. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to ferry aircraft to a maintenance base in order to comply with the requirements of this AD.

All persons affected by this directive who have not already received the appropriate service information from the manufacturer may obtain copies upon request to Pacific Scientific Company, 1346 S. State College Boulevard, Anaheim, California 92803. These documents may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or at 15000 Aviation Boulevard, Hawthorne, California.

This amendment becomes effective October 26, 1987.

Issued in Seattle, Washington, on September 10, 1987.

Wayne J. Barlow,

Director, Northwest Mountain Region.

[FR Doc. 87–22221 Filed 9–25–87; 8:45 am]

14 CFR Part 71

[Airspace Docket No. 87–AWP–11]

Revision to the Sacramento Metropolitan Airport, CA; Control Zone

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action revises the Sacramento Metropolitan Airport, CA; control zone. Construction of a new runway parallel to the existing runway will be completed shortly. The airport reference point (ARP) will change and controlled airspace will be required for instrument landing system (ILS) and nondirectional radio beacon (NDB) instrument approaches to the new runway.

EFFECTIVE DATE: 0901 UTC, January 14, 1988.

FOR FURTHER INFORMATION CONTACT: Frank Torikai, Airspace and Procedures Branch, Air Traffic Division, Federal Aviation Administration (FAA), 15000 Aviation Boulevard, Lawndale, California 90261; telephone (213) 297–1648.

SUPPLEMENTARY INFORMATION:

History

On July 13, 1987, the FAA proposed to amend Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to revise the Sacramento Metropolitan Airport, CA; control zone (52 FR 26153). Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. Except for editorial changes, this amendment is the same as that proposed in the notice. Section 71.171 of Part 71 of the Federal Aviation Regulations was published in Handbook 7400.6C dated January 2, 1987.

The Rule

This amendment to Part 71 of the Federal Aviation Regulations revises the Sacramento Metropolitan, CA; control zone. The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 25, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Part 71 of the Federal Aviation Regulations (14 CFR Part 71) is amended, as follows:

PART 71—[AMENDED]

1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; E.O. 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 71.171 [Amended]

2. Section 71.171 is amended as follows:

Sacramento Metropolitan Airport, CA. [REVISED]

Within a 5-mile radius of the Sacramento Metropolitan Airport (lat. 38°41'44"N., long 121°35'23"W.), within 2.5 miles each side of the Runway 16R/34L localizer N and S courses, extending from the 5-mile radius zone to 6 miles north and south of the airport, within 2.5 miles each side of the Runway 16L/34R localizer N and S courses, extending from the 5-mile radius zone to 6 miles north and south of the airport, and including that airspace adjoining the Sacramento McClellan AFB, CA., and the Sacramento Municipal Airport, CA., control zones between lat. 38°44'43" N., and the Sacramento VORTAC 351° radial.

Issued in Los Angeles, California, on September 8, 1987.

James A. Holweger,

Assistant Manager, Air Traffic Division, Western-Pacific Region.

14 CFR Part 75

[Airspace Docket No. 87–AWA–6]

Alteration of Jet Routes, Expanded East Coast Plan; Phase II

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment alters the descriptions of four of eight jet routes located in the vicinity of New York that were published in the notice. These routes are part of an overall plan designed to alleviate congestion and compression of traffic in the airspace bounded by Eastern, New England, Great Lakes and the Southern Regions. However, due to numerous technical and administrative problems, only J–190, J–193, J–211 and J–221 will be implemented at this time. This amendment is part of Phase II of the Expanded East Coast Plan (EECP); Phase I was implemented February 12, 1987. The EECP is designed to make optimum use of the airspace along the east coast corridor. This action reduces en route and terminal delays in the Boston, MA; New York, NY; Miami, FL; Chicago, IL; and Atlanta, GA, areas, saves fuel and reduces controller workload. The EECP is being implemented in coordinated segments until completed.

EFFECTIVE DATE: 0901 UTC, November 19, 1987.

FOR FURTHER INFORMATION CONTACT: Lewis W. Still, Airspace Branch (ATO–240), Airspace-Rules and Aeronautical Information Division, Air Traffic Operations Service, Federal Aviation

Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267–9250.

SUPPLEMENTARY INFORMATION:

History

On July 8, 1987, the FAA proposed to amend Part 75 of the Federal Aviation Regulations (14 CFR Part 75) to alter the descriptions of Jet Routes J–174, J–190, J–191, J–193, J–208, J–209, J–211 and J–221 located in the vicinity of New York (52 FR 25607). Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. However, due to numerous technical and administrative problems, the FAA has determined that only J–190, J–193, J–211 and J–221 should be implemented at this time. The other four jet routes will be delayed until a later date. Except for editorial changes and the omission of four jet routes, this amendment is the same as that proposed in the notice. Section 75.100 of Part 75 of the Federal Aviation Regulations was republished in Handbook 7400.6C dated January 2, 1987.

The Rule

This amendment to Part 75 of the Federal Aviation Regulations alters the descriptions of four of eight jet routes located in the vicinity of New York that was published in the notice. These routes are part of an overall plan designed to alleviate congestion and compression of traffic in the airspace bounded by Eastern, New England, Great Lakes and the Southern Regions. This amendment is a part of Phase II of the EECP; Phase I was implemented February 12, 1987. The EECP is designed to make optimum use of the airspace along the east coast corridor. This action reduces en route and terminal delays in the Boston, MA; New York, NY; Miami, FL; Chicago, IL; and Atlanta, GA, areas, saves fuel and reduces controller workload. The EECP is being implemented in coordinated segments until completed.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 75

Aviation safety, Jet routes.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Part 75 of the Federal Aviation Regulations (14 CFR Part 75) is amended, as follows:

PART 75—ESTABLISHMENT OF JET ROUTES AND AREA HIGH ROUTES

1. The authority citation for Part 75 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510, E.O. 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); 14 CFR 11.69.

§ 75.100 [Amended]

2. Section 75.100 is amended as follows:

J–190 [Amended]

By removing the words "to Rockdale, NY." and substituting the words "Rockdale, NY; to Albany, NY."

J–193 [Revised]

From Wilmington, NC; Cofield, NC; Harcum, VA; to INT Harcum 006° and Hopewell, VA, 030° radials.

J–211 [Amended]

By removing the words "From Johnstown, PA, via INT Johnstown 129° and Westminster, MD, 292° radials; " and substituting the words "From Youngstown, OH; Johnstown, PA; INT Johnstown 129° and Westminster, MD, 292° radials;"

J–221 [Removed]

Issued in Washington, DC, on September 15, 1987.

SUPPLEMENTARY INFORMATION:

History

On July 8, 1987, the FAA proposed to amend Part 75 of the Federal Aviation Regulations (14 CFR Part 75) to establish Jet Routes J–213, J–215, J–223 and J–227 located in the vicinity of New York (52 FR 25609). Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No comments objecting to the proposal were received. However, due to numerous technical and administrative problems, the FAA has determined that only J–223 and J–227 should be implemented at this time. The other two jet routes will be delayed until a later date. Except for editorial changes and the omission of two jet routes, this amendment is the same as that proposed in the notice. Section 75.100 of Part 75 of the Federal Aviation Regulations was republished in Handbook 7400.6C dated January 2, 1987.

The Rule

This amendment to Part 75 of the Federal Aviation Regulations establishes two of four jet routes located in the vicinity of New York that was published in the notice. These routes are part of an overall plan designed to alleviate congestion and compression of traffic in the airspace bounded by Eastern, New England, Great Lakes and the Southern Regions. This amendment is a part of Phase II of the EECP; Phase I was implemented February 12, 1987. The EECP is designed to make optimum use of the airspace along the east coast corridor. This action reduces en route and terminal delays in the Boston, MA; New York, NY; Miami, FL; Chicago, IL; and Atlanta, GA, areas, saves fuel and reduces controller workload. The EECP is being implemented in coordinated segments until completed.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 75

Aviation safety, Jet routes.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Part 75 of the Federal Aviation Regulations (14 CFR Part 75) is amended, as follows:

PART 75—ESTABLISHMENT OF JET ROUTES AND AREA HIGH ROUTES

1. The authority citation for Part 75 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; Executive Order 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 75.100 [Amended]

2. Section 75.100 is amended as follows:

J-223 [New]

From LaGuardia, NY, via LaGuardia 310° and Elmira, NY, 100° radials; to Elmira.

J-227 [New]

From Armel, VA; INT Armel 001° and Elmira, NY, 193° radials; to Elmira.

Issued in Washington, DC, on September 15, 1987.

Daniel J. Peterson,

Manager, Airspace-Rules and Aeronautical Information Division.

BILLING CODE 4910-13-M

---

14 CFR Part 97

[Docket No. 25392; Amdt. No. 1357]

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: *Effective:* An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference—approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591;
2. The FAA Regional Office of the region in which the affected airport is located; or
3. The Flight Inspection Field Office which originated the SIAP.

For Purchase—

Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA-200), FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591; or
2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—

Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald K. Funai, Flight Procedures Standards Branch (AFS-230), Air Transportation Division, Office of Flight Standards, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone (202) 267-8277.

SUPPLEMENTARY INFORMATION: This amendment to Part 97 of the Federal Aviation Regulations (14 CFR Part 97) prescribes new, amended, suspended, or revoked Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR Part 51, and § 97.20 of the Federal Aviation Regulations (FARs). The applicable FAA Forms are identified as FAA Forms 8260-3, 8260-4, and 8260-5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form document is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to Part 97 is effective on the date of publication and contains separate SIAPs which have compliance dates stated as effective dates based on related changes in the National Airspace System or the application of new or revised criteria. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPs). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs is unnecessary, impracticable, and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Approaches, Standard instrument, Incorporation by reference.

Issued in Washington, DC, on September 18, 1987.

Robert L. Goodrich,

Director of Flight Standards.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Part 97 of the Federal Aviation Regulations (14 CFR Part 97) is amended by establishing, amending, suspending, or revoking Standard Instruction Approach Procedures, effective at 0901 G.m.t. on the dates specified, as follows:

PART 97—[AMENDED]

1. The authority citation for Part 97 continues to read as follows:

Authority: 49 U.S.C. 1348, 1354(a), 1421, and 1510; 49 U.S.C. 106(g) (revised, Pub. L. 97–449, January 12, 1983; and 14 CFR 11.49(b)(2)).

§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33 and 97.35 [Amended]

By amending: Section 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, ISMLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

. . . Effective January 14, 1988

Pago Pago, American Samoa—Pago Pago Intl, VOR/DME or TACAN–B, Amdt. 4

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1207

Standards of Conduct; Correction

AGENCY: National Aeronautics and Space Administration.

ACTION: Final rule, correction.

SUMMARY: A final rule entitled "Standards of Conduct" was published in the **Federal Register** on June 16, 1987 (52 FR 22755–22764). An error was made in the paragraph stating the procedure of how to include employees who are GM–13 or GS–13 in the category of employees who must file confidential statements of employment and financial interests. This is corrected below.

FOR FURTHER INFORMATION CONTACT: Elizabeth N. Siegel, 202 453–2465.

1. 14 CFR Part 1207.405 (a)(4) is correctly revised to read as follows:

§ 1207.405 [Corrected]

(a) * * *

(4) Employees classified below the GM–13 or GS–13 level under 5 U.S.C. 5332, or at a comparable pay level under other authority, and who are in positions which otherwise meet the criteria of § 1207.405(a)(1) or § 1207.405(a)(3), when designated in writing by the Designated Agency Ethics Official, after such designation has been justified in accordance with 5 CFR 735.403(d).

FEDERAL TRADE COMMISSION

16 CFR Part 13

[Docket C–3215]

Prohibited Trade Practices, and Affirmative Corrective Actions; American Hoechst Corporation, et al.

AGENCY: Federal Trade Commission.

ACTION: Consent order.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order requires, among other things, American Hoechst Corp. to divest certain polyester fiber businesses. The respondent must make the divestiture to a Commission-approved acquirer within one year and must obtain the Commission's prior approval for certain acquisitions for the next ten years.

DATE: Complaint and Order issued July 2, 1987.[1]

FOR FURTHER INFORMATION CONTACT: FTC/A–3302, Ronald B. Rowe, Washington, DC 20580. (202) 326–2610.

SUPPLEMENTARY INFORMATION: On Thursday, March 5, 1987, there was published in the **Federal Register,** 52 FR 6806, a proposed consent agreement with analysis In the Matter of American Hoechst Corporation, Hoechst Aktiengesellschaft, and Celanese Corporation, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions or objections regarding the proposed form of order.

Comments were filed and considered by the Commission. The Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

[1] Copies of the Complaint and the Decision and Order are available from the Commission's Public Reference Branch, H–130, 6th Street & Pennsylvania Avenue, NW., Washington, DC 20580.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows: Subpart—Acquiring Corporate Stock Or Assets: Section 13.5 Acquiring corporate stock or assets; S.13.5–20 Federal Trade Commission Act. Subpart—Corrective Actions And/Or Requirements: S.13.533 Corrective actions and/or requirements; S.13.533–45 Maintain records.

Prohibited Trade Practices, and Affirmative Corrective Actions; L'Air Liquide Societe Anonyme Pour L'Etude et L'Exploitation des Procedes Georges Claude

AGENCY: Federal Trade Commission.

ACTION: Consent order.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order requires, among other things, L'Air Liquide to divest some assets to resolve any antitrust concerns in the production and sale of liquid gases and to obtain prior Commission approval for similar acquisitions.

DATE: Complaint and Order issued July 15, 1987.[1]

FOR FURTHER INFORMATION CONTACT: FTC/S–2105, Ernest A. Nagata, Washington, DC 20580, (202) 326–2714.

SUPPLEMENTARY INFORMATION: On Tuesday, November 4, 1986, there was published in the **Federal Register**, 51 FR 40039, a proposed consent agreement with analysis In the Matter of L'Air Liquide Societe Anonyme Pour L'Etude Et L'Exploitation Des Procedes Georges Claude, a corporation, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions or objections regarding the proposed form of order.

A comment was filed and considered by the Commission. The Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered a modified order to divest, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows: Subpart—Acquiring Corporate Stock Or Assets: Section 13.5 Acquiring corporate stock or assets; S.13.5–20 Federal Trade Commission Act. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Social Security Administration

20 CFR Part 416

[Regulations No. 16]

Supplemental Security Income for the Aged, Blind, and Disabled; State Supplementation Provisions; Agreements; Payments; Mandatory Passalong of Federal Supplemental Security Income Benefit Increases to Recipients of State Supplementary Payments

AGENCY: Social Security Administration, HHS.

ACTION: Final rules.

SUMMARY: The final regulations provide the rules we will use to implement the amendments made to the passalong provisions of section 1618 of the Social Security Act (the Act) by section 186 of Public Law (Pub. L.) 97–248 (Tax Equity and Fiscal Responsibility Act of 1982), enacted September 3, 1982; section 147 of Pub. L. 97–377 (Fiscal Year 1983 Continuing Budget Resolution for the Department of Health and Human Services), enacted December 21, 1982; section 402 of Pub. L. 98–21 (Social Security Amendments of 1983), enacted April 20, 1983; and section 12201(a) of Pub. L. 99–272 (Consolidated Omnibus Budget Reconciliation Act of 1985), enacted April 7, 1986.

Generally, the passalong provisions of section 1618 of the Act require States that supplement the Federal supplemental security income (SSI) benefit to "pass along" Federal cost-of-living increases to individuals who are eligible for State supplementary payments. In order to meet the passalong requirements of the Act, States that make supplementary payments on or after June 30, 1977, must have in effect an agreement with the Secretary to continue making these supplementary payments and to keep them at certain levels. If a State does not have such an agreement in effect, or if the State has such an agreement but does not keep the payments at the required levels, the State is subject to loss of Medicaid reimbursement under title XIX of the Act. However, the State will not be found to be out of compliance with the passalong requirements because it did not keep its payments at a particular level if it maintains its total annual expenditures for State supplementary payments at an amount at least equal to its expenditures for such payments in the preceding 12-month period provided that the State was in compliance for such preceding 12-month period.

DATES: These rules are effective September 28, 1987, but the statutory changes which the regulations reflect were effective on the dates provided for by the legislation, namely; section 186 of Pub. L. 97–248, enacted September 3, 1982; section 147 of Pub. L. 97–377, enacted December 21, 1982; section 402 of Pub. L. 98–21, enacted April 20, 1983; and section 12201(a) of Pub. L. 99–272 enacted April 7, 1986. Because the rules implementing section 12201(a) of Pub. L. 99–272 (see § 416.2097(c)) were not included in the Notice of Proposed Rulemaking, we are publishing these rules as final rules but will consider any comments concerning that provision that we receive by November 27, 1987, and will revise such rules if public comment warrants.

ADDRESSES: Send your written comments to the Commissioner of Social Security, Department of Health and Human Services, P.O. Box 1585, Baltimore, Maryland 21203 or deliver them to the Office of Regulation, Social Security Administration, 3–A–3 Operations Building, 6401 Security Boulevard, Baltimore, Maryland 21235, between 8:00 a.m. and 4:30 p.m. on regular business days. Comments may be inspected during the same hours by making arrangements with the contact person below.

SUPPLEMENTARY INFORMATION:

Introduction

These regulations were published as a Notice of Proposed Rulemaking in the **Federal Register** on February 25, 1985 (50 FR 7607) with a 60-day comment period. A number of comments were received and are discussed under the heading titled *Discussion of Comments.* In addition to the changes made as a result of the comments, we made some minor clarifications to the regulations in order to make them easier to read and understand. The following regulations sections were clarified: 20 CFR 416.2096(c)(5), 416.2096(c)(3)(i); 416.2096(c)(3)(ii); 416.2097 (a) and (c); and 416.2098.

These regulations also implement section 12201(a) of Pub. L. 99–272 (Consolidated Omnibus Budget Reconciliation Act of 1985), which adds section 1618(f) to the Act and which was enacted subsequent to the notice of proposed rulemaking. We are including regulations reflecting this provision as final regulations but with an opportunity for public comment. The Department, even when not required by statute, as a matter of policy, generally follows the Administrative Procedure Act (APA) notice of proposed rulemaking and public comment procedures specified in 5 U.S.C. 553 in the development of its regulations. The APA provides exceptions to its notice and public comment procedures when an agency finds good cause for dispensing with such procedures on the basis that they are impracticable, unnecessary, or contrary to the public interest. Section 1618(f), as added by section 12201(a), provides a special rule for passalong compliance for the period January 1, 1984 through December 31, 1985 under which a State will not be found out of compliance for that period if in the period January 1, 1986 through December 31, 1986 its suppiementary payment levels are not less than its payment levels in effect in December 1976 increased by the percentage by which the Federal Benefit Rate has increased after December 1976 and before February 1986. The language of the statute is not subject to any interpretation. The regulation implementing section 12201(a) does not involve an exercise of discretion or administrative policy choice. It does not grant or deny rights beyond those provided by the statute. Accordingly, we have determined that under 5 U.S.C. 553(b)(3), good cause exists for waiver of notice of proposed rulemaking and public comment procedures on the regulations implementing section 1618(f) of the Act since opportunity for public comment is unnecessary.

Relationship of Federal SSI Benefit and State Supplementary Payment

Beginning January 1974, the SSI program replaced the Federal/State matching grant program of assistance to the aged, blind, and disabled. To assure that individuals converted to SSI from the State rolls received at least the same amount as before the conversion, the States were required to supplement the SSI payment to these individuals where necessary. In addition to these mandatory payments, the States could, at their election, provide optional supplementary payments to SSI recipients.

Purpose of the Passalong Provision

The purpose of the passalong provision of section 1618 of the Act is to encourage States to pass along to SSI beneficiaries the amount of any Federal benefit increase. Some States had not done this prior to enactment of section 1618 on October 21, 1976. Instead, when Congress enacted cost-of-living increases in the Federal SSI benefit amount, some States would reduce the levels of the State supplementary payments by the amount of the Federal benefit increase. Thus, the SSI beneficiaries in these States received the same combined Federal/State benefit they were receiving before the increase, and did not receive the additional money provided by the benefit increase.

Description of the Passalong Provision

The original passalong provisions of section 1618 of the Act required States that supplemented Federal SSI benefits to "pass along" Federal cost-of-living increases to individuals eligible for State supplementary payments. To meet the passalong requirements, a State that makes supplementary payments on or after June 30, 1977 must, under an agreement with the Secretary, continue making the payments and keep them at certain levels. If the State does not comply it is subject to loss of Medicaid reimbursement under Title XIX of the Act. A State will not be found out of compliance with the requirement that it maintain its payments at certain levels with respect to any particular month or months if it maintains its total expenditures for supplementary payments in the 12-month period within which the month or months fall, beginning on the effective date of any increase in the level of SSI benefits pursuant to section 1617, at least equal to its expenditures for such payments in the preceding 12-month period provided that the State was in compliance for such preceding 12-month period.

Amendments to Passalong Provision

Congress, over the past 4 years, has enacted four amendments to section 1618 of the Act.

Section 186 of Pub. L. 97–248 (section 1618(c) of the Act) permitted a State which had not maintained all its December 1976 payment levels, but had been meeting the passalong requirements through total annual expenditures, to switch to the maintenance-of-payment-levels method without having to pass along all the Federal cost-of-living increases that had occurred since December 1976. Prior to the enactment of section 1618(c), for months from July 1, 1977 through June 30, 1982, a State shifting from the total-annual-expenditures method to the maintenance-of-payment-levels method was required to maintain its supplementary payments at levels at least equal to its December 1976 levels or, if a State first made supplementary payments after December 1976, the levels for the first month the State made supplementary payments. However, section 1618(c) provided that for any period beginning after June 30, 1982, a State switching to the maintenance-of-payment-levels method could elect to maintain the payment levels in effect in the immediately preceding December rather than those in effect in either December 1976 or in the first month thereafter that the State began making such payments. Because of the interaction of section 402 of Pub. L. 98–21 (discussed below) with section 186 of Pub. L. 97–248, section 1618(c) was applicable only to the period from July 1, 1982, through March 31, 1983, and the only December a State switching from the total-annual-expenditures method to the maintenance-of-payment-levels method could use was December 1981.

Section 147 of Pub. L. 97–377 (section 1618(d) of the Act) created a special method of compliance for meeting the passalong requirements of section 1618 of the Act by the total-annual-expenditures test for the period July 1, 1980 through June 30, 1981. Under this provision, the total expenditures for that period must only have equaled or exceeded the total expenditures for July 1, 1976 through June 30, 1977, rather than the total expenditures for the preceding 12-month period. As noted above, this provision did not become effective until December 21, 1982. Therefore, we will

give credit to States which already had made additional payments (prior to the enactment of section 147 of Pub. L. 97–377) in order to make up shortfalls for the July 1, 1980 through June 30, 1981 period, if the States so request. This credit will be limited to the amount of "excess" payments made by the State and will be applied to any shortfall(s) in total expenditures (should one exist) in any period(s) ending on or before December 31, 1986. A 3-year period has been selected to parallel the exception for shortfall States formerly provided in § 416.2096(c) of the regulations for the three 12-month periods ending before July 1980. Also, the 3-year period imposes a limit that is long enough to provide the States with some flexibility and yet short enough so that we can close these periods and resolve the accounts. This is noted in § 416.2096(c)(3)(ii) of the final regulations. This policy was explained in the preamble of the Notice of Proposed Rulemaking but was inadvertently omitted from the regulation itself.

Section 402 of Pub. L. 98–21 (section 1618(e) of the Act) changed the measure for determining passalong compliance from a concept of "State supplementary payment level" to a concept of a "combined level" of State supplementary payments and Federal SSI payments and established the March 1983 combined level as the base for compliance for months after March 1983. The purpose of this change was twofold: to prevent States on the total-expenditures method of compliance from reverting to December 1976 or other levels below the March 1983 levels; and to require that States maintaining supplementary payment levels pass along that part of the July 1983 Federal SSI benefit increase that would have occurred had there been a cost-of-living increase in July 1983.

Section 401 of Pub. L. 98–21 amended section 1617 of the Act to provide for an increase in SSI benefit rates effective July 1, 1983. The passalong provisions of section 1618(b) of the Act refer to total expenditures for State supplementary payments in a 12-month period beginning on the effective date of any Federal SSI benefit increase pursuant to section 1617 of the Act. Prior to July 1983, all section 1617 increases were cost-of-living adjustments (COLA's) and are referred to as such in the existing regulations. The July 1983 general Federal SSI benefit increase was not a COLA, but it did take place pursuant to section 1617 of the Act. For this reason, the passalong provisions of section 1618(b) apply to the July 1983 Federal SSI benefit increase.

Section 111 of Pub. L. 98–21 provides in effect that future COLA's in SSI benefits will occur in January rather than July as they had in the past. Therefore, the current and immediately preceding 12-month periods for passalong compliance under the total-expenditures test will run from January through December, beginning January 1, 1984. This change in the effective date for future COLA's from July 1 to January 1 caused a transitional 6-month period to occur that does not appear to have been contemplated by the passalong statute, which measures compliance in 12-month periods beginning with the effective date of each increase in the federal SSI benefit rate pursuant to section 1617 of the Act. That 6-month period is July 1, 1983 through December 31, 1983. Section 416.2096(c)(3)(i) of the final regulations provides a special rule for compliance under the total-expenditures test for this 6-month period. This rule is explained under *Discussion of Comments.*

Section 12201(a) of Pub. L. 99–272 (section 1618(f) of the Act) provided a special method of compliance for the period January 1, 1984 through December 31, 1985. A State will not be found out of compliance for that period if in the period January 1, 1986 through December 31, 1986, its supplementary payment levels are not less than its supplementary payment levels in effect in December 1976 increased by the percentage by which the Federal Benefit Rate has increased after December 1976 and before February 1986.

Revisions to the Regulations

We have updated § 416.2095 to reflect the reorganization of this subpart.

In § 416.2096(a), we discuss the State agreement with the Secretary. Basically, the State must have in effect an agreement with the Secretary to continue making supplementary payments at certain levels. For months prior to April 1983, these levels must have been either the levels in effect in December 1976 or, if newly established payments, the levels in effect for the first month of payment, or, in certain circumstances, the levels in effect in December 1981. For months beginning April 1983, the supplementary payment levels must be such as to maintain the combined supplementary/SSI payment levels of March 1983, increased by any subsequent Federal SSI benefit increases except that a State need pass along only a portion of the July 1, 1983, increase to the Federal Benefit Rate (FBR) and essential person increment. Effective July 1, 1983, the FBR was increased $20/$30 for an individual/couple and the essential person increment increased by $10. While these increases are not actually cost-of-living increases, they are increases pursuant to section 1617 of the Act and are, therefore, subject to the passalong requirements of section 1618 of the Act. A State was required to pass along only $9.70/$14.60 (individual/couple) and raise the essential person increment by $4.50. This represents the amount by which the FBR and essential person increment would have increased had there been a COLA (3.5 percent) effective July 1, 1983. A State could reduce its supplement by any amount up to $10.30/$15.40 (individual/couple) and reduce the essential person increment by up to $5.50.

If a State does not maintain these levels, but does make total State supplementary payments during a 12-month period that are at least equal to the expenditures for such payments made in the 12-month period before a Federal benefit increase, we will consider the State to have complied with the passalong requirements provided that the State was in compliance for such preceding 12-month period. We have also revised § 416.2096 to provide for a special 6-month transition period (July 1, 1983 through December 31, 1983) for total expenditures purposes. This is necessary to effectuate properly the provision of Pub. L. 98–21 whereby SSI cost-of-living increases beginning with 1984 occur in January rather than July, as discussed above, which caused a cost-of-living increase to occur on January 1, 1984—6 months following the previous SSI benefit increase.

In an effort to avoid passing along to SSI recipients the July 1983 Federal benefit increase, some States, which had not maintained all their December 1976 supplementary payment levels, but which had increased some of their supplementary payment levels, might have switched from the total expenditures test (which they had been meeting to comply with the passalong requirements) to maintenance of their December 1976 or other levels lower than their March 1983 levels. To prevent States from doing this, Congress introduced in section 1618(e), as added by Pub. L. 98–21, the concept of the combined supplementary/SSI payment level and established the March 1983 combined level for payment level passalong compliance purposes. Section 416.2096(b) was revised to reflect this provision.

We have deleted from the regulations the exception found at § 416.2096(c)(3)

VOL 52 ISS 187 SEP 28 1987 UMI

for compliance with the passalong requirements under the total-expenditure test for the three 12-month periods ending before July 1980, because this exception has become obsolete due to passage of time.

In § 416.2097, a new section, we provide that in order for a State to comply by the payment-levels method the combined supplementary/SSI payment level for each payment category must at least equal the total of the Federal SSI benefit and State supplementary payment that a recipient with no countable income received for March 1983, increased by the amount of all subsequent SSI Federal benefit increases (including cost-of-living increases) except that we use for the amount of the July 1983 increase the amount (3.5 percent) by which the Federal benefit rate would have increased had there been a COLA. For months after March 1983, States that choose to comply by a means other than the total-expenditures test must maintain these combined March 1983 levels in order to comply with the passalong requirements.

For months prior to April 1983, the rules for passalong compliance are based on the definition of "supplementary payment level". In § 416.2098(f), we continue to define the December 1976 (or later month if it was the first month of supplementation) supplementary payment level as the amount of the supplementary payment established by the State that an individual in each payment category received in the State in December 1976 (or later month if it was the first month of supplementation) if the individual had no countable income. States must have maintained these levels to comply with the passalong requirements.

For example, the Federal SSI benefit amount in December 1976 for an individual living in his or her own household and having no income was $167.80 per month. If a State made a $50 per month optional State supplementary payment to individuals in this situation, they would receive a total payment of $217.80 per month under the SSI program. In July 1977, the Federal cost-of-living increase was $10 and the Federal SSI benefit amount was increased to $177.80 per month. Under these circumstances, a State would maintain the level of its supplementary payment if the State continued to make a $50 per month supplementary payment above the Federal SSI benefit to individuals in this situation. Thus, the individuals would receive a total payment of $227.80 per month under the SSI program, and the Federal cost-of-living increase of $10 per month would be passed along to them.

Pub. L. 97–248 made one change as to what month's supplementary payment level a State could maintain under certain conditions and still comply with the payment-levels test. Section 186 of Pub. L. 97–248, effective September 3, 1982, provided that when a State had not maintained one or more of the December 1976 supplementary payment levels but, instead, had met the total-expenditures test for a particular 12-month period and decided to switch to the maintenance-of-payment levels test for the next 12-month period, the State could elect to maintain all its supplementary payment levels in effect in the preceding December instead of the December 1976 levels, provided that the preceding December was subsequent to 1980. Because of the interaction of section 402 of Pub. L. 98–21 with section 186 of Pub. L. 97–248, this option could be applied only for the period July 1, 1982, through March 31, 1983, and the only supplementary payment levels which could be elected instead of those which were in effect in December 1976 were those which were in effect in December 1981. Section 416.2098(b)(2) reflects this change.

In § 416.2099 (formerly § 416.2098), we discuss what we will require the States to do to show that they are complying with the passalong rules. Generally, a State must keep records and provide information about: (1) Its supplementary payment levels in December 1976 or, if no supplementary payments were made in December 1976, the first month such payments were or are made; (2) its March 1983 supplementary payment levels; (3) its total expenditures for supplementary payments for the 12-month period beginning July 1976 through June 1977 and the following 12-month periods, as well as its advance estimates of the total State supplementary payment expenditures for each 12-month period covered by the passalong agreement between the State and the Secretary; and (4) its total expenditures for supplementary payments in the 6-month period July 1983 through December 1983. If a State is not complying with the passalong rules, the State will be subject to a finding by the Secretary of ineligibility for payments under title XIX (Medicaid) of the Act.

Discussion of Comments

As previously indicated, we received a number of comments on the Notice of Proposed Rulemaking published in the **Federal Register** on February 25, 1985 (50 FR 7607). A summary of the comments and our responses follows.

Comment: One State suggested that paragraph (4) of § 416.2097 be clarified, or that we add a paragraph which would provide that State payments should be counted for passalong purposes in the month of entitlement when the State can document such month and the month of issuance if the entitlement month cannot be identified.

Response: The State's comment obviously applies to § 416.2096(c)(4) since § 416.2097 has no paragraph (4). Our policy, as reflected in § 416.2096(c)(4), has been to count the payment in the 12-month period in which it is processed (paid). The only instance in which we count payments made in the current 12-month period for a previous period is when the payments are made to correct a shortfall. In such an instance the payments are counted (included) as payments in the shortfall period only. (See § 416.2096(c)(5)). We do not believe a change in our present procedures would be beneficial to the States or to the SSI program. We must have a final cut-off date for each 12-month period since we cannot continue to reopen closed periods. If we reopened closed periods we would be increasing base-year amounts against which succeeding 12-month periods must be measured.

Comment: One commenter stated that it is unclear how court ordered retroactive payments will be treated for passalong purposes under § 416.2096(c)(5). Will the payments be recorded in the period in which the payments are made, thus inflating the State's expenditures in the current 12-month period, or will they be apportioned over the periods to which the court order applies?

Response: Section 416.2096(c)(5) provides that total State expenditures for a relevant 12-month period include adjustments made after the expiration of the relevant 12-month period if the payments are made to correct a shortfall. This is the only exception provided in the regulations to our general policy that State payments are attributed to the periods in which they are actually made. We believe the regulation is clear, i.e., there is no additional exception for court ordered retroactive payments. Therefore, court ordered retroactive payments will be recorded in the period in which the payments are made. Historically, all State supplementary payments have been recorded on the cash basis of accounting. As stated in the previous response, we cannot continually reopen closed periods. Therefore, § 416.2096(c)(5) is not being revised.

Comment: Two States suggested that for the July-1, 1983 through December 31, 1983, period (the transitional 6-month period) an additional comparison period or periods be permitted for those States complying with section 1618 of the Act by the total-expenditures method. The States requested that, for compliance purposes, total expenditures for the period January 1, 1983 through December 31, 1983, be at least as much as the total expenditures in the period January 1, 1982 through December 31, 1982. An additional comparison period suggested is to compare total expenditures for July 1, 1983 through December 31, 1983, with expenditures for July 1, 1982 through December 31, 1982.

Response: After considering the implications of these comments we are revising § 416.2096(c)(3)(i) to include two additional comparison periods. They are: (1) That total expenditures for State supplementary payments in the 12-month period January 1, 1983 through December 31, 1983, must be at least as much as in the 12-month period January 1, 1982, through December 31, 1982; or (2) that total expenditures for State supplementary payments in the 6-month period July 1, 1983 through December 31, 1983, must be at least as much as in the 6-month period July 1, 1982 through December 31, 1982. As provided in the Notice of Proposed Rulemaking a third comparison period would require that total expenditures for State supplementary payments in the 6-month period July 1, 1983 through December 31, 1983, be at least equal to one-half of the total expenditures for the period July 1, 1982 through June 30, 1983. Since it appears that Congress did not contemplate this 6-month period, the choice of comparison periods is a matter within the Secretary's authority to issue regulations that are necessary for efficient administration of the Act. Use of each of the three periods described above for purposes of passalong compliance for the 6-month transitional period is consistent with section 1618(b) of the Act, which measures compliance for total-expenditure States by the amount expended in the preceding period. Since the 6-month period overlaps two 12-month periods (July 1, 1983 through June 30, 1984 and January 1, 1983 through December 31, 1983), it is appropriate to provide several alternative comparison periods.

Comment: One State requested both a credit and that the final regulations provide for credit for State supplementary payments expended during the 12-month period July 1, 1981, through June 30, 1982, to make up a shortfall for the 12-month period July 1, 1980 through June 30, 1981. The State further requested that credits used to make up the shortfall not be added to a calendar year's total expenditures in measuring future compliance.

Response: We have provided for credits to States which made additional payments (prior to the enactment of section 147 of Pub. L. 97–377) in order to make up shortfalls for the July 1, 1980 through June 30, 1981, period. Credits must have been used by December 31, 1986. Once a base year expenditure amount under the total-expenditures method of compliance has been established, it cannot be decreased while the State remains on this method of compliance. If, in the succeeding calendar year, the State spends less than it spent in the prior year, a shortfall results. Credits are then used to increase the current year expenditures to the base year amount. The base year has not changed. To permit a State to use the amount expended prior to the addition of the credits as a new (and lower) base year would reduce the base-year amount for future years. This would clearly be inequitable to recipients.

Comment: One State requested that a "good faith effort" provision be incorporated in the regulations to cover the July 1, 1983 through December 31, 1983, period. The State was unaware of the fact that, under the payment-level method of compliance, at least a portion of the July 1, 1983, Federal benefit increase was required to be passed along to all recipients. It further stated that misinformation and lack of understanding on its part resulted in a reduction of a payment level. It also points out that a lack of published regulations also hindered its ability to make the proper decision to pass along the increase.

Response: Almost simultaneously with passage of the 1983 amendments, all States were notified that while the July 1, 1983, increase in the Federal benefit rate was not a cost-of-living adjustment (COLA) it took place pursuant to section 1617 of the Act. We notified all States in writing that they were required to pass along at least that portion of the increase that would have been required had there been a COLA in July 1983 (3.5 percent). Only seven States were out of compliance for the transitional 6-month period and were so notified by the Secretary. Since the other States have complied with the passalong requirements for this period, it would not be equitable to incorporate a "good faith effort" provision into the regulations.

Because these final regulations are being published after the close of this 6-month period and include additional compliance periods, we will soon be notifying States of the exact amount of their shortfalls. For this reason also, we are granting States additional time to correct any shortfalls. Any State with a shortfall for the transitional 6-month period must either restore retroactively the deficient payment levels to the March 1983 level or March 1983 level as adjusted (payment-level States) or increase payments to recipients in the current calendar year (total-expenditures States) by December 31, 1987.

Comment: One commenter does not believe the interpretation placed on section 402 of Pub. L. 98–21 (that the March 1983 payment levels must be maintained) is in compliance with the wording of the law or the intent of Congress. The commenter believes it was the intent of Congress to lock into regulation the March 1983 payment level for those States which had, at some point after 1977, reduced benefits below the December 1976 level and met the passalong requirements with aggregate expenditures.

Response: We do not agree with the above interpretation. This interpretation would permit the continued use of December 1976 State supplementary payment levels to satisfy the passalong requirements (section 1618(a)(4)).

The legislative history of section 402 of Pub. L. 98–21 clearly supports our position that the March 1983 levels are those that now must be maintained. The House bill substituted the State supplementary payment levels in effect in March 1983 for those in effect in December 1976 as the levels States must maintain to comply with the passalong requirements. The Senate amendment would have given States the option of maintaining either December 1976 levels or March 1983 levels. The Conference Committee rejected the Senate amendment, agreeing instead to follow the House version. *See* H.R. Rep. No. 47, 98th Cong., 1st Sess. 165–166 (1983).

Therefore, while section 1618(a)(4) of the Act still refers to levels in effect for December 1976 (in reference to payment-level States) the law does not provide these levels as bench marks for months after March 1983. For months after March 1983 a State which elects the payment level(s) method for complying with section 1618 of the Act must maintain the combined Federal/State payment level(s) in effect in March 1983 increased by all federal cost-of-living adjustments occurring subsequent to March 1983 except that a State need

1987
UMI

passalong only a portion of the July 1, 1983, increase in the FBR's as discussed above.

Comment: One commenter believes that section 402 of Pub. L. 98–21 was only intended to update the payment level standard set forth in section 1618(a)(4) and was not intended to foreclose States from meeting passalong requirements under section 1618(c) of the Act. The commenter contends that a State which complies by the total-expenditures method for any period on or after June 30, 1982, may switch to the maintenance-of-payment-levels method of compliance if it maintains the payment levels in effect during December of the immediately preceding 12-month period. A State which complied with the payment-level standard of section 1618(a)(4) must, for months after March 1983, maintain payment levels in accordance with the combined-levels method set forth in section 1618(e).

Response: We do not believe that section 1618(e), as added by section 402 of Pub. L. 98–21 must be applied so narrowly. The combined supplementary-payment-level standard of section 1618(e) is applicable to "a State which is not treated as meeting the requirements imposed by paragraph (4) of subsection (a) by reason of subsection (b) * * *." In other words, a State meeting the basic passalong payment-level requirement of section 1618(a)(4) by a method other than by maintaining total annual expenditures for supplementary payments under section 1618(b), must maintain its payment levels in accordance with section 1618(e). Since a State that satisfies passalong by complying with the "previous December" payment-level-method of section 1618(c) would be a State "not treated as meeting the requirements imposed by paragraph (4) of subsection (a) by reason of subsection (b) * * *," such a State would appear from this language to now be required to comply with the payment level provisions of section 1618(e) rather than the "previous December" payment levels set forth in section 1618(c). Furthermore, section 1618(e) provides that for any months after March 1983, a State shall be treated as meeting the basic passalong requirement of section 1618(a)(4) "if and only if" it maintains the March 1983 combined levels together with the July 1983 passalong amount of section 1618(e)(2) and any subsequent increases in the Federal SSI benefit. The language "if and only if" stresses that Congress intended for there to be no exception to the March 1983 passalong level requirement, such as the December 1976 level requirement of section 1618(a)(4) or the previous December level requirement of section 1618(c).

In addition to the express language of section 1618(e), the legislative history of that section also provides some indication of the intent of the legislature with respect to the continued applicability of section 1618(c). In this regard, the differences in the Senate version of section 1618(e) of the Act from the version proposed by the House Bill, as summarized in the Conference Committee Report on H.R. 1900, dated March 24, 1983 (H.R. Rep. No. 98–47, 98th Cong., 1st Sess. 165, 166 (1983)) are most significant. Both the House and Senate versions continued the aggregate-spending-level option of section 1618(b) of the Act without change. As to the supplementary-payment-level option, however, the Senate version retained the December 1976 requirement of section 1618(a)(4) of the Act as well as the "previous December" option of section 1618(c) of the Act and made the March 1983 standard yet a third method for compliance available to the States, rather than a substitute for the December 1976 payment-level option. On the other hand, the House Bill required States which opt for maintaining supplementary payment levels to maintain March 1983 levels plus the July 1983 passthrough amount plus all subsequent increases in the FBR, in lieu of maintaining the December 1976 levels.

The Conference Committee rejected the Senate Amendment, which provided for the continuance of section 1618(c) of the Act and recommended adoption without change of the House Bill, which made clear that States which elect to meet the passthrough requirement by recourse to the supplementary-payment-levels option must, without exception, comply with the new March 1983 standard. Thus, in passing the House Bill into law, Congress abandoned section 1618(c) of the Act in favor of a uniform March 1983 supplementary-payment-level standard applicable to all States which meet the passthrough requirement by maintaining supplementary payment levels.

Moreover, under the commenter's approach, two classes of States meeting passalong requirements under the levels test could be created over time: those that were required to meet the precise test of 1618(e), and those that would be permitted to use as the basis for subsequent passalong compliance whatever their previous December levels happened to be. Since under Pub. L. 98–21, total-expenditure compliance is now measured for the period January through December, those levels could be significantly below the combined levels required under section 1618(e). Since such a result could seriously undermine the purpose of the passalong provision, which is to protect recipients from erosion of their benefits, we do not believe that the statute must be read to authorize it.

Regulatory Procedures

Executive Order 12291

The Secretary has determined that this is not a major rule under Executive Order 12291 because these regulations do not create any costs. Therefore, a regulatory impact analysis is not required.

Regulatory Flexibility Act

We certify that these final regulations will not have a significant economic impact on a substantial number of small entities because they affect only individuals and States. Therefore, a regulatory flexibility analysis as provided in Pub. L. 96–354, the Regulatory Flexibility Act, is not required.

Paperwork Reduction Act of 1980

Section 416.2099 of this final rule contains information collection requirements. As required by section 3504(h) of the Paperwork Reduction Act of 1980, we submitted a copy of the proposed rule to the Office of Management and Budget (OMB) for its review of these information collection requirements. Other organizations and individuals desiring to submit comments on the information collection requirements were requested to send them to us and to the Office of Information and Regulatory Affairs, OMB, Room 3208, New Executive Office Building, Washington, DC 20503, ATTN: Robert J. Fishman. No comments were received on the information collection requirements.

Section 416.2099 was formerly § 416.2098, and this section has been approved by the Office of Management and Budget, approval number 0960–0240.

Otis R. Bowen,

Secretary of Health and Human Services.

Part 416 of Title 20 of the Code of Federal Regulations is amended as follows:

PART 416—[AMENDED]

1. The authority citation for Subpart T of Part 416 continues to read as follows:

Authority: Secs. 1102, 1616, 1618, and 1631 of the Social Security Act; 42 U.S.C. 1302, 1382e, 1382g, and 1383; sec. 212 of Pub. L. 93–66, 87 Stat. 155; sec. 401 of Pub. L. 92–603, 86 Stat. 1485; sec. 8 of Pub. L. 93–233, 87 Stat. 956; secs. 1 and 2 of Pub. L. 93–335, 88 Stat. 291.

2. Section 416.2095 is revised to read as follows:

§ 416.2095 Passalong of Federal benefit increases.

(a) *General.* This section and the four sections that follow describe the rules for passing along increases in the Federal SSI benefit to recipients of State supplementary payments.

(1) Section 416.2095(b) indicates when the passalong rules apply to State supplementary payments.

(2) Section 416.2096 describes the basic passalong rules. The States must have an agreement to "pass along" increases in Federal SSI benefits. A State passes along an increase when it maintains (rather than decreases) the levels of all its supplementary payments after a Federal benefit increase has occurred. Generally, a passalong of the increase permits recipients to receive an additional amount in combined benefits equal to the Federal benefit increase. A State can decrease one or more of its payment levels if it meets an annual total expenditures test.

(3) Section 416.2097 explains the required combined supplementary/SSI payment level.

(4) Section 416.2098 explains how to compute the March 1983, December 1981, and December 1976 supplementary payment levels.

(5) Section 416.2099 discusses what information a State must provide to the Secretary concerning its supplementation programs so that the Secretary can determine whether the State is in compliance. That section also discusses the basis for findings of noncompliance and what will occur if a State is found out of compliance.

(b) *When the passalong provisions apply.* (1) The passalong requirements apply to all States (and the District of Columbia) that make supplementary payments on or after June 30, 1977, and wish to participate in the Medicaid program.

(2) The passalong requirements apply to both optional State supplementary payments of the type described in § 416.2001(a) and mandatory minimum State supplementary payments as described in § 416.2001(c), whether or not these State supplementary payments are Federally administered.

(3) The requirements apply to State supplementary payments both for recipients who receive Federal SSI benefits and those who, because of countable income, receive only a State supplementary payment.

(4) The requirements apply to State supplementary payments for recipients eligible for a State supplementary payment on or after June 30, 1977.

(5) Supplementary payments made by a State include payments made by a political subdivision (including Indian tribes) where—

(i) The payment levels are set by the State; and

(ii) The payments are funded in whole or in part by the State.

3. Section 416.2096 is revised to read as follows:

§ 416.2096 Basic passalong rules.

(a) *State agreements to maintain supplementary payment levels.* (1) In order to be eligible to receive Medicaid reimbursement, any State that makes supplementary payments on or after June 30, 1977, must have in effect an agreement with the Secretary. In this agreement—

(i) The State must agree to continue to make the supplementary payments;

(ii) For months from July 1977 through March 1983, the State must agree to maintain the supplementary payments at levels at least equal to the December 1976 levels (or, if a State first makes supplementary payments after December 1976, the levels for the first month the State makes supplementary payments). For months in the period July 1, 1982 through March 31, 1983, a State may elect to maintain the levels described in paragraph (b)(2) of this section; and

(iii) For months after March 1983, the State must agree to maintain supplementary payments at least sufficient to maintain the combined supplementary/SSI payment levels in effect in March 1983, increased by any subsequent SSI benefit increases, except as provided in § 416.2097(b) and § 416.2097(c).

(2) We will find that the State has met the requirements of paragraph (a)(1) of this section if the State has the appropriate agreement in effect and complies with the conditions in either paragraph (b) or (c) of this section. We will consider a State to have made supplementary payments on or after June 30, 1977, unless the State furnishes us satisfactory evidence to the contrary.

(b) *Meeting the passalong requirement—supplementary payment levels.* (1) We will consider a State to have met the requirements for maintaining its supplementary payment levels (described in § 416.2098) for a particular month or months after March 1983 if the combined supplementary/SSI payment levels have not been reduced below the levels in effect in March 1983 (or if a State first made supplementary payments after March 1983, the combined supplementary/SSI payment levels in effect the first month the State made supplementary payments), increased by any subsequent Federal SSI benefit increases, except as provided in § 416.2097(b) and § 416.2097(c). We will consider a State to have met the requirements for maintaining its supplementary payment levels for a particular month or months between June 1977 and April 1983 if the supplementary payment levels have not been reduced below the levels in effect in December 1976 (or if a State first made supplementary payments after December 1976, the levels in effect the first month the State made supplementary payments, or in certain cases described in paragraph (b)(2) of this section, the levels in effect in December 1981.)

(2) We will also consider a State to have met the requirements for maintaining its supplementary payment levels for a particular month or months in the period July 1, 1982, through March 31, 1983, if the State had met the requirements of paragraph (c) of this section for a particular month or months in the 12-month period July 1, 1981 through June 30, 1982, and, with respect to any month in the period July 1, 1982 through March 31, 1983, the State maintained the payment levels in effect in December 1981.

(3) If a State reduced any of its supplementary payment levels for a month or months within any 12-month period beginning with the effective date of a Federal benefit increase, we will consider the State to have met the requirement to maintain its supplementary payment levels if—

(i) Within 12 months after the relevant 12-month period, the State restores the levels retroactively; and

(ii) The State makes a single retroactive benefit payment to each of

VOL 52 ISS 187 SE 28 1987 UMI

the beneficiaries eligible for the retroactive payment.

(c) *Meeting the passalong requirement—total expenditures.* (1) If a State does not meet the conditions in paragraph (b) of this section, we will consider a State to have met the requirement for maintaining supplementary payment levels for a particular month or months if total State expenditures for supplementary payments in the 12-month period within which the month or months fall, beginning on the effective date of a Federal SSI benefit increase, are at least equal to the total State expenditures for supplementary payments in the 12-month period immediately before the Federal SSI benefit increase provided that the State was in compliance for such preceding 12-month period. The combined Federal/State payment level for those persons receiving a mandatory minimum State supplementary payment can be no lower than the recipient's total income for December 1973 as defined in section 212(a)(3)(B) of Pub. L. 93–66.

(2) If total State expenditures in the relevant 12-month period are less than the total expenditures in the preceding 12-month period (a "shortfall"), we also will consider a State to have met the requirement for maintaining supplementary payment levels for the relevant 12-month period if in the following 12-month period the State increases the total expenditures required for that period by an amount at least equal to the amount of the shortfall in the relevant 12-month period. The increased amount up to the amount needed to correct the shortfall shall be deemed to be an expenditure in the relevant 12-month period, for passalong purposes only. (See paragraph (c)(5) of this section.)

(3)(i) Exception for the 6-month period from July 1, 1983 through December 31, 1983: We will consider the State to have met the total-expenditures requirement for the 6-month period July 1, 1983 through December 31, 1983, if—

(A) Total expenditures for State supplementary payments for the period July 1, 1983 through December 31, 1983, equal or exceed the total of such expenditures for the period July 1, 1982 through December 31, 1982;

(B) Total expenditures for State supplementary payments for the period January 1, 1983 through December 31, 1983, equal or exceed the total of such expenditures for the period January 1, 1982 through December 31, 1982; or

(C) Total expenditures for State supplementary payments for the period July 1, 1983 through December 31, 1983 equal or exceed one-half of the total of such expenditures for the period July 1, 1982 through June 30, 1983. The provisions of paragraphs (c)(4) and (c)(5) of this section and of § 416.2099 (b), (c), and (d) shall apply to this 6-month period in the same manner as they apply to the 12-month periods referred to therein.

(ii) Exception for the 12-month period ending June 30, 1981: If a State did not meet the conditions in paragraph (b) of this section, we will consider a State to have met the maintenance-of-supplementary-payment-levels requirement for this 12-month period if the State's expenditures for supplementary payments in that period were at least equal to its expenditures for such payments for the 12-month period ending June 30, 1977 (or, if the State made no supplementary payments in that period, the expenditures for the first 12-month period ending June 30 in which the State made such payments); if a State made additional State supplementary payments during the period July 1, 1981 through June 30, 1982, in order to make up a shortfall in the 12-month period ending June 30, 1981 (determined by a comparison with the preceding 12-month period) which later resulted in an excess payment (determined by comparison with the 12-month period July 1, 1976 through June 30, 1977) we will credit the State with the amount of the excess payments if the State so requests. This credit will be applied to any shortfall(s) in total expenditures (should one exist) in any period(s) ending on or before December 31, 1986.

(4) Total State expenditures for supplementary payments are the State's total payments for both mandatory minimum and optional State supplementary payments in the appropriate 12-month period less any amounts deemed to be expenditures for another 12-month period under paragraph (c)(2) of this section, less the amount of any payments recovered and other adjustments made in that period. Total State expenditures do not include State administrative expenses, interim assistance payments, vendor payments, or payments made under other Federal programs, such as Titles IV, XIX, or XX of the Social Security Act.

(5) Adjustments in total State supplementary payments made after the expiration of the relevant 12-month period for purposes of meeting total State expenditures under paragraph (c) of this section shall be considered a State expenditure in the relevant 12-month period only for purposes of the passalong requirement. For purposes of § 416.2080, which discusses the rules for limitation on fiscal liability of States (hold harmless), these retroactive adjustments are State expenditures when made and shall be counted as a State expenditure in the fiscal year in which the adjustments are made.

4. Sections 416.2097 and 416.2098 are redesignated as §§ 416.2098 and 416.2099, a new § 416.2097 is added and, as redesignated, § 416.2098 and paragraph (a) of § 416.2099 are revised. As amended, §§ 416.2097, 416.2098, and 416.2099 read as follows:

§ 416.2097 Combined supplementary/SSI payment levels.

(a) The combined supplementary/SSI payment level for each payment category that must be provided in any month after March 1983 (or if a State first made supplementary payments after March 1983, the combined supplementary SSI payment levels in effect the first month the State made supplementary payments) in order for a State to meet the requirement of the first sentence of § 416.2096(b) is the sum of—

(1) The SSI Federal benefit rate (FBR) for March 1983 for a recipient with no countable income;

(2) That portion of the July 1983 benefit increase computed in accordance with paragraph (b) of this section;

(3) The full amount of all SSI benefit increases after July 1983; and

(4) The State supplementary payment level for March 1983 as determined under § 416.2098.

(b) The monthly FBR's were increased in July 1983 by $20 for an eligible individual and $30 for an eligible couple, and the monthly increment for essential persons was increased by $10 in lieu of the expected cost-of-living adjustment which was delayed until January 1984. However, in computing the required combined supplementary/SSI payment levels for the purpose of determining passalong compliance, we use only the amounts by which the FBR's and the essential person increment would have increased had there been a cost-of-living adjustment in July 1983 (a 3.5 percent increase would have occurred). These amounts are $9.70 for an eligible individual, $14.60 for an eligible couple and $4.50 for an essential person.

(c) For the 24-month period January 1, 1984, through December 31, 1985, a State will not be found out of compliance with respect to its payment levels if in the period January 1, 1986, through December 31, 1986, its supplementary payment levels are not less than its supplementary payment levels in effect in December 1976 increased by the percentage by which the FBR has increased after December 1976 and

before February 1986. The FBR for an individual in December 1976 was $167.80. The FBR for an individual in effect on January 31, 1986, was $336.00, an increase of 100.24 percent over the December 1976 FBR. In order for a State to take advantage of this provision for the 24-month period January 1, 1984, through December 31, 1985, the State supplementary payment levels in effect for calendar year 1986 must be at least 100.24 percent higher than the State supplementary payment levels in effect in December 1976. This provision does not apply to State supplementary payments to recipients in Federal living arrangement "D" (residents of a medical facility where title XIX pays more than 50 percent of the costs).

§ 416.2098 Supplementary payment levels.

(a) *General.* For the purpose of determining the combined supplementary/SSI payment levels described in § 416.2097(a), (i.e., the levels that must be provided in any month after March 1983), the supplementary payment level for each payment category must be no less than the total State payment for March 1983 for that payment category that a State provided an eligible individual (or couple) with no countable income in excess of the FBR for March 1983. For July 1983 and successive months, a State can reduce the total State payment for March 1983 as described above by that portion of the July 1983 increase which does not relate to the cost of living (i.e., $10.30). For States that did not make supplementary payments in March 1983, the supplementary payment level for each payment category must be no less than the total State payment for the first month after March 1983 in which a State makes supplementary payments.

(b) *Calculation of the required mandatory minimum State supplementary payment level.* (1) Except for States described in paragraph (b)(2) of this section, the mandatory minimum State supplementary payment level for March 1983 is a recipient's December 1973 income, as defined in section 212(a)(3)(B) of Pub. L. 93–66, plus any State increases prior to April 1983, less any reductions made at any time after December 1973 due to changes in special needs or circumstances, less the March 1983 FBR. The amount determined under the previous sentence shall continue for April, May, and June 1983. For July 1983 and later the amount calculated in the first sentence shall continue except that it may be reduced by the amount of the July 1983 Federal increase that was not related to the cost of living (i.e., $10.30), so long as that reduction does not cause the mandatory minimum State supplementary level to fall below that required by section 212(a)(3)(A) of Pub. L. 93–66.

(2) Section 1618(c) of the Act permitted any State that had satisfied the requirements of section 1618 of the Act by the total-expenditures method for the 12-month period July 1, 1981, through June 30, 1982, and that elected to change and meet the section 1618 requirements by the maintenance-of-payment-levels method for the period July 1, 1982, through June 30, 1983, to do so by paying benefits at levels no lower than the levels of such payments in effect for December 1981. However, a recipient's December 1981 total income (December 1981 mandatory minimum State supplement plus the FBR) could not be less than the recipient's total income for December 1973 as defined in section 212(a)(3)(B) of Pub. L. 93–66. For a State that elected the option in the preceding two sentences, the mandatory minimum State supplementary payment level for March 1983 is a recipient's December 1981 total income (but not less than the total income for December 1973 as defined by section 212(a)(3)(B) of Pub. L. 93–66) plus any State increases after December 1981 and prior to April 1983, less any reductions made at any time after December 1981 due to changes in special needs or circumstances, less the March 1983 FBR. The amount determined under the previous sentence shall continue for April, May, and June 1983. For July 1983 and later, the amount calculated under the preceding sentence defining the required March 1983 mandatory minimum State supplementary payment level would continue except that it may be reduced by the amount of the July 1983 Federal increase that was not related to the cost of living (i.e., $10.30), so long as that reduction does not cause the mandatory minimum State supplementary level to fall below that required by section 212(a)(3)(A) of Pub. L. 93–66.

(c) *Calculation of the required optional State supplementary payment level for flat grant amounts.* The optional State supplementary payment level for March 1983 for flat grant amounts is the total amount that an eligible individual (or couple) with no countable income received for March 1983 in excess of the FBR for March 1983. The amount determined under the previous sentence shall continue for April, May, and June 1983. For July 1983 and later the amount calculated in the first sentence shall continue except that it may be reduced by the amount of the July 1983 Federal increase that was not related to the cost of living (i.e., $10.30). If the State varied its payment levels for different groups of recipients (e.g., paid recipients different amounts based on eligibility categories, geographic areas, living arrangements, or marital status), each variation represents a separate supplementary payment level.

(d) *Calculation of the required optional State supplementary payment level for individually budgeted grant amounts.* The optional State supplementary payment level for individually budgeted grant amounts for March 1983 is the amount that the State budgeted for March 1983 in excess of the March 1983 FBR for an eligible individual (or couple) having the same needs and no countable income. The amount determined under the previous sentence shall continue for April, May, and June 1983. For July 1983 and later the amount calculated in the first sentence shall continue except that it may be reduced by the amount of the July 1983 Federal increase that was not related to the cost of living (i.e., $10.30).

(e) *Optional State supplementary payment level for per diem based grant amounts.* (1) The optional State supplementary payment level for March 1983 for per diem grant amounts is the total dollar amount that the State paid to an eligible individual (or couple) with no countable income at rates in effect for March 1983 (number of days in the calendar month multiplied by the March 1983 per diem rate plus any March 1983 personal needs allowance) in excess of the March 1983 FBR.

Example:

March 1983:	
$15.40	Per diem rate.
×31	Days in month.
477.40	
477.40	
+42.00	Personal needs allowance.
519.40	
519.40	Combined State supplementary/SSI payment.
−284.30	March 1983 FBR.
235.10	State supplementary payment level.

(2) The optional State supplementary payment level for months subsequent to March 1983 for per diem grant amounts is the total dollar amount that the State paid to an individual (or couple) with no countable income at rates in effect in March 1983 (number of days in the calendar month multiplied by the March 1983 per diem rate plus any March 1983 personal needs allowance) in excess of the March 1983 FBR for an individual (or couple) with no countable income

increased by all FBR increases subsequent to March 1983 with the exception of the July 1, 1983 increase. For the July 1, 1983 increase to the FBR, a State need passalong only that portion of the increase which represented the increase in the cost of living adjustment (3.5 percent).

Example:

Note.—Example assumes the State passed along only $9.70 of the $20.00 increase in the FBR effective July 1, 1983.

The March 1983 combined supplementary/SSI payment level for a 31-day month was $519.40.

July 1983 level:	
$519.40	March 1983 combined payment.
+9.70	July 1983 COLA-equivalent.
529.10	Required July 1983 combined level.
Payment:	
529.10	Required July 1983 combined level.
Payment:	
−304.30	July 1983 FBR.
224.80	Required State Supplementary level.
Payment:	
529.10	Required July 1983 combined level.
Payment:	
−42.00	Personal needs allowance.
487.10	
487.10	
÷31	Days in month.
15.71	Per diem rate.

The required July 1983 combined supplementary/SSI payment level for a 31-day month was $529.10. This amount is equal to the March 1983 combined payment amount for a 31-day month plus the July 1983 COLA-equivalent ($519.40 + $9.70).

(f) *Required Optional State supplementary payment level for months prior to April 1983.* In determining passalong compliance under the maintenance-of-payment-levels test for months from July 1977 through March 1983, we used December 1976 (or December 1981 under the circumstances described in paragraph (g) of this section) as the standard month for determining the required State supplementary payment level. To determine the December 1976 State supplementary payment levels for categories described in paragraphs (a) through (e) of this section substitute "December 1976" for "March 1983" and "January 1977" for "April 1983" whenever they appear in these paragraphs only.

(g) *Alternative required Optional State supplementary payment level for July 1982 through March 1983.* States which were in compliance solely under the total-expenditures test for the 12-month period ending June 30, 1982, had the option of substituting December 1981 for December 1976 and switching to the maintenance-of-payment-levels test for July 1982 through March 1983 (see § 416.2096(b)(2)). If this situation applies, determine the December 1981 State supplementary payment levels for categories described in paragraphs (a) through (e) of this section by substituting "December 1981" for "March 1983" and "January 1982" for "April 1983" whenever they appear in these paragraphs only.

§ 416.2099 Compliance with passalong.

(a) *Information regarding compliance.* Any State required to enter into a passalong agreement with the Secretary shall provide appropriate and timely information to demonstrate to the Secretary's satisfaction that the State is meeting the passalong requirements. The information shall include, where relevant—

(1) The State's December 1976 supplementary payment levels, any subsequent supplementary payment levels, and any change in State eligibility requirements. If the State made no supplementary payments in December 1976, it shall provide such information about the first month in which it makes supplementary payments;

(2) The State's March 1983 supplementary payment levels, any subsequent supplementary payment levels, and any changes in State eligibility requirements;

(3) The total State expenditures for supplementary payments in the 12-month period beginning July 1976 through June 1977, in each subsequent 12-month period, and in any other 12-month period beginning on the effective date of a Federal SSI benefit increase. The State shall also submit advance estimates of its total supplementary payments in each 12-month period covered by the agreement; and

(4) The total State expenditures for supplementary payments in the 6-month periods July 1, 1982 through December 31, 1982 and July 1, 1983 through December 31, 1983.

(b) *Records.* Except where the Secretary administers the State supplementary payments, the State shall maintain records about its supplementary payment levels and total 12-month (or 6-month where applicable) expenditures for supplementary payments and permit inspection and audit by the Secretary or someone designated by the Secretary.

(c) *Noncompliance by the States.* Any State that makes supplementary payments on or after June 30, 1977, and does not have a passalong agreement with the Secretary in effect, shall be determined by the Secretary to be ineligible for payments under Title XIX of the Act. A State does not have an agreement in effect if it has not entered into an agreement or has not complied with the terms of the agreement. Ineligibility shall apply to total expenditures for any calendar quarter beginning after June 30, 1977, for which a State has not entered into an agreement. A State that enters into an agreement but does not maintain its payment levels or meet the total-expenditures test in a particular 12-month or transitional 6-month period, shall be determined by the Secretary not to have an agreement in effect for any month that the State did not meet the passalong requirements during that particular period. The State shall then be ineligible for title XIX payments for any calendar quarter containing a month for which an agreement was not in effect. If a State first makes supplementary payments beginning with a month after June 1977, ineligibility shall apply to any calendar quarter beginning after the calendar quarter in which the State first makes payments.

(d) *Notices to States about potential noncompliance.* Within 90 days after the end of the relevant 12-month period, the Secretary shall send a notice to any State that has not maintained its supplementary payment levels and that appears not to have maintained its total expenditures during the period. The notice will advise the State of the available methods of compliance and the time within which corrective action must be taken (see §§ 416.2096(b)(3) and 416.2096(c)(2)) in order to avoid a determination of noncompliance. If the State fails to take the corrective action, the Secretary shall make a timely determination of noncompliance.

(Approved by the Office of Management and Budget under control number 0960–0240.)

Federal Highway Administration

23 CFR Part 625

[FHWA Docket No. 86-17, Notice 2]

Design Standards for Highways; Standard Specifications for Highway Signs, Luminaires and Traffic Signals

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Final rule.

SUMMARY: This rule adopts for application on Federal-aid highway projects the American Association of State Highway and Transportation Officials' (AASHTO) "Standard Specifications for Highway Signs, Luminaires and Traffic Signals, 1985" except for the requirements of Section 7 of the document which deal with breakaway supports. The FHWA is not yet ready to make a final decision regarding appropriate breakaway requirements for sign and luminaire supports. In the interim, the FHWA will continue to following the requirements for breakaway supports found in section 7 of the 1975 edition of AASHTO's "Standard Specifications for Highway Signs, Luminaires and Traffic Signals."

EFFECTIVE DATE: September 28, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. James H. Hatton, Office of Engineering, (202) 366-1629, or Mr. Michael J. Laska, Office of Chief Counsel, (202) 366-1382, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., ET, Monday through Friday, except legal holidays.

SUPPLEMENTARY INFORMATION: A notice of proposed rulemaking (NPRM), FHWA Docket 86-17, (51 FR 40817, November 10, 1986), presented FHWA's proposal to adopt for application on Federal aid highway projects revised specifications for structural supports for highway signs, luminaires, and traffic signals. The FHWA has been following as a design standard on Federal-aid highway projects the specifications found in the 1975 edition of AASHTO's "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals." In May 1985, AASHTO approved a new edition of these standard specifications which included several revisions to the previous specifications. It is these revised specifications (1985 edition) which FHWA has proposed to adopt.

There were 14 commenters on the NPRM. Comments were received from five State highway agencies, five suppliers of breakaway luminaire support systems, two distributors of traffic control systems, a lighting support industry group, and a safety advocacy group. Two State highway agencies, one luminaire support supplier, and the two distributors of traffic control devices recommended that FHWA adopt the 1985 AASHTO specification in its entirety.

Four other commenters, two State highway agencies and two luminaire support suppliers, recommended that FHWA adopt the 1985 AASHTO specification except for section 7, Breakaway Supports. It was suggested that FHWA's adoption of section 7 be deferred until there has been an opportunity to evaluate the results of FHWA's ongoing program to crash test existing breakaway luminaire support systems. The safety advocacy group also identified the need for making crash test results publicly available. It has always been FHWA's intention to publish for public information and comment the results from its ongoing luminaire crash testing program before a final decision is made regarding section 7. Additional information on this matter is discussed below.

Three other commenters, two luminaire support suppliers and the safety advocacy group, presented several suggestions concerning additional design information and other design detail modifications that might be included in the 1985 AASHTO specification. The FHWA is of the opinion that these proposed modifications would have no significant impact on the safety of sign and luminaire supports and they are not being incorporated into this final rule. The FHWA will forward the suggested modifications to the AASHTO Subcommittee on Bridges and Structures for its consideration in any future updates to the material in the AASHTO sign and luminaire specification.

Two suggestions could have some bearing on safety and are discussed in further detail as follows. One commenter recommended that the 1985 AASHTO specifications be revised to include guidance covering the placement of luminaires on slopes similar to the guidance that the FHWA issued to its regional offices in 1985. The FHWA is of the opinion that its previous guidance on this matter has served its intended purpose and there is no need to incorporate this material into a standard specification. The FHWA is working with the AASHTO on development of a Roadside Design Guide and this item will be considered for inclusion in that document.

The second comment concerning safety was that revisions to section 1.1.3(C) of the 1985 AASHTO specifications would result in the placement of overhead sign supports in locations vulnerable to vehicle impact and without barrier or impact attenuator protection. The FHWA does not share this concern. The 1985 AASHTO specification eliminates the reference to the fixed 30-foot clear zone for shielding of supports and instead references the AASHTO "Guide for Selecting, Locating, and Designing Traffic Barriers." It is expected that this AASHTO guide will be used for determining appropriate clear zones for the highway facility involved and that supports located within the designated clear zones will be shielded.

Several comments were also receive regarding the breakaway support requirements within section 7 of the 1985 AASHTO specification. Issues raised included:

- Concerns about the need to reduce the test vehicle from 2,250 pounds to 1,800 pounds.
- A need for the FHWA to develop a breakaway support standard that covers all licensed vehicles including those weighing as little as 1,200 pounds.
- A recommendation to lower the change of velocity criterion below 15 feet/second.
- A need for compliance dates for any new requirements established.
- Concerns about the reliability of the crash testing methods used at FHWA's testing facility.

As explained below, the FHWA is not proceeding at this time with the adoption of section 7 of the 1985 AASHTO specifications. Comments received to the NPRM regarding section 7 plus anticipated future comments received once the crash tests results are published will be considered later when a final decision is made regarding adoption of section 7.

The FHWA has decided to adopt as a design standard for use on Federal-aid highway projects the provisions of the 1985 AASHTO sign and luminaire specifications with the exception of section 7, Breakaway Supports. For the time being, FHWA's requirements regarding breakaway requirements for sign and luminaire supports will remain to be those found in section 7 of the 1975 AASHTO specification. The reasons for this are discussed below:

The November 10, 1986, NPRM noted that to assist in determining whether currently accepted hardware meets the breakaway requirements of the new 1985 AASHTO specifications, the FHWA would be conducting limited

UMI

testing of previously accepted luminaire hardware. Crash testing of various luminaire support systems with an 1,800-pound bogie vehicle at impacts of 20 mph and 60 mph is on-going. The NPRM also noted that when this capability testing was completed the FHWA would publish in the **Federal Register** a supplemental notice summarizing the test results and requesting public comment. Based on FHWA's analysis of the comments received and the test results, the FHWA would then adopt sign and luminaire support breakaway requirements it deemed appropriate.

Several suppliers have provided breakaway luminaire systems for the testing program. This program is taking longer to complete than originally anticipated and overall test results are not yet available. As a consequence, the FHWA will not be in a position to publish the supplemental notice until later this year.

So as to not unnecessarily delay FHWA's acceptance of other material in the 1985 AASHTO specification, FHWA is adopting all sections of the 1985 AASHTO specifications with the exception of section 7, Breakaway Supports. In the interim, FHWA's requirements for breakaway sign and luminaire supports on Federal-aid highways will remain to be those found in the 1975 AASHTO specification. These requirements are that satisfactory performance for a breakaway support is indicated when the maximum changes in momentum for a 2,250-pound vehicle, or its equivalent, striking the support at speeds of 20 mph and 60 mph does not exceed 1,100 pound-seconds but desirably does not exceed 750 pound-seconds.

Although the FHWA has not yet adopted section 7, Breakaway Supports, of the 1985 AASHTO specifications, a State or local highway agency has the option to begin applying on Federal-aid highway projects the more stringent requirements of section 7 of the 1985 AASHTO specification if it so chooses.

As previously noted, when the capability testing program for existing luminaire hardware is completed, an overall summary of test results will be published in a supplemental notice. Following an opportunity for public comment, the FHWA will then make a decision as to whether section 7 of the 1985 AASHTO specification should be adopted for application on Federal-aid highway projects.

Discussion of Revisions

The 1985 AASHTO specifications that the FHWA is adopting are divided into sections which address: General features of design; application and consideration of loads; method of analysis; steel, aluminum, and prestressed concrete design, including corresponding allowable unit stress; foundations and their design criteria; details of design; use of timber; and an accompanying commentary covering each section. The significant changes from the 1975 AASHTO specifications are discussed in detail below.

Section 1. The 1975 edition referred to the need to shield overhead sign supports when placed within 30 feet of the edge of the traveled way. The 1985 edition clarifies that these supports should be shielded wherever warranted. Also, the horizontal clearance from the rail to the face of the support has been clarified to demonstrate that this distance is measured from the back of the rail to the face of the supports.

Section 2. Wind drag coefficients for hexdecagonal, square and diamond shapes have been added in an attempt to more accurately apply expected wind load forces on structural supports. Information from wind tunnel tests suggests these drag coefficients should now be used in designing structural supports. This should result in a design procedure that incorporates the latest research findings.

Section 3. New requirements are established regarding telescopic field splices for high level lighting supports. Also, changes in the requirements for the use of anchor bolts include: optional use of cut or rolled threads; sizing of bolts due to combined loading of shear and tension; and increases in the allowable unit stresses. These changes should permit the structural designer more flexibility in specifying hardware and will give the industry more flexibility in supplying that hardware.

Section 4. New requirements have been added regarding: width to thickness ratios of compression elements, penetration criteria for longitudinal seam welds, and silicon content of structural steel to be galvanized. These changes have been included to ensure that the structure is a safe, reliable, and economical as possible.

Section 5. The allowable unit stresses for aluminum alloy members have been increased. The stresses allowed are now in conformance with building type structures rather than those for bridge type structures. This will result in more consistency between the factors of safety of aluminum structures and those of steel structures.

Section 6. Changes in the design of prestressed concrete materials include: A new equation for allowable stresses under severe corrosive exposure conditions, such as coastal areas; a revised ultimate strength design procedure; and recommendations on the use of epoxy coated reinforcement. These changes are expected to merely extend the life expectancy of prestressed concrete materials.

Section 7. The changes in the 1985 edition are not being adopted (see previous discussion).

Section 8. There are no significant changes to this section from the 1975 edition.

Section 9. Suggested deflection criteria for cantilever supports has been added to aid those wishing to control deflection for esthetic purposes. Under the 1985 AASHTO specifications, supports for small roadside signs would be exempt from the minimum thickness requirements for steel support. Experience has indicated that small roadside sign supports not meeting the minimum thickness requirements in the 1975 edition have sufficient durability and that they may have safety advantages.

The FHWA has determined that this document contains neither a major rule under Executive Order 12291 nor a significant regulation under the regulatory policies and the procedures of the Department of Transportation. For the sections of the 1985 AASHTO specifications which are being adopted in this final rule, the economic impacts, if any, are minimal. This determination is based on the fact that, although the Revised Specifications contain standards which in some cases have been clarified, modified, or revised, the basic structural support design criteria will remain essentially the same. For this reason and under the criteria of the Regulatory Flexibility Act, the FHWA hereby certifies this action will not have a significant economic impact on a substantial number of small entities.

The manufacturers of sign and luminaire support systems may be minimally affected should FHWA decide, at a future date, to adopt section 7 of the 1985 AASHTO specification. A draft regulatory evaluation discussing these impacts was prepared and made available when the November 10, 1986, NPRM was published. This regulatory evaluation will be finalized at such time that the FHWA has made a final decision regarding adoption of section 7 of the 1985 AASHTO specification.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program)

List of Subjects in 23 CFR Part 625

Design standards, Grant programs—transportation, Highways and roads, Incorporation by reference, Reporting requirements.

In consideration of the foregoing, Part 625 to Chapter 1 of Title 23, Code of Federal Regulations, is amended as set forth below.

Issued on: September 22, 1987.

Ray A. Barnhart,

Federal Highway Administrator, Federal Highway Administration.

The FHWA hereby amends 23 CFR Part 625 as follows:

PART 625—DESIGN STANDARDS FOR HIGHWAYS

1. The authority citation for Part 625 continues to read as follows:

Authority: 23 U.S.C. 109, 315, and 402; 49 CFR 1.48(b).

2. In § 625.4, paragraph (b)(5) is amended to read as follows:

§ 625.4 Standards, policies, and standard specifications.

* * * * *

(b) * * *

(5) Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, AASHTO 1985, and Interim Revisions, AASHTO 1986, except for section 7, Breakaway Supports. The FHWA requirements for breakaway sign and luminaire supports are contained in section 7 of Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, AASHTO 1975. BILLING CODE 4910-22-M

DEPARTMENT OF DEFENSE

Department of the Air Force

32 CFR Part 807

Publications Sales

AGENCY: Department of the Air Force, Department of Defense.

ACTION: Final rule.

SUMMARY: This part has been rearranged and certain areas expanded to clarify handling procedures for specific types of requests from the public. This part provides Air Force procedures for issuing publications and forms to private citizens, organizations and commercial activities.

EFFECTIVE DATE: October 28, 1987.

ADDRESS: SAF/AADPD, Bolling AFB, DC 20332-6468.

FOR FURTHER INFORMATION CONTACT: Walter S. Frazer, SAF/AADPD, Bolling AFB, DC 20332-6468, telephone (202) 767-6077.

SUPPLEMENTARY INFORMATION: On July 24, 1987, the Air Force published a proposed rule on issuing Air Force publications and forms outside the Air Force (52 FR 27825). No comments were received.

The Department of the Air Force has determined that this regulation is not a major rule as defined by Executive Order 12291, is not subject to the relevant provisions of the Regulatory Flexibility Act of 1980 (Pub. L. 96-354), and does not contain reporting or recordkeeping requirements under the criteria of the Paperwork Reduction Act of 1980 (Pub. L. 96-511).

List of Subjects in 32 CFR Part 807

Government contracts, government procurement.

Therefore, 32 CFR Part 807 is revised to read as follows:

PART 807—PUBLICATIONS SALES

Sec.

807.1 General requirements.
807.2 Charges.
807.3 Requests for classified material, For Official Use Only (FOUO) material, accountable forms, storage safeguard forms, Limited (L) distribution items, and items with restrictive distribution caveats.
807.4 Availability and non-availability of stock.
807.5 Processing requests.
807.6 Depositing payments.

Authority: 10 U.S.C. 8013.

§ 807.1 General requirements.

(a) Unaltered Air Force publications and forms in this distribution system will be made available to the public with or without charge subject to the requirements of this part. Base Chiefs of Administration will establish procedures to accommodate these requirements and will make available Master Publications Libraries for public use in accordance with AFR 5-31. Requesters will be advised of the availability of these libraries since in many instances this will satisfy their requirements and reduce workloads involved in processing sales requests. If the item is on sale by the Superintendent of Documents, Government Printing Office, refer the request to that outlet.

(b) These unaltered publications and forms are not considered records within the meaning of the Freedom of Information Act (FOIA) as outlined in 5 U.S.C. 552 and implemented by Part 806 of this chapter. Requests which involve the FOIA will be referred to the Chief, Base Administration for processing.

(c) Requests under the Foreign Military Sales Program (FMS) will be processed in accordance with AFR 7-1, Chapter 11.

(d) Requests from foreign governments, their representatives, or international commands are answered only by offices holding delegation of disclosure authority letters, as described in AFR 200-9. Such requests must be sent to the foreign disclosure policy office within a command, and at HQ USAF to HQ USAF/CVAI. Copies of such requests should also be sent to the base public affairs office for their information. Commands will supplement this requirement to include policies pertaining to those items which they have authority to release.

(e) Requests for non-Air Force items will be returned to the requester for submission to appropriate agency.

§ 807.2 Charges.

(a) Air Force policy provides that charges will be applied to all requests unless specifically excluded.

(b) Charges will be applied in accordance with Part 813 of this chapter. Additional guidance is in Part 812, including specific exclusions for charges as listed in § 812.5. As indicated, the list of exclusions is not all inclusive and recommendations for additional exclusions will be forwarded to the OPR for Part 812 of this chapter.

(c) Publications and forms required for contract performance will be furnished without charge to the contractor when these requirements are approved by the government contracting officer.

§ 807.3 Requests for classified material, For Official Use Only (FOUO) material, accountable forms, storage safeguard forms, Limited (L) distribution items, and items with restrictive distribution caveats.

(a) *Classified material.* Answer these requests by telling the requesters that the material is not authorized for release because it is currently and properly classified in the interest of national security as authorized by Executive Order, and must be protected from unauthorized disclosure.

(b) *FOUO material.* Requests will be reviewed by the Office of Primary Responsibility for the material to determine its releasibility.

(c) *Accountable forms.* These requests will be returned to the requester stating that the forms are stringently controlled and cannot be released to unauthorized personnel since their misuse could jeopardize Department of Defense

security or could result in fraudulent financial gain or claims against the government.

(d) *Storage safeguard forms.* These requests will be returned to the requesters stating that the forms are specially controlled and are not releasable outside the Department of Defense since they could be put to unauthorized or fraudulent use.

(e) *Limited (L) distribution items.* These items are not releasable outside the Department of Defense without special review in accordance with AFR 700–6. Requests will be referred to the SIS Manager shown in the index or on the cover of the publications. Advise the requesters of the referral.

(f) *Items with restrictive distribution caveats.* Some publications have restrictive distribution caveats on the cover. Follow the instructions stated and advise the requesters of the referral.

§ 807.4 Availability and non-availability of stock.

(a) It is Air Force policy to limit quantities furnished so that stock levels required for operational Air Force support are not jeopardized.

(b) If the item is not available from PDO stock, obtain it from the Air Force Publishing Distribution Center (AFPDC).

(1) If the item is not stocked by the AFPDC, check the appropriate index to see if it is available from another source and refer the request to that source. Advise the requester of the referral.

(2) If the item is under revision, advise the requester that it is being revised and no stock is available.

(c) If stock is not available and the item is being reprinted, advise the requester that stock is expected to be available in 90 days and to resubmit at that time.

§ 807.5 Processing requests.

Payment will be required before shipping the requested material. Payment must be by check or money order.

(a) When the request is received, determine the cost involved and advise the requester to ensure that he/she is willing to pay.

(b) If the requester agrees to pay the cost involved, take action to obtain the material.

(c) When the item is received advise the requester to remit the required payment and forward the material after payment is received.

(d) If the material cannot be obtained, advise the requester of the reason.

§ 807.6 Depositing payments.

Obtain instructions from the local Accounting and Finance Office regarding how checks or money orders must be prepared and required procedures for depositing them.

Patsy J. Conner,

Air Force Federal Register Liaison Officer.

Coast Guard

33 CFR Part 166

[CGD 84–004]

Shipping Safety Fairways; Approach to New York

AGENCY: Coast Guard, DOT.

ACTION: Final rule; correction.

SUMMARY: This notice corrects an error in the final rule published in the **Federal Register** on September 4, 1987 (52 FR 33587). The final rule established two new parallel shipping safety fairways to connect the Eastern approach off Nantucket and the Eastern approach off Ambrose lanes of the traffic separation scheme (TSS Off New York).

FOR FURTHER INFORMATION CONTACT: Lieutenant (j.g.) Daphne Reese at (202) 267–0365.

SUPPLEMENTARY INFORMATION: There is a typographical error on page 33589 (first column, lines 58–65 and second column, lines 5–12). The geographical positions for the fairway are given in degrees and minutes to the nearest hundreth of a minute. The geographic positions for the fairways should be listed in degrees, minutes, and seconds.

Section 166.500, paragraph (b) is correctly added to read as follows:

PART 166—SHIPPING SAFETY FAIRWAYS

§ 166.500 Areas along the Atlantic Coast.

* * * * *

(b) *Designated Areas*—(1) *Off New York Shipping Safety Fairway.* (i) Ambrose to Nantucket Safety Fairway. The area enclosed by rhumb lines, [North American Datum of 1927 (NAD–27)] joining points at:

BILLING CODE 4910–14–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[(A-1-FRL-3267-8)]

Approval and Promulgation of Implementation Plans; Rhode Island; James River Corp.

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is approving a State Implementation Plan (SIP) revision submitted by the State of Rhode Island. This revision approves an administrative consent agreement to control volatile organic compound (VOC) emissions from five coating lines at James River Corporation's Decorative Products Division (formerly Whitman Products Limited) in Johnston, Rhode Island. The intended effect of this action is to reduce ozone levels as required under section 110 of the Clean Air Act.

EFFECTIVE DATE: This action will be effective November 27, 1987 unless notice is received within 30 days that adverse or critical comments will be submitted.

ADDRESSES: Comments may be mailed to Louis F. Gitto, Director, Air Management Division, Room 2312, JFK Federal Building, Boston, MA 02203. Copies of the submittal and EPA's evaluation are available for public inspection during normal business hours at the Environmental Protection Agency, JFK Building, Room 2311, Boston, MA 02203; Public Information Reference Unit, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460; and the Division of Air & Hazardous Materials, Department of Environmental Management, 75 Davis Street, Cannon Building, Room 204, Providence, RI 02908.

FOR FURTHER INFORMATION CONTACT: David B. Conroy (617) 565–3252, FTS 835–3252.

SUPPLEMENTARY INFORMATION: On July 6, 1983 (48 FR 31026), EPA approved Rhode Island's Ozone Attainment Plan and incorporated it into the SIP. As part of the attainment plan, Rhode Island adopted Regulation No. 19, "Control of Volatile Organic Compounds from Surface Coating Operations." This regulation applies to facilities which emit more than 100 tons per year (TPY) of VOC emissions from either paper, fabric or vinyl surface coating operations. A source subject to this regulation is required under subsection 19.3.1 to apply reasonably available control technology (RACT) to its VOC emitting processes by July 1, 1985. The RACT limitations specified in subsection 19.3.1 are equivalent to those specified in EPA's applicable control techniques guideline (CTG) document (EPA–450/2–77–0 08).

On November 5, 1985, June 16, 1986, and November 3, 1986 the Rhode Island DEM submitted a revision to its SIP. This revision consists of an administraive consent agreement originally negotiated between the DEM's Division of Air and Hazardous Materials and Whitman Products Limited and now applicable to the new owner of the facility, James River Corporation (James River) in Johnston, Rhode Island. This consent agreement was issued pursuant to provisions found in Rhode Island Regulation No. 19, subsection 19.3.3.

The provisions found in subsection 19.3.3 allow the DEM to specify alternative final compliance dates to those set forth in subsection 19.3.1 on a case-by-case basis.

Rhode Island submitted subsection 19.3.3 on May 14, 1982 and EPA approved it on July 6, 1983 (48 FR 31026) as part of Rhode Island's Ozone Attainment Plan. It was EPA's intention when approving subsection 19.3.3 that all alternative compliance dates granted pursuant to this subsection by the DEM would be submitted to EPA as SIP revisions.

Summary of SIP Revision

James River operates eight coating/printing lines in Johnston, Rhode Island. James River coats book covering materials. James River is subject to the control requirements of Rhode Island SIP Regulation No. 19, subsection 19.3.1 which requires that the VOC content of each coating employed at James River be at or below 2.9 pounds VOC/gallon of coating (minus water) by July 1, 1985 except as provided in subsection 19.3.3.

At the time Rhode Island Regulation No. 19 was developed, the former owner of the facility, Whitman Products Limited, primarily employed solvent-based coatings on its coating/printing lines. During 1979, the first year this regulation was effective, the VOC emissions from this source were 2080 TPY. In 1985, the VOC emissions from this source were 504 TPY. Whitman Products Limited achieved this substantial reduction by reformulating a large percentage of its basecoats to agueous-based formulations. However, the reformulations do not reduce the facility's VOC emissions to the level required by the Rhode Island SIP. James River has proposed to achieve further reformulations by December 31, 1986 which would reduce James River's VOC emissions to approximately 293 TPY. Once James River implements the additional reformulations, the company will have achieved approximately a 86% reduction in VOC emissions from the 1979 level. This reduction is likely more than James River could have achieved had it installed add-on control equipment on its coating/printing lines.

Pursuant to subsection 19.3.3, the Rhode Island DEM has submitted a revision providing James River with a compliance date extension to December 31, 1986 for five of its eight coating/printing lines. After that date, James River will be subject to the existing SIP emission limitation in subsection 19.3.1 which will require James River to achieve continuous compliance with the emission limit of 2.9 pounds VOC/gal coating (minus water) for all coatings, or to comply on a daily plant-wide basis if the provisions of Rhode Island's generic bubble rule (subsection 19.4) are utilized.

The administrative consent agreement requires James River to reformulate certain basecoats to higher solids formulations and certain base and topcoats to aqueous formulations. The source is also required to meet and maintain daily interim emission limitations on each line during the reformulation program. The consent agreement also has a provision in it which would have required James River to install add-on control equipment by December 31, 1986 if James River's reformulation efforts to convert its solvent-based coatings to high solids and aqueous-based coatings were not achieving a certain level of success by April 1, 1986. However, James River was not required to install add-on controls since the Rhode Island DEM determined that the company was achieving the progress required by the consent agreement by April 1, 1986.

Rhode Island has demonstrated that it has achieved sufficient VOC reductions necessary to show attainment of the National Ambient Air Quality Standard (NAAQS) for ozone by December 31, 1982. EPA approved this demonstration on July 6, 1983 (48 FR 31026). (The entire State of Rhode Island, however, continues to be nonattainment due to transport of ozone from upwind sources into Rhode Island.) Additionally, Rhode Island has demonstrated in a letter to EPA dated November 3, 1986 that there is an adequate margin for growth, below the level of emissions necessary to show attainment of the NAAQS for ozone, to absorb the temporary increased emissions resulting from this compliance date extension. Each year Rhode Island recalculates that growth margin based on updated emission figures for all existing sources and emissions from new sources. Rhode Island only allows increases in VOC emissions from new sources based on the availability of emissions in that growth margin. Therefore, since James River itself does not consume the entire growth margin nor will Rhode Island give offsets to any new source which consumes the remainder of the growth margin, this compliance date extension for James River will not interfere with the continued maintenance of the NAAQS for ozone in Rhode Island.

Moreover, the DEM showed that Rhode Island's Ozone Attainment Plan projected Whitman Products (now James River Corporation) to emit approximately 2179 TPY in 1983, 2505 TPY in 1984, 2485 TPY in 1985, and 2402 in 1986. From Rhode Island's VOC emissions inventory, it can be seen that Whitman Products (now James River Corporation) actually emitted 720 TPY in 1983, 678 TPY in 1984, and 504 TPY in 1985. Furthermore, James River was expected to emit approximately 293 TPY of VOC in 1986 with the compliance date extension, which required James River to achieve additional reductions. Therefore, it was shown that James River has emitted much less over the past four years than were projected in Rhode Island's Ozone Attainment Plan.

For these reasons, this compliance date extension for James River will not interfere with Reasonable Further Progress (RFP) towards attainment of the ozone standard in Rhode Island.

EPA is approving this SIP revision without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. This action will be effective 60 days from the date of this **Federal Register** notice unless, within 30 days of its publication, notice is received that adverse or critical comments will be submitted. If such notice is received, this action will be withdrawn before the effective date by publishing two subsequent notices. One notice will withdraw the final action and another

will begin a new rulemaking by announcing a proposal of the action and establishing a comment period. If no such comments are received, the public is advised that this action will be effective Novemeber 27, 1987.

Final Action

EPA is approving the administrative consent agreement for James River Corporation submitted as a SIP revision by the Rhode Island DEM on November 5, 1985, June 16, 1986 and November 3, 1986. EPA believes that the conditions of the DEM's consent agreement were established in accordance with the compliance date provisions of federally-approved subsection 19.3.3 of the Rhode Island SIP. This compliance date extension is not to be construed as an alternative RACT determination for this source. A more detailed description of EPA's evaluation is presented in the Technical Support Document that has been prepared for the revision. Copies of that document may be obtained from the EPA Regional Office listed in the **ADDRESSES** section of this notice.

Under 5 U.S.C. section 605(b), I certify that this SIP revision will not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.)

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by (November 27, 1987). This action may not be challenged later in proceedings to enforce its requirements. (See 307(b)(2).)

List of Subjects in 40 CFR Part 52

Air pollution control, Ozone, Hydrocarbons, Intergovernmentional relations, Reporting and Recordkeeping requirements, Incorporation by reference.

Note: Incorporation by reference of the State Implementation Plan for the State of Rhode Island was approved by the Director of the **Federal Register** on July 1, 1982.

Dated: September 18, 1987.

Lee M. Thomas,

Administrator.

PART 40—[AMENDED]

Part 52, Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

Subpart 00—Rhode Island

1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401–7642.

2. Section 52.2070 is amended by adding paragraph (c)(26) to read as follows:

§ 52.2070 Identification of plan.

* * * * *

(c) * * *

(26) Revisions submitted on November 5, 1985, June 16, 1986 and November 3, 1986 by the Rhode Island Department of Environmental Management (DEM) consisting of an administrative consent agreement between the DEM's Division of Air and Hazardous Materials and Whitman Products Limited (now James River Corporation's Decorative Product Division) in Johnston, Rhode Island. When the consent agreement expires on December 31, 1986, James River Corporation will be subject to the emission limits in Rhode Island Regulation No. 19, subsection 19.3.1.

(i) Incorporation by reference. (A) An administrative consent agreement between the Rhode Island and Providence Plantation Department of Environmental Management and Whitman Products Limited. The consent agreement became effective on May 29, 1985.

(B) Letters of June 16, 1986 and September 17, 1985 from the Department of Environmental Management to EPA.

(ii) *Additional materials.* (A) Letter submitted on November 3, 1986 affirming that a sufficient growth margin exists, below the level of emissions necessary to show attainment of the national ambient air quality standard for ozone in Rhode Island, to absorb the increased emissions resulting from this compliance date extension.

3. In § 52.2081 table 52.2081 is amended by adding the following entry at the end of No. 19 as indicated below:

§ 52.2081 EPA-approved EPA Rhode Island State regulations.

* * * * *

BILLING CODE 6560–50–M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 64

[Docket No. FEMA 6763]

Suspension of Community Eligibility; Maine et al.

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Final rule.

SUMMARY: This rule lists communities, where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP), that are suspended on the effective dates listed within this rule because of noncompliance with the floodplain management requirements of the program. If FEMA receives documentation that the community has adopted the required floodplain management measures prior to the effective suspension date given in this rule, the suspension will be withdrawn by publication in the **Federal Register**.

EFFECTIVE DATES: The third date ("Susp.") listed in the fourth column.

FOR FURTHER INFORMATION CONTACT: Frank H. Thomas, Assistant Administrator, Office of Loss Reduction, Federal Insurance Administration, (202) 646–2717, Federal Center Plaza, 500 C Street, Southwest, Room 416, Washington, DC 20472.

SUPPLEMENTARY INFORMATION: The National Flood Insurance Program (NFIP), enables property owners to purchase flood insurance at rates made reasonable through a Federal subsidy. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended (42

U.S.C. 4022), prohibits flood insurance coverage as authorized under the National Flood Insurance Program (42 U.S.C. 4001 through 4128) unless an appropriate public body shall have adopted adequate floodplain management measures with effective enforcement measures. The communities listed in this notice no longer meet that statutory requirement for compliance with program regulations (44 CFR Part 59 *et. seq.*). Accordingly, the communities will be suspended on the effective date in the fourth column. As of that date, flood insurance will no longer be available in the community. However, some of these communities may adopt and submit the required documentation of legally enforceable floodplain management measures after this rule is published but prior to the actual suspension date. These communities will not be suspended and will continue their eligibility for the sale of insurance. A notice withdrawing the suspension of the communities will be published in the **Federal Register**. In the interim, if you wish to determine if a particular community was suspended on the suspension date, contact the appropriate FEMA Regional Office or the NFIP servicing contractor.

In addition, the Federal Emergency Management Agency has identified the special flood hazard areas in these communities by publishing a Flood Hazard Boundary Map. The date of the flood map, if one has been published, is indicated in the fifth column of the table. No direct Federal financial assistance (except assistance pursuant to the Disaster Relief Act of 1974 not in connection with a flood) may legally be provided for construction or acquisition of buildings in the identified special flood hazard area of communities not participating in the NFIP and identified for more than a year, on the Federal Emergency Management Agency's initial flood insurance map of the community as having flood-prone areas. (Section 202(a) of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), as amended). This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column.

The Administrator finds that notice and public procedure under 5 U.S.C. 553(b) are impracticable and unnecessary because communities listed in this final rule have been adequately notified. Each community receives a 6-month, 90-day, and 30-day notification addressed to the Chief Executive Officer that the community will be suspended unless the required floodplain management measures are met prior to the effective suspension date. For the same reasons, this final rule may take effect within less than 30 days.

Pursuant to the provision of 5 U.S.C. 605(b), the Administrator, Federal Insurance Administration, FEMA, hereby certifies that this rule if promulgated will not have a significant economic impact on a substantial number of small entities. As stated in section 2 of the Flood Disaster Protection Act of 1973, the establishment of local floodplain management together with the availability of flood insurance decreases the economic impact of future flood losses to both the particular community and the nation as a whole. This rule in and of itself does not have a significant economic impact. Any economic impact results from the community's decision not to (adopt) (enforce) adequate floodplain management, thus placing itself in noncompliance of the Federal standards required for community participation. In each entry, a complete chronology of effective dates appears for each listed community.

Harold T. Duryee,
Administrator, Federal Insurance Administration.

[FR Doc. 87-22249 Filed 9-25-87; 8:45 am]
BILLING CODE 6718-03-M

44 CFR Part 67

Final Flood Elevation Determinations; Alabama et al.

AGENCY: Federal Emergency Management Agency.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are determined for the communities listed below.

The base (100-year) flood elevations are the basis for the floodplain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: The date of issuance of the Flood Insurance Rate Map (FIRM) showing base (100-year) flood elevations, for the community. This date may be obtained by contacting the office where the maps are available for inspection indicated on the table below.

ADDRESSES: See table below.

FOR FURTHER INFORMATION CONTACT: John L. Matticks, Chief, Risk Studies Division, Federal Insurance Administration, Federal Emergency Management Agency, Washington, DC 20472, (202) 646-2767.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency gives notice of the final determinations of flood elevations for each community listed. Proposed base flood elevations or proposed modified base flood elevations have been published in the **Federal Register** for each community listed.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448)), 42 U.S.C. 4001-4128, and 44 CFR Part 67. An opportunity for the community or individuals to appeal proposed determination to or through the community for a period of ninety (90) days has been provided.

The Agency has developed criteria for flood plain management in flood-prone areas in accordance with 44 CFR Part 60.

Pursuant to the provisions of 5 U.S.C. 605(b), the Administrator, to whom authority has been delegated by the Director, Federal Emergency Management Agency, hereby certifies for reasons set out in the proposed rule that the final flood elevation determinations, if promulgated, will not have a significant economic impact on a substantial number of small entities. Also, this rule is not a major rule under terms of Executive Order 12291, so no regulatory analyses have been prepared. It does not involve any collection of information for purposes of the Paperwork Reduction Act.

List of Subjects in 44 CFR Part 67

Flood insurance, Flood plains.

PART 67—[AMENDED]

The authority citation for Part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 et seq., Reorganization Plan No. 3 of 1978, E.O. 12127.

The base (100-year) flood elevations are finalized in the communities listed below. Elevations at selected locations in each community are shown. No appeal was made during the 90-day period and the proposed base flood elevations have not been changed.

PROPOSED BASE (100-YEAR) FLOOD ELEVATION

Source of flooding and location	# Depth in feet above ground *Elevation in feet (NGVD)
Alabama	
Carbon Hill (city), Walker County (FEMA Docket No. 6909)	
Lost Creek:	
About 0.5 mile downstream of U.S. Highway 78	*402
About 1.2 miles upstream of Howard Road	*425
Poplar Tributary:	
About 0.5 mile downstream of Widow's Lane Road	*402
Just downstream of Poplar Street	*428
Just upstream of Poplar Street	*446
About 850 feet upstream of 8th Avenue	*476
Allen Creek:	
At mouth	*418
About 1,450 feet upstream of Nubbin Ridge Road	*424
Maps available for inspection at the City Hall, Carbon Hill, Alabama.	
Childersburg (city), Talladega County (FEMA Docket No. 6909)	
Coosa River:	
About 1.1 miles downstream of 12th Avenue	*413
About 4,000 feet upstream of Norfolk Southern Railway	*414
Talladega Creek:	
At mouth	*414
About 0.7 mile upstream of confluence of Four-mile Branch	*416
Town Creek:	
At mouth	*416
About 1,000 feet upstream of Park Lane	*432
Griffin Branch: Within community	*417
Talladega Creek:	
Just downstream of Norfolk Southern Railway	*415
About 1.7 miles upstream of Norfolk Southern Railway	*418
Maps available for inspection at the City Hall, 118 6th Avenue, S.W., Childersburg, Alabama.	
Demopolis (city), Marengo County (FEMA Docket No. 6909)	
Tombigbee River:	
About 0.9 mile downstream of Demopolis Lock and Dam	*92
About 3.2 miles upstream of Demopolis Lock and Dam	*93
Black Warrior River:	
About 4.4 miles upstream of confluence with Tombigbee River	*93
About 5.3 miles upstream of confluence with Tombigbee River	*94
Maps available for inspection at the City Hall, Demopolis, Alabama.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Endangered Status For Eriastrum Densifolium ssp. Sanctorum (Santa Ana River Woolly-star) and Centrostegia leptoceras (Slender-horned Spineflower)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Service determined two plants, *Eriastrum densifolium* ssp. *sanctorum* (Santa Ana River woolly-star) and *Centrostegia leptoceras* (slender-horned spineflower), to be

endangered species. *Eriastrum densifolium* ssp. *sanctorum* occurs patchily on the higher floodplain terraces of the Santa Ana River from Redlands east to the mouth of the Santa Ana Canyon in San Bernardino County, southern California. A disjunct stand occurs on Lytle Creek in the city of San Bernardino. *Centrostegia leptoceras* is currently known from five small isolated populations. The total area occupied by this species is less than 4 hectares (10 acres). Historic and present threats facing these plants include encroaching developments within the floodplain, sand and gravel mining, grazing by domestic animals, and competition from exotic plants. This rule implements the protection and recovery provisions of the Endangered Species Act (Act) of 1973, as amended, for these two plants.

DATES: The effective date of this rule is October 28, 1987.

ADDRESSES: The complete file for this rule is available for inspection, by appointment, during normal business hours at the U.S. Fish and Wildlife Service, Lloyd 500 Building, 500 N.E. Multnomah Street, Suite 1692, Portland, Oregon 97232.

FOR FURTHER INFORMATION CONTACT: Mr. Wayne S. White, Chief, Division of Endangered Species, at the above address (503/231–6131 or FTS 429–6131).

SUPPLEMENTARY INFORMATION:

Background

Eriastrum densifolium ssp. *sanctorum* was first collected by Hall. This subspecies was described as *Gilia densifolia* var. *sanctorum* by Milliken (1904) and renamed as *Huegelia densifolia* var. *sanctorum* by Jepson (1925). Wooton and Standley (1913) proposed the replacement of *Huegelia* with *Eriastrum*; Mason (1945) accepted the new genus name. *Centrostegia leptoceras* was first collected by Lobb in 1849. It was described by Gray in 1870 (Torrey and Gray 1870); and then placed in the genus *Chorizanthe* by Watson (1877). Goodman (1934) transferred it back to *Centrostegia*.

Eriastrum densifolium ssp. *sanctorum* is a shrub occasionally reaching one meter (3.3 feet) in height. This plant has gray-green stems and leaves. The bright blue flowers are up to 30 millimeters (1.4 inches) long and are contained in heads of about 20 blossoms each. *Centrostegia leptoceras* is a small prostrate annual. The diameter of the basal rosette of a mature plant varies between about 3 and 10 centimeters (1.4 and 4.5 inches). The flowering stalks are from 5 to 15 centimeters (2.3 to 6.8 inches) in length, and bear three-lobed bracts at the nodes. The leaves and bracts turn bright red with age. One to three involucres containing several flowers each occur at an axil and are 4 to 6 millimeters (0.2 to 0.3 inches) long (Munz 1974).

Eriastrum densifolium ssp. *sanctorum* is endemic to the Santa Ana River drainage of southern California. Formerly this subspecies was a conspicuous shrub in the alluvial fan scrub community on the higher floodplain terraces of the Santa Ana River and its tributaries in Orange, Riverside and San Bernardino Counties. The range of elevations occupied by this plant was from about 150 to 600 meters (500 to 2,000 feet) (Craig 1934, Mason 1945).

Centrostegia leptoceras was formerly more widespread, and occurred on old sandy benches or floodplain terraces containing alluvial fan scrub vegetation in Los Angeles, San Bernardino, and Riverside Counties (Munz 1974). This plant is currently known from only five localities, totaling less than 4 hectares (10 acres) in extent, in San Bernardino and Riverside Counties (Krantz 1984).

Alluvial fan scrub receives little natural disturbance. Sheet flood flows probably occur once every one to two hundred years, and such scouring appears to maintain this plant community. The perennial vegetative cover where *Eriastrum densifolium* spp. *sanctorum* and *Centrostegia leptoceras* occur is relatively low (seldom over 50 percent); annual cover is also fairly low (Zembal and Kramer 1984). The plant community is characterized by old *Juniperus californica* (California juniper), *Cercocarpus betuloides* (mountain mahogany) and *Eriodictyon trichocalyx* (Yerba Santa). *Eriastrum densifolium* spp *sanctorum* is found in disjunct stands within this habitat, and tends to occupy areas with slight surface disturbance (Zembal and Kramer 1984). Conversely, *Centrostegia leptoceras* exists almost exclusively in small isolated areas lacking any evidence of surface disturbance (Reveal and Krantz 1979; Krantz 1984).

The Secretary of the Smithsonian Institution, as directed by section 12 of the Act, prepared a report on those native U.S. plants considered to be endangered, threatened, or extinct in the United States. This report (House Document No. 94–51), which included *Centrostegia leptoceras* but not *Eriastrum densifolium* ssp. *sanctorum*, was presented to Congress on January 9, 1975. On July 1, 1975, the Service published a notice in the **Federal Register** (40 FR 27823) accepting the report as a petition within the context of Section 4(c)(2) of the Act (petition acceptance is now governed by Section 4(b)(3)(A)) and giving notice of its intention to review the status of the plant taxa named therein, including *Centrostegia leptoceras*. On June 16, 1976, the Service published a proposed rule in the **Federal Register** (41 FR 24523) to determine approximately 1,700 vascular plant species, including *Centrostegia leptoceras*, to be endangered species pursuant to section 4 of the Act. This list was assembled on the basis of comments and data received by the Smithsonian Institution and the Service in response to House Document No. 94–51 and the July 1, 1975, **Federal Register** publication. General comments on the 1976 proposal were summarized in an April 26, 1978, **Federal Register** publication (43 FR 17909).

In 1978, amendments to the Endangered Species Act required that all proposals over two years old be withdrawn. A 1-year grace period was given to those proposals already more than 2 years old. Subsequently, on December 10, 1979, the Service published a notice (44 FR 70796) of the withdrawal of the portion of the June 16, 1976, proposal that had not been made final, along with four other proposals that had expired. This notice of withdrawal included *Centrostegia leptoceras*.

The Service published an updated notice of review for plants on December 15, 1980 (45 FR 82840). This notice included *Centrostegia leptoceras* and *Eriastrum densifolium* ssp. *sanctorum*. On February 15, 1983, the Service published a notice (48 FR 6752) of its prior finding that the listing of these two species may be warranted in accordance with section 4(b)(3)(A) of the Act as amended in 1982. Such a finding requires the petition to be recycled, pursuant to section 4(b)(3)(C)(i) of the Act. On October 13, 1983, October 12, 1984, and again on October 11, 1985, further findings were made that the listing of *Centrostegia leptoceras* and *Eriastrum densifolium* ssp. *sanctorum* was warranted, but precluded by other pending listing actions, in accordance with section 4(b)(3)(B)(iii) of the Act. The proposed rule to list both species as endangered was published in the **Federal Register** on April 9, 1986 (51 FR 12180).

Summary of Comments and Recommendations

In the April 9, 1986, proposed rule (51 FR 12180) and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. Appropriate State and Federal agencies, county governments, landowners, scientific organizations,

and other interested parties were contacted and requested to comment. Newspaper notices that invited public comment were published in the Los Angeles Times (May 7, 1986), the Los Angeles Herald Examiner (May 6, 1986), the San Bernardino Sun Telegram (May 6, 1986), the San Jacinto Valley Register (May 5, 1986), and the Riverside Press Enterprise (May 8, 1986). A public hearing was requested by the Environmental Management Agency of Orange County and was held on July 7, 1986. The public comment period was reopened for an additional 30 days on June 24, 1986 (51 FR 22955).

Oral and written comments were received from a total of 16 agencies and individuals. Nine commenters supported the proposed rule, two suggested that the rule be split—listing *Eriastrum densifolium* ssp. *sanctorum* separately from *Centrostegia leptoceras*. One commenter, a representative of a sand and gravel mining company, opposed the listing of *Eriastrum densifolium* ssp. *sanctorum*. No other opposing testimony was received. The written comments and oral testimony received (from five individuals) at the public hearing are grouped below and discussed by issue.

Issue 1: Critical habitat should be designated for these species.

Reponse: The Service believes that the danger posed by designating critical habitat would outweigh the potential benefits. As discussed in the "Summary of Factors Affecting the Species" section below under Factor "B," both species could be adversely affected by curiosity seekers. Designation of critical habitat would increase the degree of threat facing these species.

Issue 2: A question was raised regarding the applicability of a Habitat Conservation Plan for *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras*. This plan was suggested as an early means of designing recovery actions.

Reponse: A Habitat Conservation Plan is specifically defined in section 10(a) of the Act. It provides for the preservation of certain areas of an animal species' habitat and grants a permit to developers for incidental take (as defined in section 9 of the Act). The prohibition of take only applies for plants that are deliberately removed from lands under Federal jurisdiction; consequently, plants are not protected from incidental take. Such taking of plants on lands under Federal jurisdiction is addressed through the consultation process as described in section 7 of the Act. Therefore, as defined in section 10(a) of the Act, it would not be appropriate to design a Habitat Conservation Plan for these two species. However, the Service recognizes the importance of establishing management objectives for conserving and enhancing endangered species, and anticipates developing a recovery plan for these two plants.

Issue 3: It would be more appropriate to work towards propagation of these species than to fine tune their status (e.g., go through the listing process). *Eriastrum densifolium* ssp. *sanctorum*, for example, could be established in Orange County.

Response: The Service will pursue actions to improve the status of these species following listing during the recovery process. Recovery efforts may include establishing the plants in portions of their historic range where they have been extirpated; however, recognition of their endangered status via listing under the Act is an appropriate step in this process.

Issue 4: The listing of these plants may result in delays and increased costs to portions of the Santa Ana Mainstem project. The Service should evaluate the impacts of this U.S. Army Corps of Engineers (COE) project on the two plants, and specifically address required mitigation. Potential recovery actions and their effects on the Santa Ana River project should also be addressed.

Response: The COE's Santa Ana River Mainstem project is presently in Phase I. Phase II will not commence until there is congressional authorization. During Phase II specific project impacts and compensation or mitigation measures will be determined. Because the project is in its early stage and information is lacking, it would be premature for the Service to determine mitigation measures. Given that the COE is responsible for this project, it also would be inappropriate for the Service to provide information on project design. In general, the Service is concerned that certain project features (dam and borrow pit locations) may directly remove some individuals of *Eriastrum densifolium* ssp. *sanctorum*. Indirect effects such as increased urban development in the floodplain below the proposed Upper Santa Ana River Dam could adversly affect both species. Representatives of the Service and the COE have been and will continue to work together in the design of this project and remain optimistic about their ability to resolve these issues. When it is appropriate, the procedures described in Section 7 of the Act will be followed.

Issue 5: Centrostegia leptoceras and *Eriastrum densifolium* ssp. *sanctorum* are different species and listing actions ought to be handled separately.

Response: *Centrostegia leptoceras* and *Eriastrum densifolium* ssp. *sanctorum* occur in alluvial fan scrub. Their remaining ranges overlap, and historic ranges have been reduced due to similar causes. Therefore, the Service believes it is appropriate to list them jointly.

Issue 6: Eriastrum densifolium ssp. *sanctorum* may not qualify for Federal listing because it is too widespread, it is not vulnerable to competition from exotics as it is a taller shrub, it is not grazed upon by rabbits, and it occurs on disturbed sites.

Response: A species need not meet every listing criterion to be endangered. The total remaining range of *Eriastrum densifolium* ssp. *sanctorum* occurs in the drainage of the Santa Ana River of San Bernardino County. The range of this plant has been significantly reduced (see Factor "A" in the "Summary of Factors Affecting the Species" section). Most of the areas on which the plant occurs have been proposed for sand and gravel mining in the recent past.

Although adult *Eriastrum densifolium* ssp. *sanctorum* shrubs have been found in some places dominated by exotic species, seedlings have not been found in these sites. Transect data revealed that this plant occurs in relatively open areas where the total vegetation cover is usually less than 50 percent (Zembal and Kramer 1984). It is likely that this species requires full sun for growth and seed germination. Establishment of exotics in areas with stands of *Eriastrum densifolium* ssp. *sanctorum* may not adversely affect these mature plants; however, self-sustaining populations with all age classes represented have not been found in areas dominated by weedy exotics such as *Bromus* and *Brassica*.

The Service is not aware of any studies on the effects of herbivory on either species.

Eriastrum densifolium ssp. *sanctorum* has rarely been found in disturbed sites. Seedlings of this plant have sprouted in a few places that had been scraped or bulldozed. Some of the adult plants recovered after one locality west of Orange Street had been superficially scraped. In these cases, there was a nearby source of seed from mature plants. It appears that on occasion human-caused disturbance mimics natural disturbance required for seed germination. Most former alluvial fan scrub habitats that have been adversely affected by discing, scraping, or sand and gravel operations do not contain *Eriastrum densifolium* spp. *sanctorum*. However, recent success in transplanting this plant offers some

hope that habitat restoration is possible. It will be important to determine the extent of seed set and germination in these transplanted patches of *Eriastrum densifolium* spp. *sanctorum*.

Issue 7: The Service's notification of the public on this proposal was inadequate.

Response: The Service went through an extensive notification process to make the public aware of this proposal; this process satisfied the requirements of the Act and is described at the beginning of this section.

Issue 8: Several commenters requested the exact locations of these plants.

Response: For the reasons discussed under Issue 1 above and in the section dealing with Critical Habitat below, the Service believes that giving exact locations would increase the degree of threat facing these species.

Issue 9: Increased persistent flooding could result in the extinction of the plants.

Response: These plants occur naturally on the higher floodplain terraces, and are probably adapted to a certain range of flood conditions. Too high a frequency of flooding may result in the extirpation of some populations. However, elimination of all flood flows also appears to eliminate the plants; some flooding appears to maintain the sparsely vegetated conditions under which these plants thrive.

In summary, no substantive comments or data received in response to the proposal indicated that *Eriastrum densifolium* ssp. *sanctorum* or *Centrostegia leptoceras* are more widespread or less vulnerable to disturbance or degradation of habitat than previously thought. Some anecdotal evidence was presented suggesting that *Eriastrum densifolium* ssp. *sanctorum* has recovered from disturbance at certain sites; however, Service personnel who are familar with this plant's habitat and range believe these sites represent exceptional cases. Both species occupy restricted ranges that are vulnerable to encroaching development.

Summary of Factors Affecting the Species

After a thorough review and consideration of all information available, the Service has determined that *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* should be classified as endangered species. Procedures found at section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR Part 424) promulgated to implement the listing provisions of the Act were followed. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1). These factors and their applications to *Eriastrum densifolium* (Benth.) Mason ssp. *sanctorum* (Milliken) Mason and *Centrostegia leptoceras* Gray are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range. Eriastrum densifolium* ssp. *sanctorum* once occurred on the higher floodplain terraces along the Santa Ana River and its tributaries in Orange, Riverside, and San Bernardino Counties. It has been extirpated from Orange and Riverside Counties. In Orange County, urban development, citrus groves, horse stables, and urban parks occur to the edge of the Santa Ana River. In Riverside County, the higher floodplain terraces contain urban neighborhoods, ranches and agriculture, and sand and gravel mines. The terraces that have not been built upon or converted to agriculture have been overgrazed. In San Bernardino County where the Santa Ana River has been channelized (mostly with earthen banks), urban and agricultural developments occur to its edge. *Eriastrum densifolium* ssp. *sanctorum* now occurs in isolated stands along the Santa Ana River in San Bernardino County between 360 and 630 meters (1,200 and 2,000 feet) in elevation. One disjunct population remains on Lytle Creek at 360 meters (1,200 feet) in elevation. Approximately 720 hectares (1,800 acres) remain (Krantz 1986 pers. comm.).

Centrostegia leptoceras once occurred in alluvial fan scrub of Los Angeles, San Bernardino, and Riverside Counties. Currently it is known from 5 localities totaling less than 4 hectares (10 acres) in extent. Populations occur adjacent to Lytle Creek, the Santa Ana River, Temescal Creek, and the San Jacinto River (Krantz 1984). A population also remains adjacent to Bautista Creek in Riverside County. The alluvial fan scrub of Los Angeles County has been replaced by the ever-expanding cities of the Los Angeles Basin. Most former San Bernardino localities have been overtaken by urbanization or san and gravel mines.

Extant populations of *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* in San Bernardino County are further threatened by proposed sand and gravel mines. The BLM is preparing a management plan for these areas. Proposed land uses in the plan include the conservation of these plants, sand and gravel mining, shooting ranges and other activities. In addition, an indirect effect of flood-control dams proposed by the COE in the Upper Santa Ana River Canyon and Lytle Creek could be relaxation of zoning restrictions that now apply to floodplain development. Such zoning changes could allow increased urbanization downstream from the dams and lead to the extinction of *Eriastrum densifolium* ssp. *sanctorum* and to the extirpation of *Centrostegia leptoceras* in San Bernardino County. In Riverside County, the San Jacinto River Temescal Creek and Bautista Canyon drainages are also sites of urbanization and agricultural developmnts. These activities have reduced the range of *Centrostegia leptoceras* on these drainages. Off-road vehicle activity and trash dumping has adversely affected some areas supporting *Centrostegia leptoceras*.

B. *Overutilization for commercial, recreational, scientific, or education purposes.* Neither of these species is known to have suffered as a result of collecting or other utilization. However, *Eriastrum densifolium* ssp. *sanctorum* is extremely attractive when in flower and could be sought by collectors, and *Centrostegia leptoceras* is found on easily distrubed sites that could be damaged by curiosity seekers.

C. *Disease or predation.* Historically, cattle grazing affected many of the areas once supporting *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras*. In some areas, plant species composition was undoubtedly altered significantly by grazing animals. Although grazing may have contributed to the extirpation of these species in some places, areas that are now grazed are so altered that they no longer appear to be capable of supporting either plant, even if grazing were the cease. Grazing does not appear to be a threat in those areas still supporting these species.

D. *The inadequacy of existing regulatory mechanisms.* The California Fish and Game Commission has listed both species as endangered. This designation gives these plants some protection from take, but not habitat destruction. Under the California Endangered Species Act of 1985, State lead agencies are required to consult with the Department of Fish and Game when their projects may affect State-listed species. In the case of *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras*, few (if any) State projects are anticipated. A general prohibition exists against destroying or removing vegetation on BLM land without a permit to do so. The County of San Bernardino has required some sand and gravel operators to avoid populations of *Eriastrum densifolium*

ssp. *sanctorum* and conduct transplant efforts. However, these regulations have not been effective in reducing habitat loss.

E. *Other natural or manmade factors affecting its continued existence.* *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* do not occur in areas dominated by weedy exotics such as *Bromus rubens* and *Brassica geniculata*. As a prostrate annual that apparently requires full sun and can only tolerate minimal, if any, disturbance, *Centrostegia leptoceras* is especially sensitive to invasion of taller annual species. All known localities of this plant are near areas dominated by weedy exotics. Some herbicide spraying by the San Bernardino County Department of Agriculture for vegetation control may have inadvertently reduced the quality of habitat of these species (Gardner, San Bernardino County Agriculture Commission 1986 pers. comm.).

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by these species in determining to make this rule final. Based on this evaluation, the preferred action is to list *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* as endangered. This preference reflects the strong likelihood that without the protection of the Endangered Species Act of 1973, as amended, these plant species would become extinct throughout their ranges.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate any habitat of a species which is considered to be critical habitat at the time the species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for these species at this time. Two of the five localities for *Centrostegia leptoceras* are in Federal ownership. *Eriastrum densifolium* ssp. *sanctorum* occurs on Federal lands; however, it is a conspicuous and attractive shrub. Designation of critical habitat for *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* would likely focus attention upon these plants and their rare and vulnerable status, and might encourage vandalism or taking for collections or commercial purposes. As mentioned above, *Eriastrum densifolium* ssp. *sanctorum* is an attractive shrub when flowering and could easily be subjected to horticultural collecting if its habitat were closely identified through publication of maps and descriptions. *Centrostegia leptoceras*, although not a likely horticultural subject, is confined to extremely localized sites that could easily be disturbed by foot traffic if they were made known to curiosity-seekers. All involved parties and landowners will be notified of the location and importance of protecting these species habitats. The potential danger posed to these species by designating critical habitat outweighs the minimal protection that such designation would provide. Therefore, it would not be prudent to determine critical habitat for these plants at this time.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provided for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. The protection required of Federal agencies and the prohibitions against taking are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat if any is being designated. Regulations implementing this Interagency Cooperation provision of the Act are codified at 50 CFR Part 402. Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal Agency must enter into formal consultation with the Service.

Two Federal agencies have proposed projects that may affect *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras*. The COE, Los Angeles District, has proposed to construct dams on the Upper Santa Ana River Canyon and Lytle Creek Canyon. The Service is concerned that these dams might increase urbanization and agricultural developments in areas occupied by *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras*, and physically alter flooding conditions necessary to maintain these plants. The Service will continue to work with the COE in protecting this plant. The COE is concerned about the survival of these plants and has expressed support for conserving them. The BLM has proposed to develop a habitat management plan for lands occupied by these plants. Competing interests such as sand and gravel mining and shooting ranges may be included in the BLM's plan. One of its goals is to provide for the protection of these plants on its land (Baier 1986). Listing of *Eriastrum densifolium* ssp. *sanctorum* and *Centrostegia leptoceras* will provide further encouragement to the BLM to conserve these plants.

The Act and its implementing regulations found at 50 CFR 17.61, 17.62, and 17.63 set forth a series of general trade prohibitions and exceptions that apply to all endangered plant species. All trade prohibitions of section 9(a)(2) of the Act, implemented by 50 CFR 17.61, apply. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to import or export any endangered plant, transport it in interstate or foreign commerce in the course of commercial activity, sell or offer it for sale in interstate or foreign commerce, or remove it from areas under Federal jurisdiction and reduce it to possession. Certain exceptions can apply to agents of the Service and State conservation agencies. The Act and 50 CFR 17.62 and 17.63 also provide for the issuance of permits to carry out otherwise prohibited activities involving endangered species under certain circumstances. Because transplant techniques have been recently developed for *Eriastrum densifolium* ssp. *sanctorum*, and because it is an attractive shrub, trade permits may be sought for this plant. It is anticipated that few trade permits would ever be sought or issued for *Centrostegia leptoceras* since the species is not common in cultivation or in the wild. Requests for copies of the regulations on plants and inquiries regarding them may be addressed to the Federal Wildlife Permit Office, U.S. Fish and Wildlife Service, Washington, DC 20240 (703/235–1903).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under the authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to Section 4(a) of the Endangered Species Act of 1973, as

amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

BILLING CODE 4310–55–M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 675

[Docket No. 61225–7052]

Groundfish of the Bering Sea and Aleutian Islands Area

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: In-season adjustment and notice of closure to directed fishing.

SUMMARY: NOAA announces the apportionment of amounts of Alaska groundfish to the domestic annual processing (DAP) portion of the domestic annual harvest (DAH) under provisions of the fishery management plan (FMP) for the Groundfish Fishery of the Bering Sea and Aleutian Islands Area and the closure of the Aleutian Islands area to directed fishing for sablefish. Groundfish are apportioned according to the regulations implementing the FMP. The intent of these actions is to assure optimum use of these groundfish while conserving sablefish stocks.

DATES: Effective: September 23, 1987. Comments will be accepted through October 8, 1987.

ADDRESSES: Comments should be mailed to Robert W. McVey, Director, Alaska Region, National Marine Fisheries Service, P.O. Box 21668, Juneau, AK 99802, or be delivered to Room 453, Federal Building, 709 West Ninth Street, Juneau, Alaska.

FOR FURTHER INFORMATION CONTACT: Janet E. Smoker (Resource Management Specialist, NMFS), 907–586–7230.

SUPPLEMENTARY INFORMATION: The FMP governs the groundfish fishery in the exclusive economic zone under the Magnuson Fishery Conservation and Management Act. The FMP was developed by the North Pacific Fishery Management Council (Council) and implemented by rules appearing at 50 CFR 611.93 and Part 675. The total allowable catches (TACs) for various groundfish species are apportioned initially among DAH, reserves and total allowable level of foreign fishing (TALFF). The reserve amount, in turn, is to be apportioned to DAH and/or TALFF during the fishing year, under 50 CFR 611.93(b) and 675.20(b). As soon as practicable after April 1, June 1, August 1 and on such other dates as are necessary, the Secretary of Commerce apportions to DAH all or part of the reserve that he finds will be harvested by U.S. vessels during the remainder of the year, except that part or all of the reserve may be withheld if an apportionment would adversely affect

the conservation of groundfish resources or prohibited species.

The initial specifications of domestic annual processing (DAP) for 1987 were based on the needs of the U.S. industry as projected by the Director, Alaska Region, NMFS (Regional Director). Certain species, including sablefish, are considered fully utilized by DAP and bycatch amounts only were made available to JVP and TALFF. After fifteen percent of TAC was placed in the nonspecific reserve, as required at 50 CFF 675.20(a)(3), the initial interim specification for the Aleutian Islands area sablefish DAP was determined to be 3,317 mt (52 FR 785, January 9, 1987). The current status of nonspecific reserve is 47,071 mt and will be further reduced to 46,471 mt by this action.

In the Aleutian Islands area, several catcher/processors and several U.S. longliners delivering fish to shoreside plants are conducting directed fisheries for sablefish. The estimated catch through September 5 is 3,250 mt. The Regional Director estimates that the entire Aleutian Islands sablefish TAC, 4,000 mt, will be taken by the directed DAP fishery by late September. When the Aleutian Islands area sablefish TAC is taken, current regulations require that all domestic vessels operating in the Aleutian Islands area discard sablefish in the same manner as prohibited species. Thus, sablefish taken in fisheries for other groundfish species and discarded as required by regulation would be wasted for the remainder of the year.

TABLE 1.—BERING SEA/ALEUTIANS REAPPORTIONMENTS OF TAC (MT)

Current This Action Revised:				
Sablefish (Aleutian Islands)	DAP	3,317	+600	3,917
TAC 4,000; EY 4,000	JVP	83		83
	TALFF	0		0
Total	DAP	336,123	+600	336,723
TAC 2,000,000	JVP	1,484,110		1,484,110
	TALFF	132,696		132,696
	RESERVES	47,071	−600	46,471

The following action is taken by this notice to reapporation specifications in the BSA fisheries.

To the BSA DAP

To allow continued DAP fisheries for sablefish in the Aleutian Islands area, 600 mt of the nonspecific reserve is apportioned to the Aleutian Islands sablefish DAP. This is the maximum reserve amount that can be apportioned to the Aleutian Islands sablefish TAC without exceeding the initial TAC. The Secretary is providing that 500 mt of the reserve apportionment amount is to be used for bycatch only, as set out below.

This apportionment does not result in overfishing of the sablefish stock, as the resulting TAC is 4,000 mt, equal to the equilibrium yield (EY).

Notice of Closure to Directed Fishing

Under 50 CFR 675.20(a)(7), when the Regional Director determines that the remaining amount of the TAC of any target species is necessary for bycatch in fisheries for other groundfish species during the remaining fishing year, the Secretary will publish a notice in the **Federal Register** prohibiting directed fishing for that species for the remainder of the fishing year. The Regional Director has determined that the estimated amount of Aleutian Islands area sablefish DAP (500 mt) remaining after September 19, will be needed for bycatch in DAP fisheries conducting directed fisheries in the Aleutian Islands area for up to 10,000 mt of other groundfish species during the remainder of the year. Therefore, in order to prevent wastage and encourage the full utilization of all sablefish harvested, directed fishing for sablefish by DAP fishermen in the Aleutian Islands area must cease effective noon, Alaska Daylight Time, September 23, 1987.

Thus, U.S. vessels participating in DAP fisheries may continue fishing for other groundfish species and retain sablefish provided that their catch, take or harvest of sablefish does not exceed 20 percent of their take as defined at 50 CFR 675.2. DAP fishermen should note, however, that DAP fisheries should rarely experience bycatches of sablefish in excess of 5 percent, and many DAP fisheries should have bycatches of less than 1 percent. If higher bycatches occur, and the remaining sablefish TAC is taken prior to the end of the year, sablefish would become a prohibited species. Under this circumstance, the Secretary could, under 50 CFR 675.20(a)(9), limit directed fishing for other groundfish by any method including area closures, gear restrictions or prohibition of directed fishing on certain species in order to prevent overfishing of sablefish.

Classification

This action is taken under the authority of 50 CFR 611.93(b), 675.20(b) and 675.20(a)(7) and complies with Executive Order 12291.

The Assistant Administrator for Fisheries finds for good cause that it is impractical and contrary to the public interest to provide prior notice and comment. Immediate effectiveness of this notice is necessary to prevent wastage and encourage the full utilization of all sablefish harvested. However, interested persons are invited to submit comments in writing to the address above for 15 days after the effective date of this notice.

Proposed Rules

Federal Register
Vol. 52, No. 187
Monday, September 28, 1987

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

9 CFR Part 51

[Docket No. 85-122]

Animals Destroyed Because of Brucellosis

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: We propose to increase the amount of Federal indemnity for brucellosis exposed bison and certain brucellosis exposed cattle destroyed during herd depopulation. Cattle affected by this action would be nonregistered cattle other than dairy cattle. The increased indemnity is necessary to give herd owners sufficient financial incentive to depopulate their herds and would help eradicate brucellosis in the United States.

DATE: Consideration will be given only to comments postmarked or received on or before October 28, 1987.

ADDRESSES: Send your comments to Steven B. Farbman, Assistant Director, Regulatory Coordination, APHIS, USDA, Room 728, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782. Please state that they are in response to Docket No. 85-122. Written comments we receive may be inspected in Room 728 of the Federal Building between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays.

FOR FURTHER INFORMATION CONTACT: Dr. H. E. Metcalf, Senior Staff Veterinarian, Program Planning Staff, VS, APHIS, USDA, Room 841, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, (301) 436-8713.

SUPPLEMENTARY INFORMATION:

Background

Brucellosis is a serious, infectious disease of animals and man caused by bacteria of the genus *Brucella*. In cattle, the disease causes abortion, infertility, and low milk yields. The Secretary of Agriculture is authorized to cooperate with the States to eradicate and prevent the interstate spread of brucellosis. To encourage livestock owners to cooperate with the National State-Federal Brucellosis Eradication Program, Title 9, Code of Federal Regulations, Part 51 (referred to below as the regulations), provides for Federal indemnity for animals destroyed because of brucellosis.

Under the regulations, owners are eligible for Federal indemnity for cattle and bison destroyed as brucellosis reactors and, under certain conditions, for cattle and bison destroyed because of exposure to brucellosis. Federal indemnity may be paid for cattle and bison destroyed because of exposure to brucellosis only if the cattle and bison are female calves or are destroyed during herd depopulation. However, 40 to 60 percent of herd owners offered herd depopulation decline, many choosing instead to have their animals destroyed only if the animals are later identified as brucellosis reactors. The amount of Federal indemnity authorized for brucellosis exposed cattle and brucellosis exposed bison destroyed during herd depopulation equals the amount authorized for cattle and bison destroyed as brucellosis reactors.

Brucellosis exposed cattle and brucellosis exposed bison have a high probability of contracting brucellosis, and may, in fact, be contagious before they react to an official test for brucellosis. The incubation period varies in cattle and bison. Usually cattle and bison develop a positive reaction to the blood test for brucellosis within 3 to 12 weeks after infection, but some may not do so for 8 months or longer. Meanwhile, the exposed cattle and bison are potential transmitters of the disease. Most herds known to be affected are made up of nonregistered cattle other than dairy cattle. In most States, owners are eligible for Federal indemnity of only $50 a head for bison and for nonregistered cattle, other than dairy cattle, that are destroyed during herd depopulation because of exposure to brucellosis. This amount is inadequate for most owners to consider depopulation. We therefore propose to increase the amount of Federal indemnity for these brucellosis exposed cattle and for brucellosis exposed bison destroyed during herd depopulation. This action would provide financial incentive for owners to depopulate in a timely manner, reducing the risk of the disease spreading.

Owners of brucellosis exposed cattle and brucellosis exposed bison destroyed during herd depopulation now are eligible for Federal indemnity in the following amounts: In all States except Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, up to $250 for any registered cattle, $250 for any nonregistered dairy cattle, $50 for any nonregistered cattle other than dairy cattle, and $50 for any bison; and in Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, up to $250 for any registered cattle, $250 for any nonregistered dairy cattle, $150 for any nonregistered cattle other than dairy cattle, and $150 for any bison. We propose the following rates of Federal indemnity for brucellosis exposed cattle and brucellosis exposed bison destroyed during herd depopulation: In all States except Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, up to $250 for any registered cattle, $250 for any nonregistered dairy cattle, $150 for any nonregistered cattle other than dairy cattle, and $150 for any bison; and in Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, up to $250 for any cattle or bison.

We propose to specify that Federal indemnity payments would be made at the rates in effect at the time the Deputy Administrator approves the herd for depopulation. This action would remove any incentive for herd owners to delay depopulation in anticipation of an increase in Federal indemnity rates.

We also propose to amend § 51.7 by extending the time that may be granted owners of registered cattle to present registration papers. The regulations now provide that in cases where registration papers are unavailable or where the cattle are less than 1 year old and not registered, the Veterinarian in Charge may grant owners up to 30 days to present the papers. The Deputy Administrator may grant an additional 30 days. We have found that the 30 days granted by the Veterinarian in Charge usually is not long enough and that extensions of time are routinely requested. We propose to allow the Veterinarian in Charge to grant owners up to 60 days to present papers, and to

allow the Deputy Administrator to grant an extension longer than 60 days.

Miscellaneous

We propose to add definitions to § 51.1 for "recognized slaughtering establishment" and "specifically approved stockyard." Footnote 1 in § 51.6, which refers readers to § 78.1 of this chapter for definitions of these terms, would be removed.

We also propose to correct present footnote 1 in § 51.3 (proposed footnote 3), which now begins as follows: "The Deputy Administrator shall authorize payment of Federal indemnity by the Department at the applicable maximum percent in § 51.3(a)(1) and (2) and the maximum per head rates in § 51.3(a)(3)". This footnote, which reflects a system of indemnity payments based on market values for slaughter and replacement, was revised by an interim rule published in the **Federal Register** on November 26, 1982 [47 FR 53320–53325, Docket No. 82–061], and affirmed March 27, 1985 [50 FR 11992–11993, Docket No. 83–107]. The footnote was revised to read as follows: "The Deputy Administrator shall authorize payment of Federal indemnity by the Department at the applicable maximum per head rate in § 51.3". This revision was necessary because the interim rule established an indemnity system based on flat, per head rates for cattle and bison destroyed because of brucellosis. Indemnity payments for swine destroyed because of brucellosis were already based on flat, per head rates. The current regulations should contain the footnote as it was revised by the rule on March 27, 1985.

In addition, we propose to make several nonsubstantive changes to clarify the regulations.

Executive Order 12291 and Regulatory Flexibility Act

We are issuing this proposed rule in conformance with Executive Order 12291, and we have determined that it is not a "major rule." Based on information compiled by the Department, we have determined that this proposed rule would have an effect on the economy of less than $100 million; would not cause a major increase in costs or prices for consumers, individuals, industries, Federal, State or local government agencies or geographic regions; and would not cause a significant adverse effect on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Under the proposed rule, owners of brucellosis exposed cattle and brucellosis exposed bison destroyed during herd depopulation would be eligible for Federal indemnity amounting to an increase of $100 over the present rates for bison and nonregistered cattle other than dairy cattle. We estimate that we will offer herd depopulation for fewer than 500 of the approximately 1.6 million herds of cattle and bison in the United States in the coming year.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that the proposed rule would not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

Information collection requirements contained in this document have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35) and have been assigned OMB control number 0579–0067.

Executive Order 12372

The program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to the provisions of Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR Part 3015, Subpart V.)

List of Subjects in 9 CFR Part 51

Animal diseases, Bison, Brucellosis, Cattle, Hogs, Indemnity payments.

Accordingly, we propose to amend 9 CFR Part 51 as follows:

PART 51—ANIMALS DESTROYED BECAUSE OF BRUCELLOSIS

1. The authority citation would continue to read as follows:

Authority: 21 U.S.C. 111–113, 114, 114a, 114a–1, 120, 121, 125, 134b; 7 CFR 2.17, 2.51, and 371.2(d).

2. In § 51.1, the definition of "Department" would be removed and two new definitions would be added in alphabetical order to read as follows:

§ 51.1 Definitions.

* * * * *

Recognized slaughtering establishment. Any slaughtering establishment operating under the Federal Meat Inspection Act (21 U.S.C. 601 through 695) or a State meat inspection act.[1]

* * * * *

Specifically approved stockyard. Premises approved by the Deputy Administrator, in accordance with § 78.44 of this chapter, for assembling cattle or bison for sale.[2]

* * * * *

§ 51.3 [Amended]

3. In § 51.3, footnotes 1 and 2 and the references to them would be redesignated footnotes 3 and 4, respectively.

4. In § 51.3, all references to "Department" would be revised to read "United States Department of Agriculture".

5. In § 51.3, paragraph (a)(2) would be revised to read as follows:

§ 51.3 Payment to owners for animals destroyed.

(a) * * *

(2) *Herd depopulation*—(i) *Eligibility.* The Deputy Administrator may authorize payment of Federal indemnity [3] by the United States Department of Agriculture to any owner whose herd of cattle or bison is destroyed because of brucellosis. The United States Department of Agriculture shall pay Federal indemnity for brucellosis exposed cattle or brucellosis exposed bison in the herd only when the Deputy Administrator determines that destruction of all cattle and bison in the herd will contribute to the brucellosis eradication program. Owners must furnish proof of destruction [4] to the

---

[1] The names and addresses of recognized slaughtering establishments may be obtained from the Deputy Administrator, Veterinary Services, Animal and Plant Health Inspection Service, United States Department of Agriculture, Washington, DC 20250.

[2] Notices containing lists of specifically approved stockyards are published in the **Federal Register**. Lists of specifically approved stockyards also may be obtained from the State animal health official, State representatives, or Veterinary Services representatives.

[3] The Deputy Administrator shall authorize payment of Federal indemnity by the United States Department of Agriculture at the maximum per head rates in § 51.3: (a) As long as sufficient funds appropriated by Congress appear to be available for this purpose for the remainder of the fiscal year; (b) in States or areas not under Federal quarantine; (c) in States requesting payment of Federal indemnity; and (d) in States not requesting a lower rate.

[4] The Veterinarian in Charge shall accept any of the following documents as proof of destruction: (a) A postmortem report; (b) a meat inspection certification of slaughter; (c) a written statement by a State representative, Veterinary Services representative, or accredited veterinarian attesting to the destruction of the animal; (d) a written, sworn statement by the owner or caretaker of the animal attesting to the destruction of the animal; (e) a permit (VS Form 1–27) consigning the animal from a farm or livestock market directly to a recognized slaughtering establishment; or (f) in unique situations where the documents listed above are not available, other similarly reliable forms of proof of destruction.

Veterinarian in Charge prior to payment of Federal indemnity. The United States Department of Agriculture shall pay Federal indemnity for brucellosis reactor cattle and brucellosis reactor bison in accordance with paragraph (a)(1) of this section.

(ii) *Amount of Federal indemnity.* Payments of Federal indemnity shall be made at the rates in effect at the time the Deputy Administrator approves depopulation for the herd. In all States except Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, the amount of Federal indemnity shall not exceed $250 for any registered cattle, $250 for any nonregistered dairy cattle, $150 for any nonregistered cattle other than dairy cattle, and $150 for any bison. In Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, the amount of Federal indemnity shall not exceed $250 for any cattle or bison.

* * * * *

§ 51.6 [Amended]

6. In § 51.6, footnote 1 and the references thereto would be removed.

7. In § 51.6, footnote 2 and the reference thereto would be redesignated as "5" and would be revised to read

"[5] Markets are approved by the Deputy Administrator in accordance with § 76.18 of this chapter.".

8. In § 51.7(a), in the last sentence, "Department" would be revised to read "United States Department of Agriculture".

9. In § 51.7, paragraph (b) would be revised to read as follows:

§ 51.7 Claims for indemnity.

* * * * *

(b) Claims for indemnity for registered cattle shall be accompanied by the cattle's registration papers issued in the name of the owner. If the registration papers are unavailable or if the cattle are less than 1 year old and are not registered at the time the claim for indemnity is submitted, the Veterinarian in Charge may grant a 60-day extension or the Deputy Administrator may grant an extension longer than 60 days for the presentation of registration papers.

Done at Washington, DC, this 23rd day of September, 1987.

J.K. Atwell,

Deputy Administrator, Veterinary Services, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 87-NM-105-AD]

Airworthiness Directives; Airbus Industrie A310-203, -221, and -222 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes an airworthiness directive (AD), applicable to all Airbus Industrie Model A310 series airplanes, that would require inspection, modification, and repair, if necessary, of the rear pressure bulkhead. This proposal is prompted by reports of cracks detected in the attachment angles during the fatigue test of the rear pressure bulkhead. This condition, if not corrected, could eventually lead to failure of the bulkhead.

DATE: Comments must be received no later than October 27, 1987.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Office of the Regional Counsel (Attention: ANM-103), Attention: Airworthiness Rules Docket No. 87-NM-105-AD, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168. The applicable service information may be obtained from Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. This information may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Ms. Judy Golder, Standardization Branch, ANM-113; telephone (206) 431-1967. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Availability of NPRM

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) oy submitting a request to the FAA, Northwest Mountain Region, Office of the Regional Counsel (Attention: ANM-103), Attention: Airworthiness Rules Docket No. 87-NM-105-AD, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168.

Discussion

The Direcion Général de L'Aviation Civile—France (DGAC) has, in accordance with existing provisions of a bilateral airworthiness agreement, notified the FAA of cracks detected in certain rear pressure bulkhead attachment angles during the fatigue test on certain Airbus Industrie Model A310 series airplanes. The cracks are attributed to fatigue. This condition, if not detected and corrected, could lead to failure of the bulkhead attachment.

Airbus Industrie has issued Service Bulletin A310-53-2024, Revision 1, dated June 20, 1986, which describes procedures for the inspection and repair of cracks in the rear pressure bulkhead attachment angles and Service Bulletin A310-53-2025, dated April 21, 1986, which describes procedures for modification of the attachment of the rear pressure bulkhead to frame (FR) 80/82. The DGAC has classified these service bulletins as mandatory.

This airplane model is manufactured in France and type certificated in the United States under the provisions of § 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement.

Since these conditions are likely to exist or develop on airplanes of this model registered in the United States, an AD is proposed that would require inspection of the rear pressure bulkhead, and repair, if necessary, in accordance with the service bulletins previously mentioned.

It is estimated that 3 airplanes of U.S. registry would be affected by this AD,

that it would take approximately 590 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of this AD to U.S. operators is estimated to be $70,800.

For the reasons discussed above, the FAA has determined that this document (1) involves a proposed regulation which is not major under Executive Order 12291 and (2) is not a significant rule pursuant to the Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and it is further certified under the criteria of the Regulatory Flexibility Act that this proposed rule, if promulgated, will not have a significant economic impact on a substantial number of small entities because few, if any, Model A310 airplanes are operated by small entities. A copy of a draft regulatory evaluation prepared for this action is contained in the regulatory docket.

List of Subjects in 14 CFR Part 39

Aviation safety, Aircraft.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend § 39.13 of Part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. By adding the following new airworthiness directive:

Airbus Industrie: Applies to certain Model A310 series airplanes, as listed in Service Bulletin A310–53–2025, dated April 21, 1986, certificated in any category. Compliance required as indicated, unless previously accomplished.

To prevent failure of the rear pressure bulkhead, accomplish the following:

A. Prior to the accumulation of 6,000 landings time in service or within the next 3,000 landings after the effective date of this AD, whichever occurs later, accomplish the following:

1. Inspect the rear pressure bulkhead for cracks, using x-ray procedures, in accordance with paragraph 2., Accomplishment Instructions, of Airbus Industrie Service Bulletin A310–53–2024, Revision 1, dated June 20, 1986. If any cracks are detected, repair prior to further flight in accordance with paragraph 2.C., Repair, of the service bulletin.

2. Modify the attachment of the rear pressure bulkhead to FR 80/82 in accordance with paragraph 2., Accomplishment Instructions, of Airbus Industrie Service Bulletin A310–53–2025, dated April 21, 1986.

B. On airplanes that were modified in accordance with paragraph A.2., above, after the accumulation of 6,000 landings, repeat the x-ray inspection of the rear pressure bulkhead required by paragraph A.1., above, within 6,000 landings after modification, and thereafter at intervals not to exceed 12,000 landings.

C. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM–113, FAA, Northwest Mountain Region.

D. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base for the accomplishment of inspections and/or modifications required by this AD.

All persons affected by this proposal who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to Airbus Industrie, Airbus Support Division, Avenue Didier Daurat, 31700 Blagnac, France. These documents may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or at the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

Issued in Seattle, Washington, on August 26, 1987.

Frederick M. Isaac,

Deputy Director, Northwest Mountain Region.

14 CFR Part 39

[Docket No. 87–NM–122–AD]

Airworthiness Directives; British Aerospace Model H.S. 748 Series Airplane

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes an airworthiness directive (AD), applicable to British Aerospace (BAe) Model H.S. 748 series airplanes, that would require modifying the overwing escape hatch locking mechanism. This proposal is prompted by reports of hatches not being properly closed and locked or the hatch locking mechanisms being strained by mishandling. This condition, if not corrected, could lead to escape hatches opening and becoming detached from the airplane during flight.

DATE: Comments must be received no later than October 30, 1987.

ADDRESSES: Send comments on the proposal in duplicate to the Federal Aviation Administration, Northwest Mountain Region, Office of the Regional Counsel (Attention: ANM–103), Attention: Airworthiness Rules Docket No. 87–NM–122–AD, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168. The applicable service information may be obtained from British Aerospace, Inc., P.O. Box 17414, Dulles International Airport, Washington, DC 20041. This information may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Ms. Judy Golder, Standardization Branch, ANM–113; telephone (206) 431–1967. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Availability of NPRM

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the FAA, Northwest Mountain Region, Office of the Regional Counsel (Attention: ANM–103), Attention: Airworthiness Rules Docket No. 87–NM–122–AD, 17900 Pacific Highway South, C–68966, Seattle, Washington 98168.

Discussion

The United Kingdom Civil Aviation Authority (CAA) has, in accordance with existing provisions of a bilateral

VOL
52
ISS
187
SE
28
1987
UMI

airworthiness agreement, notified the FAA of an unsafe condition which may exist on British Aerospace Model H.S. 748 series airplanes. There have been numerous reports of overwing escape hatches opening and detaching from airplanes in flight due to hatches not being properly locked prior to flight. This condition, if not corrected, could lead to decompression due to the door leaving the airplane in flight with associated damage to the airplane and possible injuries to people on board and on the ground.

British Aerospace has issued Service Bulletin 52/127, dated May 29, 1985, which describes a modification to the overwing escape hatch locking device, which consists of installing a replacement for the existing hatch locking mechanism that allows visual identification of the hatch locked/unlocked status. With this modification installed, it will no longer be necessary to raise a cover to determine if the lock is engaged. The United Kingdom CAA has classified the BAe service bulletin as mandatory.

This airplane model is manufactured in the United Kingdom and type certificated in the United States under the provisions of § 21.29 of the Federal Aviation Regulations and the applicable bilateral airworthiness agreement.

Since these conditions are likely to exist or develop on airplanes of this model registered in the United States, an AD is proposed that would require the overwing escape hatch locking mechanism be modified in accordance with the service bulletin previously mentioned.

It is estimated that 2 airplanes of U.S. registry would be affected by this AD, that it would take approximately 33 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of this AD to U.S. operators is estimated to be $2640.

For the reasons discussed above, the FAA has determined that this document (1) involves a proposed regulation which is not major under Executive Order 12291 and (2) is not a significant rule pursuant to the Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and it is further certified under the criteria of the Regulatory Flexibility Art that this proposed rule, if promulgated, will not have a significant economic impact on a substantial number of small entities because of the minimal cost of compliance per airplane ($1,320). A copy of a draft regulatory evaluation prepared for this action is contained in the regulatory docket.

List of Subjects in 14 CFR Part 39

Aviation safety, Aircraft.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend § 39.13 of Part 39 of the Federal Aviation Regulations as follows:

PART 39—[AMENDED]

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. By adding the following new airworthiness directive:

British Aerospace: Applies to Model H.S. 748 series airplanes, as listed in British Aerospace Service Bulletin 52/127, dated May 29, 1985, certificated in any category. Compliance required within 5 months after the effective date of this AD, unless previously accomplished:

To prevent the loss of the overwing escape hatch during flight, due to improper locking, accomplish the following:

A. Replace the escape hatch locking mechanism with P/N 1OD14062 locking mechanism assembly, in accordance with the instructions in British Aerospace Service Bulletin No. 52/127, dated May 29, 1985.

B. An alternate means of compliance or adjustment of the compliance time, which provides an acceptable level of safety, may be used when approved by the Manager, Standardization Branch, ANM-113, FAA, Northwest Mountain Region.

C. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base for the accomplishment of inspections and/or modifications required by this AD.

All persons affected by this directive who have not already received the appropriate service document from the manufacturer may obtain copies upon request to British Aerospace, Inc., P.O. Box 17414, Dulles International Airport, Washington, DC 20041. This document may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or at the Seattle Aircraft Certification Office, 9010 East Marginal Way South, Seattle, Washington.

Issued in Seattle, Washington, on September 16, 1987.

Frederick M. Isaac,

Acting Director, Northwest Mountain Region.

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 87-NM-108-AD]

Airworthiness Directives; Boeing Model 737 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This notice proposes to supersede two existing airworthiness directives (AD), applicable to certain Boeing Model 737 series airplanes, which currently require inspection for cracking of the forward service doorway aft frame and repair, if necessary. This proposal would combine the inspections required by both AD's and add inspections of the frame support structure for the lower four door stop fittings. This action is prompted by several reports of cracks of the door stop support structure for the door stops on the aft frame. This condition, if not corrected, could result in the loss of pressurization.

DATE: Comments must be received no later than October 27, 1987.

ADDRESSES: Send comments on the proposal in duplicate to Federal Aviation Administration, Northwest Mountain Region, Office of the Regional Counsel (Attn: ANM-103), Attention: Airworthiness Rules Docket No. 87-NM-108-AD, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168. The applicable service information may be obtained from the Boeing Commercial Airplane Company, P.O. Box 3707, Seattle, Washington 98124. This information may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, FAA, Northwest Mountain Region, 9010 East Marginal Way South, Seattle, Washington.

FOR FURTHER INFORMATION CONTACT: Mr. Owen E. Schrader, Airframe Branch, ANM-120S; telephone (206) 431-1923. Mailing address: FAA, Northwest Mountain Region, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. All

communications received on or before the closing date for comments specified above will be considered by the Administrator before taking action on the proposed rule. The proposals contained in this Notice may be changed in light of the comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA/public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Availability of NPRM

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the FAA, Northwest Mountain Region, Office of the Regional Counsel (Attn: ANM-103), Attention: Airworthiness Rules Docket No. 87-NM-108-AD, 17900 Pacific Highway South, C-68966, Seattle, Washington 98168.

Discussion

On December 30, 1986, the FAA issued AD 87-01-U6, Amendment 39-5509 (52 FR 517; January 7, 1987), which requires inspection for cracks and repair, if necessary, of the aft frame of the forward service door in the area of the upper two door stops fittings.

After the issuance of AD 87-01-06, additional service experience indicated that cracks also could occur in the frame around the lower door stop fittings (Number 3-6), as well as in the backup structure for these door stops. On May 6, 1987, the FAA issued AD 87-10-03, Amendment 39-5621 (52 FR 17935; May 13, 1987), to require inspection and repair, if necessary, of the forward service door aft frame in the area of the lower four door stop fittings.

Recent reports indicate that the supporting structure must also be inspected for cracks. Therefore, the FAA has determined that the areas required to be inspected in accordance with AD 87-01-06 and AD 87-10-03 must be expanded to include the support structure for the lower four stops. This action is necessary to ensure the structural integrity of the door support structure.

The FAA has reviewed and approved Boeing Alert Service Bulletin 737-53A1108, Revision 2, dated August 13, 1987, which describes procedures for inspection, repairs, and terminating action, for cracks in the forward service door aft frame and the door stop support structure.

Since this condition is likely to exist or develop on other airplanes of this same type design, an AD is proposed which would require inspections and repairs, as necessary, of the forward galley doorway aft frame around the six door stops, and their support structure, in accordance with the service bulletin previously mentioned, and would supersede AD 87-01-06 and AD 87-10-03. It would also provide terminating action for the required repetitive inspections.

It is estimated that 450 airplanes of U.S. registry would be affected by this AD, that it would take approximately 6 manhours per airplane to accomplish the required actions, and that the average labor cost would be $40 per manhour. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $108,000.

For these reasons, the FAA has determined that this document (1) involves a proposed regulation which is not major under Executive Order 12291 and (2) is not a significant rule pursuant to the Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979), and it is further certified under the criteria of the Regulatory Flexibility Act that this proposed rule, if promulgated, will not have a significant economic impact on a substantial number of small entities because few, if any, Model 737 airplanes are operated by small entities. A copy of a draft regulatory evaluation prepared for this action is contained in the regulatory docket.

List of Subjects in 14 CFR Part 39

Aviation safety, Aircraft.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) as follows:

PART 39—[AMENDED]

1. The authority citation for Part 39 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1421 and 1423; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); and 14 CFR 11.89.

§ 39.13 [Amended]

2. By superseding AD 87-01-06, Amendment 39-5509 (52 FR 517; January 7, 1987), and AD 87-10-03, Amendment 39-5621 (52 FR 17935; May 13, 1987), with the following new airworthiness directive:

Boeing: Applies to Model 737 series airplanes, as listed in Boeing Alert Service Bulletin 737-53A1108, Revision 2, dated August 13, 1987, certificated in any category. Compliance required as indicated, unless previously accomplished.

To ensure structural integrity of the forward service door support structure, accomplish the following:

A. Prior to the accumulation of 25,000 landings or within the next 125 landings after the effective date of this AD, or 250 landings since the last inspection, whichever occurs later, perform a close visual inspection around the six door stop fittings of the forward service doorway aft frame in accordance with Boeing Alert Service Bulletin 737-53A1108, Revision 2, dated August 13, 1987, or later FAA-approved revisions. Repeat the inspections at intervals not to exceed 250 landings until the inspection required by paragraph B., below, is accomplished. If cracks are found, prior to further flight, perform a visual inspection for cracks in the intercostals and stringers, which support these door stops. Parts found cracked must be repaired prior to further flight in accordance with the aforementioned service bulletin.

B. Prior to the accumulation of 25,000 landings or within the next 4,500 landings after the effective date of this AD, whichever occurs later, perform an internal visual inspection for cracks in the intercostals and stringers, which support these door stops, in accordance with Boeing Alert Service Bulletin 737-53A1108, Revision 2, dated August 13, 1987, or later FAA-approved revisions. Parts found cracked must be repaired before further flight in accordance with the aforementioned service bulletin. Repeat the inspection at intervals not to exceed 9,000 landings.

C. The repetitive inspections required by paragraph B., above, may be terminated after the intercostals and stringers have been modified in accordance with the terminating action specified in Paragraph III of the "Accomplishment Instructions" of Boeing Alert Service Bulletin 737-53A1108, Revision 2, dated August 13, 1987, or later FAA-approved revisions, or incorporation of a modification approved by the Manager, Seattle Aircraft Certification Office, FAA, Northwest Mountain Region.

D. An alternate means of compliance or adjustment of the compliance time, which provide an acceptable level of safety and which has the concurrence of an FAA Principal Maintenance Inspector, may be used when approved by the Manager, Seattle Aircraft Certification Office, FAA, Northwest Mountain Region.

E. Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate airplanes to a base for the accomplishment of inspections and/or modifications required by this AD.

All persons affected by this directive who have not already received the appropriate service documents from the manufacturer may obtain copies upon request to the Boeing Commercial

Airplane Company, P.O. Box 3707, Seattle, Washington 98124. These documents may be examined at the FAA, Northwest Mountain Region, 17900 Pacific Highway South, Seattle, Washington, or Seattle Aircraft Certification Office, FAA, Northwest Mountain Region, 9010 East Marginal Way South, Seattle, Washington.

Issued in Seattle, Washington, on August 26, 1987.

Frederick M. Isaac,

Deputy Director, Northwest Mountain Region.

BILLING CODE 4910-13-M

---

14 CFR Part 71

[Airspace Docket No. 87-ANM-22]

Proposed Alteration of VOR Federal Airways; Montana

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to change the descriptions of several Federal Airways located in the vicinity of Missoula, MT. Changes to instrument flight procedures to the Missoula Airport now require the Salt Lake City Air Route Traffic Control Center (ARTCC) controllers to position arriving aircraft on published routes or approach transition prior to transfer of control to the Missoula Air Traffic Control Tower. This action would be compatible with the new instrument approach procedures thus expediting the traffic in the Missoula terminal area and increasing flight safety.

DATE: Comments must be received on or before November 6, 1987.

ADDRESSES: Send comments on the proposal in triplicate to: Director, FAA, Northwest Mountain Region, Attention: Manager, Air Traffic Division, Docket No. 87-ANM-22, Federal Aviation Administration, 17900 Pacific Highway South, C-68966, Seattle, WA 98168.

The official docket may be examined in the Rules Docket, weekdays, except Federal holidays, between 8:30 a.m. and 5:00 p.m. The FAA Rules Docket is located in the Office of the Chief Counsel, Room 916, 800 Independence Avenue SW., Washington, DC.

An informal docket may also be examined during normal business hours at the office of the Regional Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Lewis W. Still, Airspace Branch (ATO-240), Airspace-Rules and Aeronautical Information Division, Air Traffic Operations Service, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-9250.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy aspects of the proposal. Communications should identify the airspace docket and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 87-ANM-22." The postcard will be date/time stamped and returned to the commenter. All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination in the Rules Docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA-230, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267-3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11-2 which describes the application procedure.

The Proposal

The FAA is considering an amendment to Part 71 of the Federal Aviation Regulations (14 CFR Part 71) to alter the descriptions of VOR Federal Airways V-2, V-120, V-257 and V-343 located in the vicinity of Missoula, MT. Changes to the instrument flight procedures at the Missoula Airport now require the Salt Lake City ARTCC to position arriving aircraft on a published route prior to transfer of control to the Missoula Air Traffic Control Tower. This procedure involves radar vectors at altitudes compatible with the instrument approach procedures. This proposed action would reduce the vectoring requirement, thereby reducing the controller workload and improving traffic flow. Section 71.123 of Part 71 of the Federal Aviation Regulations was republished in Handbook 7400.6C dated January 2, 1987.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Aviation safety, VOR Federal airways.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend Part 71 of the Federal Aviation Regulations (14 CFR Part 71) as follows:

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 1348(a), 1354(a), 1510; E.O. 10854; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983); 14 CFR 11.69.

§ 71.123 [Amended]

2. Section 71.123 is amended as follows:

V-2 [Amended]

By removing the words "Mullan Pass, ID; 5 miles, 53 miles, 91 MSL, Missoula, MT; 6 miles, 84 MSL, Drummond, MT; 11 miles, 84

MSL," and by substituting the words "Mullan Pass, ID; Missoula, MT; Drummond, MT;"

V-120 [Amended]

By removing the words "Mullan Pass, 5 miles, 55 miles, 95 MSL, 43 miles, 125 MSL," and by substituting the words "Mullan Pass;"

V-257 [Amended]

By removing the words "22 miles, 85 MSL"

V-343 [Revised]

From Dubois, ID; Bozeman, MT; to Drummond, MT.

Issued in Washington, DC, on September 15, 1987.

Daniel J. Peterson,

Manager, Airspace-Rules and Aeronautical Information Division.

DEPARTMENT OF THE TREASURY

Customs Service

19 CFR Parts 141 and 177

Proposed Customs Regulations Amendments Relating to Tariff Designation on Entry Documents

AGENCY: Customs Service, Treasury.

ACTION: Proposed rule.

SUMMARY: This document proposes to amend the Customs Regulations to require that if a person has received written notice from a Customs official of the Customs designation of the duty/statistical reporting number for imported articles, the person filing an entry summary (Customs Form 7501), or other applicable Customs forms, must provide that designation as stated in the notice. If the person fails to comply with this requirement Customs may subject the person to a claim for monetary penalty under 19 U.S.C. 1592. Compliance with the requirement would not constitute waiver of the person's right to protest liquidation of the entry. By providing written notice to a person, and requiring that person to provide the Customs designation of the duty/statistical reporting number as stated in the notice, Customs will be better able to carry out its statutory responsibility to ascertain the proper classification and rate of duty applicable to imported merchandise.

DATE: Comments must be received on or before November 27, 1987.

ADDRESS: Comments (preferably in triplicate) may be addressed to, and inspected at, the Regulations Control Branch, Room 2324, U.S. Customs Service, 1301 Constitution Avenue NW., Washington, DC 20229.

FOR FURTHER INFORMATION CONTACT: Robert J. Pisani, or Charles D. Ressin, Entry Procedures and Penalties Division, (202-566-8317).

SUPPLEMENTARY INFORMATION:

Background

Section 484(a)(1)(B), Tariff Act of 1930, as amended (19 U.S.C. 1484(a)(1)(B)), provides that an importer of record shall file with Customs, documentation which, among other things, enables a Customs officer to properly assess duties on the merchandise, collect accurate statistics, and determine whether any other applicable requirement of law is met. Further, Section 500, Tariff Act of 1930, as amended (19 U.S.C. 1500), requires the appropriate Customs officer to "ascertain the classification and rate of duty applicable to (imported) merchandise." In accordance with 19 U.S.C. 1484(a)(1)(B), § 141.61(e), Customs Regulations (19 CFR 141.61(e)), requires the filing of the applicable statistical reporting information required by the General Statistical Headnotes, Tariff Schedules of the United States Annotated ("TSUSA"), and places the responsibility for providing the information on the person filing the form.

It has now been determined necessary to propose to amend § 141.61(e), Customs Regulations, to require that any person who has received written notice from a Customs official of the Customs designation of the duty/statistical reporting number, must provide that designation to Customs on the entry summary (Customs Form 7501), or other applicable forms. The complete designation number must be placed in Block 30 of Customs Form 7501. If the person does not provide the Customs designation of the duty/statistical reporting number, the person may be subject to liability under Section 592, Tariff Act of 1930, as amended (19 U.S.C. 1592).

Customs has been reluctant to impose a penalty under 19 U.S.C. 1592 if the only material falsity upon entry involves supplying an incorrect tariff designation. Customs reluctance stems, in part, from the requirement of 19 U.S.C. 1500 placing the obligation on Customs to "ascertain the classification and rate of duty applicable to (imported) merchandise." Because of substantial increases in annual import volume, however, more accurate reporting data are required to enable Customs to carry out its statutory responsibilities. The need for importer cooperation has become particularly necessary since the adoption of the Automated Commercial System (ACS) which considerably increases Customs reliance upon information contained in the entry documents filed by the importer.

Accordingly, Customs believes it is necessary (1) to assert the authority of the Secretary of the Treasury under 19 U.S.C. 1484 if a person, or agent, has received written notice from a Customs official of the Customs designation of the duty/statistical reporting number for specific merchandise and (2) to advise importers that a claim for monetary penalty may be assessed if, after notice, another designation is provided.

By providing written notice to a person, and requiring that person to provide the Customs designation of the duty/statistical reporting number as stated in the notice, Customs will be better able to carry out its statutory duty under 19 U.S.C. 1500. Furthermore, the written notice requirement will assist Customs in establishing one of the levels of culpability necessary to constitute a violation under 19 U.S.C. 1592 in appropriate cases.

Compliance with the requirement to provide the Customs designation of the duty/statistical reporting number would not constitute, in any way, a waiver of a persons right to challenge Customs determination by filing a protest under Section 514, Tariff Act of 1930, as amended (19 U.S.C. 1514), and Part 174, Customs Regulations (19 CFR Part 174)

Comments

Before adopting this proposal, consideration will be given to any written comments timely submitted to Customs. Comments submitted will be available for public inspection in accordance with the Freedom of Information Act (5 U.S.C. 552), § 1.6, Treasury Department Regulations (31 CFR 1.6), and § 103.11(b), Customs Regulations (19 CFR 103.11(b)), on regular business days between the hours of 9:00 a.m. and 4:30 p.m. at the Regulations Control Branch, Room 2324, Customs Headquarters, 1301 Constitution Avenue NW., Washington, DC 20229.

Regulatory Flexibility Act

Pursuant to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 et seq.), it is certified that, if adopted, the proposed amendments will not have a significant economic impact on a substantial number of small entities. Accordingly, they are not subject to the regulatory analysis or other requirements of 5 U.S.C. 603 and 604.

Executive Order 12291

This document does not meet the criteria for a "major rule" as specified in

VOL 52 ISS 187 SEP 28 1987 UMI

E.O. 12291. Accordingly, no regulatory impact analysis has been prepared.

Paperwork Reduction Act

Furnishing the tariff designation number is subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501). The information is furnished on the Customs Form 7501 which has been submitted to and approved by OMB under control number 1515–0065.

Drafting Information

The principal author of this document was Marvin M. Amernick, Regulations Control Branch, U.S. Customs Service. However, personnel from other Customs offices participated in its development.

List of Subjects in 19 CFR Parts 141 and 177

Entry and entry summary documentation, Statistical reporting number, Administrative rulings.

Proposed Amendments

It is proposed to amend Parts 141 and 177, Customs Regulations (19 CFR Parts 141 and 177), as set forth below.

PART 141—ENTRY OF MERCHANDISE

1. The authority citation for Part 141 continues to read as follows:

Authority: 19 U.S.C. 66, 1448, 1484, 1624.

2. It is proposed to revise § 141.61 (e)(2) and (e)(5) to read as follows:

§ 141.61 Completion of entry and entry summary documentation.

* * * * *

(e) *Statistical information.* * * *

* * * * *

(2) *Responsibility.* The person filing the form is responsible for providing the information required by paragraph (e)(1) of this section.

(i) (A) *Classification information-importer.* If the person filing the form is an importer, and that importer receives written notice as defined in paragraph (e)(2)(i)(B) of this section, from a Customs official of the Customs designation of the duty/statistical reporting number for the specific merchandise, the importer shall record only that number in the designated location on the form for the merchandise subject to the notice and any other entries of identical merchandise.

(B) *Written notice.* Written notice provided to the person must state the Customs designation of the duty/statistical reporting number. The term "Written notice" includes, but is not limited to:

(*1*) Customs rulings issued pursuant to 177.8 of this chapter and decisions on requests for internal advice issued pursuant to § 177.11 of this chapter;

(*2*) A protest decision issued pursuant to Part 174 of this chapter;

(*3*) A notice of action (Customs Form 29);

(*4*) An entry rejection notice; or

(*5*) An advice letter.

(C) *Classification information-Customs broker.* If the person filing the form is a customs broker and that customs broker has received, or has actual knowledge that its importer-client has received, written notice of the information described in paragraph (e)(2)(i)(A) of this section, with regard to specific merchandise, the broker shall record only that number in the designated location on the form for the merchandise subject to the notice and any other entries of identical merchandise.

(ii) *Value information.* If the information required by subparagraph (XIV), (XV), and (XVI), General Statistical Headnote 1(a), TSUSA, cannot be obtained readily, the person filing the form shall provide reasonable estimates of the required information. The acceptance of an estimate for a particular transaction does not relieve the person filing the form from the obligation of obtaining the necessary information for similar future transactions. The district director may require additional documentation to substantiate the statistical information required by paragraph (e)(1) of this section. The importer shall give an appropriate bond for the production of the required documentation, as follows:

(A) Except for merchandise entered for warehouse, the documentation shall be produced within 50 days after the entry summary (or the entry, if there is no entry summary) is required to be filed.

(B) If merchandise is entered for warehouse, the documentation shall be produced within 2 months after the date of withdrawal, except that if an invoice is part of the documentation, the invoice shall be produced within 50 days after the entry summary for warehouse is required to be filed. The district director may grant a reasonable extension of time to produce the required documentation for good cause shown. (See § 141.91(d) for bond requirements relating to failure to produce an invoice and §§ 113.42 and 113.43 of this chapter relating to the time period for the production of documents.).

* * * * *

(5) (i) *Penalty procedures; when not invoked.* Except as provided for in paragraph (e)(5)(ii) of this section, penalty procedures relating to erroneous statistical information shall not be invoked against any person who in good faith attempts to comply with the statistical requirements of the General Statistical Headnotes, TSUSA.

(ii) *Penalty procedures; when invoked.* A failure to comply with the requirements of paragraph (e)(2)(i) of this section shall not be considered to be an act in good faith, and may subject the person to a claim for monetary penalty under section 592, Tariff Act of 1930, as amended (19 U.S.C. 1592). Compliance with this requirement does not constitute a waiver of the person's right to protest liquidation of the entry in accordance with section 514, Tariff Act of 1930, as amended (19 U.S.C. 1514), and Part 174 of this chapter.

* * * * *

PART 177—ADMINISTRATIVE RULINGS

1. The authority citation for Part 177 is revised to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (Gen. Hdnote. 11), 1624.

Section 177.3 also issued under 19 U.S.C. 1481, 1484.

2. It is proposed to amend § 177.8(a)(2) by adding the following after the last sentence:

§ 177.8 [Amended]

(a) * * *

(2) * * *

Also see requirements under Subpart E of Part 141 of this chapter relating to presentation of entry papers.

William von Raab,

Commissioner of Customs.

Approved: September 3, 1987.

Francis A. Keating,

Assistant Secretary of the Treasury.

BILLING CODE 4820–02–M

VETERANS ADMINISTRATION

38 CFR Part 21

Veterans Education; Entitlement Charges for Refresher, Remedial and Deficiency Course

AGENCY: Veterans Administration.

ACTION: Proposed regulations.

SUMMARY: Current regulations do not state how to charge entitlement when a veteran or eligible person is pursuing some courses for which entitlement is charged concurrently with refresher, remedial or deficiency courses for which no charge is made against entititlement. The result has been inconsistent

adjudication of cases by the various Veterans Administration (VA) offices. The proposed regulation specifies the manner in which entitlement charges are to be made, thus eliminating the possibility of nonuniform administration of the program.

DATES: Comments must be received on or before November 9, 1987. Comments will be available for public inspection until November 24, 1987.

ADDRESSES: Send written comments to: Administrator of Veterans Affairs (271A), Veterans Administration, 810 Vermont Avenue NW., Washington, DC 20420. All written comments received will be available for public inspection only in the Veterans Services Unit, room 132 of the above address between the hours of 8 a.m. to 4:30 p.m., Monday through Friday (except holidays) until November 24, 1987.

FOR FURTHER INFORMATION CONTACT: June C. Schaeffer, Assistant Director for Education Policy and Program Administration, Vocational Rehabilitation and Education Service, Department of Veterans Benefits, (202) 233–2092.

SUPPLEMENTARY INFORMATION: On pages 31782 and 31783 of the **Federal Register** of September 5, 1986, there was published a notice of proposed rulemaking to amend Part 21 to provide a specific rule for computing the correct entitlement charge for veterans training under the Vietnam Era GI Bill (38 U.S.C. Chapter 34) and eligible spouses and surviving spouses receiving Dependents' Educational Assistance (38 U.S.C. Chapter 35) who concurrently enroll in courses for which entitlement is charged and courses for which entitlement is not charged.

Interested people were given 30 days to submit suggestions, comments or objections. The VA received three letters. Two were from officials of educational organizations and supported the proposal. One was from a university official and contained two suggestions.

One suggestion was to expand the regulation so that a list of the education programs administered by the VA would appear in 38 CFR 21.1045(c) along with a statement as to whether the revised regulation applied to each program. The university official suggested including vocational rehabilitation (38 U.S.C. Chapter 31), the New GI Bill (38 U.S.C. Chapter 30), the Post-Vietnam Era Educational Assistance Program (38 U.S.C. Chapter 32), the Vietnam Era GI Bill (38 U.S.C. Chapter 34), Dependents' Educational Assistance (38 U.S.C. Chapter 35) and Educational Assistance for Members of the Selected Reserve (10 U.S.C. Chapter 106).

The VA does not believe this is necessary. The 38 CFR 21.1000 series of regulations apply to the education programs described in 38 U.S.C. Chapters 34 and 35. The paragraphs preceding the amended paragraph as well as the amended paragraph itself make this clear. The other chapters either are already adequately covered elsewhere (for example, 38 CFR 21.5072) or they will be covered when the VA publishes regulations implementing 38 U.S.C. Chapter 30 and 10 U.S.C. Chapter 106.

The second suggestion was that rather than make the proposed regulation final, the VA should adopt a rule which would result in a charge against entitlement for all credit hours which count towards a degree.

In most cases this method would result in the same charge against entitlement as the proposed amended regulation. However, in some cases the suggested method would result in a greater entitlement charge than the proposed rule.

The VA evaluated the alternatives, including the one offered by the comment writer and determined that the amended regulation as originally proposed might lend itself to abuse of the Vietnam Era GI Bill and Dependents' Educational Assistance more easily than a regulation modeled after the university official's suggestion. Accordingly, the VA is withdrawing its original proposal and is publishing for comment a new proposed regulation which adopts an alternative approach and takes the suggestion into account. The method used in this propsal would eliminate the potential area of abuse and accomplish the original goal of stating a uniform adjudicatory rule.

The VA has determined that this proposed amended regulation does not contain a major rule as that term is defined by E.O. 12291, entitled Federal Regulation. The regulation will not have a $100 million annual effect on the economy, and will not cause a major increase in costs or prices for anyone. It will have no significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

The Administrator of Veterans Affairs has certified that this proposed amended regulation, if promulgated, will not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act (RFA), 5 U.S.C. 601–612. Pursuant to 5 U.S.C. 605(b), the amended regulation, therefore, is exempt from the initial and final regulatory flexibility analyses requirements of sections 603 and 604.

This certification can be made because the proposed amended regulation affects only individuals. It will have no significant economic impact on small entities, i.e., small businesses, small private and nonprofit organizations and small governmental jurisdictions.

(The Catalog of Federal Domestic Assistance numbers for the programs affected by this regulation are 64.111 and 64.117)

List of Subjects in 38 CFR Part 21

Civil rights, Claims, Education, Grant programs-education, Loan programs-education, Reporting and recordkeeping requirements, Schools, Veterans, Vocational education, Vocational rehabilitation.

Approved: August 25, 1987.

Thomas K. Turnage,

Administrator.

PART 21—[AMENDED]

In 38 CFR Part 21, *Vocational Rehabilitation and Education*, § 21.1045 is amended by revising paragraph (c)(1) and by adding paragraph (c)(3) to read as follows:

§ 21.1045 Entitlement charges.

* * * * *

(c) * * *

(1) For all other courses, after making any adjustments required by paragraph (c)(3) of this section, the VA will make a charge against entitlement.

* * * * *

(3) A veteran or eligible spouse or surviving spouse may concurrently enroll in a refresher, remedial or deficiency course or courses for which paragraph (a)(4) of this section requires no charge against entitlement and in a course or courses for which paragraph (b) of this section requires a charge against entitlement. When this occurs, the VA will charge entitlement for the concurrent enrollment based only on pursuit of the course or courses described in paragraph (b) of this section, measured in accordance with §§ 21.4270 through 21.4275 of this part, as appropriate.

(Authority: 38 U.S.C. 1661, 1677(b))

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL-3268-6]

Approval and Promulgation of Implementation Plans; Texas Lead Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rulemaking.

SUMMARY: As required by section 110(a) of the Clean Air Act (CAA) and the October 5, 1978 (43 FR 46246), promulgation of National Ambient Air Quality Standards (NAAQS) for lead, the State of Texas has submitted revisions to its State Implementation Plan (SIP) for lead for the El Paso area of the State. EPA announced its approval/disapproval action on the El Paso SIP on August 13, 1984 (49 FR 32184). Proposed approval of the State's request for a two year extension of the attainment date for lead NAAQS for a limited area in El Paso, Texas was announced on August 16, 1985 (50 FR 33069). Federal promulgation of a compliance date for the installation of secondary hoods on copper converters at the ASARCO primary smelter in El Paso County was announced on May 20, 1986 (51 FR 18440). This action announces EPA's proposed approval of emission limit revisions to Texas Regulation III, Subchapter B titled Lead from Stationary Sources. Nonferrous Smelters in El Paso County and announces EPA's proposed approval of the Texas Lead SIP for the limited area surrounding the ASARCO facility in El Paso County. A modeling analysis using these proposed revised emission limits now demonstrates attainment by modeling of the NAAQS for El Paso County. Since attainment is now demonstrated and such attainment is within three years of the August 13, 1984, approval of the El Paso lead SIP, the two year extension of the NAAQS attainment date is no longer necessary. The Federal promulgation of the compliance date for the installation of secondary hoods on copper converters as is required by Texas Rule 113.53 is not affected by today's action. The rest of the Texas SIP was previously approved by EPA (except for the Dallas and El Paso part of the SIP) in a **Federal Register** notice published on October 4, 1983 (48 FR 45246).

DATES: Comments must be received on or before October 28, 1987. Public comments on this document are requested and will be considered before taking final action on these SIP revisions.

ADDRESSES: Written comments should be sent to Thomas H. Diggs, Chief, SIP/New Source Review Section, EPA (6T-AN), 1445 Ross Avenue, Dallas, Texas 75202. Copies of the SIP and FPA's evaluation report are available for public review during normal business hours at the following locations: Texas Air Control Board, 6330 Hwy 290 East, Austin, Texas 78723, and EPA, Region 6, Library, 12th Floor, Allied Bank Tower at Fountain Place, 1445 Ross Avenue, Dallas, Texas 75202.

FOR FURTHER INFORMATION CONTACT: Jim Callan, State Implementation Plan/New Source Section, Air Programs Branch, Environmental Protection Agency, Region 6, 1445 Ross Avenue, Dallas, Texas, 75202, telephone (214) 655-7214 or FTS 255-7214.

SUPPLEMENTARY INFORMATION:

I. Background

On October 5, 1978, the NAAQS for lead was promulgated by EPA (43 FR 46246). Both the primary and secondary standards were set at a level of 1.5 micrograms of lead per cubic meter of air (ug lead/m^3) averaged over a calendar quarter. As required by section 110 of the CAA, and the October 5, 1978, promulgation of the NAAQS for lead, each State must submit a SIP which will provide for attainment and maintenance of the lead NAAQS within three years from the date of approval of the plan. Section 110(e) of the CAA allows EPA to grant up to a two-year extension of the lead NAAQS attainment date if the Governor of a State requests it for a specified area of the State, and if the State's SIP provides a proper justification for the need for a two year extension (explained below).

On June 12, 1980, the Governor of Texas submitted to EPA the State's SIP for attainment and maintenance of the NAAQS for lead. On October 4, 1983 (48 FR 45246). EPA approved the Texas lead SIP except for the part of the SIP concerning the Dallas and El Paso areas. On June 20, 1984, the Governor of Texas submitted to EPA the State's Lead SIP for El Paso County. On August 13, 1984 (49 FR 32184), EPA approved the Texas lead SIP and regulations for El Paso County, except for a disapproval of the compliance date for the installation of secondary hoods on copper converters (explained in the August 13 **Federal Register** notice), and except for a no-action on the lead NAAQS attainment date for El Paso County. ASARCO petitioned EPA to reconsider the compliance date disapproval, but the petition was denied and the compliance date was Federally promulgated to be August 13, 1987, on May 20, 1986 (51 FR 18440). On August 16, 1985 (50 FR 33069), the EPA proposed approval of the State's request for a two year extension of the lead NAAQS attainment date for a limited area around the primary lead smelter in El Paso County, Texas, and explained that the attainment date for the main part of El Paso County will be August 13, 1987. As a condition to full approval of this request, however, the State was required to consider production curtailments and similar alternative measures that might result in attainment within three years. In a September 11, 1985, letter to the EPA the Texas Air Control Board (TACB) submitted its follow up study plan outlining its intention to (1) reevaluate emission rates based on stack test results from the ASARCO facility to determine if attainment can be demonstrated through dispersion modeling, and (2) revise current SIP control requirements determined to be inadequate to provide an attainment demonstration. ASARCO conducted stack tests at the ASARCO lead smelter indicating that actual emissions were lower than those listed in the current SIP. On January 8, 1987, TACB submitted to EPA a draft proposed revision to the current SIP in which lower lead emission limits are required. Modeling was conducted by ASARCO's consultant, TRC, using the ASARCO facility's revised emission rates. The modeling results were submitted to the TACB on March 13, 1987, and to the EPA on May 15, 1987. However, EPA's review of the State's submittal raises two concerns. The first concern is the potential impact of emissions from the zinc plant on ambient lead levels. This is important since the zinc plant's shutdown is not enforceable. The second concern is an inconsistency in the options used in the modeling. Both concerns are addressed in today's notice. Analysis of the submitted modeling shows that attainment of the lead NAAQS will result at these lower proposed emission rates, and it is judged that resolving these two concerns will not adversely affect the attainment demonstration.

Todays notice calls for the adoption of lower revised emission limits at the El Paso facility. This notice also proposes final approval of the Lead SIP based upon demonstration of NAAQS attainment through modeling.

The TACB is parallel-processing this proposed revision for final submittal by the Governor to the EPA.

II. Summary of SIP Revision

The TACB submitted to the EPA a draft revision to the lead SIP for El Paso County in a letter dated January 8, 1987. In that letter, the TACB requested a revision of the lead emission limits for certain vent gas streams based on stack tests conducted by ASARCO indicating that lead emissions at the site were lower than the emissions documented in the current SIP. Previous technical analysis by the staff of the TACB has shown that lead emissions from the smelter operated by ASARCO and from the use of leaded gasoline in automobiles and other gasoline-powered vehicles account for most of the measured lead concentrations in El Paso. The smelter is the principal contributor to lead concentrations at the ambient monitors closest to the smelter where the highest concentrations have been measured as determined by modeling and by analyses of the monitor filters. Since the use of leaded gasoline is projected to continue to decline with the phase-out of older vehicles and since the smelter is the greatest contributor to the concentrations, the control strategy for attainment of the lead standard is based primarily on lead emission reductions at the ASARCO facility. TACB Regulation III, Subchapter B, Lead from Stationary Sources, Nonferrous Smelters in El Paso County, requires Reasonably Available Control Technology (RACT) measures for the smelting of lead, copper, and zinc to control lead emissions from fugitive sources and point sources (stacks). All point sources (stacks) at the smelter are equipped with RACT, including baghouses, electrostatic precipitators (ESP's), or ESP's followed by an acid plant.

Prior to September 15, 1985, ASARCO's El Paso Operations included copper, lead, and zinc primary smelting. On September 15, 1985, lead smelting was suspended temporarily and zinc smelting was suspended permanently due to poor economic market conditions.

An earlier letter from the Governor of Texas dated June 20, 1984, requested that a two-year extension of the lead NAAQS attainment date be granted by EPA for a limited area around the ASARCO smelter in El Paso, as allowed by section 110(e) of the CAA. The Governor's letter explained that, despite the application of state-of-the-art controls to all stacks and stringent controls on all significant fugitive sources at the ASARCO smelter, values slightly above the lead NAAQS were predicted by dispersion modeling for areas in Texas in the vicinity of the smelter when the smelter is operating at maximum production. The State provided justification for the request for the two-year extension in the attachments to the Governor's letter. The State explained that Texas Regulation III, as adopted by the TACB on February 17, 1984, requires the implementation of lead emission control measures at the ASARCO lead and copper smelter in El Paso. The Regulation III provisions ensure that: (A) All point sources (stacks) at ASARCO having the potential to emit significant quantities of lead have emission limitations requiring the use of RACT such as baghouses, electrostatic precipitators, or scrubbers, and (B) all significant sources of fugitive lead emission are controlled by RACT methods such as enclosure or local hooding of emission points with routing to a ventilation system, and paving, cleaning, wetting and/or chemical treatment of plant roads and open unpaved plant property. With these controls already required, the TACB explained that additional control studies were needed and that this would warrant an extension of the attainment date.

On August 16, 1985, the EPA announced its proposed approval of the attainment date extension. EPA noted that final approval of the extension request would require the State to consider production curtailments and similar alternative measures that might result in attainment within three years. The State had committed to studying the emission reduction methods necessary to demonstrate attainment of the lead standard. In a letter to the EPA dated September 11, 1985, TACB outlined a scheduled plan of emission reduction studies, investigating both additional controls and production curtailments. In a December 19, 1985, letter to the EPA, the TACB recommended that production curtailment not be further considered and that the modeling based on monitored stack emissions data be analyzed to demonstrate attainment of the standard.

ASARCO submitted an April 1986 draft report to the TACB entitled "Model Analysis of Revised Stack Emissions in Support of Revised State Implementation Plan for Lead in El Paso, Texas" evaluating monitored emissions from its primary smelter. In an August 5, 1986, letter to the TACB, ASARCO requested a revision to the lead SIP based on the emission limits documented in the report. After reviewing the draft report TACB identified discrepancies between ASARCO's modeling input and that used by the TACB staff in the latest SIP submittal. These discrepancies were addressed in a December 8, 1986, letter to ASARCO from its consultant, TRC Environmental Consultants, Inc. On May 15, 1987, the TACB submitted modeling analysis performed by TRC showing attainment of the NAAQS. The State of Texas now requests that the lower revised limits be incorporated in the SIP and that attainment of the NAAQS be considered demonstrated by modeling at those limits.

III. Review of SIP Revision

The TACB's draft SIP revision request leaves the existing Subchapter B of TACB Regulation III unaltered except for amending Table 113.71(1), Lead Emission Limits for Certain Vent Gas Streams at Nonferrous Smelting Operations. Emission limits stated in pounds of lead per hour are revised for the Lead and Copper Ore Conveying Baghouse, Lead Ore Unloading Building Baghouse, Lead and Copper Ore Bedding Building Baghouse (Total), Copper Ore Unloading Building Baghouse, and the Copper Converter Building Ventilation Baghouse stacks. These revised limits allow a total lead emission rate of 25.8 lb/hr for the vent gas streams addressed in Table 113.71(1). This results in a 26% reduction in emission limits from those allowed in the current TACB regulation. An increase in lead emission limits is requested for the Copper Ore Unloading Building Baghouse and Copper Converter Building Ventilation Baghouse stacks.

ASARCO contracted TRC to revise the ambient air quality impact analysis. Following the submittal and revision of a draft report, a final report was submitted. Emission rates which were consistent with the revised limits in Table 113.71(1) where used in the revised modeling. Both the Industrial Source Complex Model-Long Term (ISC–LT) and Valley-Bid were utilized. Fugitive emission rates modeled remained the same as in the previous SIP analysis. Stack emission rates were revised in the modeling analysis consistent with revisions in TACB regulation 113.71(1). Stack sampling also revealed differences in stack exit parameters from those used in the original SIP, and changes in the modeling parameters were made accordingly.

Air Quality Impact Analysis

The previous air quality analysis performed by the TACB showed that for most of El Paso County, Texas and for all affected areas in the State of New Mexico, which is across the Rio Grande

River immediately to the northwest, the lead National Ambient Air Quality Standard would be attained and maintained under the final Texas lead SIP of August 13, 1984. However, the previous modeling identified an area of potential monitored violation in an area conterminous to the smelter.

The lead air quality impact analysis which supports this demonstration of attainment and maintenance was separated into two evaluations based on the type of terrain. In other words, the model known as Valley was applied to assess ASARCO lead emission impact on those receptors in complex terrain areas, and the ISC–LT was used for evaluating the lead air quality impact in the other area surrounding the smelter.

In general there are four elements considered in the application of an air quality model: (1) Input of the sources of the emissions, (2) selection of a meteorological data set which best represents dispersion and transport in the area, (3) identification of receptors, and (4) choice of model options. The consideration of the source data in both the ISCLT and Valley model analyses was acceptable. The sources of emissions were adequately characterized. For example, sources in ISCLT were properly represented as point, area or volume. Source emissions were also adequately considered regarding the effects of aerodynamic downwash and deposition.

Long-term modeling often involves the use of statistically summarized meteorological data. In this case four years of meteorological data on a calendar quarter basis for the period 1976 through 1979 were applied. The development of the meteorological data base required special processing in the following respects: (1) Merge on-site 75 foot tower wind data measured at the ASARCO facility with cloud data from the El Paso Airport to develop stability class, (2) adjust wind speed with height, and (3) deal with missing and invalid data.

Two separate receptor networks were prepared for each of the models, ISCLT and Valley, considering terrain height. An evaluation was performed in order to ensure that the receptor networks were representative of the areas of expected maximum concentrations.

In regard to selecting model options, as in other aspects of air quality modeling, the guideline provides for some degree of standardization to ensure consistency while allowing the flexibility needed to assure the technically best analysis for each regulatory application. For the case of the El Paso lead SIP air quality analysis, the recommended regulatory version of the ISCLT model (UNAMAP 6) was not fully applied. The concern is primarily with the model option chosen for plume rise and consideration of stack tip downwash. The regulatory option was not selected. It is believed that this results in air quality estimates which do not ensure consistency and are not reflective of the technically best analysis.

Before finalizing this revision to the SIP, the ISCLT modeling will be reworked using the recommended regulatory option. (The Valley modeling is fully acceptable; an equivalent version of Valley was used including acceptable options such as bouyancy induced dispersion). It is judged to be very unlikely that the revised analysis will show results different from the current analysis which predicts that no concentration will exceed the lead standard in the ambient air around the smelter. Moreover it is expected that the revised analysis will provide air quality estimates which are close to those in the current modeling. The details of the modeled results are provided in the evaluation report.

Effects of Revision

This revision to TACB Regulation III and the EL Paso Lead SIP changes only the emission limits pertaining to stacks at the ASARCO facility. These changes result in a net reduction in the SIP's allowed lead emission limits. Modeling at these lower revised limits (predicts) shows attainment of the NAAQS for lead based on 16 consecutive quarters of meteorological data and maximum plant operating rates, and typical operating parameter conditions. Approval of this revision will demonstrate that the lead NAAQS around the ASARCO facility will be attained. As this is not a revision of the control technology, it will be in effect immediately upon approval by the TACB.

IV. EPA Reasons for Approval

EPA proposes to approve the State's request for an emission limit revision to the lead SIP for El Paso County by demonstration of attainment by modeling. EPA also announces proposed approval of the Texas Lead SIP for the limited area surrounding the ASARCO facility in El Paso County. Prior to final approval of this SIP revision however, the State is required to submit reworked ISCLT modeling incorporating the regulatory option. Also, the State must either provide modeling of the zinc plant emissions for EPA review or provide an enforceable mechanism to ensure the permanency of the zinc plant's shut down. Upon adoption of the lower emission limits by the State, EPA judges that attainment in the limited area around the ASARCO facility will be demonstrated, and that this demonstration will not be adversely affected by the impact of the zinc plant and the regulatory option modeling. The ASARCO El Paso facility has shown through stack testing analysis that its lead emissions from certain gas streams are lower than those limits documented in the current SIP. ASARCO is not committing to any additional controls, but is simply committing to lower emission limits. Reduction of lead emissions at the ASARCO facility and the Lead-phasedown-in-gasoline Federal program are the joint methods of attaining the NAAQS. The TACB has studied all sources of lead emissions in the ambient air in the El Paso area and has determined that control of lead emissions from the major nonferrous smelter is the only means available to reduce emissions adequately to attain the primary NAAQS for lead in El Paso County. Texas Regulation III requirements provide for the installation and implementation of all fugitive emission control equipment and work place practices determined to be feasible and reasonable for the smelter. All point sources (stacks) at the smelter are already equipped with RACT, including baghouses, electrostatic precipitators (ESP's), or ESP's followed by an acid plant. Baghouses currently represent state-of-the-art in particulate control equipment. The August 16, 1985 (50 FR 33069), proposed approval of the State's request for a two year extension to the attainment date for the lead NAAQS for the limited area in El Paso was to allow the TACB time to evaluate extra control measures. Rather than pursuing production curtailments, the TACB chose to tighten emission limits and model using these revised limits to demontrate attainment. As noted above, the EPA proposes to approve this tightening of lead emission limits. Before publishing final approval, the State will submit modeling to include the regulatory option in the ISCLT model. Also, since the permanency of the shutdown of the zinc plant is not currently enforceable, the State must either provide modeling of the zinc plant emissions for EPA evaluation or provide an enforceable mechanism to ensure the permanency of the zinc plant's shutdown status. EPA judges that the addition of the ambient levels contributed by the zinc plant and the regulatory option to the modeling previously submitted will still demonstrate attainment of the lead standard. This will result in a demonstration of attainment of the lead

NAAQS, and a proposal to complete the El Paso Lead SIP approval of August 13, 1984.

EPA is soliciting public comments on this notice and on issues relevant to EPA's proposed action. Comments will be considered before taking final action. Interested parties may participate in the Federal rulemaking procedure by submitting written comments to the address above.

The revisions are being proposed under a procedure called "parallel processing" (47 FR 27073). If the proposed revisions are substantially changed in areas other than those identified in this notice, EPA will evaluate those changes and may publish a revised NPR. If no substantial changes are made other than those areas cited in this notice, EPA will publish a Final Rulemaking Notice on the revisions. The final rulemaking action by EPA will occur only after the SIP revisions have been adopted by Texas and submitted to EPA for incorporation into the SIP. Parallel processing will reduce the time necessary for final approval of these SIP revisions by 3 to 4 months.

Proposed Action

EPA proposes to approve the State's request for a revision of the stack lead emission limits in the Texas Lead SIP for El Paso. Upon approval of these tightened emission limits by the State, attainment of the NAAQS for lead will be demonstrated by modeling for the limited area surrounding the ASARCO facility in El Paso County. This action proposes EPA's approval of the part of the Texas Lead SIP for El Paso that was not previously approved on August 13, 1984 (49 FR 32184). However, as indicated above, in order for EPA to fully approve this emission limit revision, the SIP revisions must have been fully adopted by Texas and submitted to EPA for incorporation in the SIP. Also, to fully approve the demonstration, the air quality modeling analysis must be reworked to address two concerns raised in today's notice.

The Regional Administrator hereby issues this notice setting forth EPA's proposed approval of the request for a revision of the lead emission limits for the vent gas stacks in the Texas Lead SIP for El Paso, announces EPA's proposed approval of the portion of the Texas Lead SIP for El Paso that was not previously approved on August 13, 1984 (49 FR 32184), and advises the public that interested persons may participate by submitting written comments to the Region 6 office. Comments received on or before the date listed in the **DATES** section will be considered. Comments received will be available for public inspection at the EPA Region 6 Office listed in the **ADDRESSES** section of this notice.

The Administrator's final decision to approve or disapprove the request will be based on the comments received, and if the request meets the requirements of section 110(a) of the Clean Air Act and 40 CFR Part 51.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Under 5 U.S.C. 605(b) the Administrator has certified that SIP approvals do not have a significant economic impact on a substantial number of small entitites. (See 46 FR 8709.)

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 584

[Docket No. 83–05; Notice 4]

Splash and Spray Suppression Devices

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Request for comments; notice of public meetings.

SUMMARY: The Surface Transportation Assistance Act of 1982 declares that visibility on wet roads should be improved by using practicable and reliable means for reducing splash and spray generated by truck tractors, trailers, and semitrailers. To carry out this directive, the statute specified that the Department of Transportation shall establish:

(1) Minimum performance standards for spray suppression devices to be installed on truck tractors, trailers, and semitrailers;

(2) Installation standards for spray suppression devices to be installed on all new truck tractors, trailers and semitrailers used on the Interstate system beginning one year after the standards are established under paragraph (1); and

(3) Installation standards for spray suppression devices to be installed on all truck tractors, trailers, and semitrailers in service on the Interstate system beginning four years after the standards are established under paragraph (1).

To carry out the first two provisions listed above, NHTSA published a proposal in the April 12, 1985 issue of the **Federal Register**. The agency tentatively concluded in that proposal that the only splash and spray suppression devices that might be practicable and reliable at that time were spray suppressant flaps and side skirts. Accordingly, NHTSA proposed that spray suppressant flaps achieve a certain level of spray reduction, as measured in a spray tunnel, and that new truck tractors, trailers, and semitrailers have spray suppressant flaps and side skirts installed at specified positions beginning one year after the final rule was published. The agency noted in that proposal, however, its misgivings about proceeding with the rulemaking at that time. Both the testing conducted before publication of the agency's proposal and subsequent research and testing have shown that installation of the proposed spray suppressant flaps and side skirts on truck tractors, trailers, and semitrailers would *not* reduce spray sufficiently so that drivers on wet roads would experience satisfactory visibility under normal wet weather conditions.

The Highway Safety Act of 1987 amended the Surface Transportation Assistance Act. The law now provides that DOT must establish final minimum standards for splash and spray suppression devices not later than April 2, 1988, *unless* DOT has determined that there is no available technology that can *significantly* reduce splash and spray from truck tractors, semitrailers, and trailers and can *significantly* improve visibility of drivers. Any determinations of significant reductions in splash and spray and significant visibility improvements must be based on testing on highways, at test facilities, and in laboratories to take into account possible wind and rain conditions.

This notice seeks public comment on the agency's analysis of currently available data indicating that neither the proposed devices nor any alternative devices can significantly reduce splash and spray or significantly improve visibility for drivers when taking into account possible wind and rain conditions. Additionally, this notice seeks any data, in addition to those

which have been analyzed by the agency, that any member of the public believes demonstrate that some splash and spray suppression device significantly reduces splash and spray and significantly improves driver visibility. These data should include the relevant test data for the highways, test facilities, and laboratories where the device has been tested and explain how the testing accounted for possible wind and rain conditions.

DATES: *Public Meeting—Deadline for Arranging Oral Presentation.* Persons wishing to make oral presentations at the public meetings should contact Mr. Kenneth Rutland (whose address and telephone number are provided under the heading "For Further Information Contact") by October 16, 1987, so that any necessary time limitations and special equipment, such as projectors, can be discussed and final arrangements can be made.

Public Meeting—Deadline for Submitting Outline of Oral Presentation. A general outline of each planned oral presentation should be submitted to Mr. Rutland by October 23, 1987.

Public Meeting(s): Public meeting(s) to receive oral comments will be held on November 13, 1987, in Washington, DC, at 9:00 am and on November 9, 1987, in Columbus, Ohio at 9:00 am.

Public Comments: All written comments on this notice must be received by NHTSA on or before November 27, 1987.

Proposed Effective Date: If the agency determines that some splash and spray suppression device has been shown to significantly reduce splash and spray and significantly improve driver visibility, it would require, without further request for comments, that such devices be installed on new vehicles manufactured on or after April 2, 1989.

ADDRESSES: *Public Meeting(s):* Public meetings will be held at the following locations: Federal Aviation Administration Auditorium, 800 Independence Avenue, SW., Washington, DC 20591.

Holiday Inn, Columbus Airport, 750 Stelzer/James Road, Columbus, Ohio 43219.

These facilities are accessible to the handicapped.

Public Comments: Written comments on this notice must refer to Docket No. 83–05; Notice 4, and be submitted to: Docket Section, NHTSA, Room 5109, 400 Seventh Street, SW., Washington, DC 20590. Docket hours are 8:00 am to 4:00 pm Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Mr. Kenneth W. Rutland, Office of Vehicle Safety Standards, NHTSA, 400 Seventh Street SW., Washington, DC 20590 (202–366–5275).

SUPPLEMENTARY INFORMATION:

1. Statutory Background for this Rulemaking

As originally enacted, section 414 of the Surface Transportation Assistance Act of 1982, (49 U.S.C. 2314), read as follows:

(a) The Congress declares that visibility on wet roadways on the Interstate system should be improved by reducing, by a practicable and reliable means, splash and spray from truck tractors, semitrailers, and trailers.

(b) The Secretary shall by regulation—

(1) Within one year of the date of the enactment of this title, establish minimum standards with respect to the performance and installation of splash and spray supression devices for use on truck tractors, semitrailers, and trailers.

(2) Within one year after the date on which the standards are established under paragraph (1) of this subsection, require that all new truck tractors, semitrailers, and trailers operated on the Interstate system be equipped with any splash and spray suppression device which satisfies the standards established pursuant to paragraph (1) of this subsection; and

(3) Within four years after the date on which the standards are established under paragraph (1) of this subsection, require that all truck tractors, semitrailers, and trailers operated on the Interstate system be equipped with any splash and spray suppression device which satisfies the standards established pursuant to paragraph (1) of this subsection.

* * * * *

In response to this statutory mandate, NHTSA reviewed the research conducted since 1960 on the problem of truck splash and spray, and initiated some additional research of its own. After the review of past research was completed, but before the additional agency research efforts were finished, NHTSA published a notice of proposed rulemaking on April 12, 1985; 50 FR 14632.

That notice stated, "The only devices which current research indicates might be both practicable and reliable for use on existing vehicle designs are spray suppressant flaps and side skirts." 50 FR 4634. Spray suppressant flaps are flaps that hang down behind the tires and are designed to absorb some of the energy in the oncoming stream of water from the tires, contain and channel most of the water out of the area where spray could be formed, or otherwise reduce the formation of spray clouds behind those tires. Side skirts are flat surfaces that hang down from the side of a vehicle above and round the tires and are designed to prevent the water coming off the top of the wheel wells and tires from forming into spray clouds alongside the wheels. Other devices that had been considered during the research to reduce splash and spray included conventional fenders and mudflaps, a DOT spray protector, and air and water deflectors. However, none of these alternative splash and spray suppression devices had been demonstrated to be an effective means of improving visibility with current truck designs, as was discussed in the proposal.

Section 414(b) of the Surface Transportation Assistance Act of 1982 was amended on April 2, 1987, when Congress enacted the Surface Transportation and Uniform Relocation Assistance Act of 1987 (Pub. L. 100–17). Title II of this Act is referred to as The Highway Safety Act of 1987, and section 205 in Title II of this Act amended section 414(b) to read as follows:

(b) The Secretary shall by regulation—

(1) Within one year of the date of the enactment of the Highway Safety Act of 1987, establish final minimum standards with respect to the performance and installation of splash and spray suppression devices for use on truck tractors, semitrailers, and trailers unless the Secretary has determined that there is no available technology which—

(A) Can significantly reduce splash and spray from truck tractors, semitrailers, and trailers, and

(B) Can significantly improve visibility of drivers, as demonstrated during testing on highways, at test facilities, and in laboratories to take into account possible wind and rain conditions.

(2) Within one year after the date on which the standards are established under paragraph (1) of the subsection, require that all truck tractors, semitrailers, and trailers operated on the Interstate system be equipped with any splash and spray suppression device which satisfies the standards established pursuant to paragraph (1) of this subsection; and

(3) Within four years after the date on which the standards are established under paragraph (1) of the subsection, require that all new truck tractors, semitrailers, and trailers operated on the Interstate system be equipped with any splash and spray suppression device which satisfies the standards

established pursuant to paragraph (1) of this subsection.

* * * * *

NHTSA interprets this statutory change as follows. This agency is required to issue final minimum standards for the performance and installation of splash and spray suppression devices by April 2, 1988, *unless* the agency determines that no available technology has been demonstrated during testing on highways, at test facilities, and in laboratories, which testing accounts for possible wind and rain conditions, to *significantly* reduce splash and spray from trucks and *significantly* improve driver visibility as a result of reducing splash and spray. If no available technology can be demonstrated to satisfy these statutory criteria by April 2, 1988, the agency would determine that no available technology has been demonstrated to satisfy the statutory criteria, and terminate this rulemaking action. If the agency were to make such a determination, its statutory obligations under section 414 would be completed. Any subsequent rulemaking actions with respect to splash and spray suppression devices would have to be based on authority granted to the agency under other statutes, most notably the National Traffic and Motor Vehicle Safety Act of 1966, as amended (15 U.S.C. 1381 *et seq.*). This notice seeks public comment on the agency analyses to date and seeks any data purporting to demonstrate that any available splash and spray suppression device will significantly reduce splash and spray from trucks and significantly enhance driver visibility.

2. Tentative Conclusions from Analysis of Data for Spray Suppressant Flaps and Side Skirts

As described above, the 1985 proposal focused exclusively on spray suppressant flaps and side skirts as the potentially practicable and reliable devices to be required on trucks to improve visibility on wet roads. It is important, however, to emphasize that these devices were only *potentially* practicable and reliable means of improving visibility. The prior research and the agency's new research had reached somewhat conflicting conclusions about how consistently effective the devices were at improving visibility.

The first major research effort examining the proposed devices was sponsored by the Federal Highway Administration in 1977 at Fort Stockton, Texas. This study concluded that a combination of spray suppressant flaps and side skirts was the most effective of the tested devices at suppressing spray. NHTSA's own testing of spray suppressant flaps and side skirts in 1983 raised some significant questions about the ability of these devices to reduce spray sufficiently so that the difference would be perceptible to the unaided eye. Testing sponsored by the Motor Vehicle Manufacturers Association (MVMA) in 1984 concluded that trucks fitted with a combination of spray reduction devices, including devices not proposed to be required, can reduce splash and spray by as much as 50 percent over trucks that use the standard hard rubber flaps typically now in use. The MVMA study cautioned that test results could not be repeated consistently, that no specific combination of devices was found best for all vehicles, and that these devices can decrease, but not eliminate splash and spray. After examining these research results, NHTSA stated, "This mixed pattern of research results leaves the agency with misgivings about the appropriateness of proceeding with rulemaking at this time." 50 FR 14634.

Additional and significant MVMA test data were received after the comment closing date for the notice of proposed rulemaking, as were two other comments containing field test data concerning the effectiveness of the proposed devices. Since NHTSA believed that the data in the late-filed comments could significantly affect its analysis in this rulemaking, the agency reopened the comment period to invite the public to analyze and comment on these data. 51 FR 5383; February 13, 1986. Seventeen more comments on the splash and spray rulemaking were submitted during this reopened comment period.

After a thorough review of the available data, NHTSA has tentatively concluded that the proposed spray suppressant flaps and side skirts would *not* significantly reduce truck splash and spray and would *not* significantly improve driver visibility, for several reasons. First, both the NHTSA tests and the two sets of MVMA tests indicate that the proposed devices only marginally reduce the amount of spray produced by the vehicle. That is, the laser transmissometers used to measure the density of the spray clouds produced by the tractor-trailer combinations showed that those spray clouds were generally less dense when the vehicles were equipped with the proposed devices than when the vehicles were equipped with conventional mudflaps.

This finding, by itself, does not establish that the proposed devices could significantly improve driver visibility, however. Transmissometer-measured increases in the transmission of light through spray clouds do not directly translate into increases in visibility, i.e., the ability of the unaided eye of the typical motorist to see through those clouds. Just as a photometer can measure slight increases in the amount of light in an essentially dark room that are insufficient to improve a person's ability to see objects within the room, so a transmissometer can detect reductions in the density of a spray cloud that are insufficient to improve the ability of motorists to see the road ahead. The recent statutory amendments make clear that the law is intended to require splash and spray suppression devices *only* if those devices can be shown to significantly reduce splash and spray from large trucks so that motorists can see the road and traffic ahead significantly better than is true at present.

Even with the measured reductions in spray cloud density, the spray clouds that resulted from vehicles equipped with the proposed devices were still too dense to allow acceptable visibility. The available data on this topic indicate that 40 percent or greater light transmission, as measured by the laser transmissiometers, is necessary for observers to rate visibility as satisfactory. On the upwind side of the test trucks in the most recently completed MNMA study, the 40 percent transmission level was met or exceeded in 21 of 48 test runs by trucks equipped with convential mudflaps. When those trucks were equipped with flaps measured as achieving a 75 percent visibility rating in the spray tunnel with side skirts at the positions NHTSA proposed for one year after publications of a final rule, the 40 percent level was met or exceeded in 26 of 48 test runs. When equipped with the 75 percent flaps and side skirts at all positions proposed to be required four years after publication of the final rule, the 40 percent level was met or exceeded in 23 of 48 test runs.

The data for the downwind side of the test trucks were much simpler. Regardless of whether those trucks were equipped with conventional mudflaps, the one year devices, or the four year devices, not one test run ever met or exceeded the level needed for satisfactory visibility.

Several points should be noted in connection with these test results. First, the upwind side of trucks does not present nearly the same degree of visibility problems as the downwind side does. Satisfactory visibility was present more than one-third of the time

on the upwind side of the test trucks without using any spray suppression devices, while it was never present on the downwind side. Second, the proposed devices would offer marginal visibility improvements on the less problematic upwind side of trucks. Using the 40 percent level for satisfactory visibility, drivers would experience satisfactory visibility about 44 percent of the time without any additional spray suppression devices, 54 percent of the time with the proposed one year devices, and 48 percent of the time with the proposed four year devices. Third, the proposed devices would never result in satisfactory visibility on the downwind side of the trucks. Thus, the net effect of requiring these devices would be to offer motorists only marginal visibility improvements on the upwind side of the trucks, while never resulting in satisfactory visibility on the downwind side of trucks.

Based on these results, NHTSA does not believe it could determine that the proposed devices would significantly reduce splash and spray and significantly improve driver visibility even on test tracks under conditions designed to limit the impacts of the environmental factors that influence the effectiveness of the proposed devices. However, NHTSA's statutory mandate is not so limited. Instead, the agency is required to determine whether any devices will significantly reduce splash and spray and significantly improve driver visibility, as demonstrated during testing on highways, at test facilities, and in laboratories *to take into account possible wind and rain conditions.* When these environmental conditions are taken into account, the potential effectiveness of the proposed devices is further reduced.

The proposed spray suppressant flaps and skirts appear to have their potential effectiveness sharply diminished in the presence of cross winds. Both NHTSA's on testing and the testing sponsored by MVMA showed that cross winds significantly reduce the effectiveness of the proposed devices. According to data compiled by the National Weather Service, the mean wind velocity for the vast majority of the United States is 8 mph or greater. When winds of that or greater velocity are present at cross winds for vehicles equipped with the proposed devices, the already marginal effectiveness of the proposed devices is further reduced.

Additionally, the data show that the amount of spray generated by a vehicle is significantly greater when the vehicle is driven at speeds in excess of 55 mph, as compared with the spray generated with the vehicle is driven at 55 mph. When tractor-trailers are driven at speeds above 55 mph, the data show that the spray generated is increased to such a level that none of the proposed devices can reduce the spray sufficiently for drivers on the Interstate system to experience satisfactory visibility. When these real would reductions of potential effectiveness for the proposed devices are considered along with the only marginal effectiveness shown by the devices under controlled test conditions, the agency must tentatively conclude that the proposed devices would *not* significantly reduce splash and spray and significantly improve driver visibility under the conditions set forth in the law.

The only data received by the agency purporting to show that the proposed devices would result in visibility improvements were submitted by Schlegel, one of the manufacturers of the proposed devices. These data consisted of visual observations of truck spray in the State of Oregon. In this study, Oregon State police and weighmasters filled out rating forms to assess visibility on wet roads while passing marked trucks, almost all of which were equippped with spray suppression devices. The observer was then instructed to find an unmarked tractor-trailer and perform a similar rating. The study collected 868 pairs of ratings between March 1985 and March 1986.

After examining these data, NHTSA does not believe that the Oregon study shows that the proposed devices would significantly improve driver visibility on wet roads. On the contrary, NHTSA believes these Oregon data support the agency's conclusions that the proposed devices have a marginal effect on the amount of spray produced by tractor-trailers, and that enviromental and operating conditions have a very large effect on visibility.

This agency belief is based on the following observations about the Oregon study:

1. The test results were dominated by the presence of trucks equipped with aeroaids, devices that were not proposed to be required. Almost 84 percent of the marked trucks were equipped with aeroaids. The data from the 1985 MVMA testing and the agency analysis of that data indicate that aeroaids alone may improve visibility more than the proposed devices. In the Oregon study, it is impossible to segregate the extent to which the observed visibility improvements were attributable to the proposed devices from the improvements resulting solely from aeroaids.

2. The treated trucks were typically driven at lower speeds than the untreated trucks. Only 6 percent of the treated trucks were travelling above 55 mph, while 22 percent of the untreated trucks exceeded 55 mph. This is significant, because both the 1978 FHWA testing at Fort Stockton and the 1984 MVMA testing have shown that spray generation increases as vehicle speed increases. The Oregon study itself showed that observers rated the spray much higher as vehicle speed rose. Therefore, it seems very likely that some of the observed visibility improvements were a result of the untreated trucks travelling at a higher speed than the treated trucks, and not the effectiveness of the proposed devices at reducing spray.

3. The Oregon study's analysis of visibility improvements for trucks equipped with the proposed devices and aeroaids shows relatively small improvements. The study asked observers to use a visibility rating scale from 1 ("very good") to 8 ("very poor"). The observers made their ratings for each test in two positions relative to the measured vehicles. One rating was before passing, when the observers were clear of all spray, and the second visibility rating was made while passing the measured vehicle. The "visibility while passing" rating was subtracted from the "visibility before passing" rating to calculate the difference in these ratings for both treated and untreated vehicles. The mean visibility difference ratings of the various spray suppressant treatments were calculated, and the highest mean visibility difference for either treated or untreated trucks was 0.27 points. Considering that an 8 point system was used, a difference of well under 0.5 points indicates that the proposed devices have a very minor impact on visibility. If anything, the agency believes this finding is consistent with the other data showing that the proposed devices can, at best, marginally reduce the amount of spray generated by tractor-trailers.

4. Even assuming that the study were controlled for significant variables, and NHTSA does not believe it was, as explained in points 1 and 2 above, there is no indication that the difference would result in any meaningful visibility improvements for drivers in normal wet weather conditions. For instance, if the baseline visibility were rated as "adequate" or better, an increase of 0.27 points would not enhance the visibility of drivers on the wet roads. On the other hand, if the baseline visibility were

rated as less than "adequate", an increase of 0.27 points still leaves drivers with less than adequate visibility.

5. The multiple regression evaluations performed by the Oregon study's author demonstrate little correlation between spray suppression treatment and visibility ratings. The author himself stated that the correlation was "quite low ($r = 0.12$), although statistically significant." Further, the author's multiple regression equations based on spray ratings showed that the amount of rainfall had a much greater effect on the spray ratings (explaining 29 percent of the variation) than did the spray suppressant devices (explaining 14 percent of the variation).

Accordingly, the agency believes that the results from the Oregon tests are generally consistent with the results of the MVMA tests. The proposed spray suppression devices might marginally reduce the amount of spray generated in some instances, but they do not do so consistently nor do they *significantly* reduce the amount of splash and spray. Moreover, both studies indicate that the effectiveness of the proposed devices is extremely sensitive to vehicle operating conditions. The MVMA study identified vehicle speed and cross winds as two important factors that greatly reduce the effectiveness of the proposed devices. The Oregon study adds the amount of rainfall to that list of factors.

Therefore, NHTSA has tentatively determined that the proposed devices would not significantly reduce the amount of splash and spray generated by large trucks and would not significantly improve driver visibility, under the conditions set forth in the law. Public comment is specifically requested on the agency's analysis of the available data and on this tentative determination. All comments will be fully considered before the agency makes its final statutory determination with respect to the proposed devices.

NHTSA has prepared an addendum to the preliminary regulatory evaluation for this proposed rulemaking action. This addendum summarizes the agency's analysis of the available data on splash and spray suppression devices. Copies of this addendum have been placed in Docket No. 83–05, Notice 4. Any interested person may obtain a copy of this addendum by writing to: NHTSA Docket Section, Room 5109, 400 Seventh Street SW., Washington, DC 20590, or by calling the Docket Section at (202) 366–4949.

3. Request for Data on Splash and Spray Suppression Devices Other than the Proposed Devices

The agency has focused its efforts almost exclusively on evaluating the potential effectiveness of the proposed spray suppressant flaps and side skirts, since those were the devices that would have been required if the notice of proposed rulemaking were adopted as a final rule. However, the amended language in section 414 requires the agency to determine that no available technology has been demonstrated during testing on highways, at test facilities, and in laboratories, which testing takes into account possible wind and rain conditions, to *significantly* reduce splash and spray and *significantly* improve driver visibility.

The data available to the agency at this time indicate that no splash and spray suppression device other than the proposed devices has been demonstrated during testing to significantly reduce splash and spray and significantly improve driver visibility. The alternative splash and spray suppression devices about which the agency has the most testing information are aerodynamic devices called "aeroaids". When attached to a truck tractor that is pulling a semitrailer called a "van" and when there is little or no crosswind present, these devices have been found to improve visibility to a degree that would generally be helpful to motorists. However, the available test data for aeroaids indicate that the devices offer no visibility improvements when transverse perpendicular crosswinds reach speeds of only 8 mph. Additionally, aeroaids have been tested only with van semitrailers. It appears from engineering analysis applying principles of aerodynamics that aeroaids would not provide any visibility improvements if the truck tractors were coupled with non-van trailers or semitrailers. Given these data, and considering the full range of vehicles specified in section 414 of the Surface Transportation Act, as amended, as well as the full range of weather conditions, NHTSA could not now determine that aeroaids have been demonstrated to significantly reduce splash and spray and significantly improve visibility.

As noted above, however, the agency has not focused its efforts on examining the potential visibility improvements available from aeroaids. With respect to all other technologies available for reducing splash and spray, the agency has very little test data. To allow the agency to fully consider all data that is currently available, this notice specifically invites any persons that have test data for aeroaids or any other currently available splash and spray suppression technology to submit such data to the agency. It is important that these data be provided as soon as possible, to allow the agency to comply with the one year deadline in the law for making a determination whether any available technology has been demonstrated to significantly reduce splash and spray and significantly improve driver visibility. All data that are received during this comment period will be analyzed and evaluated in connection with this comment period, the agency will use the data that are currently available as the basis for its determination.

4. Public Meetings

Public meetings will be held on November 13, 1987, in Washington, DC, and on November 9, 1987, in Columbus, Ohio, at the times and addresses specified near the beginning of this notice. The agency invites interested members of the public to participate in these meetings and to comment on all of the issues raised in this notice.

No opportunity will be afforded the public to directly question participants in the meetings. However, persons desiring that questions be addressed to a particular participant may submit those questions to the presiding panel of Department officials for its consideration. The members of the panel may address those questions as well as questions of their own to any person making an oral presentation at the meetings.

Persons wishing to make oral presentations at the public meetings should contact Mr. Ken Rutland (whose address and telephone number are provided near the beginning of this notice) by October 16, 1987, so that any necessary time limitations and special equipment, such as projectors, can be discussed and final arrangements can be made. A general outline of each planned oral presentation should be submitted to Mr. Rutland by October 23, 1987. Persons whose presentations will include slides, motion pictures, or other visual aids should submit copies of the visual aids for the record at the meeting. Oral presentations will be limited to between five and 15 minutes, depending on the number of persons desiring to make presentations. If the number of requests for oral presentations exceeds the available time, the agency may ask prospective witnesses having similar views or belonging to similar types of groups or occupations to combine their presentations.

VOL
52
ISS
187
SE
28
1987
UMI

Persons making oral presentations are requested but not required to submit 25 written copies of the full text of their presentation to Mr. Rutland, no later than the day before the meetings begin. If time permits, persons who have not requested time in advance, but would like to make a statement, will be afforded an opportunity to do so at the end of each day's schedule. Copies of all written statements will be placed in the docket for this notice. A verbatim transcript of the public meetings will be prepared and also placed in the NHTSA docket as soon as possible after the meetings. A schedule of the persons making oral presentations at the meeting will be available at the designated meeting area at the beginning of each public meeting.

Written Comments

Interested persons are invited to submit comments on this request. It is requested but not required that 10 copies be submitted.

All comments must not exceed 15 pages in length. (49 CFR 553.21). Necessary attachments may be appended to these submissions without regard to the 15-page limit. This limitation is intended to encourage commenters to detail their primary arguments in a concise fashion.

If a commenter wishes to submit certain information under a claim of confidentiality, three copies of the complete submission, including purportedly confidential business information, should be submitted to the Chief Counsel, NHTSA, at the street address given above, and seven copies from which the purportedly confidential information has been deleted should be submitted to the Docket Section. A request for confidentiality should be accompanied by a cover letter setting forth the information specified in the agency's confidential business information regulation. 49 CFR Part 512.

All comments received before the close of business on the comment closing date indicated above for the proposal will be considered, and will be available for examination in the docket at the above address both before an after the date. To the extent possible, comments filed after the closing date will also be considered. Comments on the proposal will be available for inspection in the docket. The NHTSA will continue to file relevant information as it becomes available in the docket after the closing date, and it is recommended that interested persons continue to examine the docket for new material.

Those persons desiring to be notified upon receipt of their comments in the rules docket should enclose a self-addressed, stamped postcard in the envelope with their comments. Upon receiving the comments, the docket supervisor will return the postcard by mail.

Issued on: September 23, 1987.

Diane K. Steed,

Administrator.

Federal Register

Vol. 52, No. 187

Monday, September 28, 1987

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Resumption of Tobacco Estimates by Class and Type

The National Agricultural Statistics Service (NASS) is publishing this notice to announce plans to resume the publication of tobacco acreage and production estimates by class and type in all forecast months.

Since March of 1982, when NASS announced a number of program reductions, estimates for all classes and types have only been shown in the August *Crop Production* report and end-of-year *Crop Production* annual summary, usually released about mid-January.

The recent program change means that class and type estimates will now be shown in the February *Prospective Plantings* and July *Crop Production* acreage reports and all other monthly *Crop Production* reports normally containing tobacco forecasts as well as the end-of-year *Crop Production* annual summary. The first class and type estimates, under the new program, will be published in the October 8, 1987 *Crop Production* report.

Questions and comments on these changes to the tobacco estimating program should be directed to John Witzig, Chief, Crops Branch, NASS/USDA, Room 5175–S, Washington, DC 20250–2000; telephone (202) 447–2127.

Dated: September 21, 1987.

ARMS CONTROL AND DISARMAMENT AGENCY

Performance Review Board; Membership

AGENCY: Arms Control and Disarmament Agency.

ACTION: Notice of membership of Performance Review Board.

SUMMARY: In accordance with 5 U.S.C. 4314(c)(4), the U.S. Arms Control and Disarmament Agency announces the appointment of Performance Review Board members.

EFFECTIVE DATE: December 4, 1987.

FOR FURTHER INFORMATION CONTACT: Nancy Aderholdt, Director of Personnel, U.S. Arms Control and Disarmament Agency, Washington, DC 20451 (202) 647–2034.

The following are the names and present titles of the individuals appointed to the register from which Performance Review Boards will be established by the U.S. Arms Control and Disarmament Agency. Each individual will serve a one year renewable term beginning on the effective date of this notice. Specific Performance Review Boards will be established as needed from the register.

These appointments supercede those in the announcement published at 51 FR 43402 on December 2, 1986.

Name and Title

David Emery—Deputy Director
Manfred Eimer—Assistant Director, Verification and Intelligence Bureau
Lynn Hansen—Assistant Director, Multilateral Affairs Bureau
Michael Gukin—Counselor
William Montgomery—Administrative Director
Thomas Graham, Jr.—General Counsel
Mary E. Hoinkes—Deputy General Counsel
Louis Nozenso—Deputy Assistant Director, Strategic Programs Bureau
Norman Wulf—Deputy Assistant Director, Nuclear and Weapons Control Bureau
William Staples—Executive Secretary
R. Lucas Fischer—Division Chief, Strategic Affairs Division, Strategic Affairs Division, Strategic Programs Bureau

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Order No. 363]

Resolution and Order Approving the Application of the Economic Development Council for the Peoria Area, for a Special-Purpose Subzone for the Chrysler Plant in Belvidere, IL, Adjacent to the Chicago Customs Port of Entry

Proceedings of the Foreign-Trade Zones Board, Washington, DC.

Resolution and Order

Pursuant to the authority granted in the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a through 81u), the Foreign-Trade Zones Board has adopted the following Resolution and Order:

The Board, having considered the matter, hereby orders:

After consideration of the application of the EDC, Inc., the Economic Development Council for the Peoria Area, grantee of FTZ 114, filed with the Foreign-Trade Zones Board (the Board) on October 21, 1985, requesting special-purpose subzone status for the automobile manufacturing plant of Chrysler Corporation in Belvidere, Illinois, adjacent to the Chicago Customs port of entry, the Board, finding that the requirements of the Foreign-Trade Zones Act, as amended, and the Board's regulations are satisfied, and that the proposal is in the public interest, approves the application.

The Secretary of Commerce, as Chairman and Executive Officer of the Board, is hereby authorized to issue a grant of authority and appropriate Board Order.

VOL
52
ISS

Grant of Authority to Establish a Foreign-Trade Subzone in Belvidere, IL, Adjacent to the Chicago Customs Port of Entry

Whereas, by an Act of Congress approved June 18, 1934, an Act "To provide for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes," as amended (19 U.S.C. 81a through 81u) (the Act), the Foreign-Trade Zones Board (the Board) is authorized and empowered to grant to corporations the privilege of establishing, operating, and maintaining foreign-trade zones in or adjacent to ports of entry under the jurisdiction of the United States;

Whereas, the Board's regulations (15 CFR 400.304) provide for the establishment of special-purpose subzones when existing zone facilities cannot serve the specific use involved, and where a significant public benefit will result;

Whereas, The EDC, Inc., the Economic Development Council for the Peoria Area, grantee of Foreign-Trade Zone 114, has made application (filed October 21, 1985, Docket No. 39–85, 50 FR 45446) in due and proper form to the Board for authority to establish a special-purpose subzone at the automobile manufacturing plant of Chrysler Corporation in Belvidere, Illinois, adjacent to the Chicago Customs port of entry;

Whereas, notice of said application has been given and published, and full opportunity has been afforded all interested parties to be heard; and,

Whereas, the Board has found that the requirements of the Act and the Board's regulations are satisfied;

Now, therefore, in accordance with the application filed October 21, 1985, the board hereby authorizes the establishment of a subzone at the Chrylser plant in Belvidere, Illinois, designated on the records of the Board as Foreign-Trade Subzone No. 114B at the location mentioned above and more particularly described on the maps and drawings accompanying the application, said grant of authority being subject to the provisions and restrictions of the Act and the Regulations issued thereunder, to the same extent as though the same were fully set forth herein, and also to the following express conditions and limitations:

Activation of the subzone shall be commenced within a reasonable time from the date of issuance of the grant, and prior thereto, any necessary permits shall be obtained from Federal, State, and municipal authorities.

Officers and employees of the United States shall have free and unrestricted access to and throughout the foreign-trade subzone in the performance of their official duties.

The grant shall not be construed to relieve responsible parties from liability for injury or damage to the person or property of others occasioned by the construction, operation, or maintenance of said subzone, and in no event shall the United States be liable therefor.

The grant if further subject to settlement locally by the District Director of Customs and District Army Engineer with the Grantee regarding compliance with their respective requirements for the protection of the revenue of the United States and the installation of suitable facilities.

In witness whereof, the Foreign-Trade Zones Board has caused its name to be signed and its seal to be affixed hereto by its Chairman and Executive Officer or his delegate at Washington, DC, this 18th day of September 1987, pursuant to Order of the Board.

Foreign-Trade Zones Board.

Paul Freedenberg,

Assistant Secretary of Commerce for Trade Administration, Chairman, Committee of Alternates.

Attest:

John J. Da Ponte, Jr.,

Executive Secretary.

BILLING CODE 3510–DS–M

International Trade Administration

[Application #84–A0024]

Export Trade Certificate of Review; Gerhardt's Inc.

AGENCY: International Trade Administration, Commerce.

ACTION: Notice of issuance of an amended Export Trade Certificate of Review.

SUMMARY: The Department of Commerce has issued a second amendment to the export trade certificate of review of Gerhardt's Inc. granted on September 20, 1984 (49 FR 37821, September 26, 1984 and 49 FR 38964, October 2, 1984). The first amendment was granted on August 30, 1985, effective as of July 15, 1985 (50 FR 36126, September 5, 1985). The second amendment consists of: (1) A change of the certificate holder from Gerhardt's, Inc. to Gerhardt Holding Company, Inc. (GHC), due to an organizational restructuring of Gerhardt's, Inc.; (2) the addition of the original certificate holder Gerhardt's, Inc. and two other subsidiaries of GHC as members to the certificate, and changes in the description of some original members to the certificate; (3) the addition of "taking title to goods" to "Export-Related Services;" (4) the change of one product listing under "Products" from "electrical governors" to "electronic governors;" and (5) the addition of the establishment of the resale price of Products in Export Trade under "Export Trade Activities and Methods of Operation." This notice summarizes the conduct for which certification has been granted.

FOR FURTHER INFORMATION CONTACT: George Muller, Acting Director, Office of Export Trading Company Affairs, International Trade Administration, 202–377–5131. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: Title III of the Export Trading Company Act of 1982 ("the Act") (Pub. L. 97–290) authorizes the Secretary of Commerce to issue export trade certificates of review. The regulations implementing Title III are found at 15 CFR Part 325 (50 FR 1804, January 11, 1985).

The Office of Export Trading Company Affairs is issuing this notice pursuant to 15 CFR 325.6(b), which requires the Department of Commerce to publish a summary of a certificate in the **Federal Register**. Under section 305(a) of the Act and 15 CFR 325.11(a), any person aggrieved by the Secretary's determination may, within 30 days of the date of this notice, bring an action in any appropriate district court of the United States to set aside the determination on the ground that the determination is erroneous.

Description of Amended Certificate

Export Trade

1. Products

Diesel fuel injection systems; hydraulic, mechanical, pneumatic and electronic governors; automatic lubrication systems; turbochargers; starters, generators and alternators; industrial ignition systems; oilfield engines and parts; and engine accessories, instruments and test devices.

2. Export-Related Services

To facilitate Export Trade in the Products, GHC and its Members intend to provide advice concerning, and/or to arrange for financing, including letters of credit, insurance, shipping, utilization of brokers, customer requirements, including bidding requirements, as well as, to provide engineering, technical and retrofitting services and training and marketing advice concerning the

Products in connection with export transactions, and to take title to Products in Export Trade.

Export Markets. The Export Markets include all parts of the world except the United States (the fifty states of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands).

Members. Gerhardt's, Inc. (Louisiana); Gerhardt's, Inc. (Texas); Gerhardt's, Inc./New Mexico d/b/a/ Gerhardt's, Inc. (Texas); Gerhardt's International, Inc. (U.S. Virgin Islands); Gerhardt's, Inc. (California); and Gerhardt, S.A. de C.V. (Mexico).

Export Trade Activities and Methods of Operation. GHC and its Members may:

1. Enter into nonexclusive agreements with individual suppliers to act as an Export Intermediary for Products in Export Trade.

2. Enter into agreements with individual suppliers of Products wherein:

a. GHC or any Member may agree to serve as the exclusive Export Intermediary for Products in any Export Market and, in addition, may agree not to represent any competitors of such supplier for Products in any Export Market; and/or

b. The supplier may agree not to sell, directly or indirectly through any other intermediary, into the Export Markets in which GHC or any Member exclusively represents the supplier as an Export Intermediary.

3. Enter into nonexclusive agreements with individual entities in which those entities agree to act as Export Intermediaries for GHC and its Members for Products in Export Trade.

4. Enter into agreements with individual Export Intermediaries whereby:

a. GHC and its Members may agree to deal in Products in Export Markets exclusively through such Export Intermediaries; and/or

b. Such Export Intermediaries may agree not to represent GHC's or its Members' competitors in the sale of Products in any Export Markets or not to buy Products from GHC's or its Members; competitors for resale in any Export Markets.

5. In connection with the sale of Products to Export Markets, purchase Products from suppliers at prices lower than those charged by such suppliers to other purchasers of the Products.

6. Refuse to sell Products to purchasers located in Export Markets.

7. Establish the resale price of Products in Export Trade.

A copy of each certificate will be kept in the International Trade Administration's Freedom of Information Records Inspection Facility, Room 4102, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230.

Date: September 21, 1987.

George Muller,

Acting Director, Office of Export Trading Company Affairs.

[FR Doc. 87-22311 Filed 9-25-87; 8:45 am]

BILLING CODE 3510-DR-M

[A-588-706]

Initiation of Antidumping Duty Investigation; Butadiene/Acrylonitrile Copolymer Synthetic Rubber From Japan

AGENCY: Import Administration, International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: On the basis of a petition filed in proper form with the U.S. Department of Commerce, we are initiating an antidumping duty investigation to determine whether imports of butadiene/acrylonitrile copolymer synthetic rubber (nitrile rubber) from Japan are being, or are likely to be, sold in the United States at less than fair value. We are notifying the U.S. International Trade Commission (ITC) of this action so that it may determine whether imports of this product materially injure, or threaten material injury to, a U.S. industry. If this investigation proceeds normally, the ITC will make its preliminary determination on or before October 15, 1987, and we will make ours on or before February 8, 1988.

EFFECTIVE DATE: September 28, 1987.

FOR FURTHER INFORMATION CONTACT: Mary S. Clapp, Office of Investigations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC, 20230, telephone (202) 377-1769.

SUPPLEMENTARY INFORMATION:

The Petition

On September 1, 1987, we received a petition filed in proper form by Uniroyal Chemical Company, Inc., on behalf of the U.S. industry producing nitrile rubber. In compliance with the filing requirements of § 353.36 of the Commerce Regulations (19 CFR 353.36), the petitioner alleges that imports of nitrile rubber from Japan are being, or are likely to be, sold in the United States at less than fair value within the meaning of section 731 of the Tariff Act of 1930, as amended (the Act), and that these imports materially injure, or threaten material injury to, a U.S. industry.

Petitioner's estimate of United States price was based on statements by its customers that also purchase Japanese nitrile rubber. Petitioner made adjustments for ocean freight, U.S. inland freight, commissions and general expenses, and interest for inventory costs in the U.S.

Petitioner based the foreign market value on information obtained in Japan listing quoted prices for medium acrylonitrile grade rubber. Petitioner made adjustments for differences in quantity, overhead and indirect expenses, freight, and interest cost.

Based on a comparison of United States prices and foreign market value, petitioner alleges dumping margins ranging from 39 to 240 percent.

Petitioner also alleges that "critical circumstances" exist with respect to imports of nitrile rubber from Japan.

After analysis of petitioner's allegation and supporting data, we conclude that a formal investigation is warranted.

Initiation of Investigation

Under section 732(c) of the Act, we must determine, within 20 days after a petition is filed, whether it sets forth the allegations necessary for the initiation of an antidumping duty investigation, and whether it contains information reasonably available to the petitioner supporting the allegations.

We examined the petition on nitrile rubber from Japan and found that it meets the requirements of section 732(b) of the Act. Therefore, in accordance with section 732 of the Act, we are initiating an antidumping duty investigation to determine whether imports of nitrile rubber from Japan are being, or are likely to be, sold in the United States at less than fair value. If our investigation proceeds normally, we will make our preliminary determination by February 8, 1988.

Scope of Investigation

The product covered in this investigation is nitrile rubber, not containing fillers, pigments, or rubber-processing chemicals, provided for in item 446.15 of the *Tariff Schedules of the United States* (TSUS) and currently classifiable under Harmonized System (HS) item number 4002.59.00. For purposes of this investigation, nitrile rubber refers to the synthetic rubber

VOL
52
ISS
187
SE
28
1987
UMI

that is made from the polymerization of butadiene and acrylonitrile and that does not contain any type of additive or compounding ingredient having a function in processing, vulcanization, or end use of the product.

The United States has developed a system of tariff classification based on the international harmonized system of customs nomenclature. Congress is considering legislation to convert the United States to this harmonized system by January 1, 1988. In view of this, we will be providing both the appropriate TSUS item numbers and the appropriate HS item numbers with our product descriptions on a test basis, pending Congressional approval. As with the TSUS, the HS item numbers are provided for convenience and customs purposes. The written description remains dispositive as to the scope of the product coverage.

We are requesting petitioners to include the appropriate HS item numbers as well as the TSUS item numbers in all new petitions filed with the Department. A reference copy of the proposed Harmonized System schedule is available for consultation in the Central Records Unit, Room B–099, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

Additionally, all customs offices have reference copies, and petitioners may contact the Import Specialist at their local customs office to consult the schedule.

Notification of ITC

Section 732(d) of the Act requires us to notify the ITC of this action and to provide it with the information we used to arrive at this determination. We will notify the ITC and make available to it all nonprivileged and nonproprietary information. We will also allow the ITC access to all privileged and business proprietary information in our files, provided it confirms in writing that it will not disclose such information either publicly or under an administrative protective order without the written consent of the Deputy Assistant Secretary for Import Administration.

Preliminary Determination by ITC

The ITC will determine by October 15, 1987, whether there is a reasonable indication that imports on nitrile rubber from Japan materially injure, or threaten material injury to, a U.S. industry. If its determination is negative the investigation will terminate; otherwise it will proceed according to the statutory and regulatory procedures.

This notice is published pursuant to section 732(c)(2) of the Act.

September 21, 1987.

Gilbert B. Kaplan,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–M

[A–427–030]

Final Results of Antidumping Duty Administrative Review; Large Power Transformers From France

AGENCY: International Trade Administration/Import Administration, Commerce.

ACTION: Notice of final results of antidumping duty administrative review.

SUMMARY: On July 29, 1987, the Department of Commerce published the preliminary results of its administrative review of the antidumping finding on large power transformers from France. We have not changed the final results from those presented in our preliminary results of review.

EFFECTIVE DATE: September 28, 1987.

FOR FURTHER INFORMATION CONTACT: Laurie A. Lucksinger or David P. Mueller, Office of Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone: (202) 377–1130/2923.

SUPPLEMENTARY INFORMATION:

Background

On July 29, 1987, the Department of Commerce ("the Department") published in the **Federal Register** (52 FR 28323) the preliminary results of its administrative review of the antidumping finding on large power tansformers from France (37 FR 11772, June 14, 1972). The Department has now completed that review in accordance with section 751 of the Tariff Act of 1930 ("the Tariff Act").

Scope of the Review

Imports covered by the review are shipments of large power transformers ("transformers"); that is, all types of transformers rated 10,000 kVA (kilovolt/amperes) or above, by whatever name designated, used in the generation, transmission, distribution, and utilization of electric power. The term "transformers" includes, but is not limited to, shunt reactors, autotransformers, rectifier transformers, and power rectifier transformers. Not included are combination units, commonly known as rectiformers, if the entire integrated assembly is imported in the same shipment and entered on the same entry and the assembly has been ordered and invoiced as a unit, without a separate price for the transformer portion of the assembly. Transformers covered by this finding are currently classifiable under items 682.0755, 682.0765, and 682.0775 of the Tariff Schedules of the United States Annotated. These products are currently classifiable under Harmonized System item numbers 8504.22.00, 8504.23.00, 8504.34.00, 8504.40.00, 8504.50.00, and 8505.50.00.

The review covers one exporter of French large power transformers to the United States, Alsthom-Atlantique ("Alsthom"), and the period June 1, 1983 through May 31, 1986.

Final Results of the Review

We gave interested parties an opportunity to comment on the preliminary results. We received no comments. We determine to assess antidumping duties for merchandise manufactured by Alsthom according to these results:

Period	Margin (percent)
6/1/83–5/31/84	1.82 [1]
6/1/84–5/31/86	72.85

[1] No shipments during the period.

The Department will instruct the Customs Service to assess antidumping duties on all appropriate entries. The Department will issue appraisement instructions on Alsthom directly to the Customs Service.

Further, as provided by section 751(a)(1) of the Tariff Act, a cash deposit of estimated antidumping duties of 72.85 percent shall be required on shipments of large power transformers manufactured by Alsthom.

For any future shipments of this merchandise from a new exporter or manufacturer not covered in this or prior administrative reviews, whose first shipments occurred after May 31, 1986 and who is unrelated to Alsthom or any other previously reviewed firm, a cash deposit of 1.82 percent shall be required on shipments of large power transformers from France.These deposit requirements are effective for all shipments of French large power transformers entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice and shall remain in effect until publication of the final results of the next administrative review.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and § 353.53a of the Commerce Regulations (19 CFR 353.53a).

Date: September 18, 1987.

Gilbert B. Kaplan,

Deputy Assistant Secretary, Import Administration.

Final Results of Antidumping Duty Administrative Review; Neoprene Laminate From Japan

AGENCY: International Trade Administration/Import Administration, Commerce.

ACTION: Notice of final results of antidumping duty administrative review.

SUMMARY: On July 16, 1987, the Department of Commerce published the preliminary results of its administrative review of the antidumping duty order on fabric expanded neoprene laminate from Japan. The review covers two manufacturers/exporters of this merchandise to the United States and the period March 15, 1985 through June 30, 1986.

We gave interested parties an opportunity to comment on the preliminary results. We received comments from the petitioner, Rubatex Corporation, and one respondent, Heiwa Rubber Industries. Based on our analysis of comments received and correction of certain clerical errors, we have changed the final results from those presented in the preliminary results of review.

EFFECTIVE DATE: September 28, 1987.

FOR FURTHER INFORMATION CONTACT: Anne S. D'Alauro or Maureen Flannery, Office of Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230; telephone (202) 377-2923/5255.

SUPPLEMENTARY INFORMATION:

Background

On July 16, 1987, the Department of Commerce published in the **Federal Register** (52 FR 26712) the preliminary results of its administrative review of the antidumping duty order on fabric expanded neoprene laminate ("FENL") from Japan. The Department has now completed the administrative review in accordance with section 751 of the Tariff Act of 1930 ("The Tariff Act").

Scope of the Review

Imports covered by the review are shipments of FENL currently provided for in items 355.81, 355.82, 350.50 and 359.60 of the Tariff Schedules of the United States Annotated. These products are also currently classifiable under item numbers 5906.91.20, 5906.99.20, 5911.10.20, 5906.91.25, 5906.99.25 and 5602.10.00 of the Harmonized system.

The review covers two manufacturers/exporters of Japanese FENL, and the period March 15, 1985 through June 30, 1986.

Analysis of Comments Received

We gave interested parties an opportunity to comment on the preliminary results. We received comments from the petitioner and one respondent.

Petitioner's Comments

Comment 1: Petitioner claims that, for the two shipments to the United States for which Heiwa had not received payment, the Department should assign a zero purchase price rather than consider the sales to represent bad debt. Petitioner argues that, since the respondent continued to sell to this customer, these sales were the equivalent of free goods.

Department's position: The failure of a customer to pay its bills is considered to constitute bad debt. It is the Department's policy to consider bad debt as an indirect selling expense. As the basis of comparison for this review is purchase price, there is no authority to adjust for indirect selling expenses.

We do not regard the fact that the exporter continued to sell to the non-paying buyer as constituting acceptance of the situation by the exporter. The record shows the exporter changed the terms of payment to protect himself against further failure to pay by this customer. For the final results of review, we included these sales in the analysis at their contracted sale price, and used the best information available to determine the credit expense for these sales.

Comment 2: Petitioner argues that the Department erred in using Yamamoto Corporation's rate of 3.09 percent from the fair value investigation as the best information available for this review. Petitioner cites the appreciation of the yen against the dollar as the reason that Yamamoto's margin should be significantly higher during the current review. In addition, the petitioner argues that, but for the penal nature of the application of best information otherwise available, there is little incentive for a foreign manufacturer with low margins to cooperate in the administrative review process.

Department's position: Unless the facts of a case indicate otherwise, the Department generally uses for best information available for a non-responsive firm the higher of (1) that firm's prior rate, or (2) the highest rate for any responsive firm during the period of review. Thus, contrary to petitioner's argument, there is an incentive for a firm with an initial low rate to cooperate in future antidumping annual reviews.

For this review, the petitioner provided no evidence to support its allegation that the prior rate for Yamamoto does not represent the best information available. Therefore, consistent with past practice, we conclude that the prior rate does constitute the best information available.

Heiwa's Comment

Heiwa states that the weighted average foreign market value used for comparison for April 1986 is not representative of the average selling price because it is based on one sales transaction of a limited quantity. It argues that this sale price is aberrational when compared with the weighted average of the previous and following months for the same product, and recommends the use of the weighted average price from March 1986 as the basis of FMV for this product.

Department's position: We disagree. Review of the sales data does not show the April 1986 sale to be outside the normal course of trade by reason of quantity or selling price. The sale is, therefore, appropriately used as the basis of FMV for this month.

Final Results of Review

As a result of our review of the comments received and correction of clerical errors, we determine that the following margins exist:

Manufacturer/Exporter	Margin (percent)
Heiwa Rubber Industries	0.29
Yamamoto Corp.	3.09

The Department will instruct the Customs Service to assess antidumping duties on all appropriate entries. Individual differences between United States price and foreign market value may vary from the percentages stated above. The Department will issue appraisement instructions directly to the Customs Service.

VOL
52
ISS
187
SE
28
1987
UMI

Further, as provided for in section 751(a) of the Tariff Act, a cash deposit of estimated antidumping duties of 3.09 percent shall be required for shipments by Yamamoto Corporation. Since the margin for Heiwa Rubber Industries is less than 0.5 percent and, therefore, *de minimis* for cash deposit purposes, the Department shall not require a cash deposit for this firm. For any future entries of this merchandise from a new exporter not covered in this or prior administrative reviews, whose first shipments occurred after June 30, 1986 and who is unrelated to any reviewed firm, no cash deposit shall be required. These deposit requirements are effective for all shipments of Japanese fabric expanded neoprene laminate entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice and shall remain in effect until publication of the final results of the next administrative review.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and § 353.53a of the Commerce Regulations (19 CFR 353.53a).

Gilbert B. Kaplan,

Deputy Assistant Secretary for Import Administration.

Preliminary Results of Antidumping Duty Administrative Review; Sodium Nitrate From Chile

AGENCY: International Trade Administration/Import Administration, Commerce.

ACTION: Notice of preliminary results of antidumping duty administrative review.

SUMMARY: In response to a request from Sociedad Quimica y Minera de Chile, S.A., the respondent, the Department of Commerce has conducted an administrative review of the antidumping duty order on sodium nitrate from Chile. The review covers one exporter of this merchandise to the United States and the period March 1, 1986 through February 28, 1987. The review indicates the existence of dumping margins for the firm during the period.

As a result of the review, the Department has preliminarily determined to assess dumping duties equal to the calculated differences between United States price and foreign market value.

Interested parties are invited to comment on these preliminary results.

EFFECTIVE DATE: September 28, 1987.

FOR FURTHER INFORMATION CONTACT: Linda Pasden or Robert Marenick, Office of Compliance, International Trade Administration, U.S. Department of Commerce, Washington, DC. 20230; telephone: (202) 377-5255.

SUPPLEMENTARY INFORMATION:

Background

On July 9, 1987, the Department of Commerce ("the Department") published in the **Federal Register** (52 FR 25897) the final results of its last administrative review of the antidumping duty order on sodium nitrate from Chile (48 FR 12580, March 25, 1983). Sociedad Quimica y Minera de Chile, S.A., the respondent, requested in accordance with § 353.53a(a) of the Commerce Regulations that we conduct an administrative review. We published a notice of initiation of antidumping duty administrative review on April 22, 1987 (52 FR 13628). The Department has now conducted that administrative review in accordance with seciton 751 of the Tariff Act of 1930 ("the Tariff Act").

Scope of the Review

The United States has developed a system of tariff classification based on the international harmonized system of Customs nomenclature. Congress is considering legislation to convert the United States to this Harmonized System ("HS") by January 1, 1988. In view of this, we will be providing both the appropriate Tariff Schedule of the United States Annotated ("TSUSA") item numbers and the appropriate HS item numbers with our product descriptions on a test basis, pending Congressional approval. As with the TSUSA, the HS item numbers are provided for convenience and Customs purposes. The written description remains dispositive.

We are requesting petitioners to include the appropriate HS item number(s) as well as the TSUSA item number(s) in all new petitions filed with the Department. A reference copy of the proposed Harmonized System schedule is available for consultation at the Central Records Unit, Room B-099, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC. 20230. Additionally, all Customs offices have reference copies and petitioners may contact the Import Specialist at their local Customs office to consult the schedule.

Imports covered by the review are shipments of industrial grade sodium nitrate (98 percent or more pure), currently classifiable under item 480.2500 of the TSUSA and under HS item number 3102.50.00.

The review covers one exporter of this merchandise to the United States, Sociedad Quimica y Minera de Chile, S.A. ("SQM"), and the period March 1, 1986 through February 28, 1987.

United States Price

In calculating United States price the Department used exporter's sales price, as defined in section 772 of the Tariff Act. Exporter's sales price was based on the delivered or f.o.b. packed or unpacked price to an unrelated purchaser in the United States. Where applicable, we made deductions for discounts, foreign inland freight, marine insurance, ocean freight, handling charges, U.S. brokerage charges, credit, and indirect selling expenses. No other adjustments were claimed or allowed.

Foreign Market Value

In calculating foreign market value the Department used home market price, as defined in section 773 of the Tariff Act, since sufficient quantities of such or similar merchandise were sold in the home market at or above the cost of production to provide a basis for comparison. Home market price was based on the delivered or the f.o.b. packed price with adjustments, where applicable, for inland freight, credit, differences in packing, and for indirect selling expenses to offset U.S. selling expenses. No other adjustments were claimed or allowed.

Preliminary Results of the Review

As a result of our review, we preliminarily determine that a margin of 1.54 percent exists for SQM for the period March 1, 1986 through February 28, 1987.

Interested parties may submit written comments on these preliminary results within 30 days of the date of publication of this notice, may request disclosure within 5 days of the date of publication, and may request a hearing within 8 days of the date of publication. Any hearing, if requested, will be held 30 days after the date of publication or the first workday thereafter. Any request for an administrative protective order must be made no later than 5 days after the date of publication. The Department will publish the final results of the administrative review, including the results of its analysis of issues raised in any such comments or hearing.

The Department shall determine, and the Customs Service shall assess, antidumping duties on all appropriate entries. Individual differences between

United States price and foreign market value may vary from the percentage stated above. The Department will issue appraisement instructions directly to the Customs Service.

Further, as provided for by section 751(a)(1) of the Tariff Act and based on the above margin, a cash deposit rate of estimated antidumping duties of 1.54 percent shall be required for all shipments by SQM of industrial sodium nitrate. For any future entries of this merchandise from a new exporter or manufacturer not covered in this or prior administrative reviews, whose first shipments occurred after February 28, 1987 and who is unrelated to any previously reviewed firm, a cash deposit of 1.54 percent shall be required. These deposit rates are effective for all shipments of Chilean industrial sodium nitrate entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and § 353.53a of the Commerce Regulations (19 CFR 353.53a).

Gilbert B. Kaplan,

Deputy Assistant Secretary for Import Administration.

National Oceanic and Atmospheric Administration

Coastal Zone Management; Federal Consistency Appeal by the South Essex Sewerage District, Massachusetts, From an Objection by the Massachusetts Coastal Zone Management Office

AGENCY: National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice of appeal.

On July 29, 1987, the Department of Commerce received a letter from the South Essex Sewerage District, Massachusetts, (Appellant) filing a Notice of Appeal under section 307(c)(3)(A) of the Coastal Zone Management Act of 1972, 16 U.S.C. 1456(c)(3)(A), and the Department of Commerce's implementing regulations, 15 CFR Part 930, Subpart H (1987). The appeal is taken from an objection by the Massachusetts Coastal Zone Management Office to Appellant's consistency certification for its proposed modification of secondary treatment requirements for discharge into marine waters off Marblehead, Massachusetts, under the Federal Water Pollution Control Act (revised section 301(h) Application for Waiver of Secondary Treatment). Appellant simultaneously submitted supporting information.

Appellant has been given until October 27, 1987, to submit any other data or information it wishes. After expiration of that date, public comments will be solicited by a notice in the **Federal Register** and a local newspaper.

FOR ADDITIONAL INFORMATION CONTACT: Stephanie S. Campbell, Office of the Assistant General Counsel for Ocean Services, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 1825 Connecticut Avenue, NW., Suite 603, Washington, DC 20235 (202) 673-5200.

Coastal Zone Management; Federal Consistency Appeal by the Town of Swampscott, MA, From an Objection by the Massachusetts Coastal Zone Management Office

AGENCY: National Oceanic and Atmospheric Administration.

ACTION: Notice of Appeal.

On July 27, 1987, the Department of Commerce received a letter from the Town of Swampscott, Massachusetts, (Appellant) filing a Notice of Appeal under section 307(c)(3)(A) of the Coastal Zone Management Act of 1972, 16 U.S.C. 1456(c)(3)(A), and the Department of Commerce's implementing regulations, 15 CFR Part 930, Subpart H (1987). The appeal is taken from an objection by the Massachusetts Coastal Zone Management Office to Appellant's consistency certification for its proposed modification of secondary treatment requirements for discharge into marine waters off Swampscott under the Federal Water Pollution Control Act (revised section 301(h) Application for Waiver of Secondary Treatment). Appellant indicated in the notice of appeal that it would submit supporting information within fifteen days. On August 10, 1987, Appellant accordingly submitted supporting information.

Appellant has been given until October 27, 1987, to submit any other data or information it wishes. After expiration of that date public comments will be solicited by a notice in the **Federal Register** and a local newspaper.

FOR ADDITIONAL INFORMATION CONTACT: Stephanie S. Campbell, Office of the Assistant General Counsel for Ocean Services, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 1825 Connecticut Avenue NW., Suite 603, Washington, DC 20235, (202) 673-5200.

Coastal Zone Management; Federal Consistency Appeal by Jay C. Poole From an Objection by the South Carolina Coastal Council

AGENCY: National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice of appeal.

On July 20, 1987, the Department of Commerce received a letter from Jay C. Poole (Appellant) filing a Notice of Appeal under section 307(c)(3)(A) of the Coastal Zone Management Act of 1972, 16 U.S.C. 1456(c)(3)(A), and the Department of Commerce's implementing regulations, 15 CFR Part 930, Subpart H (1987). The appeal is taken from an objection by the South Carolina Coastal Council to Appellant's consistency certification for U.S. Army Corps of Engineers Permit Application No. 86-2c-367, under section 10 of the River and Harbor Act of 1899 and section 404 of the Federal Water Pollution Control Act, for excavation of a boat slip and construction of a bulkhead, with associated backfill, in wetlands along the Black River in Georgetown County, South Carolina. Some of the backfill has already been placed.

If Appellant perfects that appeal by filing the supporting data and information required by the Department's implementing regulations, public comments will be solicited by a notice in the **Federal Register** and a local newspaper.

[P406]

Application for Permit, Marine Mammals; Dr. R.H. Defran

Notice is hereby given that an Applicant has applied in due form for a Permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361 through 1407), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 216).

1. Applicant: Dr. R.H. DeFran, Cetacean Behavior Laboratory, Department of Psychology, San Diego, California 92182.

2. Type of Permit: Scientific Research.

3. Name and Number of Marine Mammals: Bottlenose dolphin (*Tursiops truncatus*) 200.

4. Type of Take: The animals may be inadvertently harassed while being photographed and censused, of the two hundred animals up to twenty will be neonates.

5. *Location of Activity:* The research will take place in the following areas: (1) San Diego Study Area: Broad Area—Coastal waters between Oceanside and the United States/Mexican Border; Core Area—The coastal waters between La Jolla and South Carlsbad State Beach; (2) Ventura-Santa Barbara Study Area: Broad Area—Coastal waters between the Santa Barbara Marina and the Ventura Marina; (3) Santa Barbara Channel Islands Study Area; Broad Area—The coastal waters surrounding the Santa Barbara Channel Islands including: San Miguel, Santa Rosa, Santa Cruz, Anacapa, Santa Barbara, San Nicholas, Santa Catalina and San Clemente; (4) Orange County—Los Angeles County Study Area; Broad Area—Coastal waters of Orange County and Los Angeles County; and (5) Point Conception—Monterey Study Area: Broad Area—Coastal waters between Point Conception and Monterey Bay.

6. *Period of Activity:* 3 Years.

Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this application should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, Washington, DC 20235, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review by interested persons in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1825 Connecticut Avenue, NW., Room 805, Washington, DC; and

Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, California 90731-7415.

Date: September 21, 1987.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service.

BILLING CODE 3510-22-M

COMMODITY FUTURES TRADING COMMISSION

New York Cotton Exchange Proposed Option Contract

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of availability of the terms and conditions of proposed commodity option contract.

SUMMARY: The New York Cotton Exchange ("NYCE") has applied for designation as a contract market in options on Five-Year U.S. Treasury Note futures. The Director of the Division of Economic Analysis of the Commodity Futures Trading Commission ("Commission"), acting pursuant to the authority delegated by Commission Regulation 140.96, has determined that publication of the proposal for comment is in the public interest, will assist the Commission in considering the views of interested persons, and is consistent with the purposes of the Commodity Exchange Act.

DATE: Comments must be received on or before October 28, 1987.

ADDRESS: Interested persons should submit their views and comments to Jean A. Webb, Secretary, Commodity Futures Trading Commission, 2033 K Street, NW., Washington, DC 20581.

Reference should be made to the NYCE Five-Year U.S. Treasury Note futures option contract.

FOR FURTHER INFORMATION CONTACT: Naomi Jaffe, Division of Economic Analysis, Commodity Futures Trading Commission, 2033 K Street, NW., Washington, DC 20581, (202) 254-7227.

SUPPLEMENTARY INFORMATION: The NYCE commenced trading in the Five-Year Treasury Note futures contract, which underlies the proposed option contract, on May 6, 1987. Since then, trading volume in the futures contract has averaged over 9,000 contracts per week, and the cumulative trading volume in the underlying futures contract has exceeded the total annual trading volume requirement of Commission Regulation 33.4(a)(5)(iii). One expiration in this future contract took place in June 1987, without any apparent problems, and a second expiration (September 1987) will have

taken place by the end of the comment period for this proposed option on a futures contract.

Copies of the terms and conditions of the proposed futures option contract will be available for inspection at the Office of the Secretariat, Commodity Futures Trading Commission, 2033 K Street, NW., Washington, DC 20581. Copies of the terms and conditions can be obtained through the Office of the Secretariat by mail at the above address or by phone at (202) 254–6314.

Other materials submitted by the NYCE in support of the application for contract market designation may be available upon request pursuant to the Freedom of Information Act (5 U.S.C. 552) and the Commission's regulations thereunder (17 CFR Part 145 (1987)), except to the extent they are entitled to confidential treatment as set forth in 17 CFR 145.5 and 145.9. Requests for copies of such materials should be made to the FOI, Privacy and Sunshine Acts Compliance Staff of the Office of the Secretariat at the Commissions's headquarters in accordance with 17 CFR 145.7 and 145.8.

Any person interested in submitting written data, views or arguments on the terms and conditions of the proposed futures contract, or with respect to other materials submitted by the NYCE in support of the application, should send such comments to Jean A. Webb, Secretary, Commodity Futures Trading Commission, 2033 K Street, NW., Washington, DC 20581, by the specified date.

Issued in Washington, DC, on September 22, 1987.

Paula A. Tosini,

Director, Division of Economic Analysis.

BILLING CODE 6351-01-M

DEPARTMENT OF DEFENSE

Department of the Army

Meeting; Historical Advisory Committee

1. In accordance with section 10(A)(2) of the Federal Advisory Committee Act (Pub. L. 92–463) announcement is made of the following committee meeting:

Name of Committee: Department of the Army Historical Advisory Committee.

Date: 22–23 October 1987.

Place: Conference Room, National Guard Association Building, 1 Massachusetts Avenue, NW., Washington, DC.

Time: 22 October, 1300–1600; 23 October, 0900–1200, 1330–1500.

Proposed Agenda:

22 October—Review of historical activities.

23 October—Discussion of activities and executive session of the Committee.

Purpose of meeting: The Committee will review the past year's historical activities based on reports and manuscripts received throughout the year and formulate recommendations through the Chief of Military History to the Chief of Staff, U.S. Army and the Secretary of the Army for advancing the purpose of the Army Historical Program.

2. Meetings of the Advisory Committee are open to the public. Due to space limitations, attendance may be limited to those persons who have notified the Advisory Committee Management Office in writing, at least five days prior to the meeting of their intention to attend the 22–23 October meeting.

3. Any members of the public may file a written statement with the Committee before, during, or after the meeting. To the extent that time permits the Committee Chairman may allow public presentations of oral statements at the meeting.

4. All communications regarding this Advisory Committee should be addressed to Dr. David F. Trask, Chief Historian, U.S. Army Center of Military History, Washington, DC 20314–0200.

Dated September 4, 1987.

David F. Trask,

Chief Historian.

BILLING CODE 3710-08-M

Intent To Grant A Limited Exclusive Patent License to Houston Biotechnology Inc.

The Department of the Army announces its intention to grant Houston Biotechnology Incorporated, a corporation of the State of Delaware, a limited exclusive license under U.S. patent application serial no. 06/911,689, filed September 25, 1986, entitled "Phospholipid Compositions and Their Effective Use as Anti-Tumor Agents" by M. Jett-Tilton, et al.

The proposed limited exclusive license will comply with the terms and conditions of 35 U.S.C. 209 and the Department of Commerce's regulations at 37 CFR Part 404. The proposed license may be granted unless, within 60 days from the date of this notice, the Department of the Army receives written evidence and argument which establishes that the grant of the proposed license would not serve the public interest. All comments and materials must be submitted to the Patent Counsel, Walter Reed Army Institute of Research, Washington, DC 20307–5100.

For further information concerning this notice, contact: Lieutenant Colonel Francis A. Cooch, Patent Counsel, Building T-20, Room 206E, Walter Reed Army Institute of Research, Washington, DC 20307–5100, Telephone no. (Area Code 202) 576–4369/4370.

BILLING CODE 3710-08-M

FEDERAL COMMUNICATIONS COMMISSION

[CC Docket No. 87–339; FCC 87–274]

Common Carrier Services; Establishment of a Program to Monitor the Impact of Joint Board Decisions

AGENCY: Federal Communications Commission.

ACTION: Report and order adopting Recommendation.

SUMMARY: The Commission adopted the recommendation of the Federal-State Joint Board in CC Docket No. 80–286 to establish a program to monitor the impact of Joint Board decisions.

EFFECTIVE DATE: August 18, 1987.

ADDRESS: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Alexander Belinfante, Industry Analysis Division, Common Carrier Bureau, (202) 632–0745.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's report and order, CC Docket No. 87–339, adopted August 18, 1987, and released August 26, 1987.

The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street NW., Washington, DC. The complete text of this decision may also be purchased from the Commission's copy contractors, International Transcription Services, (202) 857–3800, 2100 M Street NW., Suite 140, Washington, DC. 20037.

Summary of Report and Order

On May 28, 1987, the Docket No. 80–286 Joint Board released a Recommended Decision and Order [1] describing a proposed monitoring program. It recommended that a series of quarterly reports be issued for the next five years, beginning in September 1987. The information in these reports is

[1] Not published in the Federal Register.

to fall into eight categories: (1) Subscribership and penetration levels; (2) lifeline assistance plans, including both our subscriber line charge waiver and Link-Up programs; (3) costs and high cost assistance; (4) network usage and growth; (5) rates and revenues; (6) bypass; (7) pooling and rate deaveraging; and (8) jurisdictional shifts in revenue requirements.

By this Report and Order, the Commission has adopted the Joint Board's recommendations. A new open docket is established to implement the program. comments are and materials can be submitted at any time in this docket, but comments are especially solicited during the period from August 28, 1987, through October 28, 1987.

William J. Tricarico,

Secretary.

BILLING CODE 6712-01-M

FEDERAL MARITIME COMMISSION

Item Submitted for OMB Review

The Federal Maritime Commission hereby gives notice that the following has been submitted to OMB for review pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et. seq.). Requests for information, including copies of the collection of information and supporting documentation, may be obtained from John Robert Ewers, Director, Bureau of Administration, Federal Maritime Commission, 1100 L Street, NW., Room 12211, Washington, DC 20573, telephone number (202) 523-5866. Comments may be submitted to the agency and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, Attention: Desk Officer for the Federal Maritime Commission, within 15 days after the date of the **Federal Register** in which this notice appears.

Summary of Item Submitted for OMB Review

46 CFR Part 581

The Federal Maritime Commission requests clearance for an amendment to its final regulations to enforce the service contracts provisions of section 8(c) of the Shipping Act of 1984. The rule defines service contract records and requires that ocean common carriers and conferences amend their service contracts to contain a description of the shipment records which will be maintained to support the contract. It also requires respondents to submit such to the Commission within 30 days after a Commission request for the production of documents. Provisions requiring that records be located in the United States or a certification that service contract records will be produced if located outside the United States have been stayed indefinitely, pending Commission assessment of the respondents' compliance with production requests.

To comply with this amendment, the Commission estimates approximately 100 respondents and 1700 annual manhours. Total estimated annual cost to the Government for this amendment is $2188; estimated annual cost to the public is $39,000.

Joseph C. Polking,

Secretary.

[FR Doc. 87-22286 Filed 9-25-87; 8:45 am]

BILLING CODE 6730-01-M

Agreement(s) Filed; Kerr Steamship, Inc.

The Federal Martime Commission hereby gives notice of the filing of the following agreemeant(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10325. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224-200038.

Title: Port of Houston Terminal Agreement.

Parties:

Port of Houston Authority (Port)

Kerr Steamship, Inc. (Kerr)

Synopsis: The proposed agreement provides for Kerr to perform freight handling services at Port's Wharves and Transit Sheds Number 19 and 20, and allocates space within the facility to accommodate cargo of ships assigned to berth at the facility by Port.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

Dated: September 23, 1987.

BILLING CODE 6730-01-M

Sea-Land Service, Inc., et al.

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Rom 10325. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 212-010286-014.

Title: South Europe/U.S.A. Pool Agreement.

Parties:

Compania Transatlantica Espanola, S.A.
Costa Line (Costa Container Lines, S.p.A., Genoa)
Evergreen Maritime Corporation
Farrell Lines, Inc.
"Italia" de Navigazione, S.p.A.
Jugolinija
Lykes Lines (Lykes Bros. Steamship Co., Inc.)
A.P. Moller-Maersk Line
Nedlloyd Lines (Nedlloyd Lijnen B.V.)
Sea-Land Service, Inc.
Trans Freight Lines
Zim Israel Navigation Company, Ltd.

Synopsis: The proposed amendment would establish a second pool period extending from May 1, 1988 through December 31, 1988 and would provide that prior to July 1, 1988, the parties will meet to review the agreement's effectiveness and to assess the fairness and value of the basic pool shares. In addition, it would also establish liquidated damages for withdrawal by a member prior to December 31, 1988 and would provide for renegotiation by Lykes Lines of its basic pool shares and withdrawal provisions should the members fail to reach agreement with Lykes.

Agreement No.: 217-011149.

Title: CCNI-TNE Space Charter Agreement.

Parties:

Compania Chilena de Navegacion Interoceanica, S.A.
Transportes Navieros Ecuatorianos

Synopsis: The proposed agreement would permit the parties to charter

space on each other's vessels and to utilize related equipment in the trade between U.S. Atlantic and Gulf ports and Chilean ports and their inland and coastal points and between U.S. Atlantic ports (excluding Florida) and Ecuadorian ports and their inland and coastal points.

Agreement No.: 206-011150.
Title: Atlantic Westbound Stabilization Agreement.
Parties:
South Europe/U.S.A. Freight Conference
North Europe-U.S. Atlantic Conference
North Europe-U.S. Gulf Freight Association

Synopsis: The proposed agreement would permit the parties to agree upon rates, service contract terms and other matters in the trade from ports in Germany (East and West), Belgium, the Netherlands, France, Italy and Yugoslavia, and from all points in Continental Europe (except points in Spain and Portugal) via such ports, to U.S. Atlantic and Gulf ports and to Continental U.S. interior and coastal points via such U.S. Atlantic and Gulf ports.

By Order of the Federal Maritime Commission. [06]Joseph C. Polking,
Secretary.

Dated: September 22, 1987.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities Under OMB Review

September 17, 1987.

Background

Notice is hereby given of final approval of proposed information collection(s) by the Board of Governors of the Federal Reserve System (Board) under OMB delegated authority, as per 5 CFR 1320.9 (OMB Regulations on Controlling Paperwork Burdens on the Public).

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nancy Steele—Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551 (202-452-3822)

OMB Desk Officer—Robert Fishman—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503 (202-395-7340).

Proposal to approve under OMB delegated authority the revision of the following report:

1. Report title: Statement of Purpose for an Extension of Credit Secured by Margin Stock.

Agency form number: FR U-1.
OMB Docket number: 7100-0115.
Frequency: Recordkeeping requirement.
Reporters: Commercial Banks.
Annual reporting hours: 94,637.
Small businesses are affected.

General description of report

This information collection is mandatory [15 U.S.C. 78g, 78w] and is not given confidential treatment.

A purpose statement is required to be completed by a bank and borrower whenever credit is secured directly or indirectly by any margin stock in an amount exceeding $100,000. It is used to determine the purpose of the loan proceeds, serve as an evidentiary tool to ascertain the intention of the parties involved, and document the securities serving as collateral.

Board of Governors of the Federal Reserve System, September 22, 1987.
William W. Wiles,
Secretary of the Board.

[FR Doc. 87-22234 Filed 9-25-87; 8:45 am]
BILLING CODE 6210-01-M

Change in Bank Control, Acquisitions of Shares of Banks or Bank Holding Companies; James K. Caldwell, et al.

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than October 13, 1987.

A. **Federal Reserve Bank of Chicago** (David S. Epstein, Assistant Vice President), 230 South LaSalle Street, Chicago, Illinois 60690:

1. *James K. Caldwell,* Whitewater, Wisconsin; to acquire 1330 Class B Common voting shares of CBE, Inc., Elkhorn, Wisconsin.

B. **Federal Reserve Bank of Kansas City** (Thomas M. Hoenig, Vice President), 925 Grand Avenue, Kansas City, Missouri 64198:

1. *Ronald E. Brown,* Broken Arrow, Oklahoma; to acquire 15.55 percent of the voting shares of American State Bancshares, Inc., Broken Bow, Oklahoma, and thereby indirectly acquire American State Bank, Broken Bow, Oklahoma.

2. *Lonnie M. Jarman,* Oklahoma City, Oklahoma; to acquire 68.75 percent of the voting shares of Mustang Community Ban Corp, Inc., Mustang, Oklahoma, and thereby indirectly acquire Mustang Community Bank, Mustang, Oklahoma.

Board of Governors of the Federal Reserve System, September 22, 1987.
James McAfee,
Associate Secretary of the Board.

BILLING CODE 6210-01-M

Acquisitions of Companies Engaged in Permissible Nonbanking Activities; Cook Investment, Inc., et al.

The organizations listed in this notice have applied under § 225.23(a)(2) or (f) of the Board's Regulation Y (12 CFR 225.23(a)(2) or (f) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. § 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to acquire or control voting securities or assets of a company engaged in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing,

identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated for the application or the offices of the Board of Governors not later than October 13, 1987.

A. **Federal Reserve Bank of Kansas City** (Thomas M. Hoening, Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

1. *Cood Investment, Inc.*, Beatrice, Nebraska; to acquire Charter West Agency, Inc., West Point, Nebraska, and thereby engage in leasing real and personal property pursuant to section 225.25(b)(5) of the Board's Regulation Y.

B. **Federal Reserve Bank of San Francisco** (Harry W. Green, Vice President) 101 Market Street, San Francisco, California 94105:

1. *La Jolla Bancorp*, San Diego, California; to acquire H.D. McNee Realty Advisers, Inc., San Diego, California, and thereby engage in mortgage loan servicing, mortgage loan origination services, real property consulting services, long term mortgage financing and property management services pursuant to § 225.25(b)(1) of the Board's Regulation Y. These activities will be conducted in San Diego County, California. *Comments on this application must be received by October 15, 1987.*

Board of Governors of the Federal Reserve System, September 22, 1987.

James McAfee,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

Applications To Engage de Novo in Permissible Nonbanking Activities; Society for Savings Bancorp, Inc., et al.

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo*, either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be a presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Baord of Governors not later than October 15, 1987.

A. **Federal Reserve Bank of Boston** (Robert M. Brady, Vice President) 600 Atlantic Avenue, Boston, Massachusetts 02106:

1. *Society for Savings Bancorp, Inc.*, Hartford, Connecticut; to engage *de novo* through its subsidiary, Fidelity Acceptance Corporation, Minneapolis, Minnesota, in the sale of single interest property and casualty insurance assuring repayment of an outstanding extension of credit pursuant to § 225.25(b)(8)(ii) of the Board's Regulation Y.

B. **Federal Reserve Bank of New York** (William L. Rutledge, Vice President) 33 Liberty Street, New York, New York 10045:

1. *Compagnie Financiere de Suez*, Paris, France, and Banque Indosuez, Paris, France; to engage *de novo* through their subsidiaries Locasuez America, Inc., New York, New York, and LSA Leasing Corp., Louisville, Kentucky, in making or acquiring commercial loans and other extensions of credit; leasing real and personal property; acting as agent, broker or advisor with respect to such financing and leasing activities; and servicing loans and other extensions of credit pursuant to §§ 225.25 (b)(1), (b)(4), and (b)(5) of the Board's Regulation Y.

2. *Continental Bancorp*, Philadelphia, Pennsylvania; to engage *de novo* through its subsidiary, CB Brokerage Service, Inc., Philadelphia, Pennsylvania, in providing securities brokerage services, related securities, credit activities, and incidental activities such as offering custodial services, individual retirement accounts, and cash management services, if the securities brokerage services are restricted to buying and selling securities solely as agent for the account of customers pursuant to § 225.25(b)(15) of the Board's Regulation Y.

3. *Keycorp*, Albany, New York, and Key Bancshares of New York Inc., Albany, New York; to engage *de novo* through their subsidiary, Key Bank Life Insurance Ltd., Phoenix, Arizona, in underwriting, as reinsurer, of credit life and credit accident and health insurance directly related to extensions of credit by their subsidiaries pursuant to § 225.25(b)(8)(i) of the Board's Regulation Y. Comments on this application must be received by October 19, 1987.

4. *U.S. Trust Corporation*, New York, New York; to engage *de novo* through its subsidiary, U.S. Trust Company of California, National Association, Los Angeles, California, in performing the functions or activities that may be performed by a trust company (including activities of a fiduciary, agency, or custodial nature) and to act as investment or financial adviser pursuant to §§ 225.25 (b)(3) and (b)(4) of the Board's Regulation Y.

C. **Federal Reserve Bank of Atlanta** (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *Hibernia Corporation*, New Orleans, Louisiana; to engage *de novo* through its subsidiaries, Hibernia Mortgage Corporation of Alabama, Birmingham, Alabama; Hibernia Mortgage Corporation of Florida, Orlando, Florida; and Hibernia Mortgage Corporation of Tennessee, Memphis, Tennessee; in the activity of making, acquiring and/or servicing loans or other extensions of credit for each company's account or for the account of others such as would be made by a mortgage company, including, but not limited to residential mortgage loans for one to four family dwelling units in the communities within which each company will operate pursuant to § 225.25(b)(1) of the Board's Regulation Y. These activities will be conducted in the states of Alabama, Florida and Tennessee.

2. *Northwest Georgia Financial Corporation*, Dallas, Georgia; to engage *de novo* in providing data processing and data transmission services, facilities, and data bases by any technological means to its subsidiaries and other banks pursuant to § 225.25(b)(7) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, September 22, 1987.

James McAfee,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

FEDERAL TRADE COMMISSION

Granting of Request for Early Termination of the Waiting Period Under the Premerger Notification Rules; Tandy Corp., et al.

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requries that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination of the waiting period provided by law and the premerger notification rules. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period:

Alcohol, Drug Abuse, and Mental Health Administration

Reestablishment of Psychopathology and Clinical Biology Research Review Committee

Pursuant to the Federal Advisory Committee Act of October 6, 1972 (Pub. L. 92-463, 86 Stat. 770-776) and the Anti-Drug Abuse Act of 1986, (Pub. L. 99-570, section 501(j)), the Administrator, Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA), announces the reestablishment, effective September 21, 1987 of the following committee:

Psychopathology and Clinical Biology Research Review Committee, NIMH.

The duration of this committee is continuing unless formally determined by the Administrator, ADAMHA, that termination would be in the best public interest.

Date: September 22, 1987.

Donald Ian Macdonald,

Administrator, Alcohol, Drug Abuse, and Mental Health Administration.

Centers for Disease Control

Grant with Morehouse School of Medicine; Availability of Funds for Fiscal Year 1987

Introduction

The Centers for Disease Control (CDC) announces the availability of funds in Fiscal Year 1987 for a grant to support the Morehouse School of Medicine (MSM) to identify reasons for elevated numbers of low birthweight infants born to black women, including factors that contribute to the 2-fold excess of low birthweight infants born to college educated black women. This is not a formal request for applications. Assistance will be provided only to MSM for the support of this project. No other applications are solicited or will be accepted.

Authority

This grant is authorized under section 301(a) (42 U.S.C. 241(a)) of the Public Health Service Act, as amended. The Catalog of Federal Domestic Assistance Number is 13.283.

Background

National Infant Mortality Surveillance Project (NIMS) data, as well as other studies, show that low birthweight (LBW) among black infants is a major reason for their 2-fold higher infant mortality compared to white infants. This relationship is found regardless of maternal education. For example, among infants born to better educated women, the discrepancy between white and black infant mortality rates is even greater than among less educated women. NIMS data indicate that among infants born to college-educated women, black infants experienced a 4-fold excess of live births weighing less than 500 grams compared to white infants. Similarly, among infants born to college-educated women, black infants had a 3.4-fold excess of live births weighing between 500 and 999 grams compared to white infants. These differences account for a great deal of the 2-fold increase in infant mortality for black infants compared with white infants. The reasons for this excess of low birthweight among blacks who should have good access to care are not clear, but if explained may provide prevention strategies for other groups at risk for low birthweight.

Because MSM serves minority high risk populations and trains health care providers to serve this population, it has established the need to identify risk factors for low birthweight as a priority for improving health care services. MSM

is interested in collaborating with CDC in this area as an extension of research capacity building previously established between the two institutions. In addition, as part of its plan to develop a regional center for preventive medicine and health promotion, MSM will use information from the low birthweight study to develop interventions targeted at reducing infant mortality and morbidity and to disseminate them through community programs for minority groups.

Reasons for Single Source Award

The MSM is part of the Atlanta University Center (AUG), a cluster of four undergraduate colleges, two graduate schools, and a medical school, which makes AUC the largest association of private historically black colleges and universities in the United States. Spelman College, one of only two predominantly black women's colleges in the United States, is a member of the Atlanta University Center and has an enrollment of approximately 1,200 undergraduates. Two of the other undergraduate colleges, Clark College and Morris Brown College, are co-educational and have a combined undergraduate female enrollment of approximately 2,000. This provides unique access to an expansive pool of black female university graduates. Agnes Scott College, a private predominantly white women's college, is also located in Metropolitan Atlanta. The combination of MSM, Spelman College, and Agnes Scott College, as well as the other predominantly black AUC colleges, provides a unique environment to compare offspring of women educated at comparable private colleges and to collaborate with minority researchers who are familiar with health care issues peculiar to minority populations. Rapid followup of study participants is assured because the Atlanta Metropolitan area has absorbed a significant number of graduates of both the Atlanta University Center and other area universities and colleges.

Review Requirements

This program is not subject to review under Executive Order 12372, Intergovernmental Review of Federal Programs.

Availability of Funds

A total of $150,000 will be available in Fiscal Year 1987 to fund this grant. It is expected that the grant will begin on or before September 30, 1987, and continue for a period not to exceed 18 months. Funding from a single appropriation is considered necessary.

Information

Information on this program may be obtained from Henry Cassell, Grants Specialist, Procurement and Grants Office, Centers for Disease Control, 255 East Paces Ferry Road NW., Room 321, Atlanta, Georgia 30305.

Dated: September 22, 1987.

Robert L. Foster,

Acting Director, Office of Program Support Centers for Disease Control.

BILLING CODE 4160-18-M

Health Resources and Services Administration

Advisory Council Meetings for October, 1987

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the following National Advisory bodies scheduled to meet during the month of October 1987:

Name: Subcommittee on Physician Manpower of the Council on Graduate Medical Education.

Time: October 5, 1987 8:00 a.m.—5:00 p.m.

Place: Conference Room G, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

Open for entire meeting.

Purpose: The subcommittee reviews and analyzes currently applicable studies of under and oversupply of physician manpower giving special attention to number and distribution of specialists, primary care physicians and residents. It also is concerned with studies and recommendation regarding the number of undergraduate medical students as well as the need for improving physician manpower data.

The subcommittee will draft a chapter for the first report of the Council. Recommendations will concern the outlook for supply, appropriate Federal policies and suggestions for voluntary action by hospitals, medical and osteopathic schools and accrediting bodies regarding physician supply, and shortages and excesses.

Agenda: Agenda items include: (1) Discussion of preliminary subcommittee conclusions regarding current and future adequacy of aggregate physician supply; (2) discussion of subcommittee preliminary conclusions regarding current and future adequacy of primary care physician supply; (3) discussions of preliminary recommendations to the Council regarding current and future adequacy of aggregate and primary care physician supply in the U.S.; and (4) discussion of a draft set of principles for the Council.

Anyone requiring information regarding the subject Subcommitte should contact Jerald Katzoff, Subcommittee Principal Staff Liaison, Division of Medicine, Bureau of Health Professions, Room 4C-25, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857 Telephone (301) 443-6364.

Name: Subcommittee on Foreign Medical Graduates of the Council on Graduate Medical Education.

Time: October 5, 1987 8:30 a.m.—5:00 p.m.

Place: Conference Room I, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

Open for entire meeting.

Purpose: The Subcommittee reviews and analyzes existing data and information on alien and U.S. foreign medical graduates in training and in practice regarding adequacy of existing data bases, effect of existing policies and procedures regarding distribution, service delivery and international relations.

The Subcommittee will draft a chapter for the first report of the Council. Recommendations will concern the appropriate Federal policies and efforts to be carried our voluntarily by hospitals, schools of medicine and osteopathy, licensing, certifying, and accrediting bodies with respect to issues relating to foreign medical graduates.

Agenda: Agenda items include (1) panel discussion of the difference treatment of Medical school graduates based on citizenship and/or Country of medical education; (2) review and acceptance of COGME principles; and (3) development of conclusions and recommendations for the foreign medical graduate chapter of the first report to the Secretary and Congress.

Anyone requiring information regarding the subject Subcommittee should contact Magdalena Miranda, Subcommittee Principal Staff Liaison, Division of Medicine, Bureau of Health Professions, Room 4C-25, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857 Telephone (303) 443-3626.

Name: Subcommittee on Graduate Medical Education Programs and Financing of the Council on Graduate Medical Education.

Time: October 5, 1987 8:00 a.m.—5:00 p.m.

Place: Conference Room H, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

BEST COPY AVAILABLE

VOL 52 ISS 187 SEP 28 1987 UMI

Purpose: The subcommittee identifies the issues and problems in current methods of financing and support. Assesses the implications of alternative financing policies on medical education programs, service delivery, cost containment, physician supply & distribution, and shortages and excesses of physicians.

Analyzes existing information and data on current and alternative medical education programs of hospitals, schools of medicine and osteopathy, and accrediting bodies; federal policies regarding medical education programs; and their impact on the supply and distribution of physicians.

The subcommittee will draft a chapter for the first report of the Council. Recommendations will concern the appropriate Federal policies and efforts to be carried out voluntarily by hospitals, schools of medicine and osteopathy and accrediting bodies with respect to medical education programs.

Agenda: Agenda items include Discussions of (1) studies of use of and transition to ambulatory care settings in medical education programs; (2) Federal policy-related activities in the financing of graduate medical education; (3) subcommittee preliminary conclusions regarding appropriate federal policies on the financing of graduate medical education; (4) preliminary recommendations to the Council regarding appropriate Federal policies on the financing of graduate medical education; and (5) a draft set of principles for the Council.

Anyone requiring information regarding the subject Subcommittee should contact F. Lawrence Clare, M.D. Subcommittee Principle Staff Liaision, Division of Medicine, Bureau of Health Professions, Room 4C–25, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857 Telephone (301) 443–6326.

Name: Council on Graduate Medical Education.

Time: October 6, 1987 8:30 a.m.—4:30 p.m.

Place: Conference Room G–H, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

Open for entire meeting.

Purpose: Provides advice and recommendations to the Secretary and to the Committees on Labor and Human Resources, and Finance of the Senate and the Committees on Energy and Commerce and Ways and Means of the House of Representatives, with respect to (A) the supply and distribution of physicians in the United States; (B) current and future shortages of physicians in medical and surgical specialties and subspecialties; (C) issues relating to foreign medical graduates; (D) appropriate Federal policies regarding (A), (B), and (C) above; (E) appropriate efforts to be carried out by medical and osteopathic schools, public and private hospitals and accrediting bodies regarding matters in (A), (B), and (C) above; (F) deficiencies in the needs for improvements in, existing data bases concerning supply and distribution of, and training programs for physicians in the United States.

Agenda: Agenda items include presentations on graduate medical education (GME) financing issues and on recent GME developments in the State of New York; Reports from the Administrator, Health Resources Administration; update on plans for public hearing scheduled for November 19–20, 1987, review of Council set of principles, and reports from the three subcommittees focusing on preliminary conclusions and recommendations. A Public comment period is also included as part of the agenda.

Anyone requiring information regarding the subject Council should contact Mr. Paul Schwab, Executive Secretary, Council on Graduate Medical Education, Health Resources and Services Administration, Room 14–05, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone (301) 443–2033.

Agenda Items are subject to change as priorities dictate.

Date: August 24, 1987.

Jackie E. Baum,

Advisory Committee Management Officer, HRSA.

BILLING CODE 4160–15–M

Social Security Administration

Meeting; Disability Advisory Council

AGENCY: Social Security Administration, HHS.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act (Pub. L. 92–463), this notice announces the schedule, proposed agenda, and location of a forthcoming meeting of the Disability Advisory Council (the Council). The Council published a notice of meetings in the **Federal Register** on December 24, 1986 at 51 FR 46724. The notice announced the schedule of regular meetings to be held by the Council. The Council is scheduling an additional regular meeting for October.

Date: October 29, 1987, 8:00 a.m. to 5:00 p.m.

Place: Hubert H. Humphrey Building, Room 337–339A, 200 Independence Avenue, SW., Washington, DC 20201.

Agenda: Approve Final Report.

FOR FURTHER INFORMATION CONTACT: W. Douglas Badger, Executive Director, Disability Advisory Council, P.O. Box 17064, Baltimore, Maryland 21203, (301) 965–4643.

SUPPLEMENTARY INFORMATION: The Council is established and governed by the provisions of section 12102 of Pub. L. 99–272. The Council is chaired by Dr. John E. Affeldt.

This meeting is open to the public to the extent that space is available. Anyone wishing to submit his or her views and/or questions for consideration by the Council should send them to the Executive Director of the Council at the address shown above.

A transcript of the Council meeting is available to the public on an at-cost-of duplication basis. The transcript can be ordered from the Executive Director of the Council.

Date: September 22, 1987.

W. Douglas Badger,

Executive Director, Disability Advisory Council.

[FR Doc. 87–22257 Filed 9–25–87; 8:45 am]

BILLING CODE 4190–11–M

Redelegations of Authorities to the Position of Social Insurance Claims Examiner (Disability), Located in the Guam Social Security Office, for Adjudication of Disability Claims From Individuals in the Northern Mariana Islands

Public Law 94–241 provided approval of a covenant between the United States (U.S.) and the Northern Mariana Islands (NMI) to establish the conditions by which the NMI would become a U.S. Comonwealth. With this convenant having been established and approved, and with the termination of the existing Trusteeship Agreement, the NMI officially became a U.S. Commonwealth on January 1, 1987.

Under its new political status, the NMI has the statutory authority that States have to make disability determinations under the Social Security Act, as amended (the Act). Accordingly, the Social Security Administration (SSA) has been in consultation with the NMI Government to provide it with the opportunity to perform this function. Previously, this function was performed by an SSA employee, in the position of Social Insurance Claims Examiner (Disability) located in the Guam Social Security office (commonly referred to as

the Federal Disability Examiner in Guam), under formal authorities redelegated to that position. These authorities covered disability determinations under Titles II and XVI of the Act, nondisability determinations under these titles required in connection with adjudication of disability claims, procurement of medical/psychological examinations and other medical evidence necessary for disability determinations and claimant travel and advance of funds for medical/psychological examinations.

However, the NMI Government has decided that the Federal Disability Examiner in Guam should continue to perform all aspects of the disability determination function for disability claims filed by individuals in the NMI. This requires exercise of all authorities previously redelegated to this position. Accordingly, notice is hereby given that the Commissioner of Social Security has reaffirmed existing redelegations of the following authorities to the position of Federal Disability Examiner in Guam, as necessary for adjudication of NMI disability claims:

A. Authorities Under Title II of the Act

1. Authority to make determinations of disability and authority to make findings of fact and decisions relating to periods of disability, under section 221(g) of the Act.

2. Authority to review determinations of disability and authority to take action in such cases reviewed, as provided under section 221(c) of the Act.

3. Authority to make findings of fact and decisions which constitute initial determinations under title II of the Act, as defined in 20 Code of Federal Regulations (CFR) 404.902, under section 205(b) of the Act.

4. Authority to make findings of fact and decisions which do not constitute initial determinations under Title II of the Act, as defined in 20 CFR 404.903, under section 205(b) of the Act.

B. Authorities Under Title XVI of the Act

1. Authority to make findings of fact and decisions regarding the existence, absence, duration or continuation of disability or blindness, under section 1614 of the Act.

2. Authority to make findings of fact and decisions affecting Supplemental Security Income (SSI) claimants, under sections 1602, 1611 through 1616, 1631 and 1633 of the Act.

3. Authority to make findings of fact and decisions as to the presumption that individuals applying for SSI benefits are disabled or blind, within the meaning of section 1614 of the Act, prior to completion of a formal determination of disability or blindness, and authority to authorize payment of benefits to such individuals presumptively eligible for not more than 3 months, under sections 1614(a), 1631(a)(4)(B) and 1633 of the Act.

4. Authority to determine whether individuals eligible for SSI payments, and medically determined to be drug addicts or alcoholics, are complying with the terms and conditions of appropriate available treatment, under section 1611(e)(3) of the Act.

5. Authority to review initial determinations and make reconsideration determinations in cases involving SSI claimants who are in disagreement with determinations under section 1631(c) of the Act, including authority to make findings as to whether good cause exists for failure to request reconsideration of an initial determination within 60 days after receiving notice of such determination.

C. Authority Under Titles II and XVI of the Act

Authority to approve travel and advance of funds for claimants who attend medical/psychological examinations requested by the Federal Disability Examiner in Guam, in connection with disability determinations, not to exceed a total amount of $500, under sections 201(j) and 1631(h) of the Act.

D. Authorities Under Title III of the Federal Property and Administrative Services Act of 1949, as Amended, and Implementing Regulations

1. Authority to purchase services of physicians and psychologists to perform medical or psychological examinations of disability claimants, not to exceed a total amount of $500 in any transaction, under pertinent provisions of the above law and regulations.

2. Authority to purchase medical evidence of record, laboratory tests and any other medical tests necesary for disability determinations, not to exceed a total amount of $500 in any transaction, under pertinent provisions of the above law and regulations.

Conditions

(1) Further redelegations are not authorized.

(2) The above authorities must be exercised in accordance with all pertinent provisions of law, regulations, operating instructions and other relevant requirements.

This action is effective on the date that this notice is published in the **Federal Register**. I affirm and ratify any actions by persons in the position of Federal Disability Examiner in Guam which may constitute the exercise of any of the above authorities before that date.

Dated: September 16, 1987.

Dorcas R. Hardy,

Commissioner of Social Security.

[FR Doc. 87-22258 Filed 9-25-87; 8:45 am]

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Information Collection Submitted to the Office of Management and Budget for Review Under the Paperwork Reduction Act

September 18, 1987.

The proposal for the collection of information listed below has been submitted to the Office of Management and Budget for approval under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). Copies of the proposed information collection and related forms and explanatory material may be obtained by contacting the Bureau's Clearance Officer at the phone number listed below. Comments and suggestions on the requirement should be made within 30 days directly to the Bureau Clearance Officer and to the Office of Management and Budget Interior Department Desk Officer, Washington, DC 20503, telephone (202) 395-7340.

Title: 25 CFR Part 31, Subchapter E, *Federal School for Indians.*

Abstract: The student enrollment application is needed to determine a student's enrollment eligibility for Indian students desiring to attend Bureau operated or Bureau funded schools. The application contains background information on students, such as schools previously attended, tribe affiliation, census number, degree of Indian blood, and language spoken in the home. The information collection will involve individual students, parents and/or guardians.

Bureau Form Number: BIA-6248.

Frequency: Upon enrollment.

Description of Respondents: Students, parents or guardians.

Annual Responses: 15,000.

Annual Burden Hours: 7,504 hours.

BILLING CODE 4310–02–M

Bureau of Land Management

[ID–010–07–4331–12]

Restricted Vehicle Use Closure Order; Idaho

AGENCY: Bureau of Land Management, Idaho, Interior.

ACTION: Notice of restricted vehicle use closure order.

SUMMARY: Notice is hereby given in accordance with Title 43 CFR Group 8000—Outdoor Recreation and in conformance with the principles established by the National Environmental Policy Act of 1969 and the Federal Land Policy and Management Act of 1976, that approximately 3,694 acres of public land located within the Hagerman Fauna Sites National Natural Landmark in Twin Falls County, Idaho, are closed to motorized vehicles except on designated roads.

Careful review and analysis in cooperation with other agencies, professionals in the field of paleontology, and the public has determined that use of this area by motorized vehicles operated off-road is causing severe damage to the scientific and other natural features. Continued off-road use by motorized vehicles will continue to cause damage to paleontological specimens and geologic features of international importance and to the terrain, soil, vegetation, and visual values of the area. An early closure, published in the Federal Register of April 30, 1985, was an emergency closure. This Notice implements the closure decision of the Jarbidge Resource Management Plan which was approved March 23, 1987.

All forms of motorized vehicles, including those used for outdoor recreation purposes, mining exploration, farming operations, scientific investigations, and resource management are excluded from the area except for use on designated roads.

The intended effect of this action is to eliminate the unnecessary and undue degradation of the natural values of the Hagerman National Natural Landmark.

SUPPLEMENTARY INFORMATION: The closure applies to all public lands administered by the Bureau of Land Management within the area known commonly as the Hagerman Fossil Beds (and officially designated as the Hagerman Fauna Sites National Natural Landmark). The area is bounded on the east by Lower Salmon Falls Reservoir on the Snake River, on the west by developed farms, on the south by a fense line along or through sections 3, 4, and 5, T. 8 S., R. 13 E., B.M., and on the north by a fence line through Sections 8, 9, and 10, T. 7 S., R. 13 E., B.M., Idaho.

The legal description of the area is:

Boise Meridian, Idaho

T. 7 S., R. 13 E.,
- Sec. 9, SE¼SW¼, E½SE¼, SW¼SE¼;
- Sec. 10, lots 3 and 6, NW¼SE¼, SW¼;
- Sec. 15, lot 4;
- *Sec. 16, lots 1, 2, 4, and 5, W½NE¼, NW¼, N½SW¼, SW¼SW¼;
- Sec. 17, E½E½, SW¼NE¼, NE¼SW¼, NW¼SE¼;
- Sec. 20, E½E½;
- Sec. 21, lots 2 to 4, inclusive, 7, and 8, W½W½, SE¼NW¼, NE¼SW¼;
- Sec. 28, lots 2, 3, 6, and 7, NW¼NW¼;
- Sec. 29, E½E½, S½SW¼, W½SE¼;
- Sec. 32;
- Sec. 33, lots 2, 3, 6, and 7, SW¼SW¼.

T. 8 S., R. 13 E.,
- Sec. 3, lots 4 and 5, SW¼;
- Sec. 4, lots 2 to 4, inclusive, and 6, SW¼NE¼, S½NW½, S½;
- Sec. 5, lots 1 to 4, inclusive, S½N½.

*Section 16 is owned by the Idaho Parks and Recreation Department. The area is managed the same as the Federal lands in accordance with a Memorandum of Understanding between the Bureau of Land Management and the Idaho Department of Parks and Recreation.

All lands within the above described areas administered by the Bureau of Land Management are closed to vehicle use except on designated roads on a year-round basis until further notice. Signs will be posted to identify the exterior boundaries and to mark road open and/or closed to motorized use. A map of the closure areas is posted at the Twin Falls and Hagerman Post Offices, Twin Falls County Courthouse, and at the Boise District Office located at 3948 Development Avenue, Boise, Idaho 83705. Cooperation of all will be sincerely appreciated.

Temporary exceptions are authorized to the listed controls for any fire, emergency, or law enforcement vehicle while it is being used for emergency purposes, any vehicle in official use, and any vehicle whose use is expressly authorized by the Bureau of Land Management.

FOR FURTHER INFORMATION CONTACT: Further information is available at the Bureau of Land Management, Boise District Office, 3948 Development Avenue, Boise, Idaho 83705, phone (208) 334–1582.

Gene L. Schloemer,

Associate District Manager.

Date: September 14, 1987.

BILLING CODE 4310–GG–M

[ID–050–4410–08–2411]

Meeting; Shoshone District Advisory Council

AGENCY: Bureau of Land Management (BLM); Interior.

ACTION: Notice of meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Shoshone District Advisory Council.

DATE: Tuesday, October 20, 1987.

ADDRESS: BLM District Office, 400 West F Street, Shoshone, Idaho 83352.

FOR FURTHER INFORMATION CONTACT: K. Lynn Bennett, District Manager, Shoshone District Office, P.O. Box 2B, Shoshone, Idaho 83352. Telephone (208) 886–2206 or FTS 554–6110.

SUPPLEMENTARY INFORMATION: The proposed agenda for the meeting includes the following items:

Updates of District Activities
Field Tour of Blaine County Projects

The Shoshone District Advisory Council is established under section 309 of the Federal Land Policy and Management Act of 1976 (Pub. L. 94–579; 43 U.S.C. 1701 *et seq.*) as amended. Operation and administration of the Council will be in accord with the Federal Advisory Committee Act of 1972 (Pub. L. 92–463; 5 U.S.C. Appendix 1) and Department of the Interior regulations, including 43 CFR Part 1784.

The meeting will be open to the public. Anyone may present an oral statement before the Council at 9:00 a.m. or may file a written statement with the Council regarding matters on the agenda. Oral statements will be limited to ten minutes. Anyone wishing to make an oral statement should notify the District Manager by October 19, 1987. Records of the meeting will be available in the Shoshone District Office for public inspection or copying within 30 days after the meeting.

K. Lynn Bennett,

District Manager.

Shoshone District Grazing Advisory Board; Meeting

AGENCY: Bureau of Land Management (BLM), Interior.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Shoshone District Grazing Advisory Board.

DATE: Monday, October 19, 1987, at 9:00 a.m.

ADDRESS: BLM District Office, 400 West F Street, Shoshone, Idaho 83352.

FOR FURTHER INFORMATION CONTACT: K Lynn Bennett, District Manager, Shoshone District Office, P.O. Box 2B, Shoshone, Idaho 83352. Telephone (208) 886–2206 or FTS 554–6110.

SUPPLEMENTARY INFORMATION: The proposed agenda for the meeting includes the following items: (1) Review of proposed range betterment projects (8100) and (2) update on district activities.

Operation and administration of the Board will be in accord with the Federal Advisory Committee Act of 1972 (Pub. L. 92–463; 5 U.S.C. Appendix 1) and Department of Interior regulations, including 43 CFR Part 1984

The meeting will be open to the public. Anyone may present an oral statement between 10:00 and 11:00 a.m. or may file a written statement regarding matters on the agenda. Oral statements will be limited to ten minutes. Anyone wishing to make an oral statement should notify the Shoshone District by October 16, 1987. Records of the meeting will be available in the Shoshone District Office for public inspection or copying within 30 days after the meeting.

K Lynn Bennett,

District Manager.

Intent To Prepare a Resource Management Plan for the Drewsey and Riley Planning Units of the Burns District, OR

AGENCY: Bureau of Land Management, Interior.

ACTION: Opportunity for public comment; notice of intent to prepare a Resource Management Plan (RMP).

SUMMARY: In accordance with 43 CFR 1601.3–1, notice is hereby given that the Bureau of Land Management, Burns District, Oregon intends to prepare a Resource Management Plan for the Drewsey and Riley Planning Units. The RMP includes the 1.1 million acres in the Riley Planning Unit, 0.7 million acres in the Drewsey Planning Unit. The subject area is located in portions of Harney, Lake and Malheur Counties.

The purpose of the RMP is to update land use planning decisions to be consistent with current conditions and trends, as required by the Federal Land Policy and Management Act of October 21, 1976 (43 U.S.C. 1701).

DATES: Comments are due by November 2, 1987.

FOR FURTHER INFORMATION CONTACT: Joshua L. Warburton, District Manager, Burns District Office, 74 South Alvord, Burns, Oregon 97720 (Telephone 503–573–5241).

SUPPLEMENTARY INFORMATION: Issues proposed to be included in the RMP include: (1) Livestock grazing management; (2) land tenure adjustment; (3) wildlife forage demands and habitat condition; (4) fire management; and (5) special management areas (including consideration of areas of critical environmental concern).

Resource management programs to be represented on the interdisciplinary team preparing the RMP and Environmental Impact Statement (EIS) include: Wildlife, wild horses, recreation, wilderness, cultural, watershed, minerals, lands and realty, range, botanical, threatened and endangered plants and animals, fire management; and land use planning.

More detailed information on planning criteria, issues and preliminary management alternatives is available at the Burns District Office and has also been mailed to known interested individuals and parties. The comment period on preliminary issues and planning criteria for the RMP and associated EIS will close November 2. Other public participation activities will include a 90-day review of the draft RMP/EIS and an open house or public meeting to receive comments and answer questions. Dates, times and location will be announced through local media and mailing to interested parties. Planning documents will be available for inspection at the Burns District Office during normal working hours.

Dated: September 8, 1987.

Donald R. Cain,

Burns Associate District Manager.

DEPARTMENT OF JUSTICE

[Civil Action No. 85–4475]

Pollution Control; Consent Decree in Action to Enjoin Discharge of Water Pollutants; Alberts Plating Works, Inc.

In accordance with Departmental Policy, 28 CFR 50.7, 38 FR 19029, notice is hereby given that a consent decree in *United States* v. *Alberts Plating Works, Inc.*, Civil Action No. 85–4475, was lodged with the United States District Court for the Eastern District of New York on August 20, 1987. The consent decree establishes a compliance program for two New York plants owned and operated by Albert Plating Works, Inc. to bring the plants into compliance with the Clean Water Act, 33 U.S.C. 1251 *et seq.*, and the applicable pretreatment regulations relating to the discharge of pollutants and requires payment of a civil penalty of $37,500.

The Department of Justice will receive for thirty (30) days from the date of publication of this notice, written comments relating to the consent decree. Comments should be addressed to the Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, DC 20530 and should refer to *United States* v. *Alberts Plating Works, Inc.*, D.J. Ref. No. 90–5–1–1–2472.

The consent decree may be examined at the office of the United States Attorney, Eastern District of New York, U.S. Courthouse, 225 Cadman Plaza East, Brooklyn, New York 11201; at the Region II office of the Environmental Protection Agency, 27 Federal Plaza, New York, New York 10278; and the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy, please enclose a check in the amount of $1.60 (10 cents per page reproduction charge) payable to the Treasurer of the United States.

Roger J. Marzulla,

Acting Assistant Attorney General, Land and Natural Resources Division.

[Civil Action No. 87-649-B]

Lodging of Consent Decree Pursuant to the Clean Air Act; Natural Gas Pipeline Co. of America

In accordance with Department policy, 28 CFR 50.7, notice is hereby given that on September 11, 1987, a proposed consent decree in *United States of America v. Natural Gas Pipeline Company of America.*, Civil Action No. 87-649-B, was lodged with the United States District Court for the Southern District of Iowa.

The proposed consent decree resolves a judicial enforcement action brought by the United States against Natural Gas Pipeline Company of America ("NGPL") for violations of the Clean Air Act. The complaint filed by the United States alleged that the defendant violated the National Emission Standard for Hazardous Air Pollutants (NESHAP) for asbestos during demolition and renovation activities that took place at defendant's facility in Harper, Iowa.

The proposed consent decree enjoins NGPL from violating the asbestos NESHAP in the future. The proposed consent decree also requires NGPL to pay a civil penalty of $24,500 to the United States Treasury.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States v. Natural Gas Pipeline Company of America.*, D.J. Ref. 90-5-2-1-1079.

The proposed consent decree may be examined at the office of the United States Attorney, Southern District of Iowa, 115 U.S. Courthouse, Des Moines Iowa 50309, and at the Region VII office of the Environmental Protection Agency, Office of Regional Counsel, Attention: Henry Rompage, 726 Minnesota Avenue, Kansas City, Kansas 66101. A copy of the proposed consent decree may also be examined at the Environmental Enforcement Section, Land and Natural Resources Division, Department of Justice, Room 1521, Ninth Street and Pennsylvania Avenue NW., Washington, DC 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Environmental Enforcement Section, Land & Natural Resources Division, Department of Justice.

Roger J. Marzulla,

Acting Assistant Attorney General, Land and Natural Resources Division, U.S. Department of Justice, 10th and Pennsylvania NW., Washington, DC 20530.

BILLING CODE 4410-01-M

Drug Enforcement Administration

Importation of Controlled Substances, Registration of Sigma Chemical Co.

By Notice dated July 23, 1987, and published in the **Federal Register** on July 29, 1987; (52 FR 28361), Sigma Chemical Company, 3500 Dekalb Street, St. Louis, Missouri 63178, made application to the Drug Enforcement Administration to be registered as an importer of the basic classes of controlled substances listed below:

Drug	Schedule
Methadone (9250)	II
Pethidine (mependine) (9230)	II

No comments or objections have been received. Therefore, pursuant to section 303 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 and Title 21, Code of Federal Regulations, § 1301.54(e), the Deputy Assistant Administrator hereby orders that the application submitted by the above firm for registration as an importer of the basic classes of controlled substances listed above is granted.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

Dated: September 22, 1987.

[FR Doc. 87-22295 Filed 9-25-87; 8:45 am]

BILLING CODE 4410-09-M

Importation of Controlled Substances; Registration of Mallinckrodt, Inc.

By Notice dated March 26, 1987, and published in the **Federal Register** on April 3, 1987; (52 FR 10824), Mallinckrodt, Inc., Department C.B., Mallinckrodt and Second Streets, St. Louis, Missouri 63147, made application to the Drug Enforcement Administration to be registered as an importer of the basic classes of controlled substances listed below:

Drug	Schedule
Raw opium (9600)	II
Opium plant form (9650)	II
Concentrate of poppy straw (9670)	II

No comments or objections have been received. Therefore, pursuant to Section 1008 (a) of the Controlled Substances Import and Export Act and in accordance with Title 21, Code of Federal Regulations 1311.42, the above firm is granted registration as an importer of the basic classes of controlled substances listed above.

Gene R. Haislip,

Deputy Assistant Administrator Office of Diversion Control Drug Enforcement Administration.

Dated: September 22, 1987.

[FR Doc. 87-22296 Filed 9-25-87; 8:45 am]

BILLING CODE 4410-09-M

Application, Importation of Controlled Substances; Diagnostic Products Corp.

Pursuant to section 1008 of the Controlled Substances Import and Export Act (21 U.S.C. 958(h)), the Attorney General shall, prior to issuing a registration under this section to a bulk manufacturer of a controlled substance in Schedule I or II and prior to issuing a regulation under section 1002(a) authorizing the importation of such a substance, provide manufacturers holding registrations for the bulk manufacture of the substance an opportunity for a hearing.

Therefore, in accordance with § 1311.42 of Title 21, Code of Federal Regulations (CFR), notice is hereby given that on August 13, 1987, Diagnostic Products Corporation, 5700 West 96th Street, Los Angeles, California 90045, made application to the Drug Enforcement Administration to be registered as an importer of a urine-based tri-level control preparation containing the basic classes of controlled substances listed below:

Drug	Schedule
Methaqualone (2565)	I
Tetrahydrocannabinols (7370)	I
Amphetamine, its salts, optical isomers, and salts of its optical isomers (1100)	II
Secobarbital (2315)	II
Phencyclidine (7471)	II
Codeine (9050)	II
Benzoylecgonine (9180)	II
Methadone (9250)	II
Morphine (9300)	II

As to the basic classes of controlled substances listed above for which application for registration has been made, any other applicant therefore, and any existing bulk manufacturer registered therefore, may file written comments on or objections to the issuance of such registration and may, at the same time, file a written request for a hearing on such application in accordance with 21 CFR 1301.54 in such form as prescribed by 21 CFR 1316.47.

Any such comments, objections or requests for a hearing may be addressed to the Deputy Assistant Administrator, Drug Enforcement Administration, United States Department of Justice, 1405 I Street, NW., Washington, DC 20537, Attention: DEA Federal Register Representative (Room 1112), and must be filed no later than October 28, 1987.

This procedure is to be conducted simultaneously with and independent of the procedures described in 21 CFR 1311.42 (b), (c), (d), (e), and (f). As noted in a previous notice at 40 FR 43745-43746 (September 23, 1975), all applicants for registration to import a basic class of any controlled substance in Schedule I and II are and will continue to be required to demonstrate to the Deputy Assistant Administrator of the Drug Enforcement Administration that the requirements for such registration pursuant to 21 U.S.C. 958(a), 21 U.S.C. 823(a), and 21 CFR 1311.42 (a), (b), (c), (d), (e), and (f) are satisfied.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

Dated: September 22, 1987.

[FR Doc. 87-22294 Filed 9-25-87; 8:45am]

BILLING CODE 4410-09-M

[Docket No. 86-49]

Revocation of Registration, Denial of Application; Thomas Parker Elliott, D.O.

On May 13, 1986, the Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration (DEA), directed an Order to Show Cause to Thomas Parker Elliott, D.O. (Respondent) of 2133 West Bay Drive, Largo, Florida 33540. The Order to Show Cause sought to revoke DEA Certificate of Registration AE7940441 and to deny any pending applications for renewal of such registration under 21 U.S.C. 823(f) and 824(a). The statutory predicate for the proposed revocation and denial was that the registration of Respondent would be inconsistent with the public interest as defined in 21 U.S.C. 823(f) and as evidenced by, but not limited to, the following: (1) During the period from July 13, 1979, to September 7, 1984, Dr. Elliott issued to ten individuals at least 1,380 prescriptions, primarily for Schedule II narcotic controlled substances, which prescriptions were not issued for a legitimate medical purpose in the usual course of his professional practice as an osteopathic physician; and (2) on July 22, 1985, Respondent entered a plea of nolo contendere to an information charging him with delivery of a controlled substance in violation of the Florida Comprehensive Drug Abuse Prevention and Control Act and, on September 18, 1985, in the Circuit Court of Pinellas County, Florida, he was placed on probation for a period of three years. The crimes with which he was charged were felony offenses relating to controlled substances. Although the court withheld adjudication, such withholding of adjudication on these charges constitutes a final judgment of the trial court, subject to review, and is a conviction within the meaning and intent of 21 U.S.C. 824(a)(2). See *United States* v. *Hartsfield*, 387 F. Supp. 16 USDC M.D. Fla. 1975); *United States* v. *Cook*, 10 M.J. 138 (U.S. Mil. App. 1981); *Matter of Stephen Granet Rosen, D.D.S.*, DEA Docket No. 84-44, 50 FR 46844 (1985).

In a letter dated June 11, 1986, Respondent, proceeding through counsel, requested a hearing on the issues raised in the Order to Show Cause. The matter was placed on the docket of Administrative Law Judge Francis L. Young. Following prehearing procedures, a hearing was held in Tampa, Florida, on November 5, 1986. On March 30, 1987 Judge Young issued his Opinion and recommended Ruling, Findings of Fact, Conclusions of Law and Decision. No exceptions were filed and on June 29, 1987, the Administrative Law Judge transmitted the record to the Administrator. The Administrator has considered the record in its entirety and, pursuant to 21 CFR 1316.67, hereby issues his final order in this matter based upon findings of fact and conclusions of law as hereinafter set forth.

The Administrative Law Judge found that Respondent is an osteopathic physician who came to the attention of the Pinellas County, Florida, Sheriff's Office in April 1982 in connection with an investigation of some of Respondent's prescriptions which were determined to have been forged. In August 1983, the Sheriff's Office received complaints from pharmacies concerning what certain pharmacists felt were an overabundance of Respondent's prescriptions for Schedule II controlled substances. Subsequent investigation did reveal an unusually large number of prescriptions for Schedule II substances written by Respondent. Schedule II prescriptions written by Dr. Elliott were found at approximately 60% of the 270

pharmacies investigated in Pinellas County.

A detective for the Pinellas County Sheriff's Office interviewed an individual who had been arrested in 1984 for trafficking in Schedule II opiates and who was attempting to negotiate a plea agreement. This individual stated that when he wanted Dilaudid on his frequent visits to Pinellas County, he sought out Respondent, since Respondent was known to him as "the man to see in the County when one wanted to obtain Dilaudid." In July 1984, the investigators took prescription profiles and other information about some of Respondent's patients to two highly-respected osteopathic physicians in the area. The doctors examined the prescriptions and the profiles and stated that, on the face of the prescriptions, they appeared to be excessive for an osteopathic physician practicing medicine in good faith in Pinellas County. The doctors stated that the Schedule II analgesics prescribed by Respondent were highly addictive and should only be used in the treatment of terminal cancer patients or chronic acute pain patients. However, they were unable to formulate a definite opinion without first seeing the related medical records for the patients.

The medical records of Dr. Elliott's patients were then obtained pursuant to a search warrant. After examining the records, the two physicians opined that, while all 23 of the patients were being overprescribed, 10 of them, in particular, would not fit into the category of being terminally ill or experiencing chronic pain. With respect to those 10 patients, the doctors concluded that Dr. Elliott was not practicing medicine in good faith in the course of professional practice. In the opinion of a third osteopathic physician, all 23 had been illegally overprescribed.

The investigators prepared profiles for 10 of the Respondent's patients, listing not only the prescriptions found by investigators at local pharmacies, but also the information as to prescriptions written according to Respondent's own office records. The entries on this profile list prescriptions written by Dr. Elliott from July 13, 1979, to September 7, 1984. They list a total of 1,385 prescriptions, primarily for Schedule II controlled substances, written by the Respondent for the 10 named individuals over that period. One of the patients received a total of 474 prescriptions: 243 for Percodan, 198 for Dilaudid and 10 for Tyloz, all Schedule II narcotics; 17 for Tuinal, a Schedule II barbiturate sedative; and 6 for Desoxyn, a Schedule II stimulant containing methamphetamine. Although Dr. Elliott testified that he began prescribing Desoxyn on March 2, 1984, for the treatment of this patient's narcolepsy (a predisposition to excessive sleepiness), just one month earlier, on February 2, 1984, Respondent had prescribed Tuinal, a sedative, for this same patient. Throughout the period during which he was receiving Desoxyn for his "narcolepsy," this patient was also receiving prescriptions from Respondent for Percodan and Tylox, both of which have a sedative effect.

On February 6, 1985, Respondent was arrested. He was charged in a Florida State Court with 10 counts of unlawful prescribing, one count for each of the 10 persons mentioned above. Dr. Elliott entered a plea of nolo contendere to one of the 10 counts.

On August 20, 1985, pursuant to a Florida procedure, adjudication was withheld and the Respondent was placed on probation for three years. The offense charged in the count to which the Respondent pled is a second degree felony carrying a 15-year maximum penalty. The conditions of probation imposed by the court prohibit Respondent from prescribing any Schedule II drug. That order was dated August 20, 1985, and was filed on September 18, 1985.

On July 17, 1986, Dr. Elliott executed an application for renewal of his DEA registration. On that application, he applied for continued authorization to handle Schedule II narcotic and non-narcotic substances, as well as those in other schedules, without revealing the restrictive condition of his court probation.

The Administrative Law Judge concluded that there is a lawful, statutory basis for the revocation of Dr. Elliott's DEA registration pursuant to 21 U.S.C. 824(a)(2). He has been convicted of a controlled substance-related felony in a Florida State court. The court's order withholding adjudication of guilt and placing defendant on probation constitutes such a conviction. *Stephen Granet Rosen, D.D.S.* Docket No. 84–44, 50 FR 46844 (1985); *Delaney v. State*, 190 So. 2d 579 (Fla. 1966); *United States v. Hartsfield*, 387 F. Supp. 16 USDC, (M.D. Fla., 1975). A conviction entered following a plea of nolo contendere is no less a conviction. *Sokoloff v. Saxbe*, 501 F.2d 571 (2nd Cir. 1974); *Noell v. Bensinger*, 586 F.2d 544 (5th Cir. 1978).

Judge Young concluded that Respondent's experience in the handling controlled substances clearly warrants finding that his continued registration is inconsistent with the public interest. Respondent prescribed enormous quantities of highly addictive drugs to 10 individuals over a period of several years. Such prescribing of these substances can be justified medically only in cases of terminal illness, such as cancer, or for chronic, severe and incapacitating pain. No such justifying circumstances existed in cases of the 10 patients discussed in Respondent's testimony at the hearing. Respondent's prescribing was not done in good faith and in accordance with competent medical practices in the osteopathic field, according to three reputable osteopathic physicians practicing in the same area as Respondent.

The Administrative Law Judge recommended that Respondent's DEA registration be revoked and any pending applications for registration denied. The Administrator adopts the Recommended Ruling, Findings of Fact, Conclusions of Law and Decision of the Administrative Law Judge in its entirety. Dr. Elliott's prescribing practices have been highly irresponsible. A doctor showing the degree of irresponsibility in dispensing controlled substances found in this record cannot be entrusted with a DEA registration. Respondent's retaining his registration would be wholly inconsistent with the public interest.

Accordingly, the Administrator of the Drug Enforcement Administration, pursuant to the authority vested in him by 21 U.S.C. 823 and 824 and 28 CFR 0.100 (b), hereby orders that DEA Certificate of Registration AE7940441, previously issued to Thomas Parker Elliott, D.O. be, and it hereby is, revoked. The Administrator further orders that any pending applications for registration be, and they hereby are, denied. This order is effective October 28, 1987.

John C. Lawn,

Administrotor.

Date: September 22, 1987.

BILLING CODE 4410–09–M

Manufacturer of Controlled Substances, Registration; Western Fher Laboratories, Inc.

By Notice dated April 21, 1987, and published in the **Federal Register** on April 27, 1987; (52 FR 13883), Western Fher Laboratories, Inc., Carretera 132, KM 25.3, P.O. Box 7468, Ponce, Puerto Rico 00732, made application to the Drug Enforcement Administration to be registered as a bulk manufacturer of Phenmetrazine and its salts (1631), a basic class of controlled substance listed in Schedule II.

No comments or objections have been received. Therefore, pursuant to section 303 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 and Title 21, Code of Federal Regulations, § 1301.54(e), the Deputy Assistant Administrator hereby orders that the application submitted by the above firm for registration as a bulk manufacturer of the basic class of controlled substance listed above is granted.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

Dated: September 22, 1987.

BILLING CODE 4410-09-M

DEPARTMENT OF LABOR

Office of the Secretary

Agency Recordkeeping/Reporting Requirements Under Review by the Office of Management and Budget

Background

The Department of Labor, in carrying out its responsibilities under the Paperwork Reduction Act (44 U.S.C. Chapter 35), considers comments on the reporting and recordkeeping requirements that will affect the public.

List of Recordkeeping/Reporting Requirements Under Review

As necessary, the Department of Labor will publish a list of the Agency recordkeeping/reporting requirements under review by the Office of Management and Budget (OMB) since the last list was published. The list will have all entries grouped into new collections, revisions, extensions, or reinstatements. The Departmental Clearance Officer will, upon request, be able to advise members of the public of the nature of the particular submission they are interested in.

Each entry may contain the following information:

The Agency of the Department issuing this recordkeeping/reporting requirement.

The title of the recordkeeping/reporting requirement.

The OMB and Agency identification numbers, if applicable.

How often the recordkeeping/reporting requirement is needed.

Who will be required to or asked to report or keep records.

Whether small businesses or organizations are affected.

An estimate of the total number of hours needed to comply with the recordkeeping/reporting requirements.

The number of forms in the request for approval, if applicable.

An abstract describing the need for and uses of the information collection.

Comments and questions

Copies of the recordkeeping/reporting requirements may be obtained by calling the Departmental Clearance Officer, Paul E. Larson, telephone (202) 523-6331. Comments and questions about the items on this list should be directed to Mr. Larson, Office of Information Management, U.S. Department of Labor, 200 Constitution Avenue NW, Room N-1301, Washington, DC 20210. Comments should also be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for (BLS/DM/ESA/ETA/OLMS/MSHA/OSHA/PWBA/VETS). Office of Management and Budget, Room 3208, Washington, DC 20503 (Telephone (202) 395-6880).

Any member of the public who wants to comment on a recordkeeping/reporting requirement which has been submitted to OMB should advise Mr. Larson of this intent at the earliest possible date.

Extension

Employment and Training Administration

Statement of Selected Workloads and Expenditures of Federal Funds for Unemployment Compensation for Federal Employees and Unemployment Compensation for Ex-servicepersons
1205-0162; ETA 191
Quarterly
State or local governments
53 respondents; 1,272 burden hours; 1 form.

Federal agencies must reimburse the Federal Employees Compensation Account for the amount expended for benefits to former Federal employees (UCFE/UCX). The report informs ETA of the amount to bill to each Federal agency as well as specific information on expenditures in the SESAs.

Reinstatement

Occupational Safety and Health Administration

Occupational Exposure to Noise
OSHA 238
1218-0048
Recordkeeping; On Occasion
Business and other for-profit; Federal agencies or employees, small businesses or organizations
311,094 respondents; 5,823,286 burden hours; 1 form.

This standard requires employers to establish and maintain accurate records of employee exposure to noise and audiometric testing performed in compliance with the provisions of the standard. These records are used by the physician, employer, employee and the Government to determine whether occupation-related hearing-loss has occurred, to prevent further deterioration of hearing and to determine the effectiveness of the employer's hearing conservation program.

Signed at Washington, DC, this 23rd day of September, 1987.

Paul E. Larson,

Departmental Clearance Officer.

BILLING CODE 4510-30-M

NATIONAL COUNCIL ON PUBLIC WORKS IMPROVEMENT

Open Public Meeting

The National Council on Public Works Improvement will hold a meeting open to the public on October 19, 1987, from 1:00 p.m. to 4:00 p.m. in Conference Room 4830 of the U.S. Department of Commerce, Main Entrance at 14th Street between Constitution and Pennsylvania Avenues, Washington, DC. If you are interested in attending this meeting, for security purposes you must contact the Council office at 653-0298, so a list of attendees can be provided to the Commerce Department security personnel.

The Council will meet with Advisory Group members to provide them with a progress report of the Council's work.

The National Council on Public Works Improvement was created by Congress to report to the President and the Congress on the state of the nation's infrastructure.

Nancy S. Rutledge,

Executive Director.

BILLING CODE 6115-01-M

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Plenary Meeting XVI of the President's Committee on the Arts and the Humanities; National Endowment for the Arts

Thursday, October 15, 1987 has been designated by the President's Committee on the Arts and the Humanities for Plenary Meeting XVI. A morning meeting has been scheduled at 9:30 a.m. in the Douglas Dillion Board Room at the Metropolitan Museum of Art in New

York City to discuss the potential effects of the current art market on institutions. The Honorable C. Douglas Dillon will lead the discussion. Panelists are Philippe de Montebello, Eugene Thaw, Hilton Kramer, and John Marion. Activities of the President's Committee will be reviewed and progress reported in an afternoon session from 2:00 p.m. until 3:30 p.m. Reports will be made by Dr. Frank Stanton on the *Liberal Arts and the Corporate Workplace Survey*, Rawleigh Warner on the *New York and the World* secondary education project, Roger Stevens on the *Fund for New American Plays*, Stanley Freehling on the *Invest in the American Collection* conservation forum, Leonard Silverstein and George Gould on tax reform, and Karen Munro on the *Initiative for State Humanities* Councils. Because space is limited, reservations must be made in advance by calling 202–682–5409 or 212–883–7026.

The Committee, charged with exploring ways to increase private support for the arts and the humanities, has generated private funds which augment their operational costs and support projects and programs which have been initiated by the President's Committee.

For further information individuals may call (202) 682–5409.

August 21, 1987.

Yvonne M. Sabine,

Acting Director, Council and Panel Operation, National Endowment For the Arts.

BILLING CODE 7537–01–M

NUCLEAR REGULATORY COMMISSION

Order To Import Licensees (South African Uranium); Eldow International Co., et al

Pursuant to Commission decision, the public is advised that the Nuclear Regulatory Commission has issued immediately effective orders to all holders of nuclear material import licenses that amend their import licenses to prohibit their use for the import of uranium ore or uranium oxide produced or manufactured in South Africa. The licensees affected are:

Edlow International Co., Docket No. 11002967, License No. ISNM–82020
Transnuclear, Inc., Docket No. 11003111, License No. ISNM–83005
Westinghouse Electric Corp., Docket No. 11002348, License No. ISNM–81001
Edlow International Co., Docket No. 11000168, License No. IU–78019
International Energy Associates Ltd., Docket No. 11003688, License No. ISNM–84012
Separative Work Unit Corp., Docket No. 11002597, License No. ISNM–82016
Braunkohle Transport, USA, Docket No. 11003204, License No. ISNM–83011
Advanced Nuclear Fuels Corp., Docket No. 11003365, License No. ISNM–83025
Phibro-Salomon, Inc., Docket No. 11002933, License No. ISNM–82015
New York Nuclear Corp., Docket No. 11003097, License No. ISNM–83003
Transnuclear, Inc., Docket No. 11002593, License No. ISNM–81017

The generic provisions of the orders follow.

On October 2, 1986, Congress enacted the Comprehensive Anti-Apartheid Act of 1986 (the Act). Section 309 of the Act, which became effective on December 31, 1986, prohibits the import into the United States of (1) uranium ore and (2) uranium oxide that is produced or manufactured in South Africa. Section 303 of the Act prohibits the import of any article which is grown, produced, marketed, or otherwise imported into the United States by a parastatal organization of South Africa.

As an interim step to comply with the statutory deadline of the Act, on December 31, 1986, the Commission promulgated an amendment to 10 CFR Part 110 that required a specific license for all imports of South Africa origin uranium.

On June 12, 1987, the Commission granted a petition for leave to intervene and a hearing request to a number of petitioners who had requested that eight applications to import South African uranium be denied. CLI–87–6, 25 NRC ____, 52 FR 23091 (June 17, 1987). These same petitioners had also requested that proceedings be instituted to revoke eleven existing NRC import licenses to the extent that the existing license authorize the importation of special nuclear material and source material of South African origin. The central issues for these proceedings were the types of South African uranium products which should be barred from import into the United States under the Act.

Following written briefs submitted by the petitioners and other interested parties, in a Decision on September 21, 1987, the Commission held, *inter alia*, that the Act bars the import of all South African and Namibian uranium ore and uranium oxide, but does not bar other forms of uranium such as uranium hexafluoride or uranium ore and uranium oxide that have been substantially transformed into other forms of uranium in countries other than South Africa. CLI–87–9, 26 NRC ____ (1987).

In another Decision on this same date (CLI–87–10, 26 NRC ____ (1987)), the Commission held that the Director, Office of Government Affairs, should review the eleven existing licenses being challenged and promptly issue, effective immediately, orders to amend, suspend, or revoke those licenses, in accord with its Decision in CLI–87–9.

In view of the foregoing, and pursuant to section 53a., 62, 161b., 161i., and 182 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 C.F.R. Part 110, it is hereby ordered effective immediately that:

License No. ISNM82015 is amended by the addition of the following license condition:

No form of uranium produced, manufactured, marketed, or otherwise exported by a parastatal organization of South Africa or Namibia shall be imported into the United States under this license. Uranium ore and uranium oxide produced or manufactured in South Africa or Namibia also shall not be imported into the United States under this license, but uranium hexafluoride or other forms of uranium are not barred from import. Uranium that has been substantially transformed in countries other than South Africa or Namibia is not barred from import into the United States.

The licensee or any other person whose interest is adversely affected by this Order may request a hearing on this Order. Any request for hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555, within 30 days of the date of this Order. A copy of the request shall also be sent to the Assistant General Counsel for Enforcement, Office of the General Counsel at the same address. Any request for a hearing shall not stay the immediately effectiveness of this order.

If a hearing is to be held concerning this Order, the Commission will issue an Order designating the time and place of hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this Order shall be sustained. Persons requesting a hearing should specify with particularity (1) their interest in having a hearing, (2) how that interest may be affected by the results of a hearing, and (3) all issues they seek to raise.

BILLING CODE 7590-01-M

[Docket No. 50-255]

Exemption; Consumers Power Co. (Palisades Plant)

I

The Consumers Power Company (the licensee) is the holder of Provisional Operating License No. DPR-20 which authorizes operation of the Palisades Plant. This license provides, among other things, that it is subject to all rules, regulations and Orders of the Nuclear Regulatory Commission (the Commission) now or hereafter in effect.

The facility comprises one pressurized water reactor at the licensee's site located in Van Buren County, Michigan.

II

10 CFR Part 50, Appendix J, section III.A.6.(b) states:

> If two consecutive periodic Type A tests fail to meet the applicable acceptance criteria in III.A.5.(b), notwithstanding the periodic retest schedule of III.D, a Type A test shall be performed at each plant shutdown for refueling or approximately every 18 months, whichever occurs first, until two consecutive Type A tests meet the acceptance criteria in III.A.5.(b), after which time the retest schedule specified in III.D may be resumed.

Palisades Plant has failed the acceptance criteria for the last three Type A tests because of leakage through containment penetrations. The Type A test is a test of the entire containment building and is normally performed every three to four years, such that three tests are conducted every ten-year period. Containment penetrations are also testable by local leak rate tests (Type B and Type C tests) which are required every refueling outage and at least every two years.

III

By letter dated August 22, 1986, the licensee requested an exemption to the requirements of section III.A.6.(b) proposing an aggressive "Local Leak Rate Testing—Corrective Action Plan" in lieu of more frequent Type A tests. The licensee has stated that the failures of the Type A tests were the result of Type B and C penalty additions to the test results. The NRC staff confirmed this statement by reviewing the test reports and notes that the licensee has proposed and implemented a corrective action program consistent with NRC Office of Inspection and Enforcement Information Notice No. 85-71, issued August 22, 1985. This Information Notice provides guidance to licensees that states in circumstances as described above "* * * the general purpose of maintaining a high degree of containment integrity might be better served through an improved maintenance and testing program for containment penetration boundaries and isolation valves. In this situation, the licensee may submit a Corrective Action Plan with an alternative leakage test program proposal as an exemption request for NRC staff review. If this submittal is approved by the NRC staff, the licensee may implement the corrective action and alternative leakage test program in lieu of the required increase in Type A test frequency incurred after the failure of two successive Type A tests." In addition, the NRC staff notes that the results of the Type A tests, neglecting the addition of the penalties for the penetration leakages determined from the Type B and C tests, do not indicate any deterioration of the containment building and are typical of results of similar containment tests in the industry. Therefore, the NRC staff concludes that the Corrective Action Plan, including an augmented local leak rate test program and trending program, if properly carried out, would more efficiently detect and correct the types of excess leakage that have occurred in the past (i.e., penetration leakage). Further, the staff sees no benefit to be gained by requiring a Type A test at this time since new equipment to correct the problems experienced during the January 1986 Type A test will not be available before June 1, 1988. The staff finds that for these circumstances, the licensee should be granted exemption from the 18-month restriction and further, that if the Type A test performed at the next refueling outage meets the acceptance criteria of Appendix J indicating the success of the Corrective Action Plan, the schedule for Type A tests may revert to that required under Section III.D of Appendix J. The Corrective Action Plan will continue in effect at least until the augmented local leak rate testing program produces consistently satisfactory results.

IV

Accordingly, the Commission has determined that, pursuant to 10 CFR 50.12(a), the requested exemption is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security. Further, the Commission finds that special circumstances are present in that application of the regulation and in these particular circumstances would not serve the underlying purpose of the rule and is not necessary to achieve the underlying purpose of the rule, in that, as discussed in section III., the proposed alternative better meets the purpose of correcting excess leakage and confirming low leakage on a more frequent test schedule. The exemption provides only temporary relief from the applicable regulation and the licensee has made good faith efforts to comply with the regulation by implementing an alternative program to achieve the underlying purpose of the rule. Therefore, the Commission hereby grants the following exemption from the requirements of section III.A.6.(b) of Appendix J to 10 CFR Part 50:

1. The 18-month limit on the interval between the January 1986 Type A test and the next required Type A test is waived provided that the licensee appropriately implements the Local Leak Rate Testing Corrective Action Plan described in its letter dated August 22, 1986;

2. If the results of the next Type A test meet the acceptance criteria of section III.A.5.(b), the next required test shall be in accordance with the requirements of section III.D.

Pursuant to 10 CFR 51.32, the Commission has determined that the granting of this exemption will have no significant impact on the environment (52 FR 32979).

A copy of the Commission's concurrently issued Safety Evaluation related to this action is available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, DC 20555, and at the local public document room located at the Van Zoeren Library, Hope College, Holland, Michigan 49428. A copy may be obtained upon written request addressed to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Director, Division of Reactor Projects—III, IV, V and Special Projects.

This exemption is effective upon issuance.

For the Nuclear Regulatory Commission.

Dennis M. Crutchfield,

Director, Division of Reactor Projects—III, IV, V, and Special Projects.

Dated at Bethesda, Maryland, this 17th day of September, 1987.

[FR Doc. 87-22317 Filed 9-25-87; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 30-01267, 70-01717; License Nos. 06-06941-01, SNM-1504; EA 87-93]

Order Imposing a Civil Monetary Penalty; Norwalk Hospital

I

Norwalk Hospital (the "licensee") Norwalk, Connecticut 06856, is the holder of Byproduct Material License Nos. 06-06941-01 and SNM-1504 (the "licenses") issued by the Nuclear Regulatory Commission (the "Commission" or "NRC") which authorize the licensee to possess and use radioactive materials for diagnostic and therapeutic medical procedures. The licenses were issued on November 22, 1960, were most recently renewed on May 10, 1983, and are due to expire on June 30, 1988.

II

An NRC safety inspection of the licensee's activities under the licenses was conducted on April 28, 1987. During the inspection, the NRC staff determined that the licensee had not conducted its activities in full compliance with NRC requirements. A written Notice of Violation and Proposed Imposition of Civil Penalty was served upon the licensee by letter dated June 25, 1987. The Notice stated the nature of the violations, the provisions of the NRC's requirements that the licensee had violated, and the amount of the civil penalty proposed for the violations. The licensee responded to the Notice of Violation and Proposed Imposition of Civil Penalty by letter dated August 7, 1987.

III

After consideration of the licensee's response and the statements of fact, explanation, and argument for mitigation contained therein, the Deputy Executive Director for Regional Operations has determined that the penalty proposed for the violations designated in the Notice of Violation and Proposed Imposition of Civil Penalty should be imposed.

IV

In view of the foregoing and pursuant to section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, it is hereby ordered that:

The licensee pay a civil penalty in the amount of Two Thousand Five Hundred Dollars ($2,500) within 30 days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and mailed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555.

V

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555, with a copy to the Regional Administrator, Region I.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of the date of this Order, the provisions of this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing as provided above, the issues to be considered at such hearing shall be:

(a) Whether the licensee was in violation of the Commission's requirements as set forth in the Notice of Violation and Proposed Imposition of Civil Penalty referenced in section II above, and

(b) Whether, on the basis of such violation, this Order should be sustained.

For the Nuclear Regulatory Commission.

James M. Taylor,

Deputy Executive Director for Regional Operations.

Dated at Bethesda, Maryland, this 21st day of September 1987.

Appendix—Evaluations and Conclusions

On June 25, 1987, a Notice of Violation and Proposed Imposition of Civil Penalty (NOV) was issued for violations identified during a routine NRC inspection. Norwalk Hospital responded to the Notice on August 7, 1987. In its response, the licensee does not specifically deny any of the cited violations, but does appear to question the appropriateness of the NRC citing three of the violations. The licensee also requests that the Severity Level be reduced or eliminated. The NRC's evaluation and conclusion regarding the licensee's arguements are as follows:

I. Restatement of Violations

A. 10 CFR 20.201(b) requires that each licensee make such surveys as may be necessary to comply with all sections of Part 20, and are reasonable under the circumstances to evaluate the extent of radiation hazards that may be present. As defined in 10 CFR 20.201(a), "survey" means an evaluation of the radiation hazards incident to the production, use, release, disposal, or presence of radioactive materials or other sources of radiation under a specific set of conditions.

Contrary to the above, a survey was not made to evaluate the extent of radiation hazards incident to waste disposal under 10 CFR 20.301, which describes the authorized means of disposing of licensed material contained in waste. Specifically, on April 28, 1987, a vial containing 125 microcuries of licensed material was disposed in the normal trash, and prior to disposal, a survey was not made to evaluate the presence of radioactive material.

B. 10 CFR 20.203(e)(1) requires that each room in which lecensed materials are used or stored and which contain any radioactive materials (other than natural uranium or thorium) in an amount exceeding 10 times the quantity specified in Appendix C of Part 20 shall be conspicuously posted with a sign or signs bearing the radiation caution symbol and the words "Caution Radioactive Material."

Contrary to the above, on April 28, 1987, the brachytherapy storage and mold preparation area contained radioactive material in excess of 10 times the amounts specified in Appendix C of Part 20, namely, a 150 millicurie cesium-137 calibration source and a 900-microcurie strontium-90 calibration source, and the room was not posted with a "Caution Radioactive Material" sign.

C. Condition 17 of License No. 06-06941-01 requires that licensed material be possessed and used in accordance with statements, representations and procedures contained in the license application dated April 12, 1983.

1. Block 10 of this application requires that, prior to using a survey meter, the technologist check the meter to verify that it is operational, including a response check with a source of radioactivity.

Contrary to the above, on April 28, 1987, a technologist using a survey meter did not first verify that the survey meter was operational. Specifically, she did not perform a response check of the meter with a source of radioactivity.

2. Block 10 of this application requires that the dose calibrator be calibrated in accordance with procedures contained in Appendix D, section 2, of Regulatory Guide 10.8.

a. Item A.1 of Appendix D, section 2, requires that the dose calibrator

linearity be determined at installation and quarterly thereafter.

Contrary to the above, the dose calibrator linearity test had not been performed for the 3rd quarter of 1985 and the 2nd quarter of 1986.

b. Item C of Appendix D, section 2, requires that the daily constancy test be performed before each day's use of the instrument.

Contrary to the above, on April 28, 1987, a technologist used the dose calibrator to assay a technetium-99m generator elution for molybdenum content, and the constancy test was not performed until after that assay.

C. Item C of Appendix D, section 2, requires that a comparison be made between the measured dose calibrator output reading and the decay corrected activity and that the percent deviation be recorded.

Contrary to the above, from April 1, 1987 until April 28, 1987, no comparison was made between the measured dose reading and the decay corrected activity and the percent deviation was not calculated and recorded.

3. Block 15 of this application requires that radioactive material be used in accordance with Appendix G of Regulatory Guide 10.8.

a. Item 1 of Appendix G, requires that laboratory coats or other protective clothing be worn at all times in areas where radioactive materials are used.

Contrary to the above, on April 28, 1987, a technologist performed work with radioactive material in the hot lab, and at the time, the technologist did not wear a laboratory coat or other protective clothing.

b. Item 5.b of Appendix G, prohibits the storage of food, drink, or personnel effects in areas where radioactive materials are used or stored.

Contrary to the above, as of April 28, 1987, food was stored in the brachytherapy storage and mold preparation room, a place where radioactive material is used and stored.

c. Item 8 of Appendix G requires that TLD finger badges be work during elution of generators and preparation, assay, and injection of radiopharmaceuticals.

Contrary to the above, on April 28, 1987, a technologist eluted a generator, and prepared and assayed radiopharmaceuticals, without wearing the required TLD finger badge.

4. Block 17 of this application requires that surveys be performed in accordance with the "Area Survey Procedures" in Appendix I of Regulatory Guide 10 8.

a. Item 3 of Appendix I requires that a weekly survey, including wipes, be performed of selected areas and the results of these surveys be documented.

Contrary to the above, between December 1986, and April 1987, wipes of selected areas were only performed on a monthly basis.

b. Item 5 of Appendix I requires that a permanent record be kept of all survey results.

Contrary to the above, daily surveys were conducted but a record was not maintained for November 11, 12, 13, 14, 1986; the week of November 17, 1986; the week of November 24, 1986; December 11, 12, 15, 1986 and for the month of March 1987.

Collectively, these violations have been categorized in the aggregate as a Severity Level III problem (Supplements IV and VI)

Cumulative Civil Penalty—$2,500—assessed equally among the violations.

II. Summary of Licensee Response

The licensee, in its response, does not specifically deny any of the violations. However, the licensee does appear to question the appropriateness of citing Violations C.2.a, C.2.b, and C.2.c. With regard to Violation C.2.a, the licensee argues that the calibrations were performed, but are missing from the records. The licensee also claims that over the five year period since the last inspection, only two quarterly calibrations could not be found. With regard to Violation C.2.b, the licensee argues that the technician did perform a constancy check after the equipment was used, but prior to patient use, and that reviewing prior data indicates constancy checks have been performed on a daily basis. With regard to Violation C.2.c, the licensee states that performing a decay correction from month to month is redundant, since the half life of the radioactive material is 30 years, and that an annual decay correction suffices given the ±5% control limits of the constancy test. While the licensee admits that the tolerance ranges from the March use sheet were not transferred to the April use sheet, it argues that this does not imply that the constancy check was performed improperly but that the technologists, aware that the activity changed imperceptibly, simply applied the March control limit to the April observations.

The licensee also requests that the NRC reduce or eliminate the Severity Level, stating that it is the judgement of its chief physicist and an outside consulting physicist that Severity Level III conditions did not exist.

III. NRC Evaluation of Licensee Response

With respect to the licensee's claims concerning Violation C.2.a, the NRC notes that the license requires linearity tests be performed quarterly with no exceptions. The NRC can not accept the licensee's argument that the calibrations were performed but are missing from the records. The licensee had maintained records of all other linearity tests performed between January 1985, and April 1987, as a regular practice. As documentation was missing only for tests performed for the 3rd quarter of 1985 and 2nd quarter of 1986, the NRC concludes that this lack of documentation indicates that these two tests were not performed. With respect to the licensee's arguments regarding Violation C.2.b, Item C of Appendix D, Section 2 of Regulatory Guide 10.8 requires that the test for constancy be performed before each day of use of the instrument. As the licensee admits that the constancy check was performed after the equipment was used, a violation occurred. With respect to the licensee's arguments regarding Violation C.2.c, the inspectors asked the licensee's physicist if a comparison had been made between the measured value and decay corrected calibrated activity, and were informed that the expected values had not been calculated and documented as required by Appendix D, Section 2 of Regulatory Guide 10.8. Therefore, the NRC concludes that the violation occurred as stated in the Notice of Violation.

With respect to the licensee's request to reduce or eliminate the Severity Level, the licensee provides no basis for its request. The NRC recognizes that each violation, if considered individually, would normally be classified at Severity Level IV. However, the violations, when considered collectively, are appropriately classified as a Severity Level III problem because collectively they demonstrate a lack of management control over the licensee's radiation safety program.

IV. NRC Conclusion

The licensee has not provided an adequate basis for withdrawing any of the violations or for reducing the Severity Level of the violations. The NRC has concluded that the violations collectively represent a breakdown in management control of the radiation safety program, occurred as stated in the Notice of Violation, and were appropriately classified in the aggregate as a Severity Level III problem. Therefore, the NRC concludes that the

proposed civil penalty in the amount of $2,500 should be imposed.

BILLING CODE 7590-01-M

[Docket No. 50-267]

Environmental Assessment and Finding of No Significant Impact; Public Service Company of Colorado

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of exemptions from the requirements of Appendix R to 10 CFR Part 50 to the Public Service Company of Colorado (the licensee) for the Fort St. Vrain Nuclear Generating Station located in Weld County, Colorado.

Environmental Assessment

Identification of Proposed Action

The proposed action would grant exemptions from certain requirements of sections III.G and III.J of Appendix R to 10 CFR Part 50, which relate to fire protection features for ensuring that systems and associated circuits used to achieve and maintain safe shutdown are free of fire damage and to the provision of emergency lighting. The exemptions are technical since the licensee must demonstrate that fire protection and emergency lighting configurations meet the specific requirements of section III.G and III.J or that alternate fire protection and emergency lighting configurations can be justified by an acceptable analysis.

The Need for the Proposed Action

The proposed exemptions are needed because the features described in the licensee's request regarding the existing and proposed fire protection at the plant would result in a net benefit to the public health and safety that compensates for any decrease in safety that may result from the granting of this exemption request.

Environmental Impacts of the Proposed Action

The proposed exemptions will provide a degree of fire protection such that there is no increase in the risk of fires at Fort St. Vrain. Consequently, the probability of fires has not been increased and the post-fire radiological releases will not be greater than previously determined nor does the proposed exemption otherwise affect radiological plant effluents. Therefore, the Commission concludes that there are not significant radiological environmental impacts associated with the proposed exemption.

With regard to potential nonradiological impacts, the proposed exemption involves features located entirely within the restricted areas as defined in 10 CFR Part 20. It does not affect nonradiological plant effluents and has no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed exemption.

The Commission has determined not to prepare an environmental impact statement for the proposed exemption.

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the licensee's letter dated April 1, 1985 (P-85113). The letter is available for public inspection at the Commission's Public Document Room, 1717 H Street, NW., Washington, DC, and at the Greely Public Library, City Complex Building, Greely, Colorado.

Dated at Bethesda, Maryland, this 16th day of September, 1987.

For the Nuclear Regulatory Commission.

Jose A. Calvo,

Director, Project Directorate—IV, Division of Reactor Projects—III, IV, V and Special Projects, Office of Nuclear Reactor Regulation.

Application for Licenses To Export Nuclear Facilities or Materials; Nissho Iwai and Transnuclear, Inc.

Pursuant to 10 CFR 110.70 (b) "Public notice of receipt of an application" please take notice that the Nuclear Regulatory Commission has received the following applications for export licenses. Copies of the applications are on file in the Nuclear Regulatory Commission's Public Document Room located at 1717 H Street, NW., Washington, DC.

A request for a hearing or petition for leave to intervene may be filed within 30 days after publication of this notice in the **Federal Register**. Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner upon the applicant, the Executive Legal Director, U.S. Nuclear Regulatory Commission, Washington, DC 20555, the Secretary, U.S. Nuclear Regulatory Commission, and the Executive Secretary, U.S. Department of State, Washington, DC. 20520.

In its review of applications for licenses to export production or utilization facilities, special nuclear materials or source material, noticed herein, the Commission does not evaluate the health, safety or environmental effects in the recipient nation of the facility or material to be exported. The information concerning these applications follow.

SECURITIES AND EXCHANGE COMMISSION

[Release No. IC-15995; 812-6656]

Greater Washington Investors, Inc. Application;

September 21, 1987.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 ("the 1940 Act").

Applicant: Greater Washington Investors, Inc. ("GWI").

Relevant 1940 Act Sections: Exemption requested under sections 6(c) and 57(c) from the provisions of sections 12(d), 17(a), 18(a), 19(b), 57(a)(1), (2), and (3), 60 and 61 and under section 17(d) and Rule 17d-1, approving certain transactions.

Summary of Application: Applicants seek an order to permit the establishment and operation of a wholly-owned subsidiary under the terms of the proposed reorganization in which Applicant will transfer assets, including its small business investment company license, in exchange for all of the common stock of the subsidiary.

Filing Date: The application was filed on March 19, 1987 and amended on June 17, August 14, 1987, and September 9, 1987.

Hearing or Notification of Hearing: If no hearing is ordered, the application will be granted. Any interested person may request a hearing on this application, or ask to be notified if a hearing is ordered. Any requests must be received by the SEC by 5:30 p.m., on October 13, 1987. Request a hearing in writing, giving the nature of your interest, the reason for the request, and the issues you contest. Serve the Applicant with the request, either personally or by mail, and also sent it to the Secretary of the SEC, along with proof of service by affidavit or, for lawyers, by certificate. Request notification of the date of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 5th Street NW., Washington, DC 20549. Applicant, 5454 Wisconsin Avenue, Chevy Chase, Maryland 20815.

FOR FURTHER INFORMATION CONTACT: Fran Pollack, Staff Attorney (202 272-3024 or Karen L. Skidmore, Special Counsel (202) 272-3023 (Division of Investment Management).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier, (800) 231-3282 (in Maryland (301) 258-4300).

Applicant's Representations

1. GWI is a corporation which was organized under the laws of the District of Columbia on August 26, 1959. GWI is a closed-end, non-diversified, management investment company and is registered with the SEC under section 8(b) of the 1940 Act. GWI is also licensed by the Small Business Administration ("SBA") as a small business investment company ("SBIC") under the Small Business Investment Act of 1958 (the "1958 Act"). GWI has elected to be regulated as a business development company under the 1940 Act by filing a notification of election with the SEC.

2. GWI operates as a "venture capital" company, principally furnishing capital to industry, financing promotional enterprises, and purchasing securities of issuers for which no ready market is in existence. GWI also makes available significant managerial assistance to the issuers of such securities. GWI seeks to change its structure and operations to enable it to: (1) Make investments that would not be permitted under the 1958 Act, and (2) increase its ability to obtain funds for investment in its business ventures.

3. Under a proposed plan of reorganization, GWI intends to transfer certain of its assets (initially approximately twenty-five percent), including its license to operate as an SBIC, to a newly formed and wholly-owned subsidiary, Greater Washington Investments, Inc. ("Investments"). In return, Investments would assume certain indebtedness of GWI to the SBA, and would issue to GWI all of its outstanding capital stock. After the transfer of assets and liabilities, Investments would carry on the SBIC activities previously conducted by GWI while GWI would engage in a broader range of investment activities. Investments would operate as an SBIC and as a registered investment company. GWI will contiue to operate as a business development company.

4. GWI presently contemplates that it may from time to time make additional investments in Investments either as contributions to capital, purchases of additional stock or loans following GWI's initial contribution. It is not contemplated that Investments would purchase or otherwise acquire any of the capital stock of GWI. In addition, Investments would from time to time pay dividends and make other distributions to GWI with respect to its investments in Investments's stock, including capital gains dividends subject in each case to the requirements of the 1958 Act and regulations thereunder. GWI intends to cause Investments to qualify and elect to be taxed as a regulated investment company and accordingly, Investments would be required to pay out as dividends substantially all of its so-called "investment company taxable income." GWI intends to continue to qualify and elect to be taxed itself as a "regulated investment company" and accordingly, would be required to pay out as dividends substantially all of its so-called "investment company taxable income." Investments may also from time to time make loans or other advances to GWI other than on account of purchases of Investments' stock. GWI and Investments might also from time to time invest in securities of the same issuer, simultaneously or sequentially, in the same or different securities of such issuer, and deal with such investments separately or jointly. GWI or Investments might also from time to time purchase all or a portion of portfolio investments held by the other in order to enhance the liquidity of the selling company.

5. GWI's proposed reorganization could be deemed to violate a number of the provisions of the 1940 Act if the requested exemptions are not granted. The proposed transaction may be prohibited by sections 12(d)(1)(A) and 12(d)(1)(C). As a business development company, the provisions of section 12 would apply to GWI through section 60. Under the proposed reorganization, GWI, a business development company, will acquire all of the capital stock of Investments, a closed-end investment company, thereby potentially violating both sections 12(d)(1) (A) and (C). In addition, in the future GWI may make loans or advances to Investments, and Investments may make loans or advances to GWI. Those transactions also might be considered acquisitions of securities prohibited by sections 12(d) and 60.

6. Section 17(a) may prohibit the proposed transaction because GWI will be an affiliated person of Investments and Investments will be affiliated person of GWI (as defined in sections

2(a)(3) of the 1940 Act). As a business development company, the substantially identical provisions of section 57(a) of the 1940 Act would apply to GWI. Portfolio companies of GWI Investments may also be affiliated persons of GWI or Investments by reason of ownership of five percent or more of such portfolio company's voting securities. Accordingly, any exchange of securities between GWI and Investments, and between either or both of them and their portfolio companies, could constitute an affiliated transaction prohibited by sections 17(a) and 57(a) of the 1940 Act.

7. Section 17(d) of the 1940 Act and Rule 17d–1(a) may prohibit transactions whereby GWI and Investments invest in securities of the same issuer and deal with such investments separately or jointly. As a business development company, the substantially identical provisions of section 57(a)(1), (2) and (3) of the 1940 Act would apply to GWI. As noted above, GWI and Investments would each be affiliated persons of the other. Therefore, investments by both in portfolio companies of either in which the other is or is proposed to beome an investor may be prohibited by section 17(d), Rule 17d–1 and section 57(a) of the 1940 Act.

8. GWI has also requested relief from those provisions of the Act governing capital structure. The proposed transaction will not meet the asset coverage requirements of section 18 of the 1940 Act. However, section 18(k) provides special exemptions from these provisions for SBIC's. In addition, for companies which have elected to be regulated as business development companies, the asset coverage requirement is reduced to 200 percent for all senior securities. As it currently is organized, GWI is entitled to the 18(k) exclusion for its SBA-guaranteed debentures, SBA-guaranteed debt being excluded from the asset coverage requirements. Following the proposed reorganization, Investments, as an SBIC, would be entitled to the section 18(k) exclusion and thus would not need any asset coverage for its SBA-guaranteed debentures. However, GWI, since it would no longer be an SBIC, would be subject to the asset coverage requirements of section 18(a) (as modified by section 61(a)), without the benefit of the 18(k) exclusion, with respect to senior securities it directly issued, as well as the senior securities issued by Investments, its wholly-owned subsidiary, of which GWI would be deemed to be the indirect issuer. Therefore, GWI is seeking an exemption for both itself and Investments to permit the issuance of senior securities only to the following extent: (1) GWI and Investments could issue and sell to banks, insurance companies and other financial institutions their secured or unsecured promissory notes or other evidences of indebtedness in consideration of any loan, or any extension or renewal thereof made by private arrangement, provided that: (a) Such notes or evidences of indebtedness were not intended to be publicly distributed, (b) such notes or evidences of indebtedness could not be convertible into, exchangeable for or accompanied by any options to acquire any equity security (except that with respect to GWI, these restrictions shall not be applicable except to the extent they are applicable generally to business development companies), and (c) immediately after the sale or issuance of such notes or evidences of indebtedness, GWI and Investments on a consolidated basis and individually would have 200 percent asset coverage, except that any SBA-guaranteed debenture would not be considered senior securities requiring asset coverage; and (2) in addition, (a) Investments may obtain financing through the issuance of SBA-guaranteed debentures on such basis and in such amount as the SBA might from time to time permit for SBIC's; (b) Investments may borrow from GWI and vice-versa, and such borrowings would not be considered senior securities requiring asset coverage; and (c) GWI may guarantee any borrowing of Investments without the guarantee being considered a senior security requiring asset coverage.

9. It is contemplated that Investments will pay dividends and other distributions on a regular basis of long-term capital gains which may violate section 19(b) and Rule 19b–1. Permitting distributions by Investments to GWI more often than once a year will permit GWI to more efficiently manage its internal cash flow which could result in administrative savings.

Applicant's Legal Conclusions

1. Rule 60a–1 under the 1940 Act would permit GWI to acquire the securities of Investments which is operated as a wholly-owned subsidiary of the business development company.

2. If GWI were to continue to operate as one company, transactions with portfolio affiliates whether controlled or not controlled would be permissible without Commission approval by virtue of section 57(a) of the 1940 Act and Rule 57b–1 thereunder. Moreover, transactions between business development companies or investment companies and their downstream affiliates are exempt from the prohibitions of sections 57(a), 17(a), and 17(d) of the 1940 Act by virtue of Rules 17a–6 and 57b–1. Therefore, Investments should be permitted to invest in downstream affiliates of GWI and vice versa. It is the intent of this request only to permit GWI and Investments to carry on their businesses as otherwise permitted by the 1940 Act, if GWI and Investments were a single company.

3. If GWI and Investments were one combined company, Rule 17d–1(d)(5) under the 1940 Act would exempt transactions under section 17(d) of the 1940 Act and Rule 17d–1 between them and their downstream affiliates and if they were one combined business development company such transactions would be exempted by Rule 57b–1 of the 1940 Act. It is reasonable and fair to exempt GWI and Investments from the provisions of section 17(d) of the 1940 Act and Rule 17d–1 thereunder to the extent that GWI would not be subject to such provisions had it remained a single company.

4. With respect to the exemptions from sections 17 (a) and (d) and 57(a) (1), (2), and (3), since Investments will be a wholly-owned subsidiary of GWI and since no officers or directors of either Investments or GWI or any controlling persons of other "upstream affiliates" of GWI will have any prohibited financial interest in the transactions described, there can be no overreaching on the part of any person and no harm to the public interest will occur in transactions solely between GWI and Investments.

5. With respect to the section 18(a) exemption, the net effect of application of the "asset coverage" requirements on a consolidated basis as to GWI and Investments following the reorganization, if relief is not obtained, could be to restrict the ability of Investment to obtain financing through the issuance of SBA-guaranteed debentures from that which would be available to GWI if the proposed reorganization were not affected. Accordingly, no harm to the public interest will occur if the section 18(a) exemption is obtained.

6. Since the section 19(b) exemption relates solely to dividends from Investment to GWI, it is patently an internal matter and does not affect the public interest.

7. The issuance of the exemptive order requested is clearly within the authority of the Commission under sections 6(c) and 57(c). If the requested exemptive order is granted, GWI will be able to achieve several goals that would be both beneficial to its shareholders and in the public interest. The proposed

reorganization is intended to permit GWI to engage in an expanded scope of operations, beyond that permitted to be engaged in by an SBIC while at the same time retaining its SBIC operations and the benefits available to its shareholders through the SBIC program. The formation of the wholly-owned subsidiary to operate as an SBIC would be in the best interests of the shareholders of GWI. The proposed reorganization also would be consistent with the congressional intent and the policies underlying the 1940 Act and the Small Business Incentive Act of 1980 (the "1980 Act"). The exemptions requested herein coincide with the principle purpose of the 1940 Act, as amended by the 1980 Act, to remove regulatory burdens on venture capital companies while assuring adequate protection of the interests of investors in such companies.

8. The position of GWI's shareholders basically will be unchanged except that their interest in the SBIC subsidiary will be indirect. Since Investments will be a wholly-owned subsidiary of GWI and since, in all material respects, its shareholders will have the same rights with respect to Investments that they currently have with respect to GWI, the shareholders of GWI will retain substantially all of GWI while gaining the opportunity to share in GWI's successes as a business development company not limited to SBIC investments.

Applicant's Conditions

If the requested order is granted, the Applicant agrees to be subject to the following conditions:

1. GWI will at all times own and hold beneficially and of record all of the outstanding capital stock of Investments; Investments will at all times be wholly owned by GWI and will therefore never have public shareholders.

2. Investments will not change any of its fundamental investment policies or engage in any of the activities described in section 13(a) of the 1940 Act unless so authorized by a vote of the majority of the outstanding voting securities of GWI.

3. No person will serve or act as an investment adviser to Investments subject to section 15 of the 1940 Act, unless shareholders and directors of both GWI and Investments have given the necessary approval.

4. No person shall serve as a director of Investments who shall not have been elected as a director of GWI at its most recent annual meeting.

5. For purposes of section 17 analysis, Investments will always be collapsed into GWI which has currently elected business development company status (and not vice versa), and, without further order of the Commission, will never be separated in order to produce a greater advantage.

6. GWI will not issue, and it will not permit Investments to issue, any senior security unless it and Investments, on an unconsolidated basis, and it on a consolidated basis, meet the 200 percent asset coverage test under the conditions described in the application.

7. GWI will file with the Commission and provide to its shareholders the financial statements required by the 1940 Act and other Federal securities laws, on a consolidated basis as to GWI and Investments, and on an unconsolidated basis with respect to Investments.

8. No officers or directors of either Investments or GWI or any controlling persons or other "upstream affiliates" of GWI will have any prohibitive financial interest in the transactions described in this notice and the application.

9. GWI will cause Investments to conduct its operations in compliance with the provisions of the 1940 Act.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

[FR Doc. 87-22277 Filed 9-25-87; 8:45 am]

BILLING CODE 8010-01-M

[Rel. No. IC-15997; 812-6731]

IDS Certificate Co., Application;

September 21, 1987.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 ("1940 Act").

Applicants: IDS Certificate Company ("IDSC"), IDS Financial Corporation ("IDS") (collectively "Applicants").

Relevant 1940 Sections: An amended exemptive order is requested pursuant to sections 6(c) and 17(d) of the 1940 Act from the provisions of sections 12(d)(3), 17(a) and 17(d) of the 1940 Act and Rule 17d-1 thereunder.

Summary of Application: Applicants seek an extension of the maturity date of a promissory note from IDS to IDSC that has been approved in earlier exemptive orders.

Filing Date: The application was filed on May 21, 1987.

Hearing or Notification of Hearing: If no hearing is ordered, the application will be granted. Any interested person may request a hearing on this application, or ask to be notified if a hearing is ordered. Any requests must be received by the SEC by 5:30 p.m., on October 13, 1987. Request a hearing in writing, giving the nature of your interest, the reason for the request, and the issues you contest. Serve the Applicant(s) with the request, either personally or by mail, and also send it to the Secretary of the SEC, along with proof of service by affidavit or, for lawyers, by certificate. Request notification of the date of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 5th Street NW., Washington, DC 20549. Applicants, IDS Tower 10, Minneapolis, MN 55440.

FOR FURTHER INFORMATION CONTACT: Joyce M. Pickholz, Staff Attorney (202) 272-3046, or Curtis R. Hilliard, Special Counsel (202) 272-3030 (Division of Investment Management).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commerical copier who can be contacted at (800) 231-3282 (in Maryland (301) 258-4300).

Applicants' Representatives

1. IDSC, formerly known as Investors Syndicate of America, Inc., a registered face amount certificate company, and its parent, IDS, formerly IDS Financial Services, Inc., sought and received Commission approval in 1981 for IDSC to sell to IDS a block of securities bearing substantial unrealized depreciation (Investment Company Act Release No. IC-12060, November 27, 1981). IDS then sold the securities on the open market thereby realizing a loss of tax purposes. The price IDS agreed to pay for the securities was the higher of book or market value.

2. IDS paid IDSC an amount equal to book value for the securities by paying cash equal to the market value and a promissory note (the "Note"), at 15% per annum, for the balance. The Note is due December 31, 1988. The Note becomes immediately due and payable if IDS defaults, if any other indeptedness of IDS is in default, if IDS becomes insolvent or if IDS' consolidated net worth (less IDSC's net worth) becomes less than $150 million. Morevover, if IDSC's qualified assets were to fall below the amount required by the 1940 Act. IDSC could accelerate an amount of the Note's principal sufficient to cover the projected deficiency.

3. Market conditions changed before IDS could sell the securities with the result that IDS did not realize the entire taxable loss it originally sought. Therefore, in 1982, IDS, IDSC and IDS Life Insurance Company, an affiliate, sought and received an amendment to the original order (Investmernt Company Act Release No. IC–13040, February 18, 1983). In this amended order, the Commission permitted additional private placement securities to be sold by IDSC to IDS at book value. IDS, in turn, sold the securities to IDS Life Insurance Company at market value incurring a loss.

4. IDS now seeks an extension of the Note from December 31, 1988 to December 31, 1991. All other terms and conditions of the Note would continue including the 15% per annum rate.

5. The amendment currently sought is necessary and appropriate in the public interest and consistent with the protection of investors because IDSC will keep a creditworthy, high interest bearing asset on its books. The Note from IDS bears interest at 15%, well in excess of current market rates. Timely payment of the Note would mean IDSC would have to invest the proceeds in investments bearing a much lower rate of interest. Also, the qualified reserves of IDSC that back its publicly held certificates are not affected by the extension of the Note because the Note is not included in the reserve calculations. The principal of the Note would nevertheless be available either through an acceleration of the Note or a pledge, assignment or transfer thereof, if needed to increase the reserves. While this provision offers a measure of added safety, IDSC is in no present jeopardy of having inadequate reserves. At March 31, 1987, assets on deposit exceeded certificate liabilities by $27.6 million. Neither IDS or IDSC has any reason to believe principal acceleration would be necessary during the life of the Note as extended.

6. IDSC and its certificates holders have the additional assurance of a very creditworthy investment. IDS is required under the terms of the Note to maintain a net worth of at least $150 million, less IDSC's net worth. At March 31, 1987, its consolidated net worth (less IDSC's net worth) was approximately $545.2 million. Moreover, IDSC is intimately familiar with IDS, IDS's parent American Express Company, and the business of each. More than with any other of its investments, IDSC is in a position to monitor the quality of the investment.

7. ISC and IDSC recognize that both parties will benefit from the requested relief. Through the extension, IDS will be able to continue to use its capital for continuing and expanding business operations. As of March 31, 1987, the balance of the Note was $40.1 million. If the Note was paid on December 31, 1988, IDSC would receive approximately $14.6 million. The benefits to IDS, however, do not change the fact that IDSC and its certificate holders receive material benefits from the Note extension. IDS has in good faith regularly and timely paid interest on the Note and also sought to reduce the Note's principal.

8. The requested relief is within the purpose fairly intended by the policy and provisions of the Act because it clearly does not involve overreaching by affiliates. The terms are fair and reasonable and will work to the advantage of the certificate holder investors as well as IDSC.

9. The IDSC Board of Directors has approved the Note extension, subject to Commission approval.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

[Rel. No. IC–15999; File No. 812–6742]

Application; The Manufacturers Life Insurance Co. of America et al.

Date: September 22, 1987.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "1940 Act").

Applicants: The Manufacturers Life Insurance Company of America ("Company"), Separate Account Two of The Manufacturers Life Insurance Company of America ("Account Two") and ManEquity, Inc.

Relevant 1940 Act Sections: Exemption requested pursuant to section 6(c) from sections 26(a) and 27(c)(2).

Summary of Application: Applicants seek an order to permit the deduction of mortality and expense risk charges under certain variable annuity contracts ("Contracts").

Filing Date: The application was filed on June 1, 1987.

Hearing or Notification of Hearing: If no hearing is ordered, the application will be granted. Any interested person may request a hearing on this application, or ask to be notified if a hearing is ordered. Any requests must be received by the SEC by 5:30 p.m., on October 19, 1987. Request a hearing in writing, giving the nature of your interest, the reason for the request, and the issues you contest. Serve the Applicants with the request, either personally or by mail, and also send it to the Secretary of the SEC, along with proof of service by affidavit, or, for lawyers, by certificate. Request notification of the date of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 Fifth Street NW., Washington, DC 20549. The Company and Account Two, Three Mellon Bank Center, Philadelphia, PA 19102. ManEquity, Inc., 9085 East Mineral Circle, Suite 300, Englewood, CO 80112.

FOR FURTHER INFORMATION CONTACT: Staff Attorney Clifford E. Kirsch (202) 272–3032 or Special Counsel Lewis B. Reich (202) 272–2061 (Office of Insurance Products and Legal Compliance).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier (800) 231–3282 (in Maryland (301) 253–4300).

Applicants' Representations and Statements

1. The Company is a stock life insurance company organized under the laws of Pennsylvania in 1977. Account Two is a separate account of the Company established under the laws of Pennsylvania for the purpose of funding variable annuity contracts. The assets of Account Two will be invested in shares of ManuLife Series Fund, Inc., a Maryland corporation registered under the 1940 Act as a diversified open-end management investment company. Account Two is registered under the 1940 Act as a unit investment trust. ManEquity, Inc., an indirect wholly-owned subsidiary of The Manufacturers Life Insurance Company, will be the principal underwriter of the variable annuity contracts funded through Account Two.

2. The Contracts provide for the deduction of an administration fee equal to 2% of the total Contract value (up to a maximum of $30) on any Contract anniversary that the total Contract value is less than $25,000 and for the deduction of that fee on a pro-rata basis upon full surrender of a Contract on a date other than a Contract anniversary if on the date of full surrender the total Contract value is less than $25,000. The fee will be deducted from the fixed

portion of the Contract and, if necessary, from the value of the Contract in Account Two.

3. In addition, the Contracts provide for a withdrawal charge (contingent deferred sales charge) to be assessed in some circumstances when a cash withdrawal is made from a Contract or a Contract is surrendered in full. Amounts surrendered or withdrawn during a Contract year which exceed 10% of the total Contract value as of the most recent Contract anniversary will be subject to a withdrawal charge based upon when the purchase payments to which such amounts are deemed attributable were made, as follows:

Number of complete contract years elapsed since purchase payment was made-	Withdrawal charge (percent)
0	8
1	8
2	8
3	5
4	4
5	3
6	2
7	1
8	0

For purposes of determining the withdrawal charge applicable to a full surrender or cash withdrawal, any amount surrendered or withdrawn, other than an amount not subject to a withdrawal charge by reason of a 10% free-withdrawal provision, will be deemed to be a liquidation of a purchase payment, and the oldest previously unliquidated purchase payment will be deemed to have been liquidated first, then the next oldest and so forth. In no event will the sum of the withdrawal charges exceed 9% of total purchase payments made.

4. Finally, the Company proposes to deduct from the assets of Account Two a charge at an annual rate of 1.00% as compensation for the mortality and expense risks it assumes under the Contracts. The mortality risk assumed is the risk that annuitants may live for longer periods of time than the periods indicated in the mortality tables on which the Company calculated the annuity tables in the Contracts and the risk that mortality will cause a Contract to terminate prematurely before the assumed annuitization date. The expense risk assumed is that expenses in administering the Contracts will be greater than the Company estimated. Of the 1.00% charge, .10% is for the mortality risk and .90% is for the expense risk.

5. Applicants seek an exemption from sections 26(a) and 27(c)(2) of the 1940 Act to the extent necessary to permit the issuance and sale of the Contracts providing for such mortality and expense risks charge. Applicants represent that the 1.00% which the Company proposes to charge is within the range of industry practice for comparable annuity products. This representation is based upon an analysis made by the Company of publicly available information about selected similar industry products, taking into consideration such factors as any contractual right to increase charges above current levels, the existence of other charges, the number of transfers permitted without charge and the nature of the free withdrawal provisions. The Company will maintain at its service office, available to the Commission, a memorandum setting forth in detail the products analyzed in the course of, and the methodology and results of, the comparative survey made.

6. Applicants acknowledge that the withdrawal charge to be made under the Contracts is expected to be insufficient to cover all costs relating to the distribution of the Contracts and that if a profit is realized from the mortality and expense risks charge, all or a portion of such profit may be offset by distribution expenses not reimbursed by the withdrawal charge. In such circumstances a portion of the mortality and expense risks charge might be viewed as providing for a portion of the costs relating to distribution of the Contracts. Notwithstanding the foregoing, the Company has concluded that there is a reasonable likelihood that the proposed distribution financing arrangements made with respect to the Contracts will benefit Account Two and the Contractowners. The basis for such conclusion is set forth in a memorandum which will be maintained by the Company at its service office and will be available to the Commission. Moreover, the Company represents that Account Two will invest only in an underlying mutual fund which undertakes, in the event it should adopt any plan under Rule 12b-1 to finance distribution expenses, to have such plan formulated and approved by a board of directors, a majority of the members of which are not "interested persons" of such fund within the meaning of section 2(a)(19) of the Act.

For the Commission, by the Division of Investment Mangement, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[Release No. IC-15998; File No. 812-6763]

Application; The Manufacturers Life Insurance Co. of America, et al.

September 22, 1987.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "1940 Act").

Applicants: The Manufacturers Life Insurance Company of America ("Company"), Separate Account One of The Manufacturers Life Insurance Company of America ("Account One") and ManEquity, Inc.

Relevant 1940 Act Sections: Exemption requested pursuant to section 6(c) from sections 9(a), 13(a), 15(a) and 15(b) of the 1940 Act and Rule 6e-2(b)(15) thereunder.

Summary of Application: Applicants seek an order to permit the sale of shares of ManuLife Series Fund, Inc. to both variable annuity and variable life insurance separate accounts of the Company.

Filing Date: The application was filed on June 18, 1987.

Hearing or Notification of Hearing: If no hearing is ordered, the application will be granted. Any interested person may request a hearing on this application, or ask to be notified if a hearing is ordered. Any requests must be received by the SEC by 5:30 p.m., on October 19, 1987. Request a hearing in writing, giving the nature of your interest, the reason for the request, and the issues you contest. Serve the Applicants with the request, either personally or by mail, and also send it to the Secretary of the SEC, along with proof of service by affidavit, or, for lawyers, by certificate. Request notification of the date of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. The Company and Account One, Three Mellon Bank Center, Philadelphia, PA 19102. ManEquity, Inc., 9085 East Mineral Circle, Suite 300, Englewood, CO 80112.

FOR FURTHER INFORMATION CONTACT: Staff Attorney Clifford E. Kirsch (202) 272-3032 or Special Counsel Lewis B. Reich (202) 272-2061 (Office of Insurance Products and Legal Compliance).

SUPPLEMENTARY INFORMATION: Following is a summary of the application, the complete application is available for a fee from either the SEC's Public Reference Branch in person or the

SEC's commercial copier (800) 231–3282 (in Maryland (301) 253–4300).

Applicants' Representations and Statements

1. The Company is a stock life insurance company organized under the laws of Pennsylvania in 1977. It is authorized to do business in the District of Columbia and all States of the United States except New York. The Company is an indirect wholly-owned subsidiary of The Manufacturers Life Insurance Company, a mutual life insurance company based in Toronto, Canada.

2. Account One is a separate account of the Company established under the laws of Pennsylvania. Account One is used for certain scheduled premium variable life insurance contracts issued by the Company. Assets of Account One are invested in shares of ManuLife Series Fund, Inc. ("Fund"), a Maryland corporation registered under the 1940 Act as a diversified open-end management investment company. Account One is registered under the 1940 Act as a unit investment trust. ManEquity, Inc., also an indirect wholly-owned subsidiary of The Manufacturers Life Insurance Company, is the principal underwriter of the variable life insurance contracts participating in Account One. Pursuant to the provisions of Rule 6c–3 under the 1940 Act, the Company, Account One and ManEquity are relying on the provisions of Rule 6e–2 for the necessary exemptive relief to issue the contracts participating in Account One.

3. The Company proposes to issue certain variable annuity contracts which will be funded by Separate Account Two of The Manufacturers Life Insurance Company of America ("Account Two"), also a separate account of the Company established under the laws of Pennsylvania. Assets of Account Two will be invested in shares of the Fund. The Company has also established two additional separate accounts to fund flexible premium variable life insurance contracts, the assets of which are or will be invested in shares of the Fund. The variable life insurance policies funded by such accounts are or will be issued in reliance on the provisions of Rules 6c–3 and 6e–3(T) under the 1940 Act.

4. Since Fund shares will not be sold exclusively to variable life insurance separate accounts of the Company, Applicants request exemption from sections 9(a), 13(a), 15(a) and 15(b) of the Act and paragraph (b)(15) of Rule 6e–2 to the extent necessary to permit the sale of Fund shares to both variable annuity and variable life insurance separate accounts subject to the provisions of clauses (i) through (iv) of Rule 6e–2(b)(15) and the undertakings set forth below.

5. Applicants assert that there is no policy reason why the exemptions provided by paragraph (b)(15) of Rule 6e–2 should not apply solely because Account Two and other variable annuity separate accounts of the Company as well as Account One and other variable life insurance separate accounts invest in Fund shares. Applicants will comply with the following conditions:

(1) The Board of Directors of the Fund, constituted with a majority of disinterested directors, will monitor the Fund for the existence of any material irreconcilable conflict between the interests of variable annuity contractholders investing in the Fund and interests of holders of variable life insurance contracts investing in the Fund.

(2) The Company agrees that it will be responsible for reporting any potential or existing conflicts to the directors of the Fund.

(3) If a material irreconcilable conflict arises, the Company will, at its own cost, remedy such conflict up to and including establishing a new registered management investment company and segregating the assets underlying the variable annuity contracts and the variable life insurance contracts.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

Coast Guard

[CGD 87-072]

Meeting; Subcommittee on Marine Occupational Safety and Health, Chemical Transportation Advisory Committee

AGENCY: Coast Guard, DOT.

ACTION: Notice of meeting.

SUMMARY: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App. I), notice is hereby given of a meeting of the Subcommittee on Marine Occupational Safety and Health of the Chemical Transportation Advisory Committee (CTAC). The meeting will be held on Wednesday, November 4, 1987 in Room 6319, U.S. Coast Guard Headquarters, 2100 Second Street SW., Washington, DC. The meeting is scheduled to begin at 9:00 a.m. and end at 4:00 p.m.

In addition to subcommittee discussions concerning old and new business, the agenda for the meeting will include a morning presentation reviewing Coast Guard efforts to develop a comprehensive occupational safety and health program for marine hazardous chemical workers. The presentation will be given by a representative from Southwest Research, Inc., the Coast Guard's primary project contractor in this effort. During the afternoon session, public reports generated during the multi-year research and development effort will be available for review and discussion by subcommittee participants interested in specific aspects of the development.

FOR FURTHER INFORMATION CONTACT: Lieutenant Joseph Ocken or Mr. Mike Morrissette, U.S. Coast Guard Headquarters (G-MTH-1), 2100 Second Street SW., Washington, DC 20593, (202) 267-1217.

Dated: September 22, 1987.

J.W. Kime,

Rear Admiral, U.S. Coast Guard, Chief Office of Marine Safety, Security and Environmental Protection.

Federal Aviation Administration

[Summary Notice No. PE-87-25]

Petition for Exemption; Summary of Petitions Received; Dispositions of Petitions Issued; American Airlines, et al.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for exemption received and of dispositions of prior petitions.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption (14 CFR Part 11), this notice contains a summary of certain petitions seeking relief from specified requirements of the Federal Aviation Regulations (14 CFR Chapter I), dispositions of certain petitions previously received, and corrections. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of any petition or its final disposition.

DATE: Comments on petitions received must identify the petition docket number involved and must be received on or before: October 19, 1987.

ADDRESS: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rules Docket (AGC-204), Petition Docket No. _____, 800 Independence Avenue SW., Washington, DC 20591.

FOR FURTHER INFORMATION: The petition, any comments received, and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC-204), Room 915G, FAA Headquarters Building (FOB 10A), 800 Independence Avenue SW., Washington, DC 20591; telephone (202) 267-3132.

This notice is published pursuant to paragraphs (c), (e), and (g) of § 11.27 of Part 11 of the Federal Aviation Regulations (14 CFR Part 11).

Issued in Washington, DC, on September 22, 1987.

Denise D. Hall,

Manager, Program Management Staff.

PETITIONS FOR EXEMPTION

Docket No	Petitioner	Regulations affected	Description of relief sought
25259	American Airlines	§§ 121.411(a)(1), (a)(2), (a)(3), and (a)(6), 121.411(b) and 121.413(b) and (c).	To allow petitioners to utilize Aeroformation pilot simulators/flight instructors for the purpose of training petitioner's initial cadre of pilots in the Airbus Industrie A300-600R type airplane in Toulouse, France, without those instructors holding appropriate U.S. certificates and ratings and without their meeting all of the applicable training requirements of Subpart N of Part 121 of the FAR
¥			*Partial Grant, September 10, 1987.*

PETITIONS FOR EXEMPTION—Continued

Docket No	Petitioner	Regulations affected	Description of relief sought
21882	China Airlines Limited	§§ 61.77(a) and (b), 63.23 (a) and (b)	To allow the issuance of U.S. special purpose pilot and flight engineer certificates to petitioner's airmen, without meeting the requirement that they hold a current foreign certificate or license issued by a foreign contracting State to the Convention on International Civil Aviation (ICAO). *Granted, September 10, 1987*
25192	Eastern Air Lines, Inc	§§ 121.685, 121.697(a), (b), (c), and (d)	To allow petitioner to substitute a computer application signature for the signed load manifest required by these sections. *Granted, September 3, 1987*
25008	Melvin M. Aman, et al	§ 121.383(c)	To allow petitioner and 38 other current and former pilots (petitioners) to continue to serve as a pilot in Part 121 air carrier operations after reaching their 60th birthday. Subsequent to the submission of the petition four of the petitioners have requested that their names be withdrawn. *Denied, September 8, 1987*
25351	USAir	§§ 121.371 (a) and 121.378	To allow petitioner to use foreign vendors to perform inspection repair, and overhaul work on airframe, engines, components, and equipment on petitioner's fleet of British aerospace BAC 1-11, Boeing 737-300, 737-200, and McDonnell-Douglas DC-9-30 aircraft, where such foreign vendors are the original equipment manufacturers of such equipment
25309	City of Pasadena	§ 45.29	To allow the petitioner to operate certain aircraft with the registration numbers placed on non-standard configuration.
25301	Condon & Forsyth	§§ 25.853 and 121.312(b)	To allow Airborne Express to operate certain aircraft without complying with the seat cushion flammability requirements in §§ 25.853 and 121.312(b)

OMB Number: 1545–0122
Form Number: 1118
Type of Review: Revision
Title: Computation of Foreign Tax Credit-Corporations

Description: Form 1118 is used by domestic and foreign corporations to claim a credit against tax for taxes paid to foreign countries. Schedule F (Form 1118) is used to reduce foreign taxes paid by corporations on foreign oil extraction income. The IRS uses Form 1118 and Schedule F (Form 1118) to determine if the corporation has computed the foreign tax credit correctly.

Respondents: Businesses or other for-profit
Estimated Burden: 175,590 hours
OMB Number: 1545–0242
Form Number: 6197
Type of Review: Extension
Title: Gas Guzzler Tax

Description: Form 6197 is used to compute tax on gas-guzzler automobiles under section 26 U.S.C. 4064. Tax is reported quarterly on Form 720. One Form 6197 is filed when production and sales of a model year is ended. Autos not meeting certain standards are taxable. IRS uses the information to verify computation of tax and compliance with the law.

Respondents: Individuals or households, Businesses or other for-profit, Small businesses or organizations
Estimated Burden: 90 hours
OMB Number: 1545–0582
Form Number: 1139
Type of Review: Revision
Title: Corporation Application for Tentative Refund

Description: Form 1139 is used by corporations to apply for a quick refund of taxes due to a net operating loss, net capital loss, unused business credit, or claim of right adjustment under section 1341(b). The information obtained is used to determine the validity of the application.

Respondents: Farms, Businesses or other for-profit, Small businesses or organizations
Estimated Burden: 6,738 hours
OMB Number: 1545–0704
Form Number: 5471, Schedules M, N, and O
Type of Review: Revision
Title: Information Return with Respect to a Foreign Corporation

Description: Form 5471 and its related schedules are used by U.S. persons that have an interst in a foreign corporation. The form is used to report income from the foreign corporation. The form and schedules are used to report a U.S. person's acquisition of a 5% interest in a foreign corporation; and to report income and deductions of a foreign personal holding company. The IRS uses Form 5471 to determine if U.S. persons have correctly reported income from the foreign corporation.

Respondents: Individuals or households, Businesses or other for-profit
Estimated Burden: 135,306 hours

Clearance Officer: Garrick Shear (202) 535–4297, Internal Revenue Service, Room 5571, 1111 Constitution Avenue NW., Washington, DC 20224,

OMB Reviewer: Milo Sunderhauf (202) 395–6880, Office of Management and Budget, Room 3208, New Executive Office Building, Washington, DC 20503.

U.S. Customs Service

OMB Number: 1515–0021
Form Number: 3499
Type of Review: Reinstatement
Title: Application and Approval to Manipulate, Examine, Sample or Transfer Goods

Description: Customs Form 3499 is used by importers or consignees as an application to request examination, sampling, repacking, or the transfer of merchandise under Customs supervision; manipulation of merchandise in a bonded warehouse; and an application for abandonment or destruction of merchandise in bond.

Respondents: Businesses or other for-profit, Small businesses or organizations
Estimated Burden: 13,740 hours.

Clearance Officer: B. J. Simpson (202) 566–7529, U.S. Customs Service, Room 6426, 1301 Constitution Avenue NW., Washington, DC 20229.

OMB Reviewer: Milo Sunderhauf (202) 395–6880, Office of Management and Budget, Room 3208, New Executive Office Building, Washington, DC 20503.

Dale A. Morgan,
Departmental Reports Management Officer.

BILLING CODE 4810–25–M

Public Information Collection Requirements Submitted to OMB for Review

Date: September 23, 1987.

The Department of Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1980, Pub. L. 96–511. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments to the OMB review enlisted and to the Treasury Department Clearance Officer, Department of the Treasury, Room 2224, 15th and Pennsylvania Avenue NW., Washington, DC 20220.

Internal Revenue Service

OMB Number: 1545–0971.
Form Number: 1040–ES.
Type of Review: Revision.
Title: Estimated Income Tax for Fiduciaries.

Description: Form 1040–ES is used by fiduciaries of estates and trusts to make estimated tax payments if their estimates tax is $500 or more. IRS used the data to credit taxpayers' accounts and to determine if the estimated tax has been properly computed and timely paid.

Respondents: Businesses or other for-profit, Small businesses or organizations.
Estimated Burden: 264,375 hours.

Clearance Officer: Garrick Shear, (202) 535–4297, Internal Revenue Service, Room 5571, 1111 Constitution Avenue NW., Washington DC 20224.

OMB Reviewer: Milo Sunderhauf, (202) 395–6880, Office of Management and Budget, Room 3208, New Executive Office Building, Washington, DC 20503.

Dale A. Morgan,
Departmental Reports Management Officer.

VETERANS ADMINISTRATION

Agency Form Under OMB Review

AGENCY: Veterans Administration.
ACTION: Notice.

The Veterans Administration has submitted to OMB for review the following proposal for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35). This document contains an extension and lists the following

information: (1) The department or staff office issuing the form, (2) the title of the form, (3) the agency form number, if applicable, (4) a description of the need and its use, (5) how often the form must be filled out, (6) who will be required or asked to report, (7) an estimate of the number of responses, (8) an estimate of the total number of hours needed to fill out the form, and (9) an indication of whether section 3504(h) of Pub. L. 96–511 applies.

ADDRESSES: Copies of the forms and supporting documents may be obtained from Patti Viers, Agency Clearance Officer (732), Veterans Administration, 810 Vermont Avenue NW., Washington, DC 20420, (202) 233–2146. Comments and questions about the items on the list should be directed to the VA's OMB Desk Officer, Joseph Lackey, Office of Management and Budget, 726 Jackson Place NW., Washington, DC 20503, (202) 395–7316.

DATE: Comments on the information collection should be directed to the OMB Desk Officer by November 27, 1987.

Dated: September 23, 1987.

By direction of the Administrator.

Frank E. Lalley,

Director, Office of Information Management and Statistics.

Extension

1. Department of Veterans Benefits
2. Report of Accidental Injury in Support of Claim for Compensation or Pension
3. VA Form 21–4176
4. This information is used to determine the veteran's eligibility for compensation and pension benefits.
5. On occasion
6. Individuals or households
7. 4,400 responses
8. 2,200 hours
9. Not applicable.

[FR Doc. 87–22301 Filed 9–25–87; 8:45 am]

BILLING CODE 8320–01–M

Veterans Administration Wage Committee; Meetings

The Veterans Administration, in accordance with Pub. L. 92–463, gives notice that meetings of the Veterans Administration Wage Committee will be held on:

Thursday, October 8, 1987, at 2:30 p.m.
Thursday, October 22, 1987, at 2:30 p.m.
Thursday, November 5, 1987, at 2:30 p.m.
Thursday, November 19, 1987, at 2:30 p.m.
Thursday, December 3, 1987, at 2:30 p.m.
Thursday, December 17, 1987, at 2:30 p.m.
Wednesday, December 30, 1987, at 2:30 p.m.

The meetings will be held in Room 304, Veterans Administration Central Office, 810 Vermont Avenue NW., Washington, DC 20420.

The Committee's purpose is to advise the Chief Medical Director on the development and authorization of wage schedules for Federal Wage System (blue-collar) employees.

At these meetings the Committee will consider wage survey specifications, wage survey data, local committee reports and recommendations, statistical analyses, and proposed wage schedules.

All portions of the meetings will be closed to the public because the matters considered are related solely to the internal personnel rules and practices of the Veterans Administration and because the wage survey data considered by the Committee have been obtained from officials of private business establishments with a guarantee that the data will be held in confidence. Closure of the meetings is in accordance with subsection 10(d) of Pub. L. 92–463, as amended by Pub. L. 94–409, and as cited in 5 U.S.C. 552b(c)(2) and (4).

However, members of the public are invited to submit material in writing to the Chairman for the Committee's attention.

Additional information concerning these meetings may be obtained from the Chairman, Veterans Administration Wage Committee, Room 1175, 810 Vermont Avenue NW., Washington, DC 20420.

Dated: September 21, 1987.

By direction of the Administrator.

Rosa Maria Fontanez,

Committee Management Officer.

Sunshine Act Meetings

Federal Register
Vol. 52, No. 187
Monday, September 28, 1987

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

THE COMMISSION OF FINE ARTS

The Commission of Fine Arts next scheduled meeting is Thursday, October 22, 1987 at 10:00 AM in the Commission's offices at 708 Jackson Place, NW., Washington, DC 20006 to discuss various projects affecting the appearance of Washington, DC, including buildings, memorials, parks, etc.; also matters of design referred by other agencies of the government. Handicapped persons should call the offices (566–1066) for details concerning access to meetings.

Inquiries regarding the agenda and requests to submit written or oral statements should be addressed to Mr. Charles Atherton, Secretary, Commission of Fine Arts, at the above address or call the above number.

Dated in Washington, DC September 22, 1987.

Charles H. Atherton,

Secretary.

[FR Doc. 87–22353 Filed 9–24–87; 11:31 am]

BILLING CODE 6330–01–M

COUNCIL ON ENVIRONMENTAL QUALITY

Date: September 24, 1987.

DATE, TIME, PLACE: Tuesday, October 6, 1987, 1:00 pm, Council on Enfironmental Quality Conference Room, First Floor, 722 Jackson Place, NW., Washington, DC 20503.

STATUS: Open.

MATTERS TO BE CONSIDERED.

1. The Council on Environmental Quality has held a series of public meetings on the issues of stratospheric ozone depletion and global warming. To date, the speakers have concentrated on the scientific aspects of these problems.

At this meeting, the Council will be hearing a presentation by Dr. Margaret Kripke, Chairman of the Department of Immunology, University of Texas Cancer Center. Dr. Kripke will address the human health implications of stratospheric ozone depletion.

The discussion will be limited to Dr. Kripke, the Council, and Council staff. Questions from the public will not be entertained.

2. Other matters may be discussed.

FOR FURTHER INFORMATION CONTACT: Lucinda Low Swartz, Deputy General Counsel, Council on Environmental Quality, 722 Jackson Place, NW., Washington, DC 20503. Telephone: (202) 395–5754.

A. Alan Hill,

Chairman.

[FR Doc. 87–22341 Filed 9–24–87; 10:16 am]

BILLING CODE 3125–01–M

MERIT SYSTEMS PROTECTION BOARD

TIME AND DATE: 1:30 p.m., Wednesday, September 30, 1987.

PLACE: Eighth Floor, 1120 Vermont Avenue NW., Washington, DC.

STATUS: Closed.

MATTERS TO BE CONSIDERED: *Greene* v. *Department of Health and Human Services,* PH07528510754, PH07528610683, and PH075285C0745; *Marchese* v. *Department of Navy,* PH07528610209; *Covington* v. *Department of Health and Human Services,* DC035182A0591, DC035182A3007, and DC035182A0687; and *Polite* v. *Department of Navy,* AT0315M8710151.

CONTACT PERSON FOR ADDITIONAL INFORMATION: Robert E. Taylor, Clerk of the Board, (202) 653–7200.

Date: September 24, 1987.

Robert E. Taylor,

Clerk of the Board.

[FR Doc. 87–22386 Filed 9–24–87; 2:18 pm]

BILLING CODE 7400–01–M

NATIONAL LABOR RELATIONS BOARD

TIME AND DATE: 2:00 p.m., Friday October 2, 1987.

PLACE: Board Conference Room, Sixth Floor, 1717 Pennsylvania Avenue, NW.

STATUS: Open to public observation.

MATTERS TO BE CONSIDERED: Regional Office Boundaries.

CONTACT PERSON FOR MORE INFORMATION: John C. Truesdale, Executive Secretary, National Labor Relations Board, Washington, DC 20570, Telephone (202) 254–9430.

Dated: Washington, DC, September 24, 1987.

By direction of the Board:

John C. Truesdale,

Executive Secretary, National Labor Relations Board.

[FR Doc. 87–22396 Filed 9–25–87; 3:18 pm]

BILLING CODE 7545–01–M

NATIONAL MEDIATION BOARD

TIME AND DATE: 2:00 P.M., Wednesday, October 7, 1987.

PLACE: Board Hearing Room 8th Floor, 1425 K Street, NW., Washington, DC.

STATUS: Open.

MATTERS TO BE CONSIDERED:

1. Ratification of the Board actions taken by notation voting during the month of September, 1987.

2. Other priority matters which may come before the Board for which notice will be given at the earliest practicable time.

SUPPLEMENTARY INFORMATION: Copies of the monthly report of the Board's notation voting actions will be available from the Executive Director's office following the meeting.

CONTACT PERSON FOR FURTHER INFORMATION: Mr. Charles R. Barnes, Executive Director, Tel: (202) 523–5920.

Date of Notice: September 23, 1987.

Charles R. Barnes,

Executive Director, National Mediation Board.

[FR Doc. 87–22393 Filed 9–24–87; 2:59 pm]

BILLING CODE 7550–01–M

NUCLEAR REGULATORY COMMISSION

DATE: Weeks of September 28, October 5, 12, and 19, 1987.

PLACE: Commissioners' Conference Room, 1717 H Street, NW., Washington, DC.

STATUS: Open and Closed.

MATTERS TO BE CONSIDERED:

Week of September 28

Thursday, October 1

2:00 p.m.—Discussion of Pending Investigations (CLOSED—Ex. 5 & 7)

3:30 p.m.—Affirmation/Discussion and Vote (*Public Meeting*)

a. Final Broad Scope Rule to Modify General Design Criteria 4 of Appendix A (Tenatative)

b. Alfred J. Morabito's Request for Modification of Order Granting Him a Hearing on Denial of a Senior Reactor Operator's License at Beaver Valley (Tentative)

Friday, October 2

10:00 a.m.—Briefing on Technical Specifications Improvement Project (*Public Meeting*)

Week of October 5—Tenative

Tuesday, October 6

2:00 p.m.—Briefing on Transportation and the Modal Study (*Public Meeting*)

Friday, October 9

10:00 a.m.—Affirmation/Discussion and Vote (*Public Meeting*) (if needed)

Week of October 12—Tentative

Friday, October 16

10:00 a.m.—Briefing on Status of Rancho Seco (*Public Meeting*)

11:30 a.m.—Affirmation/Discussion and Vote (*Public Meeting*) (if needed)

Week of October 19—Tentative

Wednesday, October 21

10:00 a.m.—Briefing on Status of Unresolved Safety/Generic Issues (*Public Meeting*)

2:00 p.m.—Briefing on the Federally Funded Research Development Center (FFRDC) (*Public Meeting*)

Thursday, October 22

10:00 a.m.—Discussion/Possible Vote on Full Power Operating License for Palo Verde–3 (*Public Meeting*)

2:00 p.m.—Briefing on Status of Licensee Fitness for Duty Initiatives (*Public Meeting*)

3:30 p.m.—Affirmation/Discussion and Vote (*Public Meeting*) (if needed)

Note.—Affirmation sessions are initially scheduled and announced to the public on a time-reserved basis. Supplementary notice is provided in accordance with the Sunshine Act as specific items are identified and added to the meeting agenda. If there is no specific subject listed for affirmation, this means that no item has as yet been identified as requiring any Commission vote on this date.

To verify the status of meetings call (Recording)—(202) 634–1498.

CONTACT PERSON FOR MORE INFORMATION: Robert McOsker (202) 634–1410.

Robert B. McOsker,

Office of the Secretary.

September 24, 1987.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 796 and 797

[OPTS-42095; FRL-3253-4]

Toxic Substances Control Act Test Guidelines

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Under the Toxic Substances Control Act (TSCA), EPA proposes to add new test guidelines of general procedures for laboratory testing for an effect or characteristic deemed important for evaluating the fate and environmental hazards of a chemical substance or mixture (test substance). These general guidelines may be utilized in developing chemical-specific TSCA section 4 rules under 40 CFR Part 799.

DATE: Submit written comments on or before November 27, 1987.

ADDRESS: Submit written comments, identified by the document control number (OPTS-42095), in triplicate to: TSCA Public Information Office (TS-793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, Rm. NE-G004, 401 M St., SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Edward A. Klein, Director, TSCA Assistance Office (TS-799), Office of Toxic Substances, Environmental Protection Agency, Rm. E-543, 401 M St., SW., Washington, DC 20460, (202)-554-1404.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of September 27, 1985 (50 FR 39252), EPA issued 40 CFR Parts 796, 797, and 798, which codified TSCA test guidelines that were previously prepared by EPA. At that time, EPA stated that new guidelines would be added as the state of the art evolves and the need for new guidelines arises. This document proposes to codify certain new guidelines that may be used to establish test standards in future TSCA section 4 test rules in 40 CFR Part 799. The test guidelines are state-of-the- art methods for generating test data and, when cited in chemical-specific test rules, would assist the Agency in reaching decisions regarding the risk of a particular chemical. These guidelines have been extensively reviewed by both internal and external experts in the disciplines covered by the guidelines.

Codification of these guidelines would not impose any regulatory obligation on any person who may be subject to a TSCA section 4 test rule. Specific guidelines would not become mandatory test standards until they are promulgated as such in individual section 4 rulemakings. Therefore, when promulgated in specific TSCA test rules, the pertinent TSCA guidelines will become the test standards for only that particular section 4 rule. EPA may propose modifications to the various guidelines as they are used for chemical-specific test rules. In each chemical-specific rule, the proposed test standards and any modifications would be subject to public comment.

II. Rulemaking Record

EPA has established a record for this rulemaking, docket number OPTS-42095. This record contains the basic information considered by the Agency in developing this proposal and appropriate **Federal Register** documents.

This record includes the following information:

1. Support documents for each test guideline providing rationales for conditions specified in each guideline.
2. List of experts that reviewed each of the guidelines.
3. Copies of all references cited in the guidelines.

III. Regulatory Assessment Requirements

A. Executive Order 12291

Under Executive Order 12291, EPA must judge whether a regulation is "major" and therefore subject to the requirement of a Regulatory Impact Analysis. EPA has determined that this proposed rule is not major because it does not meet any of the criteria set forth in section 1(b) of the Order, i.e., it will not have an annual effect on the economy of at least $100 million, will not cause a major increase in prices, and will not have a significant adverse effect on competition or the ability of U.S. enterprises to compete with foreign enterprises.

The proposed regulation was submitted to the Office of Management and Budget (OMB) for review as required by Executive Order 12291. Any written comments from OMB to EPA, and any EPA response to those comments, are included in the rulemaking record.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (15 U.S.C. 601 *et seq.*, Pub. L. 96-354, September 19, 1980), EPA is certifying that these guidelines, if promulgated, will not have a significant impact on a substantial number of small businesses because: (1) They are not expected to perform testing themselves, or to participate in the organization of the testing effort; (2) they will experience only very minor costs in securing exemption from testing requirements; and (3) they are unlikely to be affected by reimbursement requirements.

C. Paperwork Reduction Act

OMB has approved the information collection requirements contained in this proposed rule under the provisions of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*), and has assigned OMB control number 2070-0033. Submit comments on these requirements to the Office of Information and Regulatory Affairs: OMB, 726 Jackson Place, NW., Washington, DC 20503, marked "Attention: Desk Officer for EPA." The final rule will respond to any OMB or public comments on the information collection requirements.

List of Subjects in 40 CFR Parts 796 and 797

Chemical fate, Chemicals, Environmental effects, Environmental protection, Hazardous substances, Incorporation by reference, Laboratories, Reporting and recordkeeping requirements.

Date: August 14, 1987.

John A. Moore,

Assistant Administrator for Pesticides and Toxic Substances.

Therefore, it is proposed that Chapter I of Title 40 of the Code of Federal Regulations be amended as follows:

PART 796—[AMENDED]

1. In Part 796:

a. The authority citation continues to read as follows:

Authority: 15 U.S.C. 2603.

b. Section 796.3510 is added to Subpart D to read as follows:

§ 796.3510 Hydrolysis as a function of pH and temperature.

(a) *Introduction*—(1) *Background and purpose.* (i) The majority of the earth's surface is covered by water in the form of oceans, seas, rivers, lakes, streams, or ponds. As a result, chemical substances or mixtures (test substances) released to the environment are likely to enter aqueous media and could undergo transformation via hydrolysis. Hydrolysis represents the transformation of a chemical substance by reaction with water into new chemicals different from their precursors. Certain classes of these substances, upon entering aquatic

media, can undergo hydrolysis, which is one of the most common chemical reactions controlling stability and is, therefore, one of the principal chemical transformation pathways of these substances in the environment.

(ii) Since hydrolysis can be such an important chemical degradation pathway for certain classes of chemical substances, it is necessary, in assessing the fate of these chemicals in the environment, to know whether, at what rate, and under what conditions a substance will hydrolyze. Some of these reactions can occur so rapidly that there may be greater concern for the transformation products than for the parent substance. In other cases, a chemical substance will be resistant to hydrolysis under typical environmental conditions; while in other instances, the substance may have an intermediate stability that can result in the need for an assessment of both the parent substance and the transformation products. The importance of hydrolysis in aqueous media in the environment can be determined quantitatively from data on hydrolysis rate constants and half-lives.

(iii) The test guideline in § 796.3500 of this Part was developed to determine hydrolysis rate constants and half-lives of test substances at any pH of environmental concern at 25 °C. However, the temperature of aquatic media in the United States can vary anywhere from near 0 °C in the winter in the northern latitudes to near 30 °C in the summer in the southern latitudes. Thus, the test guideline in this section was developed to determine hydrolysis rate constants and half-lives of substances at any environmentally relevant pH and temperature anywhere in the United States.

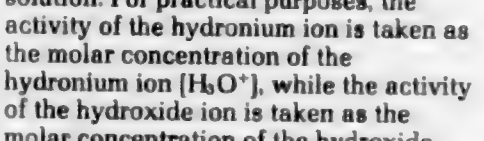
(2) *Definitions and units.* (i) "Hydrolysis" is defined as a reaction of an organic chemical with water such that one or more bonds are broken and the reaction products incorporate the elements of water (H_2O). This type of transformation often results in the net exchange of the group X, in an organic chemical substance RX, for the OH group from water. This reaction can be written as

Equation 1

$$RX + HOH \longrightarrow ROH + HX .$$

Another result of hydrolysis can be the incorporation of both H and OH in a single product. An example of this reaction is the hydrolysis of an epoxide which can be represented by the reaction

Equation 2



(ii) An "elimination reaction" means the reaction of an organic chemical substance RX in water in which the X group (as HX) is lost. These reactions generally follow the same type of rate laws that hydrolysis reactions follow, and, therefore, are also covered in this test guideline.

(iii) A "first-order reaction" means a reaction in which the rate of disappearance of the test substance is directly proportional to the concentration of the test substance and is not a function of the concentration of any other substance present in the reaction mixture.

(iv) A "second-order reaction" means a reaction in which the rate of disappearance of a test substance is directly proportional to the product of the first power of the concentration of the test substance and the first power of the concentration of another species in the reaction mixture.

(v) The half-life "($t_{1/2}$" of a test substance means the time required for the concentration of the test chemical to be reduced to one-half its initial concentration.

(vi) The "pH" of an aqueous solution means the negative decadic logarithm of the activity of the hydronium ion in solution. For practical purposes, the activity of the hydronium ion is taken as the molar concentration of the hydronium ion [H_3O^+]. Thus, pH is defined mathematically as

Equation 3

$$pH = -\log[H_3O^+].$$

(vii) The "ion product of water (K_w)" means the product of the activities of the hydronium and hydroxide ions in solution. For practical purposes, the activity of the hydronium ion is taken as the molar concentration of the hydronium ion [H_3O^+], while the activity of the hydroxide ion is taken as the molar concentration of the hydroxide ion [OH^-]. Thus,

Equation 4

$$K_w = [H_3O^+][OH^-].$$

(viii) The "pK_w" means the negative decadic logarithm of K_w. Thus,

Equation 5

$$pK_w = -\log K_w.$$

(ix) The "specific acid catalyzed rate constant (k_H)" means the second-order rate constant for the hydrolysis of a chemical catalyzed by the hydronium ion (H_3O^+). The units of k_H are in molar^{-1} time^{-1}.

(x) The "specific base catalyzed rate constant (k_{OH})" means the second-order rate constant for the hydrolysis of a chemical substance catalyzed by the hydroxide ion (OH^-). The units of k_{OH} are in molar^{-1} time $^{-1}$.

(xi) The "neutral water rate constant (k_N)" means the pseudo first-order rate constant for the reaction of a chemical substance with water. The units of k_N are in time^{-1}.

(3) *Principle of the test method*—(i) *Rate of hydrolysis as a function of pH at a fixed temperature.* (A) At a fixed temperature, the rate law for the hydrolysis of a substrate RX can be put in the form—

Equation 6

$$-(d[RX]/dt) = k_h[RX] = k_H[H_3O^+][RX] + k_{OH}[OH^-][RX] + k_N[H_2O][RX],$$

where k_H, k_{OH}, and k'_N are the second-order rate constants for acid and base catalyzed and neutral water processes, respectively. In dilute solutions, such as are encountered in this test guideline, water is present in great excess, and its concentration is, therefore, essentially constant during the course of the hydrolysis reaction. At a fixed pH, the reaction becomes pseudo first-order and the net hydrolysis rate constant k_h is given by the expression—

Equation 7

$$k_h = k_H[H_3O^+] + k_{OH}[OH^-] + k_N,$$

where k_N is now the pseudo first-order neutral water rate constant. Since this is a first-order process, the half-life ($t_{1/2}$) is independent of the concentration of a test substance and is given by the expression—

Equation 8

$$t_{1/2} = 0.693/k_h.$$

At a fixed pH and temperature, equation 6 in this paragraph can be integrated to yield the first-order rate expression—

Equation 9

$$\ln([C_o]/[C_t]) = k_h t,$$

where $[C_o]$ and $[C_t]$ represent the molar concentration of RX, the test substance, at time zero and t, and k_h is the net hydrolysis rate constant.

(B) In order to determine k_h as a function of pH, at a fixed temperature T_j, it is necessary to obtain the values of k_H, k_{OH}, and k_N in equation 7 under

paragraph (a)(3)(i)(A) of this section. This can be accomplished by measuring k_h at three different pH's at a fixed temperature T_j and solving the three equations for k_H, k_{OH}, and k_N. This has been carried out mathematically and the results are summarized below. Equation 7, under paragraph (a)(3)(i)(A) of this section can be written in the following form:

Equation 10

$$K_{h(i)} = k_H[H_3O^+] + k_{OH}[OH^-] + k_N,$$

where i corresponds to the pH at which the hydrolysis rate constant k_h is measured. For the boundary conditions—

Equation 11

i=1, pH=x
i=2, pH=x+y
i=3, pH=x+y+z.

When the lowest pH is 3 and the increments are at least 2—, i.e., if $x>2$, $y>2$, $z>2$, then k_H, k_{OH}, and k_N are given by the following mathematical expressions:

Equation 12

$$k_H = 10^x k_{h(1)} - 10^x k_{h(2)} + 10^{(x+z)} k_{h(3)};$$

Equation 13

$$k_{OH} = 10^{(pK_W - x - 2y - z)} k_{h(1)} - 10^{(pK_W - y - z)} k_{h(2)} + 10^{(pK_W - z)} k_{h(3)};$$

Equation 14

$$k_N = -10^{-y} k_{h(1)} + k_{h(2)} - 10^{-z} k_{h(3)}.$$

(C) The term pK_w that appears in equation 13 under paragraph (a)(3)(i)(B) of this section can be calculated from equation 5 under paragraph (a)(2)(viii) of this section and the following equation:

Equation 15

$$\log K_w = -(6014/T) - 23.65 \log T + 64.70,$$

where T is the absolute temperature in °K, T=t+273.2 and t is the temperature in °C.

(D) For 25 °C and x=3, y=z=4, the pH values for i=1, 2, and 3 correspond to 3, 7, and 11 (using equation 11 under paragraph (a)(3)(i)(B) of this section); pK_w=14.00 (using equation 1 under paragraph (a)(2)(viii) of this section and equation 15 under paragraph (a)(3)(i)(C) of this section); and equations 12, 13, and 14 under paragraph (a)(3)(i)(B) of this section reduce to the same equations, equation 5 of the test guideline under § 796.3500 of this part, entitled "Hydrolysis as a function of pH at 25 °C."

(E) To experimentally determine k_H, k_{OH}, and k_N at temperature T_j, the three pH's 3, 7, and 11 have been chosen. It should be noted that the pH's need not be precisely 3, 7, and 11, but must be close to these pH values (e.g., pH±0.3). However, the pH must be fixed and measured precisely to ±0.03 pH units. Solutions of test substance are prepared at an initial molar concentration of 10^{-3} M or less in buffered distilled water at pH's 3, 7, and 11 [C_o]. The solutions are placed in a constant temperature bath controlled to ±0.1 °C at temperature t_j(°C), or T_j(K), and the concentration of test substance is measured at regular time intervals [C_t] to provide a minimum of 7 time points between 10 and 80 percent hydrolysis. Linear regression analysis of these data in equation 9 under paragraph (a)(3)(i)(A) of this section gives a slope equal to k_h. From the exact values of the three pH's in equation 11 under paragraph (a)(3)(i)(B) of this section, x, y, and z are calculated. Using the precise values of x, y, and z and the experimental values of $k_{h(i)}$ at the three pH's (i=1, 2, 3) in equations 12, 13, and 14 under paragraph (a)(3)(i)(B) of this section, along with pK_w (calculated from equation 5 under paragraph (a)(2)(viii) of this section and equation 15 under paragraph (a)(3)(i)(C) of this section at temperature T_j, k_H, k_{OH}, and k_N can be calculated.

(F) The hydrolysis rate constant at any pH of environmental concern at temperature T_j can be calculated using the values of k_H, k_{OH}, k_N, $[H_3O^+]$, and $[OH^-]$ in equation 7 under paragraph (a)(3)(i)(A) of this section. Finally, the half-life of test substance can be calculated by substituting the value of k_h in equation 8 under paragraph (a)(3)(i)(A) of this section.

(ii) *The rate of hydrolysis as a function of pH and temperature.* (A) In order to calculate k_h at any temperature of environmental concern, it is necessary to determine k_H, k_{OH}, and k_N as a function of the temperature T (K). This can be accomplished by using the Arrhenius equation for the three different rate processes—

Equation 16

$$k_H = A_H \exp(-E_H/RT)$$

Equation 17

$$k_{OH} = A_{OH} \exp(-E_{OH}/RT)$$

Equation 18

$$k_N = A_N \exp(-E_N/RT),$$

where A_H, A_{OH}, and A_N are constants and E_H, E_{OH}, and E_N correspond to the energy of activation for the acid, base, and neutral water processes; T is the absolute temperature in K; and R is the gas constant, which equals 1.99×10^{-3} kcalories/mole or 8.31×10^{-3} kjoules/mole. Equations 16, 17, and 18 in this paragraph are conveniently transformed to the following expressions

Equation 19

$$\ln k_H = \ln A_H - (E_H/R)(1/T)$$

Equation 20

$$\ln k_{OH} = \ln A_{OH} - (E_{OH}/R)(1/T)$$

Equation 21

$$\ln k_N = \ln A_N - (E_N/R)(1/T).$$

(B) Paragraph (a)(3)(i) of this section describes a procedure for determining k_H, k_{OH}, and k_N by measuring k_h at pH's 3, 7, and 11 in buffered distilled water at temperature T_j. These experiments are repeated at two other elevated temperatures T_k and T_l, each temperature being separated by at least 15 °C (15 K). These experiments yield k_H, k_{OH}, and k_N as a function of the temperatures T_j, T_k, and T_l. Using these data in equations 19, 20, and 21 under paragraph (a)(3)(ii)(A) of this section and linear regression analysis, A_H, A_{OH}, A_N, E_H, E_{OH}, and E_N can be determined.

(C) With the appropriate Arrhenius constants A and E in equations 16, 17, and 18 under paragraph (a)(3)(ii)(A) of this section, k_H, k_{OH}, and k_N can be calculated at any environmentally relevant temperature T_m of concern. At a fixed $(pH)_n$ of environmental concern, $[H_3O^+]_n$ and $[OH^-]_n$ can be calculated; and using these results in equation 7 under paragraph (a)(3)(i)(A) of this section along with k_H, and k_{OH}, and k_N, k_h can be calculated. The corresponding half-life can be calculated by using k_h in equation 8 under paragraph (a)(3)(i)(A) of this section.

(4) *Applicability and specificity.* (i) There are several different common classes of organic chemical substances that are subject to transformation by hydrolysis. These classes of substances include alkyl halides, epoxides, ethers, esters, amides, carbamates, phosphoric and phosphonic esters, lactones, and anhydrides. Processes other than nucleophilic displacement by water can also take place. Among these are elimination reactions that exhibit kinetic behavior similar to hydrolysis and are, therefore, also covered in this test guideline. This test guideline is not applicable to the above classes of chemicals which contain functional groups which ionize or protonate and are located close to the hydrolytic reaction center.

(ii) For most test substances, the hydrolysis experiments should be carried out at pH's 3, 7, and 11. However, for a few chemicals, the rate of hydrolysis could be too rapid at pH's 3 and 11 so that measuring the loss of test substance would be too difficult. For these substances, the hydrolysis experiments should be carried out at pH's 5 and/or 9 because the rates are reduced by approximately a factor of 100 relative to pH's 3 and/or 11. At pH's 5, 7, and 9, equations 12, 13, and 14

under paragraph (a)(3)(i)(B) of this section are still applicable. If the rates are still too fast at pH's 5 and/or 9, then the pH's should be adjusted to give rates that are easily measured in the laboratory.

(b) *Test procedures*—(1) *Test conditions*—(i) *Special laboratory equipment.* Special laboratory equipment shall include:

(A) A thermostatic bath that can be controlled to 0.1 °C in the temperature range 10–90 °C;

(B) A pH meter with an accuracy of ±0.03 pH units or better; and

(C) Stoppered volumetric flasks (no grease) or glass ampoules that can be sealed.

(ii) *Purity of water.* Reagent-grade water shall be used (e.g., water meeting ASTM Type IIA standards or an equivalent grade). ASTM Type IIA water is described in ASTM D–1193–77, "Standard Specification for Reagent Water." This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. Copies may be obtained from (insert the name of standard producer or publisher and address). Copies may be inspected at Rm. NE–G004, Environmental Protection Agency, 401 M St., SW., Washington, DC, or at the Office of the Federal Register, 1100 L St., NW., Rm. 8301, Washington, DC.

(iii) *Sterilization.* It is required that all glassware be sterilized, aseptic conditions be used in the preparation of all solutions, and aseptic conditions be used in carrying out all hydrolysis experiments to minimize or eliminate biodegradation. Glassware can be sterilized in an autoclave or by any other suitable nonchemical methods.

(iv) *Temperature controls.* All hydrolysis experiments must be carried out at a temperature controlled to ±0.1 °C.

(v) *Volatile chemical substances.* If a test substance is volatile, it is extremely important to take special precautions when carrying out hydrolysis experiments, especially at very high temperatures. Thus, the reaction vessels must be effectively sealed. Sealed tubes or tubes with gas-tight Mininert valves are recommended for elevated temperature studies. At lower temperatures, volumetric flasks or tubes with Teflon-lined screw caps can often be used successfully. Volumetric or other glass-stoppered flasks should be used without grease. In addition, the reaction vessel should be almost completely filled, and when conducting the hydrolysis experiments, especially at elevated temperatures, it is extremely important to submerge the reaction vessel completely below the fluid in the constant-temperature bath.

(vi) *pH.* (A) It is recommended that all hydrolysis experiments be performed at pH's of approximately 3, 7, and 11 but fixed precisely to ±0.03 pH units. Buffers listed in paragraph (b)(2)(i)(A) of this section are strongly recommended.

(B) In order to measure the pH accurately, the pH meter must be calibrated with NBS primary and secondary standards. In addition, some hydrophobic test substance could adsorb to the surface of the glass electrode in the pH meter and cause anomalous kinetic results. Hence, for these hydrophobic substances, the glass electrode should be checked for contamination.

(vii) *Concentration of solutions of test substances.* It is required that the concentration of the test substance be less than one-half its solubility in water and not greater than 10^{-3} M.

(viii) *Buffers.* For certain test substances, buffers may catalyze the hydrolysis reaction. If this is suspected, then hydrolysis rate determinations must be carried out with the appropriate buffers and the same experiments must be repeated at buffer concentrations lowered by at least a factor of five. If the hydrolysis reaction produces a change of greater than 0.03 pH units in the lower concentration buffers at the end of the measurement time, then the test substance concentration must be lowered by at least a factor of five. Alternatively, test substance concentration and buffer concentration may be both lowered simultaneously by a factor of five. A sufficient criterion for minimization of buffer catalysis is an observed equality in the hydrolysis rate constant of two different solutions differing in buffer or test substance concentration by a factor of five.

(ix) *Light sensitive test chemicals.* The solution absorption spectrum should be employed to determine whether a particular test chemical is potentially subject to photolytic transformation upon exposure to light. The absorption spectrum can be obtained by using the test guideline under § 796.1050 of this Part, entitled "Absorption in aqueous solution: ultraviolet/visible spectra." For substances that absorb light of wavelengths greater than 290 nm, it is recommended that the experiments be carried out by wrapping the reaction vessels with aluminum foil, by the use of amber or red colored glassware, by the use of amber or red safelights, or any other suitable technique which will eliminate the possibility of photolytic transformation.

(x) *Substances susceptible to oxidation.* If a test substance is suspected of being susceptible to oxidation with air, the following experiments should be performed. At a fixed pH and temperature, the rate of hydrolysis should be determined with and without purging the reaction solutions with purified argon or nitrogen gas. If the rate constant k_h measured in the unpurged solution is faster than the rate constant in the purged solution, then air oxidation may be occurring and all reaction solutions should be purged before all hydrolysis rate measurements are performed. For volatile test substances, the buffer solution must be purged before adding the test substance.

(xi) *Chemical analysis of solutions of test substance.* In determining the concentration of the test substance in solution, the most applicable analytical method may be employed. Chromatographic methods are recommended because of their compound specificity in analyzing the parent chemical without interferences from impurities. Whenever practicable, the chosen method should have a precision within ± 5 percent. The test guideline requires that the specific analytical technique utilized be completely described.

(2) *Preparations*—(i) *Reagents and solutions*—(A) *Buffer solutions.* (*1*) Prepare buffer solutions using reagent-grade chemicals and reagent-grade water as follows:

(*i*) pH 3: Use 500 mL of 0.100 M potassium hydrogen phthalate ($KHC_8H_4O_4$) and 223 mL of 0.100 M hydrochloric acid, diluted to 1.000 L with water.

(*ii*) pH 5: Use 250 mL of 0.100 M potassium hydrogen phthalate and 113 mL of 0.100 M sodium hydroxide, diluted to 500 mL with water.

(*iii*) pH 7: Use 500 mL of 0.100 M potassium dihydrogen phosphate (KH_2PO_4) and 291 mL of 0.100 M sodium hydroxide, diluted to 1.000 L with water.

(*iv*) pH 9: Use 250 mL of 0.0250 M borax ($Na_2B_4O_7$) and 23 mL of 0.100 M hydrochloric acid, diluted to 500 mL with water.

(*v*) pH 11: Use 500 mL of 0.0500 M sodium bicarbonate ($NaHCO_3$) and 227 mL of 0.100 M NaOH, diluted to 1.000 L with water.

(*2*) Recommended buffers at other pH's are listed in the test guideline under § 796.3500 of this Part.

(B) *Adjustment of buffer concentrations.* (*1*) The concentrations of all the buffer solutions are the maximum concentrations to be employed in carrying out hydrolysis experiments. If the initial concentration

of the test substance is less than 10^{-3} M, it is extremely important that the buffer concentrations be lowered by a corresponding amount, e.g., if the initial concentration of the test substance is 10^{-4} M, then reduce the concentration of the buffers by a factor of 10. In addition, for those reactions in which an acid or base is not a reaction product, then use the minimum buffer concentration necessary for maintaining the pH within ±0.03 units.

(*2*) Check the pH of all buffer solutions with a pH meter at temperature T_j and adjust the pH to the proper value with acid or base, if necessary.

(C) *Preparation of test substance solution.* (*1*) If the test substance is readily soluble in water, prepare an aqueous solution of the test substance in the appropriate buffer and determine the concentration of the test substance [C_o]. Alternatively, a solution of the substance in pure water may be prepared and added to an appropriate buffer solution, and the concentration of the test substance may then be determined. In the latter case, it is important that the aliquot be small enough so that the concentration of the buffer in the final solution and the pH of the solution remain essentially unchanged. Do not employ heat in dissolving the test substance. The final concentration of the test substance must not be greater than one-half its solubility in water and not greater than 10^{-3} M.

(*2*) If the test substance is too insoluble in pure water to permit reasonable handling and reliable analysis, it is recommended that the substance be dissolved in reagent-grade acetonitrile (or reagent-grade ethanol if the hydrolysis experiments are carried out at temperatures above 80 °C), and buffer solution is then added to an aliquot of the acetonitrile (or ethanol) solution. Do not employ heat to dissolve the substance in acetonitrile (or ethanol). The final concentration of the test substance must not be greater than one-half its solubility in water and not greater than 10^{-3} M. In addition, it is extremely important that the final concentration of acetonitrile (or ethanol) be 1 volume percent or less.

(3) *Performance of the test.* (i) Prepare the test substance solution as described in paragraph (b)(2)(i)(C) of this section at pH's of approximately 3, 7, and 11. Measure the pH of each solution to ± 0.03 pH units at temperature T_j, where T_j corresponds to the temperature of the constant temperature bath where the hydrolysis experiments will be carried out. Record the exact values of the three pH's and the temperature, T_j, of the constant temperature bath to 0.1 °C (0.1 K) or less. For each kinetic experiment at each pH: measure the initial concentration of the test substance [C_o] in duplicate; measure the concentration of test substance in duplicate at regular time intervals [C_t] to provide a minimum of 7 time points with the extent of hydrolysis between 10 and 80 percent; and repeat each rate measurement once. Five of the 7 time points should be between 20 and 70 percent hydrolysis. Rates should be rapid enough so that 70 to 80 percent of the test substance hydrolyzes within 1 week.

(ii) If the pH at the end of the concentration measurements has changed by more than 0.03 units from the initial pH, repeat the experiments using a solution having a test substance concentration lowered sufficiently to keep the pH variation within 0.03 pH units.

(iii) Repeat the above experiments at two elevated temperatures, T_k and T_l, each temperature separated by at least 15 °K (15 °C).

(4) *Analytical methodology.* Select an analytical method that is most applicable to the analysis of the test substance (paragraph (b)(1)(xi) of this section).

(c) *Data and reporting*—(1) *Treatment of results*—(i) *Rate of hydrolysis as a function of pH at a fixed temperature.*

(A) The objective of this set of experiments is to determine k_H, k_{OH}, and k_N of the test substance at a fixed temperature T_j, from the rates of hydrolysis at the three pH's (3, 7, and 11). This can be accomplished by the following steps.

(*1*) Hydrolysis experiments shall be carried out at three pH's at a fixed temperature T_j, and the molar concentration of test substance is measured as a function of the time. These data are used to determine $k_{h(i)}$ at the three pH's (i.e., pH's 3, 7, and 11 corresponding to i=1, 2, 3), and using these data in equation 9 under paragraph (a)(3)(i)(A) of this section and linear regression analysis with ln([C_o]/[C_t]) as the dependent variable and t as the independent variable, the slope of the best straight line is obtained. The slope of this line is $k_{h(i)}$.

(*2*) From equation 11 under paragraph (a)(3)(i)(B) of this section and the exact values of the pH's (measured precisely to 2 decimal places), calculate the values of x, y, and z.

(*3*) Calculate the value of pK_w, at T_j, from the value of log K_w from equation 15 under paragraph (a)(3)(i)(C) of this section and $pK_w = -\log K_w$.

(*4*) Using 12, 13, and 14 under paragraph (a)(3)(i)(B) of this section and the values of $k_{h(1)}$, $k_{h(2)}$, $k_{h(3)}$, x, y, z, and pK_w, calculate k_H, k_{OH}, and k_N.

(B) [Reserved]

(ii) *Rate of hydrolysis as a function of pH and temperature.* The objective of this set of experiments is to determine the rate of hydrolysis and half-life of the test substance at any pH and temperature of environmental concern.

(A) *The rate constants k_H, k_{OH}, and k_N as a function of temperature.* Hydrolysis experiments shall be carried out at three pH's at three different temperatures T_j, T_k, and T_l and k_H, k_{OH}, and k_N are calculated as described in paragraph (c)(1)(i) of this section. Using these data in equations 19, 20, and 21 under paragraph (a)(3)(ii)(A) of this section and linear regression analysis, A_H, A_{OH}, A_N, E_H, E_{OH}, and E_N can be calculated. For example, consider the experimental data for k_H at T_j, T_k, and T_l. Using linear regression analysis of these data in equation 19 with ln k_H as the dependent variable and (1/T) as the independent variable (with T in K), the slope and y-intercept can be calculated. From equation 19, the slope is equal to (E_H/R); and using the value of $R = 8.3 \times 10^{-3}$ kjoules/mole, E_H can be calculated. From equation 19, the y-intercept is equal to ln A_H; hence, A_H can be calculated.

(B) *Rate of hydrolysis and the half-life in the environment.* The calculation of the rate of hydrolysis and the half-life of the test substance at any temperature T_m and $(pH)_n$ of environmental concern can be accomplished by the following steps.

(*1*) Using equations 16, 17, and 18 under paragraph (a)(3)(ii)(A) of this section and the values of A_H, A_{OH}, A_N, E_H, E_{OH}, and E_N determined above, calculate k_H, k_{OH}, and k_N at any temperature T_m of environmental concern.

(*2*) Calculate the ion product of water, K_w, and T_m using equation 15 under paragraph (a)(3)(i)(C) of this section.

(*3*) At a given $(pH)_n$ of environmental concern, $(pH)_n$ is equal to $-\log [H_3O^+]_n$ and $[OH^-]_n$ is equal to $K_w/[H_3O^+]_n$. From the value of $(pH)_n$, calculate $[H_3O^+]_n$; and from the value of K_w calculated from step (*2*) and $[H_3O^+]_n$, calculate $[OH^-]_n$.

(*4*) Calculate k_h using the values of $[H_3O^+]_n$, $[OH^-]_n$, k_H, k_{OH}, and k_N in equation 7 under paragraph (a)(3)(i)(A) of this section.

(*5*) Calculate the half-life, $t_{1/2}$, by substituting the value of k_h in equation 8 under paragraph (a)(3)(i)(A) of this section.

(2) *Test data report*—(i) *Test conditions.* Report the following:

(A) The name, structure, purity of the test substance, and whether the

substance absorbs light at lambda >290 nm;

(B) The type of reaction vessels used;

(C) The exact pH's and temperature used for each experiment;

(D) The type of solvent, if used, to solubilize the test substance and the percent by volume;

(E) The initial and final pH for each experiment;

(F) A description of the buffers used if they are not listed in this test guideline; and

(G) If buffer effects were observed, describe how they were minimized or eliminated.

(ii) *Specific analytical and recovery procedures.* (A) Provide a detailed description or reference for the analytical procedures, including the calibration data and precision; and

(B) If extraction methods were used to separate the solute from the aqueous solution, provide a description of the extraction method as well as the recovery data.

(iii) *Test data report.* Report the following:

(A) The initial molar concentration [C_o] of test substance for each replicate and the mean value for each hydrolysis experiment (i.e., at pH's corresponding to i=1, 2, 3, and at temperatures T_j, T_k, T_l);

(B) The two separate values of the molar concentration [C_t] and the mean value for each time point for each hydrolysis experiment (i.e., at pH's corresponding to i=1, 2, 3, and temperatures T_j, T_k, T_l);

(C) The value of $k_{h(i)}$ and the correlation coefficient for each set of experiments at temperatures T_j, T_k, T_l;

(D) The average value of $k_{h(i)}$ from the two separate experiments at temperatures T_j, T_k, T_l;

(E) The calculated values of k_H, k_{OH}, and k_N at T_j, T_k, T_l (in K) in tabular form;

(F) Using the appropriate data from paragraph (c)(2)(iii)(E) of this section, report the values of A and E and the correlation coefficient for each process (e.g., A_H, E_H, and the correlation coefficient, etc.); and

(G) If the compound was susceptible to oxidation, report the data under paragraph (c)(2)(iii) (A) through (F) of this section for the purged solutions.

(d) *References.* For additional background information on this test guideline, the following references should be consulted:

PART 797—[AMENDED]

2. In Part 797:

a. The authority citation continues to read as follows:

Authority: 15 U.S.C. 2603.

b. New Subpart D, consisting at this time of §§ 797.2900, 797.3050, 797.3100, 797.3700, and 797.3775, is added to read as follows:

Subpart D—Microcosm Guidelines

Sec.

797.2900 Rhizobium-legume chronic toxicity test.
797.3050 Generic freshwater microcosm test.
797.3100 Site-specific aquatic microcosm test.
797.3700 Soil microbial community toxicity test.
797.3775 Soil-core microcosm test.

Subpart D—Microcosm Guidelines

§ 797.2900 Rhizobium-legume chronic toxicity test.

(a) *Purpose.* This guideline is intended for use in developing data on the toxicity of chemical substances and mixtures ("test substances") subject to environmental effects test regulations under the Toxic Substances Control Act (TSCA) (Pub. L. 94–469, 90 Stat. 2003, 14 U.S.C. 2601 *et seq.*). The guideline prescribes tests using commercially important terrestrial plants and their nitrogen-fixing bacterial symbionts to develop data on the phytotoxicity of test substances. The United States Environmental Protection Agency (EPA) will use data from these tests in assessing the hazard of a test substance to the environment.

(b) *Definitions.* The definitions in section 3 of TSCA and Part 792—Good Laboratory Practice Standards of this Chapter apply to this test guideline. The following definitions also apply:

"EC X" means the experimentally-derived test substance concentration that is calculated to affect X percent of the test effect (e.g., EC_{50}).

"Germination" means the resumption of active growth by a plant embryo.

"Legume" means a member of the pea family (Leguminosae) and includes many species of great economic importance.

"N fixation" means the conversion of elemental nitrogen to nitrates by *Rhizobium* which colonize legume root nodules.

"*Rhizobium*" means a genus of symbiotic bacteria that forms nodules on the roots of certain legumes.

"Support media" means the quartz sand used to support the plant.

"Symbiont" means either of two organisms participating in a symbiotic relationship.

"Symbiosis" means the close union of two dissimilar organisms in a mutually beneficial relationship.

(c) *Test procedures*—(1) *Summary of the test.* Seeds of a legume species are inoculated with their specific *Rhizobium* symbiont and planted in sand irrigated with a nutrient solution. The test substance is applied to the plant-bacteria complex via the nutrient solution or is adsorbed to the support media, resulting in continuous exposure to the test substance from the time the seed (or seedling, if appropriate) is planted to maturity of the plant. After significant leaf development has occurred (usually after several weeks during which the *Rhizobium*-infected plants are irrigated at regular intervals with the nutrient solution), all plants are harvested for analysis. Effects are evaluated by comparing plant yield, nodule production, and N-fixation in plants exposed to the test substance to those plants not exposed (negative controls) to the test substance.

(2) *Application of test substance.* (i) Deionized or glass-distilled water shall be used in making stock solutions of a water-soluble test substance. Sufficient quantities of each concentration should be made as needed to minimize storage time and disposal volume. A measured portion of the stock solution shall be added to the nutrient solution just before beginning the test.

(ii) A test substance that is insoluble in water, but which can be suspended in an aqueous solution by a carrier, should be added, with the carrier, to the nutrient solution. The carrier should be soluble in water, nontoxic to plants, and used in the minimum amount required to dissolve or suspend the test substance. There are no preferred carriers; however, acetone, gum arabic, polyethylene glycol, ethanol, and others have been used extensively in testing herbicides, plant growth regulators, fungicides, and other chemical substances that affect plants. Carrier controls shall be included in the experimental design and tested simultaneously with the test substance.

(iii) A water-insoluble test substance for which no nontoxic, water-soluble carrier is available should be dissolved in an appropriate volatile solvent. The stock solution of the test substance should be mixed with the support media, then placed in a rotary vacuum apparatus and evaporated, leaving a uniform coating of the test substance on the support media. A weighed portion of support media shall be weighed, the test

substance shall be extracted with the same organic solvent, and the concentration of the test substance shall be determined before the potting containers are filled. Solvent controls shall be included in the experimental design and tested simultaneously with the test substance.

(3) *Selection of initial test substance concentrations.* (i) A preliminary test should be conducted to determine the concentrations of test substance to be used in the definitive test for each *Rhizobium*-legume association. For this purpose, seed germination, the first event in the establishment of a *Rhizobium*-legume symbiotic relationship, may be used.

(ii) If the concentration of test substance to which the *Rhizobium*-legume association is likely to be exposed in nature can be predicted, seeds of the selected legume should be treated with concentrations that are 0.1, 1, and 10 times the anticipated environmental concentration. After a given exposure period, the effects shall be assessed as the sum of the root lengths (mm) of all plants at each test concentration, relative to that evidenced in the controls. Should reasonable predictions of potential environmental exposure concentrations not be possible, seeds of the same legume shall be exposed to a series of widely spaced concentrations (e.g., 0.01, 0.1, 1.0, 10, 100, 1,000 mg/L) of the test substance. After a given period, root lengths shall be compared as previously described. The lowest concentration tested in the series, exclusive of controls, should be at the analytical detection limit of the test substance. The upper concentration, for water-soluble test substances, should not exceed 50 percent of the saturation concentration.

(iii) The seed-germination test consists of exposing a minimum of 15 seeds of one legume species (representing the plant host in the selected *Rhizobium*-legume association) to each concentration of test substance and to the control. Seeds, placed between sheets of filter paper moistened with varying concentrations of test substance, should be incubated in darkness at room temperature (approximately 22 °C) in petri dishes, allowing adequate room for linear root growth. When 65 percent of the control seeds have germinated and developed roots at least 20 mm long, the test may be terminated.

(iv) No replicates are required and nominal concentrations are acceptable.

(4) *Definitive test.* (i) The purpose of the definitive test is to determine whether the test substance is toxic to the selected *Rhizobium*-legume association and, if so, to delineate its concentration response curves and EC_{50}s for each of three variables of the test system used.

(ii) Since the anticipated fate of the test substance involves soil or soil water, and the mechanism of toxicity depends upon root exposure, the test substance shall be applied in nutrient solution to the support media or coated on the support media for water-insoluble test substances for which no nontoxic, water-soluble carrier is available. The test substance should be chemically stable in the nutrient solution.

(iii) Seeds of legume species that are subject to attack by mold (e.g., clovers) may be washed with ethanol before being planted.

(iv) Seeds should be mixed with a small amount of moist commercial peat previously inoculated with the desired *Rhizobium* species. Seeds of some legumes (e.g., *Trifolium repens*, white clover) may be planted immediately in pots (0.3 g dry seed/pot) filled to within 2.5 cm of the top with support media of clean, coarse (0.5 to 1.0 mm diameter) sand, while others (e.g., *Phaseolus vulgaris*, bush bean), once inoculated with *Rhizobium*, should be allowed to germinate for as many as 6 days in darkness between moist paper towels before being planted, one seedling per pot. The support media shall be irrigated with the nutrient solution before planting occurs. Unless it is necessary to adsorb the test substance to the support media, the nutrient solution shall contain the desired concentration of test substance.

(v) Six replicate pots of seed for each of at least five concentrations of test substance, exclusive of controls, should be used in the definitive test. For each *Rhizobium*-legume association tested, the concentration range should be selected to define, as closely as possible, the concentration-response curve between the EC_{10} and EC_{90}.

(vi) Pots shall be irrigated regularly (for example, 30 minutes every hour) with nutrient solution, preferably using a system in which water flows from the bottom of the pot upward. Irrigation shall be suspended for 6 to 8 hours before N-fixation measurement. Nutrient solution should be replaced with fresh solution at least once every 2 weeks. If the test substance is rapidly degraded under test conditions, it may be necessary to replace the nutrient solution more frequently.

(vii) Every test shall include controls consisting of the same dilution water, conditions, procedures, bacteria from the same culture, and seed from the same lot used in the exposed groups, except that none of the test substance shall be added. If a carrier solvent is needed to dissolve or suspend the test substance, a carrier control shall also be included.

(viii) Alternative planting methods may be required when the test substance is highly volatile. An impervious barrier of polyethylene film, a modification of the double pot method, a glass plate, or other appropriate apparatus should be used to prevent volatilization from the root zone. Seeds should be germinated in the dark at approximately 22 °C, and the barrier should be positioned such that the shoots pass through holes in the barrier. A ring of nontoxic, inert, pliable putty should be used to seal the holes around the stems. Control pots should be handled identically to the test pots but with no exposure to the test substance.

(ix) The definitive test consists of exposing the selected *Rhizobium*-legume association to at least five concentrations of the test substance, using a minimum of six replicate pots for each concentration and control, followed by measurements and analyses of N-fixation, nodulation performance, and plant yield. The duration of the test should be 3 to 7 weeks from the date of planting, depending on the legume used.

(x) Plants should be observed daily. All visible effects of the test substance on plant growth and morphology, such as stunting, discoloration, chlorosis, or necrosis of the leaves shall be noted.

(xi) To measure N-fixation for a small-to-moderate-sized legume species (e.g., *T. repens*, white clover), each pot shall be enclosed in an airtight chamber. To enhance the reduction of acetylene (C_2H_2), the chambers may be flushed with an inert gas (evacuating the N_2-containing air) before introducing the C_2H_2. Following exposure to C_2H_2 for a period of time sufficient to yield a linear production of ethylene (C_2H_4), gas samples shall then be withdrawn and analyzed for C_2H_4 as an index of N-fixation, using gas chromatography. Should the *Rhizobium*-legume association selected for the test use a larger species of legume (e.g., *P. vulgaris*, bush bean), plant roots may be removed, washed with distilled water, and placed in an airtight plastic jar. Gas samples shall then be withdrawn and analyzed for C_2H_4 after an appropriate incubation period (as above) in the presence of C_2H_2. Using the test conditions and clover and bean species recommended, incubation periods of 5 hours and 1 hour, respectively, are suitable for N-fixation determinations. Optimal incubation times for other species in containers of other sizes may be different.

(xii) Nodulation performance shall be assessed by counting the cumulative number of root nodules on the plants from each treatment group. Yield shall be recorded as the total dry (70 °C, 48 hours) biomass (tops and roots) per pot.

(xiii) The assignment of pots to test substance concentrations shall be random. In addition, placement of groups of pots (six per group, all within each group receiving nutrients and test substance from the same source) shall be randomized, to the extent possible, in the greenhouse or growth chamber.

(xiv) Irradiation measurements should be taken at the top of the plant canopy and the mean, maximum, and minimum values determined over the plant-growing area. These measurements should be taken daily, but shall be taken at least at the start and completion of the test. If the test is conducted in a greenhouse facility, hourly measurements of irradiation should be recorded and presented as daily total irradiance including representative hourly curves for clear-sky conditions and cloudy days.

(xv) Temperature shall be monitored continuously at the top of the plant canopy, while humidity shall be measured at least once during each light and dark period.

(xvi) For chamber-grown plants, measurements of carbon dioxide concentrations should be made at the top of the plant canopy on a "continuous basis."

(5) [Reserved]

(6) *Analytical measurements*—(i) *Test Substance.* Stock solutions of test substance should be diluted with glass distilled or deionized water to obtain the test solutions. Standard analytical methods, if available, should be used to establish concentrations of these solutions and should be validated before beginning the test. An analytical method is not acceptable if likely degradation products of the test substance, such as hydrolysis and oxidation products, give positive or negative interference. The pH of these solutions should also be measured before use.

(ii) *Numerical.* Entire plants (tops and roots) should be dried and weighed, and numbers of root nodules should be counted for the definitive test. Means and standard deviations of ethylene production (from acetylene reduction assay), plant yields, and nodulation should be calculated and plotted for each treatment and control. Appropriate statistical analyses should provide a goodness-of-fit determination for the concentration response curves.

(d) *Test conditions*—(1) *Test species*—(i) *Selection.* (A) A species of the genus *Trifolium* (e.g., *T. repens,* white clover) is the preferred legume for this test. The specific complementary species of *Rhizobium* shall be obtained from a reliable source of bacterial cultures.

(B) As an alternative, other legume species (e.g., *Phaseolus vulgaris,* bush bean) of economic or ecologic importance to the region of impact may be selected for testing. The rationale for selecting alternative species should be provided.

(ii) *Seed selection.* Information on seed lot, the seed year, or growing season collected and germination percentage should be provided by the source of the seed. Only untreated seed (not treated with fungicides, repellants, etc.) taken from the same lot and year or season of collection shall be used in a given test. In addition, all seed of a species used in a test should be of the same size class, and that size class which contains the most seed should be selected and used in a given test. Any damaged seed shall be discarded.

(2) *Facilities*—(i) *Apparatus.* (A) Greenhouse or environmental chambers shall provide adequate environmental controls to meet the carbon dioxide, humidity, irradiation, photoperiod, and temperature specifications. Chambers shall be designed to prevent escape of internal air into the external environment other than through appropriate filtering material or media to prevent contamination of the external environment with the test substance.

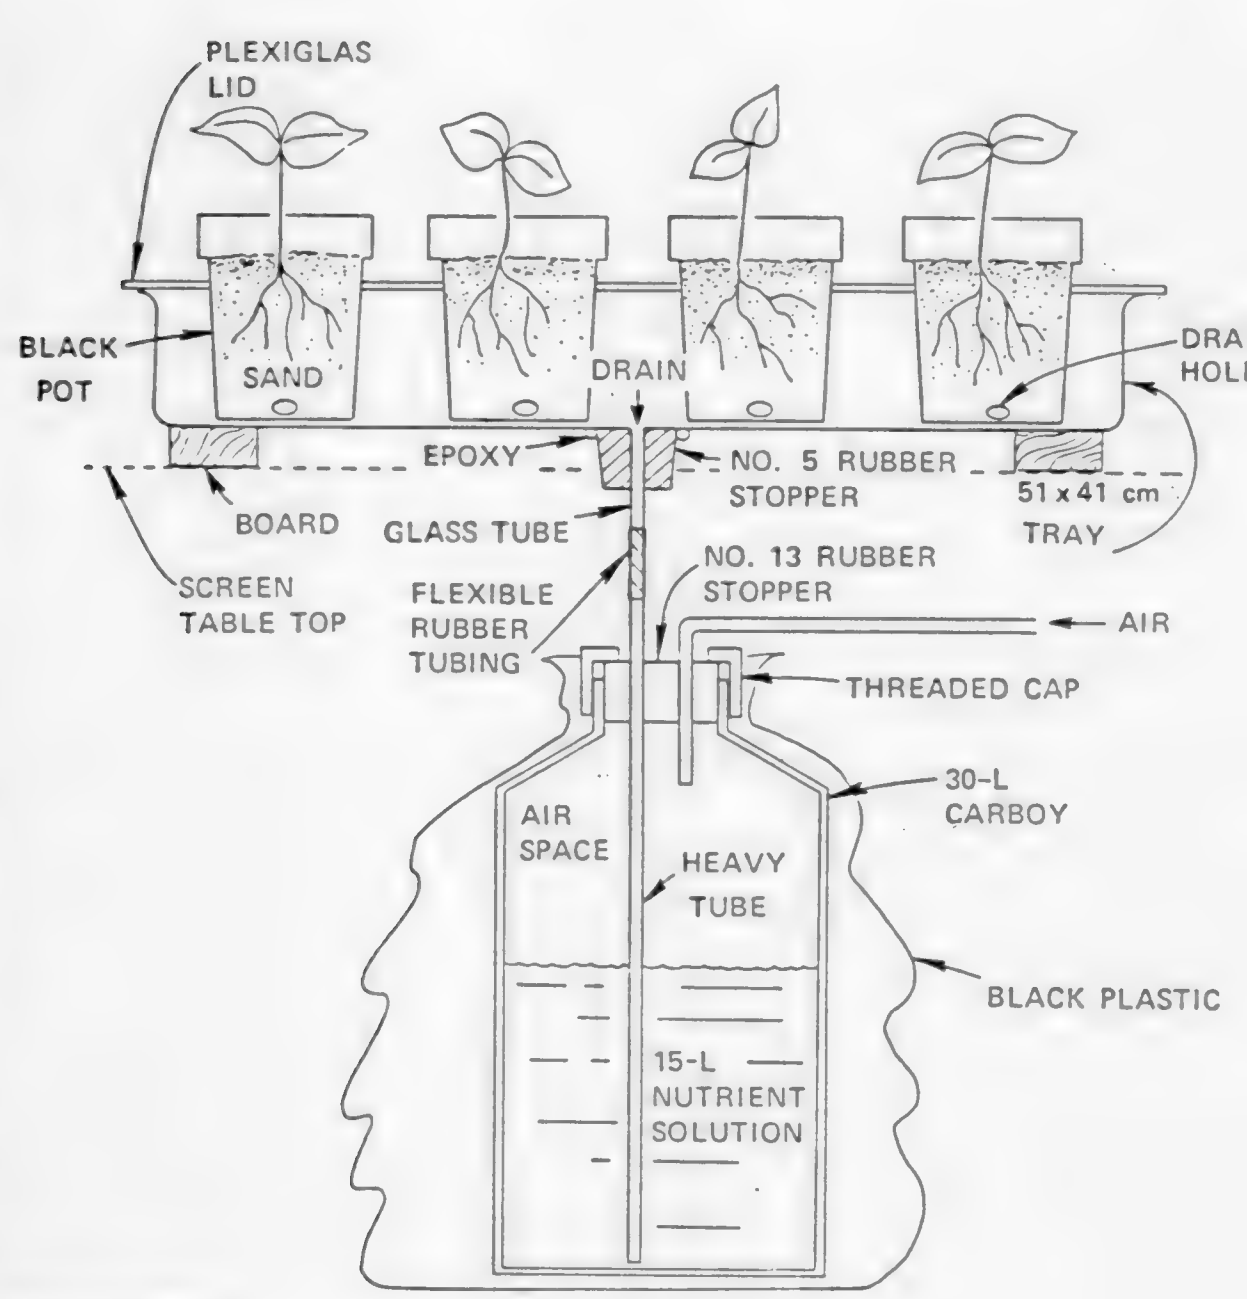
(B) Laboratory facilities for testing should include non-porous floor covering, absorbent bench covering with non-porous backing, and adequate disposal facilities to accommodate plant nutrient, test, and wash solutions containing the test substance at the end of each run, and any bench covering, lab clothing, or other contaminated materials.

(ii) *Containers and support media.* (A) For each run, at least 36 to 42 potting containers (6 per concentration of test substance, 6 for the control, and 6 if a carrier control is necessary) will be needed. Containers used in each experiment shall be of equal size and volume and possess the same configuration. Potting containers should be filled with support media to within 2.5 cm of their tops. Perlite, vermiculite, native soils, etc. should not be used for root support. A cellulose sponge plug in the pot drain hole will prevent the loss of sand during drainage.

(B) Six or seven 25–L carboys (one per concentration of test substance and one for controls; another if a carrier control is necessary) will serve as reservoirs from which nutrient solution will be delivered, under air pressure, to the appropriate tray of potting containers. An automatic system design is recommended (See the following Figure 1.

BILLING CODE 6560-50-M

FIGURE 1--CROSS-SECTIONAL DIAGRAM OF A REPRESENTATIVE TRAY UNIT AND THE NUTRIENT SOLUTION RESERVOIR FOR IRRIGATING POTTED PLANTS.



BILLING CODE 6560-50-C

(C) Each series of six replicate pots (per test concentration, control, and, if applicable, carrier control) may be placed in a large tray into which the appropriate nutrient solution will be delivered (see Figure 1 in paragraph (d)(2)(ii)(B) of this section). Trays should be constructed of an inert material to which adsorption of the test substance will be minimal, e.g., glass, Teflon, polyethylene or linear high-density polypropylene. Each tray may then be covered with a plexiglas sheet bearing six holes to accommodate the pots, keeping them upright and properly spaced.

(iii) *Cleaning and sterilization.* (A) Potting and receiving containers, nutrient storage containers, and support media shall be cleaned before use. All equipment should be washed according to good standard laboratory procedures to remove any residues remaining from manufacturing or prior use. A dichromate solution shall not be used for cleaning pots or other containers.

(B) Support media shall be discarded at the end of the test. Disposal shall conform to existing regulations.

(iv) *Nutrient media.* (A) The recommended medium for growth and establishment of the *Rhizobium*-legume association consists of the following:

Chemical	Amount (mg/L)
K_2SO_4	801
KH_2PO_4	272
$CaCl_2$	416
$MgSO_4 \cdot 7H_2O$	493
Fe	8.3
H_3BO_3*	2.9
$MnCl_2 \cdot 4H_2O$[1]	1.8
$ZnSO_4 \cdot 7H_2O$[1]	0.22
$H_2MoO_4 \cdot H_2O$[1]	0.02
$CuSO_4 \cdot 5H_2O$[1]	0.08

[1] A single stock solution containing 1,000X concentrations of each of these trace elements should be prepared in advance. One ml of stock solution/L of nutrient solution yields the required amount of each.

For certain legumes (e.g., *Phaseolus vulgaris,* bush bean), growth in this medium will be enhanced by the addition, after 2 weeks, of 50 mL of a nitrate supplement (18.2 g of KNO_3/L and 28.3 g of $Ca(NO_3)_2 \cdot 4H_2O$/L) to the 15 L of nutrient solution.

(B) The pH of the nutrient medium shall be maintained within a range of 4 to 7.

(C) Nutrient solution levels in 25–L carboys shall be maintained at 15–L throughout the experiment by replacing transpired water with distilled water, and by complete replacement with fresh solution at least twice a week.

(D) Nutrient solutions shall be transported by inert tubing from the carboys to the trays of pots at regular intervals. A timer-activated air pump is recommended for maintaining a controlled irrigation schedule.

(3) *Test parameters.* Environmental conditions shall be maintained as follows:

(i) If a growth chamber is used, the carbon dioxide concentration should be 350±50 ppm.

(ii) Irradiation, measured at 1 meter from the source, at 350±50 $\mu E/m^2/sec.$ at 400 to 700 nm.

(iii) Photoperiods of 16 hours light and 8 hours darkness.

(iv) Optimum temperature for growth and N-fixation for the species used. For example, the optimum range for clover is 15 to 25 °C.

(v) Relative humidity in growth chambers should approach 70±5 percent during light periods and 90±5 percent during dark periods.

(vi) pH range of 5 to 8.

(e) *Reporting.* (1) The final report should include, but not necessarily be limited to, the following information.

(i) Name and address of the facility performing the study and the dates on which the study was initiated and was completed, terminated, or discontinued.

(ii) Objectives and procedures stated in the approved protocol, including any changes in the original protocol.

(iii) Statistical methods used for analyzing the data.

(iv) The test substance identified by name, Chemical Abstracts Service (CAS) number or code number, source, lot or batch number, strength, purity, and composition or other appropriate characteristics.

(v) Stability of the test and, if used, control substances under the conditions of administration.

(vi) A description of the methods used, which should include the following:

(A) Description of greenhouse or environmental chamber conditions, including type, size, and carbon dioxide concentration (applicable to chambers), temperatures, humidity, photoperiod, and lighting intensity.

(B) Description of nutrient solution including source of any unusual component(s).

(C) Description of delivery system including a diagram if the design is complex.

(D) Method(s) used to determine the placement of potting containers in the test trays and the assignment of test concentrations to particular trays of pots to ensure randomization of exposure.

(E) Frequency, duration, and methods of observations.

(vii) A description of the test system used, including the scientific names and sources of the test species (legume and bacterial), and histories of the species (e.g., percentage of plants germinating, seed size class, and culture history of *Rhizobium* strain used).

(viii) The number or total weight (for smaller species) of seeds tested per concentration, number of replicates, description of carriers, any seed sterilization procedures used, and times of exposure.

(ix) Concentration of the test substance in nutrient solution and in the support media when the test substance is soluble in water or solubilized with a carrier; the concentration of carrier solvent in nutrient solution when carrier is used; the quantity of test substance per unit weight of root support media when the substance is coated on the sand.

(x) pH of the nutrient solution when fresh and when replaced. The reported results should include:

(A) The results of the preliminary test and measurements. Species and concentrations of test substance used, and observed effects on seed germination, should be stated.

(B) For the definitive test, the species, concentrations of test substance used, and the following:

(*1*) Mean plant yield (g dry wt/pot), cumulative nodule count (per pot), and C_2H_4 production (nmol/g dry wt/hour and nmol/pot/hour) for untreated controls and for each concentration of the test substance used.

(*2*) Visible effects, if any, of the test substance on the intact plants (tops, roots, and nodules).

(xi) A description of all circumstances that may have affected the quality or integrity of the data.

(xii) The name of the sponsor, study director, principal investigator, names of other scientists or professionals, and the names of all supervisory personnel involved in the study.

(xiii) A description of the transformations, calculations, or operations performed on the data, a summary and analysis of the data, and a statement of the conclusions drawn from the analysis. Results of the analysis of data should include the concentration response curves with 95-percent confidence limits, the results of a goodness-of-fit test (e.g., chi-square test), and EC_{50}'s.

(xiv) The signed and dated reports of each of the individual scientists or other professionals involved in the study including each person who, at the

request or direction of the testing facility or sponsor, conducted an analysis or evaluation of data or specimens from the study after data generation was completed.

(xv) The locations where all specimens, raw data, and the final report are stored.

(xvi) The statement prepared and signed by the quality assurance unit.

§ 797.3050 Generic freshwater microcosm test.

(a) *Purpose.* This guideline is intended for use in developing data on the chemical fate and/or ecological effects of chemical substances and mixtures ("test substances") subject to environmental effects testing regulations under the Toxic Substances Control Act (TSCA) (Pub. L. 94–469, 90 Stat. 2003, 15 U.S.C. 2601 et seq.) This guideline prescribes methodologies to predict the potential fate and/or effects of a chemical substance in freshwater ecosystems using various types of microcosms, i.e., standardized aquatic microcosm, naturally derived mixed-flask culture microcosm, or naturally derived pond microcosm, with and without sediment. The microcosms contain freshwater algae and zooplankton with an assortment of unidentified bacteria and fungi. The United States Environmental Protection Agency (EPA) will use data from this test in assessing the potential hazard of a chemical substance to freshwater ecosystems.

(b) *Definitions.* The definitions in section 3 of TSCA and the definitions in Part 792—Good Laboratory Practice Standards—of this chapter apply to this guideline. The following definitions also apply to this guideline:

"Aseptic" means free from contaminating organisms, e.g., aseptic transfer of an algal culture into a sterilized tube via a sterile inoculating loop.

"Axenic" means free from other living organisms. An axenic culture (pure culture) of algae contains only one species of algae, no bacteria, and no fungi.

"Batch culture" means a culture of organisms that use only the initial supply of nutrients in the culture medium. Without replenishment of nutrients, concentrations of nutrients decline and waste products accumulate in the culture medium with the increase in numbers of organisms.

"Bioconcentration factor (BCF)" means the ratio of the concentration of the test substance in an organism or tissue (i.e.,the biota) to the concentration in microcosm water or sediment, as specified.

"Carrier" means the organic solvent, solubilizer and/or other substance used to disperse the test substance into microcosm water.

"Detritivore" means an organism (e.g., ostracod) that feeds on detritus, i.e., dead organic matter.

"Ecosystem" means a community of organisms and its interrelated physical and chemical environment functioning as a unit.

"EC–X" means the experimentally derived test substance concentration, in the aqueous phase, that is calculated to affect X percent of the test species.

"Generic microcosm" means a general representation of an aquatic ecosystem in which a microcosm is maintained under constant laboratory conditions and no attempt is made to simulate the physical/chemical environment of the natural system.

"Gnotobiotic" means a culture or community containing only known species or organisms.

"Grazer" means an animal that grazes or feeds on growing plants, e.g., daphnids, rotifers, and some protozoa.

"Herbivore" means an animal that feeds on plants, synonymous with grazer.

"Linear contrast" means the statistical comparison of the means of two treatment groups, e.g., the control and another treatment group.

"Medium" means the chemically-defined culture solution used in the microcosms.

"Microcosm" means a miniaturized model of a natural ecosystem.

"Naturally-derived" means using an assortment of organisms and/or water and sediment collected from one or more natural freshwater ecosystems.

"Net daytime production" means the increase in dissolved oxygen (DO) concentration in microcosm water during the light phase of the photoperiod.

"Nighttime respiration" means the decline in dissolved (DO) concentration during the dark phase.

"Semi-continuous culture" means an algae culture that is periodically harvested by partial draining and replenished with an equal volume of fresh nutrient solution.

"Standardized aquatic microcosm" (SAM) means a culture of a community containing known species of algae and aquatic invertebrates, but containing uncharacterized species of protozoa and microorganisms.

"Treatment group" means the replicate microcosms that receive the same amount (if any) of the test substance; controls are treatment groups that receive none of the test substance.

"Unialgal culture" means the cultivation or growth of a single species of algae; each species of algae is established and maintained in a separate culture.

"Xenic" means a culture or community containing one or more kinds of unidentified organisms.

(c) *Test procedures*—(1) *Summary of the test.* (i) In preparation for the test, a sufficient number of containers for the test plus an appropriate number of extra containers shall be filled with appropriate volumes of nutrient medium or natural water, numbers and types of organisms, and, in some cases, natural or artificial sediment. Microcosm components shall be allowed to interact and adjust to one another for a specified period of time. Then, after culling microcosms which deviate most from the group as a whole, microcosms shall be randomly assigned to treatment groups and to specific locations in the test area.

(ii) The test shall be started by applying the test substance to the microcosms. Appropriate control groups shall be established. Microcosms shall be sampled and/or monitored for changes in one or more attributes at specified intervals during the exposure period or the recovery period or both. The means of the attributes should be compared using suitable statistical methods to assess the fate or effects of the test substance. Dose-response curves should be plotted for appropriate attributes.

(iii) Microcosms should be monitored for at least 6 weeks after the test substance is applied. Monitoring may be terminated earlier if all test parameters in the treatment microcosms treated with the test substance remain the same as the control microcosms for 2 weeks after the application of test substance (the last application in the case of multiple applications).

(2) *Administration of test substance.* (i) When possible, it is preferred that a test substance be radiolabeled so that its residues can be rapidly and accurately measured by radioassay.

(ii) A test substance that is soluble in water should be dissolved in distilled water to make a stock solution of known concentration; a nominal concentration of test substance could be established in the microcosm by adding a measured volume of stock solution and thoroughly dispersing it by adequate stirring.

(iii) A test substance that is insoluble in water, but that is soluble in relatively non-toxic, water-miscible solvents, such as acetone, shall be dissolved in the minimum volume of carrier solvent required to form a homogenous stock

solution of known concentration. At the beginning of the test, a measured portion of stock solution shall be added to microcosm water and dispersed to form a homogeneous suspension. Carrier controls should be included in the experimental design and monitored simultaneously with microcosms treated with test substance.

(iv) A test substance that is insoluble in both water and water-miscible solvents should be dissolved in more than one carrier, for example, consisting of a lipophilic solvent and an emulsifier, and then a measured portion of stock solution should be dispersed into microcosm water to form a homogeneous suspension.

(v) In the pond microcosm, where stirring is hampered by the macrophyte vegetation and the potential siltation of natural sediment, the stock solution of test substance may be mixed thoroughly with 1 or 2 liters of water taken from the microcosm, and then poured slowly back into the microcosm while the microcosm water is gently stirred.

(vi) Sufficient quantities of stock solution should be made as needed to minimize storage time and disposal volume.

(vii) If the test substance is a formulated preparation, the strength of the active ingredient (AI) in the preparation and the concentration of the test substance in microcosm water should be specified in terms of percent AI.

(viii) The nominal concentration of test substance in both stock solution and microcosm water should be confirmed by chemical analyses at the beginning of the exposure period.

(3) *Range-finding test.* (i) A range-finding test may be conducted to establish if definitive testing is necessary and, if it is necessary, to establish concentrations of the test substance for the definitive test.

(ii) Culled, old control, or newly established microcosms should be exposed for 2 weeks to a series of test substance concentrations (e.g., 0.1, 1.0, 10, and 100 μg/L). Controls should also be used. The exposure period may be shortened if sufficient data are gathered in a shorter time.

(iii) The lowest test substance concentration in a test series, exclusive of controls, should be the lowest concentration which can be analytically quantified. The highest concentration should be 100 μg/L or the maximum water solubility of the test substance at ambient temperature. Replicates are not needed, and nominal concentrations of the test substance are acceptable for range-finding. If all calculated EC_{50}s for all species are greater than 100 μg/L or less than the analytical detection limit, definitive testing is not necessary. However, replicates and measured concentrations of the appropriate dose are needed to substantiate this result.

(iv) A range-finding test is not necessary if data on environmental concentrations of the test substance are available from monitoring studies, or environmental releases of the test substance are known or can be predicted from models, and the objective of the test is to bracket environmental concentrations which result from the releases. Otherwise, a range-finding test is advisable since microcosm response can differ significantly from single species tests.

(4) *Definitive test*—(i) *Purpose.* The purpose of the definitive test is to determine the potential ecological effects and/or fate of a test substance released into the freshwater environment.

(ii) *Concentration.* At least three concentrations of test substance, exclusive of controls, shall be tested. The concentration range selected shall define the dose-response curves for major microcosm species between EC_{10} and EC_{90}, unless a known environmental or release concentration is being bracketed. A minimum of six replicate microcosms shall be used for each concentration.

(iii) *Controls*—(A) *General requirements.* Each test shall include controls consisting of the same nutrient medium or natural water, types of biological groups, kind and amount of sediment (if present), and otherwise shall be treated the same as exposed groups, except that none of the test substance is added. If a carrier is used to dissolve or suspend the test substance, additional controls containing the carrier shall also be included in the test to determine any effect of the carrier on the microcosms.

(B) *Standardized aquatic microcosm.* To demonstrate the health of standardized microcosms in use, untreated controls shall meet the criteria specified below; otherwise, test data may be rejected by EPA, unless adequately justified.

(*1*) On day 28, the following criteria should be met in the static microcosms:

(*i*) At least 90 percent reduction in nitrate (NO_3) concentration;

(*ii*) Algal biomass in each mL of medium has exceeded $2{,}000\times10^4$ $(\mu m)^3$;

(*iii*) Oxygen gain has exceeded 4 mg/L (ppm);

(*iv*) Population density of daphnids, including members of all size groups, has exceeded 85 *Daphnia* per 100 mL;

(*v*) Coefficient of variation for each microcosm attribute within ±0.5 more than 50 percent of the time except as noted; coefficient of variation should not be calculated for any nitrate concentration below 2 μM or for oxygen gain below 1 mg/L (ppm); and

(*vi*) pH values in late-afternoon between 6 and 10; coefficient of variation among replicate microcosms within ±0.05 more than 50 percent of the time.

(*2*) From day 28 to the conclusion of the test, the performance of control microcosms should always meet the following criteria:

(*i*) Algal biomass exceeds 100×10^4 $(\mu m)^3$ per mL;

(*ii*) Positive oxygen gain in daytime;

(*iii*) Daphnid population density exceeds 15 *Daphnia* per 100 mL;

(*iv*) More than 50 percent of the time, the coefficient of variation is within ±0.5 among replicates of control microcosms for algal biomass, daphnid population density, and for oxygen gain above 1.00 mg/L (ppm); and

(*v*) pH values in late-afternoon between 6 and 9, and coefficient of variation for pH values among control replicates within ±0.05 more than 50 percent of the time.

(*3*) When control microcosms fail to meet the above criteria, adequate statistical justification is required for EPA acceptance of test data.

(iv) *Initiation and maintenance of microcosms*—(A) *Standardized aquatic microcosm.* The standardized microcosm shall be initiated and maintained as follows:

(*1*) At least 36 glass jars (or more if extra controls are needed) shall be filled with 3 liters of culture medium, 200 g of acid-washed silica sand, 0.5 g of rinsed chitin, and 0.5 g of cellulose powder, and then sterilized in an autoclave as specified in (d)(2)(ii)(A)(*2*) of this section.

(*2*) On day 0, at least 30 of the 36 autoclaved jars containing sterilized culture media shall be inoculated with 10 species of algae at 10^3 cells/mL for each species. Algal cultures are then covered and incubated on a white table under adequate illumination.

(*3*) On day 4, algae cultures shall be examined for algal abundance, pH, oxygen gain, and other variables and then each jar of algal culture shall be stocked with five species of animals, which include both grazers and detritivores. The numbers of microinvertebrates to be added to each liter of algal culture are 110 *Hypotrich* protozoans and 30 *Philodina* rotifers. The volume of media with protozoa and rotifers should not exceed 5 mL. The macroinvertebrates to be stocked into each microcosm include:

BEST COPY AVAILABLE

(*i*) Sixteen daphnids consisting of 3 adults with embryos, 3 adults without embryos, and 10 juveniles;

(*ii*) Six ostracods; and

(*iii*) Twelve amphipods consisting of 3 mating pairs (if possible) and 6 juveniles.

(*4*) On day 7, the 30 microcosms shall be reexamined and any outliers should be culled. At least 24 microcosms shall be selected for the test. The following attributes of microcosms should be used in the selection of the 24 microcosms:

(*i*) Dissolved oxygen gain in the daytime;

(*ii*) pH value (pre-light);

(*iii*) Abundance of daphnids and the presence of ostracods and amphipods; and

(*iv*) Abundance of *Selenastrum* and *Chlamydomonas*.

(*5*) Selected microcosms shall be randomly assigned to one of the treatment groups including the controls, and then located on the support table in a six-block design as follows:

(*i*) Initially, each of the 24 selected microcosms (the number of microcosms for a typical test) shall be randomly assigned to one of the four treatment groups (including the control), appropriately labeled, and then treated with appropriate concentrations of the test substance except that the control microcosm does not receive the test substance.

(*ii*) Then, each of the six microcosms in each of the four treatment groups shall be randomly assigned to one of the six block groups on the table; therefore, each block group has four microcosms, one from each treatment group.

(*iii*) Finally, each of the four microcosms in each block group shall be randomly assigned to one of the four specific locations within that block on the table.

(*iv*) To facilitate the handling of microcosms during the test, a series of new numbers should be assigned to the microcosms according to their ordered locations on the table.

(*6*) The test substance shall be added after sampling on experiment day 7 (paragraph (c)(4)(iv)(A)(*4*) of this section).

(*7*) The standardized microcosm should be sampled and examined at least once every 7 days after the test substance is added and reinoculated as follows:

(*i*) After sampling and enumeration on each Friday, any microcosm that is underpopulated (<three individuals) with mature macroinvertebrates shall be reinoculated with reproductive age adults so that each microcosm contains at least three individual amphipods, daphnids, and ostracods.

(*ii*) About 0.05 mL (1 drop) of dense hypotrich protozoan culture and the same volume of dense *Philodina* rotifer culture should be added to each microcosm after each examination.

(*iii*) Each microcosm shall be reinoculated every 7 days with about 0.05 mL of an algal mixture that is prepared by pooling equal volumes of monoculture from each of the 10 algal species.

(B) *Naturally-derived mixed-flask microcosm.* The mixed-flask microcosm shall be initiated and maintained as follows:

(*1*) A culture medium shall be prepared from fresh refrigerated stock solution (warmed to ambient temperature before measuring) in sufficient volume to fill each container with 950 mL of culture medium from the same stock solution.

(*2*) Stock cultures, which are derived from biotic samples collected from a variety of ecosystems, shall be at least 3 months old before they are inoculated into the microcosms.

(*3*) Each microcosm shall contain 50 mL of inoculum, 950 mL of culture medium, and 50 mL of acid-washed sand, and shall be randomly assigned to one of the four treatment groups, including controls.

(*4*) Inoculum in each 50-mL beaker should be placed under microcosm water with the beaker and then decanted into the microcosm water to avoid exposing the zooplankton to the air during inoculation and cross-seeding.

(*5*) Microcosms are placed in the environmental chamber according to a randomized block design.

(*6*) All microcosms shall be cross-seeded at least twice per week for 3 weeks following inoculation. Cross-seeding should be performed by collecting a 50-mL aliquot of a homogeneous suspension from each microcosm, carefully pooling and mixing them together and then returning a 50-mL aliquot of the mixture to each microcosm.

(*7*) Each microcosm should be reinoculated weekly with a 50-mL inoculum.

(*8*) Following weekly reinoculation, distilled water should be added to each microcosm to return the volume to 1 L to compensate for loss of water through evaporation.

(*9*) The test substance (and carrier, if needed) should be introduced into appropriate microcosms 6 weeks following initial inoculation of the system.

(C) *Naturally-derived pond microcosm.* The pond microcosms shall be initiated and maintained as follows:

(*1*) All microcosm components, including water, sediment and biota, should be collected from a single ecosystem, preferably on the same day they are to be used. A shallow pond is the best source of material for pond microcosms, but littoral zones of lakes, or slow-moving rivers, may be acceptable alternatives.

(*2*) Water should be collected before sediment. At least 60 liters of water should be collected from the pond for each microcosm.

(*3*) Sediment should be collected from the upper 26 cm of the pond bottom and placed in appropriate containers for transportation. Stones, twigs, and other large debris should be removed before the sediment is placed in microcosm containers. At least 12 L of sediment are required for each microcosm.

(*4*) If a macrophyte community is present in the pond, a portion should be collected from the bottom and placed in an appropriate container. All organisms naturally associated with the macrophyte community may be included in the samples except crayfish. At least 100 gm of the macrophytes shall be needed for each microcosm. If macrophyte communities are unavailable in the pond, filamentous algae communities may be collected instead if present.

(*5*) Water, sediment, and biota should be protected from bright sunlight and extreme temperatures, and placed, as soon as possible, in an environmental chamber that is set at a temperature equal to that of the pond water.

(*6*) The glass aquaria should be positioned in the environmental chamber before filling.

(*7*) Approximately twelve L of sieved sediment should be placed in each aquarium, resulting in a layer of sediment about 6.7 cm thick. Sediment in each transportation container should be equally divided among all microcosms.

(*8*) If interstitial water sampling is planned, two suitable water collectors, such as a glass diffuser, should be embedded in the sediment of each microcosm. The fritted-glass disk of the air diffusers should be positioned 4 cm below the sediment surface which is then leveled and smoothed.

(*9*) Approximately fifty-five L of pond water should be slowly added to each aquarium. Pond water in each transportation container should be equally divided among all microcosms. To minimize resuspension of sediment during water filling, a plastic film may be used to cover the sediment layer and a simple diffuser should be used to dissipate the kinetic force of the water

flow. The diffuser may be made of the bottom half of a 4–L polyethylene jug with holes punched around the perimeter.

(*10*) One hundred grams of drained macrophytes or filamentous algae from the source, such as *Elodea canadensis*, should be planted in the sediment in each microcosm.

(*11*) After macrophytes are planted, 1 to 2 L of water remaining in the macrophyte collection container should be added to each microcosm as an additional source of biota.

(*12*) The microcosm should be incubated in the environmental chamber for at least 4 weeks before the test substance is applied.

(*13*) Distilled water should be added to the microcosms periodically to compensate for the loss of water through evaporation. If a significant volume of microcosm water is removed in sampling, it should be replaced with an equal volume of dechlorinated tap water or well water.

(v) *Sampling procedures*—(A) *Ecological effects.* Sampling of microcosms for routine monitoring and final sampling can be performed as follows:

(*1*) Each species of macroinvertebrates, including daphnids, ostracods, and amphipods, in the microcosm can be counted visually if the numbers of animals are less than 20 and the water is clear enough for counting. When a dense population or turbid water hampers direct counting of all macroinvertebrates in the microcosm, a series of 100-mL subsamples shall be taken out of the standardized microcosm for enumeration of each macroinvertebrate species until 20 of each invertebrate are counted or 6 subsamples are removed, whichever occurs first. Water samples should be quickly captured and confined in a wide-mouth sampler before removal. Periphyton shall be scraped from the glass surface and thoroughly dispersed into the culture media preceding sampling of the water column. Zooplankton should be counted in the mixed-flask microcosm by removing a series of 25 mL subsamples. Four such samples are usually sufficient. In the pond microcosm, zooplankton population should be measured twice per week. They are captured with a 2–L beaker that is submerged rapidly into the microcosm water, concentrated on a 80-um mesh plankton bucket, stained, and preserved. Population density for three groups of zooplankton, (i.e., cladocera, copepod, and rotifers) should be counted in the pond microcosm; major groups of zooplankton should be identified according to genus, or species if possible.

(*2*) The population density of protozoa and rotifiers shall be determined in standardized aquatic microcosms, a water sample of up to 2 mL shall be dispersed in a 0.01, 0.1, or 0.2 mL aliquot on counting plates (e.g., Palmer cell with water depth of 4 mm) at 12 times magnification under a stereomicroscope. The total volume of aliquots examined should contain at least 50 individuals per species.

(*3*) The population density of each algal species can be counted twice per week. In the standardized aquatic microcosm, at least 50 cells shall be counted for each known algal species from a series of up to 35 fields on the counting chamber under the microscope. If species cannot be identified, then the major genus of the phytoplankton and periphyton should be identified for the following groups of algae: diatoms, green algae, euglenoid, and blue-green algae.

(*4*) Filamentous algae in the algal mat should be examined every 7 days with a microscope to detect the potential extinction of any inoculated algae and the possible presence of contaminant algal species.

(*5*) The biomass of primary producers should be estimated twice per week with *in vivo* fluorescence or optical density of chlorophyll *a* in acetone solution.

(*6*) The rate of uptake of dissolved inorganic carbon-14 by phytoplankton should be measured every 7 days as follows:

(*i*) Primary productivity in each microcosm should be measured in duplicate bottles under the same light intensity as that intensity over the microcosm, with a set of two duplicate bottles placed in the dark as controls.

(*ii*) Dissolved inorganic carbon-14 shall be kept sterile before the test. For example, it may be kept in a sealed ampule and then autoclaved.

(*iii*) About 100 mL of water should be taken from each microcosm, sieved through a 440-μm nylon screen and then placed in a 125-mL conical flask.

(*iv*) The sieved phytoplankton suspension in each flask should be shaken vigorously and poured into a set of four 16.5-mL test tubes until water rises to the rim of each tube, which is then sealed with a serum stopper.

(*v*) About 10 μCi of carbon-14 labeled sodium bicarbonate (specific activity about 1.0 μCi/1.0 μg) per milliliter of alkaline aqueous solution should be maintained at pH 9.5, packed in a glass ampule, and sterilized after the ampule is sealed.

(*vi*) About 1 μCi of $NaH^{14}CO_3$ in 0.1 mL aqueous solution should be injected into each of the four 16.5 mL test tubes. Two of the tubes shall be immediately placed in the dark inside a light-tight box while the other two should be exposed to the same level of light intensity as that prevailing over the microcosms. All tubes should be vigorously shaken during the 2-hour incubation.

(*vii*) After incubation, the phytoplankton culture in each tube should be filtered through a 0.45 um filter membrane over a vacuum flask. The membrane filter and the phytoplankton retained on its surface shall be dried and stored in a desiccator over silica gel before the radioassay.

(*viii*) Immediately before liquid scintillation counting, each filter membrane with the phytoplankton materials should be fumed over concentrated hydrochloric acid for at least 90 seconds to remove remaining inorganic carbon-14, and then placed in a counting vial for radioassay.

(*ix*) The counting rate for each liquid scintillation counting vial that holds the particulate matter from one of the incubation tubes should be properly calibrated for quenching effects.

(*x*) If the absolute rate of carbon assimilation (besides the relative carbon-14 uptake) is desired, the total dissolved inorganic carbon shall be determined. The total content of dissolved inorganic carbon in the microcosm, which affects the specific activity of carbon-14 (added as sodium bicarbonate) in the incubation tube, shall be measured simultaneously with measurement of carbon-14 uptake rate. Total carbon dioxide content is usually calculated from measured values of total carbonate alkalinity and pH in the microcosm water. It can also be measured by gas chromatography if the buffering capacity of the microcosm medium interferes with the alkalinity-pH method.

(*7*) The content of chlorophyll *a* in microcosm water should be measured weekly as follows:

(*i*) A sample of microcosm water, from 30 to 60 mL depending on the standing crop of algae, shall be sieved through a 0.3 mm nylon screen to remove any macroinvertebrates among the phytoplankton.

(*ii*) Sieved microcosm water shall be filtered under suction through a 0.45 um filter pad, which is covered with a fine powder of magnesium carbonate at about 10 mg/cm^2 of filter area. Following filtration, phytoplankton on the filter pad shall be immediately

extracted for chlorophyll *a* or temporarily stored at −30 °C.

(*iii*) Retained on the filter pad, the phytoplankton and magnesium carbonate shall be placed in a glass, pestle-type homogenizer with 3 to 5 mL of 90 percent acetone and then homogenized at 500 rpm for about 1 minute.

(*iv*) After each homogenate is transferred to a graduated centrifuge tube equipped with a cap, the homogenizer and its pestle shall be rinsed 2 to 3 times with 90 percent acetone before its next use. The final volume of pooled homogenate and washes shall be adjusted to 15.0 mL.

(*v*) After the cap is fastened, the centrifuge tube with its contents shall be allowed to stand in a dark, cold (below 10 °C) place for at least 1 hour, and then centrifuged at 4,000–5,000 g for approximately 10 minutes. Any turbid supernatant shall be recentrifuged if its absorbance at 750 um exceeds 0.005 at 1 cm of light path.

(*vi*) Without disturbing the precipitate, the supernatant in the centrifuge tube shall be poured or pipetted into a tube, capped, placed in a dark place, and warmed to room temperature before quantification of chlorophyll *a* by a fluorometric or spectrophotometric method.

(*vii*) In spectrophotometry, the band-width of each monochromatic light should be 3 nm or less. The absorbance (A) of the acetonic extract shall be measured at 750, 663, 645, and 630 nm against a 90 percent acetone blank. The concentration of chlorophyll *a* in the acetonic extract (μg/mL) should be calculated from the length of the optical path (cm) and the absorbance at each of the four wave lengths using the formula:

[Chlorophyll *a*] = m11.64 (A663–A750) − 2.16 (A645–A750) + 0.10 (A630–A750)% (light path).

(*viii*) The concentration of chlorophyll *a* in a water sample (μg/L) is calculated by multiplying the concentration in the extract by the volume of the extract (in milliliters), and dividing the product by the total volume of the water sample (in liters).

(*8*) At least twice each week, the peak and troughs on the diel curve of DO in microcosm water can be measured to estimate oxygen gain and loss resulting from daytime photosynthesis and nighttime respiration, respectively. The morning measurement of DO should be taken immediately before the light is turned on, while the afternoon measurement should be taken in the late afternoon or evening after the DO concentration in each microcosm has reached the peak in its diel cycle. At least once during the early part of the study, DO readings should be taken hourly during the light cycle to determine when the peak occurs. The net daytime community production, which is the gain in DO during the 12-hour photophase, should be calculated as the difference between the DO concentration at the end of the photophase and the DO concentration at the end of the preceding dark phase. The net nighttime community respiration, which is the loss of DO in the microcosm during the dark phase, should be calculated as the difference between the DO concentration at the end of the photophase and the DO concentration at the end of the following dark phase.

(*9*) The pH values of microcosm water should be read to 0.01 unit after the pH meter is calibrated with standard buffers of pH 7 and pH 10, and the pH probe should be rinsed very thoroughly between readings. The pH value should be taken at the same time day on scheduled sampling dates after addition of the test substance to the microcosm as, for example, 0, 1, 2, 3, 5, 7, 10, 14, 21, 28, 35, and 42 days after addition of the test substance. It is preferable to take the pH reading at the end of the dark phase to reflect community respiration or at the end of the photophase to reflect photosynthetic activity.

(*10*) Dissolved nutrients in the microcosms should be monitored at least twice each week for the first 4 weeks and at least once every 7 days thereafter; the samples should be filtered through a 0.45 μm membrane and kept frozen before they are analyzed by standard analytical methods for soluble reactive phosphorus, ammonia, nitrite, and nitrate.

(*11*) Net daytime community production and net nighttime community respiration should be measured on scheduled sampling dates as, for example, days 0, 1, 2, 3, 5, 7, 10, 14, 21, 28, 35, and 42 after addition of the test substance.

(*12*) Biomass decomposition rate, represented by the decomposition rate of ^{14}C-glucose in 15 mL of microcosm suspension, can be measured on scheduled sampling dates as, for example, days 0, 1, 2, 3, 5, 7, 10, 14, 21, 28, and 35, after addition of the test substance to the microcosms. Sampling for biomass decomposition (^{14}C-glucose decomposition) shall precede reinoculation if both occur on the same day. The ^{14}C-glucose decomposition should be performed as follows:

(*i*) A 15 mL water sample should be collected in a 50 mL flask.

(*ii*) A glucose solution that contains 0.15 μCi radioactivity in 0.3 mL of distilled water should be added to the flask.

(*iii*) The flask should be immediately sealed with a specially designed serum stopper, which is fitted with a plastic center well containing a 2 x 5 cm strip of chromatographic paper, and then shaken gently for approximately 15 minutes in the dark.

(*iv*) The heterotrophic activity should be stopped by injecting 1.0 mL of 2N sulfuric acid into the flask. A CO_2 trapping agent, such as carbosorb, should then be immediately injected onto each filter paper under the stopper after the acidification to collect the evolving carbon dioxide.

(*v*) The flask should be gently shaken for at least 2 hours, and the ^{14}C activity in the filter paper should be counted with a liquid scintillation counter.

(*vi*) The percentage deviation in the counts per minute (CPM) of the treatment from the control should be calculated.

(*13*) Total alkalinity, dissolved organic carbon, and specific conductivity of microcosm water can be measured weekly.

(*14*) Interstitial water in the sediment, if present, can be collected weekly to be analyzed for ammonium-nitrogen content. The first 5-mL water sample from the embedded gas diffuser, as specified in the pond microcosm, shall be discarded, and the second sample of 10 mL shall be filtered before chemical analysis.

(*15*) Any extinction of macrophytes, such as *Elodea canadensis* in the pond microcosm, in treated microcosms can be noted during the test, and biomass of macrophytes should be determined at the end of the test.

(*16*) The extinction and reappearance of benthic fauna, such as insects, snails, and oligochaetes, can be observed weekly in those microcosms containing natural sediments.

(*17*) Water-borne bacteria can be counted weekly.

(B) *Chemical fate.* Sampling should be performed according to the following procedures:

(*1*) The initial concentration of test substance in microcosm water shall be determined by chemical analysis of samples that are taken immediately after the test substance is thoroughly dispersed in microcosm water.

(*2*) The dissolved test substance, its total residue, or both should be measured in the filtrate of microcosm water semiweekly immediately after the test substance is applied and at least once more during the first week,

measured at least once during the second week, and then measured biweekly until the end of the test. The filtrate may be substituted with unfiltered microcosm water if the test substance is partitioned into the particulate fraction in such a high proportion that the chemical concentration in the filtrate fraction falls below the analytical detection limit for the test substance using the most practical analytical method.

(*3*) The concentration of test substance in macrophyte shoots, if present, can be measured biweekly if the sample is less than 5 percent of biomass.

(*4*) Distribution of the test substance among compartments of microcosms can be determined at the end of the test; the components may include:

(*i*) Macrophytes, subdivided into roots, shoots, and leaves;

(*ii*) Phytoplankton;

(*iii*) Zooplankton;

(*iv*) Benthic fauna;

(*v*) Sediment core, sectioned into 1-cm subcores; and

(*vi*) Periphyton, if any.

(5) [Reserved].

(6) *Analytical measurements*—(i) *Chemical.* Standard analytical methods should be used in performing analyses. The analytical method used to measure the amount of test substance in a sample should be validated by appropriate laboratory practices before beginning the test. An analytical method is not acceptable if likely degradation products of the test substance, such as hydrolysis and oxidation products, give positive or negative interference which cannot be systematically identified and mathematically corrected.

(ii) *Numerical.* (A) The following data shall be obtained from the standardized microcosm test:

(*1*) Abundance of each species of alga and macroinvertebrate;

(*2*) Abundance of each type of microscopic animal (i.e., protozoa and rotifers);

(*3*) Net daytime production;

(*4*) Net nighttime respiration;

(*5*) Chlorophyll *a* concentration;

(*6*) Water pH;

(*7*) Nutrients (at least nitrate) in water.

(B) The following data shall be obtained from the mixed-flask microcosm test:

(*1*) Abundance of phytoplankton and zooplankton;

(*2*) Net daytime production (DO gain);

(*3*) Net nighttime respiration (DO loss);

(*4*) Chlorophyll *a* concentration;

(*5*) Water pH;

(*6*) Carbon-14 glucose decomposition rate.

(C) The following data shall be obtained for the pond microcosm:

(*1*) Abundance of phytoplankton and zooplankton;

(*2*) Abundance of each type of benthic fauna;

(*3*) Net daytime production;

(*4*) Net nighttime respiration;

(*5*) Chlorophyll *a* concentration;

(*6*) Water pH, alkalinity, conductivity, and dissolved oxygen;

(*7*) Concentrations of the test substance in each compartment of the microcosm;

(*8*) Bioconcentration factor.

(D) Means and standards deviations of each chemical and biological attribute specified in paragraphs shall be calculated for the replicates of each treatment and control groups.

(E) EC_{50} values and their 95 percent confidence limits should be calculated for each of the appropriate attributes for the time between application of the test substance and recovery from test substance treatment, if data are adequate for statistical analysis. Otherwise, EC_x should be calculated as the percent deviation of an attribute in a treatment group from that in the control.

(F) Appropriate statistical analyses (e.g., Dunnett's procedure) shall be performed to determine whether significant differences in attributes exist between the carrier (if appropriate) and carrier-free controls and between the control and treated groups, and between microcosms receiving different concentrations of test substance.

(G) For the pond microcosm, appropriate statistical analyses should be performed to determine whether significant differences in the amount and in the bioconcentration factor of the test substance exist between treated different compartments within treated microcosms and between treated microcosms receiving different treatments.

(d) *Test conditions*—(1) *Test species*—(i) *Selection.* (A) The organisms inoculated into the standardized microcosm shall include 10 algal species; one protozoa, rotifer, daphnid, ostracod, and amphipod species; and an uninvited assortment of unidentified heterotrophs, such as bacteria and fungi. (*1*) The following 10 species of algae shall be included:

(*i*) *Anabaena cylindrica;*

(*ii*) *Ankistrodesumus* sp.;

(*iii*) *Chlamydomonas reinhardi;*

(*iv*) *Chlorella vulgaris;*

(*v*) *Lyngbya* sp.;

(*vi*) *Nitzschia kutzigiana;*

(*vii*) *Scenedesmus obliquus;*

(*viii*) *Selenastrum capricornutum;*

(*ix*) *Stigeoclonium* sp.;

(*x*) *Ulothrix* sp.

(*2*) *Daphnia magna* should be included. Species identity of the test daphnids should be verified using appropriate systematic keys.

(3) Amphipods, *Hyalella azteca,* also named *H. knickerbockeri,* should be used in the test. Mating pairs and the young are inoculated into the microcosm.

(*4*) Ostracods chosen should be either *Cypridopsis* or *Cyprinotus* sp. Only adults should be used.

(5) Protozoa should belong to the order *Hypotrichida,* and the culture should be 72 hours old when it is inoculated into the microcosm.

(*6*) Rotifers should belong to the *Philodina* sp.

(B) Inoculum for the mixed-flask microcosm test shall at least contain the following:

(*1*) Two species of single-celled green algae or diatoms;

(*2*) One species of filamentous green alga;

(*3*) One species of nitrogen-fixing blue-green alga;

(*4*) One species of grazing macroinvertebrate;

(*5*) One species of benthic, detritus-feeding macroinvertebrate;

(*6*) Bacteria and protozoa.

(C) The following broad groups of biota shall be included in the pond microcosm:

(*1*) Macrophyte;

(*2*) Phytoplankton;

(*3*) Periphyton;

(*4*) Zooplankton;

(*5*) Benthic animals.

(ii) *Source.* (A) Each unialgal culture that is a part of the 10-species composite inoculum for all standardized microcosms in a test should be of the same batch that in turn is subcultured to the exponential growth phase from a single source. Before the test, at least two successive subcultures outside the microcosm are required to acclimate the algal monoculture from agar slant to microcosm medium. A semicontinuous culture system is recommended for culture of unicellular algae. *Anabaena, Ankistrodesumus, Selenastrum,* and *Lyngbya* should be cultured in batch culture before they are inoculated into microcosms. Recommended procedures for culturing algae as well as the other organisms used in this test are described by Taub and Read (1984) under paragraph (f)(2) of this section.

(B) The original stock culture for the mixed-flask microcosm shall be collected from a variety of natural ecosystems. Then, new stock culture should be added to the old stock

VOL 52 ISS 187 SE 28 1987 UMI

cultures at least twice each year. To prepare the inoculum for microcosms, samples from several different aged stock cultures should be mixed together. Stock cultures should be at least 3 months old to be used as a source of microcosm inoculum. Distilled water should be added to the stock cultures in the open aquaria as needed to replace losses by evaporation. Aquatic organisms collected from a variety of natural ecosystems should be inoculated into culture medium to start stock cultures.

(C) Organisms for the pond microcosm should be obtained from the same natural ponds that supply the water and sediment used in the microcosm.

(2) *Facilities*—(i) *Apparatus.* (A) The environmental chambers or room housing the microcosms shall provide adequate environmental controls to meet temperature, irradiation, photoperiod, and air circulation requirements. Chambers shall be designed to prevent escape of contaminated internal air into the external environment by using appropriate filtering devices to prevent contamination of the external environment with the test substance.

(B) Laboratory facilities where the test substance is handled should have nonporous floor covering, absorbent bench covering with impermeable backing, and adequate disposal facilities to accommodate liquid waste (e.g., test and waste solutions containing the test substance at the end of each test), and solid wastes (e.g., bench covering, lab clothing, disposable glassware, or other contaminated materials).

(C) The test substance should be stored in a room separate from stock cultures and microcosms.

(D) A large autoclave capable of sterilizing several 1-gallon microcosm containers shall be used. An autoclave large enough for sterilizing culture medium in a 20–L (5 gallon) carboy is desirable.

(E) The dimensions of the bench space for the gnotobiotic microcosms shall be at least 2.6×0.85 m and should have a white top or white covering.

(F) Standard laboratory equipment and, if the test substance is radiolabeled, a liquid scintillation counter for radioassays is required.

(G) For the standardized and mixed-flask microcosm tests, a special sampler shall be used to capture macroinvertebrates from the microcosm. The sampler should be taller than the microcosm to reach the bottom of the jar, have a large diameter for free passage of water into the sampler, and a rubber stopper attached to a long glass rod to stir the water before sampling and to seal the bottom of the sampler for transferring water out of the microcosm after the sample is taken.

(ii) *Containers and media*—(A) *Standardized microcosm.*

(*1*) The containers used in each standardized microcosm test shall be new glass jars with the capacity of at least 1 gallon (3.8 liters). The jars should be at least 25 cm in height and 16.0 cm in diameter, with an opening 10.6 cm in diameter. The new jars should be washed with diluted (1:10) hydrochloric acid, flushed with tap water, and then rinsed with distilled water before use.

(*2*) Each standardized microcosm should contain at least 3 liters of a medium, such as Taub's T82MV, in addition to an artificial sediment made of silica sand (200 g) enriched with chitin (0.5 g) and cellulose (0.5 g). Before use, the sand should be washed with diluted (1:10) hydrochloric acid for 2 hours, repeatedly rinsed with clean water until the pH rises to 7, and then dried in an oven at 120 °C. The crude chitin from commercial sources should be rinsed with distilled water, air-dried, ground in a blender, and sifted through a 0.4 mm sieve. The cellulose powder, which is also packing material for chromatographic columns, is commercially available.

(B) *Naturally derived mixed-flask microcosm.* Hard-glass containers (e.g., 1-liter Pyrex® beakers), should be selected for testing organic substances in mixed-flask microcosms. Polypropylene beakers may be used for testing inorganic substances.

(C) *Naturally derived pond microcosm.* For the pond microcosm test, 72–L glass aquaria (60 cm L×30 cm W×40 cm D) should be used as containers. About 12 L of sieved sediment and 55 L of pond water should be added to each container.

(D) *Materials and equipment.* Materials and equipment that contact test solutions should be selected to minimize sorption of test substances from the microcosm and should not contain substances that can be leached into aqueous solution in quantities that can affect test results.

(iii) *Cleaning and sterilization.* Microcosm containers, stock culture containers, nutrient storage containers, and all other glassware should be cleaned before use. All glassware and equipment should be washed according to good standard laboratory procedures to remove any residues remaining from manufacturing or previous use. A dichromate solution should not be used for cleaning glassware. In the standardized microcosm, all glass containers and equipment for culturing and testing organisms should be sterilized by autoclave where possible. DO and pH probes may be cleaned with ethanol and thoroughly rinsed with distilled water before use. All sampling devices should be sterilized before each test; sampling devices in contact with lake water or sediment should be sterilized after each use.

(iv) *Nutrient media.* (A) Taub's T82MV in Taub and Read (1984) under paragraph (f)(2) of this section, medium is recommended for use in the standardized microcosm. It consists of the following compounds in Table 1:

TABLE 1.—NUTRIENT MEDIUM,[1] TAUB T82MV

Compound	Molecular weight	Concentration		
		mM	Element	mg/liter
$NaNO_3$	85.0	0.5	N	7.0
$MgSO_4 \cdot 7H_2O$	246.5	0.1	Mg	2.43
KH_2PO_4	136.0	0.04	P	1.23
NaOH	40.0	0.099	Na	2.27

Pyridoxine monohydrochloride	205.7	2.43		0.50

[1] pH adjusted to 7.0 with diluted (1:10) HC1.

(B) The recommended medium for growth and establishment of stock cultures for the mixed-flask microcosm is Taub's T82, which is the same as T82MV without vitamins. The modified Taub's #36 medium (Leffler 1981) under paragraph (f)(1) of this section used in the early protocol development is also adequate.

(C) There is no need to add nutrients to pond microcosms.

(3) *Test parameters.* (i) Environmental conditions for the microcosms shall be maintained as follows:

(A) Temperature within 21 to 25 °C (23±2 °C),

(B) Photoperiod of 12 hours light and 12 hours darkness, and

(C) Standard deviation of light intensities among the microcosms within ±10 percent of the mean and a light intensity of 150 $\mu Em^{-2}sec$ for this test.

(ii) [Reserved]

(e) *Reporting.* (1) The final report shall include, but not necessarily be limited to, the following information:

(i) Name and address of the facility performing the study and the dates on which the study was initiated and was completed, terminated, or discontinued.

(ii) Objectives and procedures stated in the approved protocol, including any changes in the original protocol.

(iii) Statistical methods used for analyzing the data.

(iv) The test substance identified by name, Chemical Abstract Service (CAS) number or code number, source, lot or batch number, strength, purity, and composition, or other appropriate characteristics.

(v) Stability of the test substance under the conditions of administration.

(vi) A description of the methods used, including the facilities and supporting equipment.

(vii) A description of the test system used, including: microcosm dimensions and water volume, sediment type and volume if used, temperature, photoperiod, and light intensity over the water surface.

(viii) A description of the organisms included in the microcosms representing various functional groups that are essential for the maintenance of a healthy microcosm.

(ix) A description of the nutrient media, if applicable.

(x) A description of the experimental design, treatment concentrations and media, and pattern of administration.

(xi) The materials, the methods, and the results of any range-finding test.

(xii) For the definitive test, reported results should include:

(A) For the standardized microcosm, a description of the following ecological effects and the fate of the test substance in the biota:

(*1*) Phytoplankton abundance, in numbers per mL, for each species;

(*2*) Population density of rotifers and protozoans, in numbers per mL, for each species;

(*3*) Abundance of daphnids, in numbers per liter, for each size group (small, medium, and large);

(*4*) Abundance of amphipods, in numbers per microcosm, for each size group (small and large);

(*5*) Abundance of ostracods, in numbers per microcosm;

(*6*) Relative abundance of phytoplankton in microcosms;

(*i*) Optical density at 440 nm, as an index of the particulate materials, including phytoplankton.

(*ii*) Content of chlorophyll *a*.

(*iii*) *In vivo* fluorescence.

(*7*) Concentrations of major mineral nutrients, such as orthophosphate, ammonia, nitrite, and nitrate in the filtrate of microcosm water,

(*8*) Primary productivity, as measured by ^{14}C-uptake methods,

(*9*) Community production and respiration, measured by the three-point methods (the net gain in dissolved oxygen during the photophase is the photosynthetic production of phytoplankton, while the loss of dissolved oxygen during the dark phase is an indicator of community respiration).

(*10*) Carrier effects when a carrier is used. Assessed by comparing biological variables in carrier controls to those in plain-water controls.

(*11*) Chemical effects assessed by comparing biological data in treated microcosms to that in plain-water controls or in combined controls for both the carrier and plain water.

(B) For the mixed-flask microcosm, a description of the following ecological effects and the fate of the test substance in biota:

(*1*) Phytoplankton abundance for the entire community or standing crop for each of the major species, in number of plants per mL.

(*2*) Zooplankton abundance for the community or standing crop for each life

stage of the major species, in numbers of animals per liter.

(3) Type and total number of the benthic organisms, or the standing crop for each species of benthic organism, in numbers of organisms per m^2.

(4) Carrier effects when carrier is used.

(5) Chemical effects assessed by comparing treated microcosms to controls.

(6) EC_{50} values for the test substance expressed in terms of pH change, net daytime community production, net nighttime community respiration, and decomposition rate of organic matter.

(7) Concentration of test substance residues in aquatic organisms or in specific tissues.

(8) The Bioconcentration factors of the test substance or its total residues.

(9) Effect of the initial concentration of the test substance on its bioconcentration factor.

(C) For the pond microcosm, a description of the following ecological effects and fate of the test substance in biota:

(1) Phytoplankton abundance for the entire community or standing crop for each of the major species, number of phytoplankton per mL or chlorophyll *a* concentration.

(2) Chlorophyll *a* content of periphyton and the major groups of periphytons, such as diatoms, green algae, blue-green algae, and euglenoid, if possible, genus or species names.

(3) Abundance of macrophytes in the microcosm calculated by estimating the volume of microcosm water occupied by the macrophytes and determining the standing crop of the macrophytes, including tops and roots.

(4) Zooplankton abundance for the community or standing crop for each life stage of the major species, in number of animals per liter.

(5) Type and total number of benthic organisms, or standing crop for each species of benthic organism, in number of organisms per square meter.

(6) Concentration of major dissolved nutrients, such as ammonium-nitrogen, nitrate and nitrite, and orthophosphate, in microcosm water.

(7) Carrier effects when carrier solvent is used.

(8) Chemical effects assessed by comparing treated microcosms to controls.

(9) The median effect concentration (EC_{50}) and its 95-percent confidence limit if the concentration of test substance causes partial reduction in any biological attribute in enough treatment groups. If the partial reduction occurs in only a few treatment groups, indicate the percentage reduction of biological abundance caused by the concentration of test substance (EC_x).

(10) Element cycling such as ammonium-nitrogen content, in $\mu g/L$.

(11) Maximum and minimum diel DO concentration on sampling date.

(12) Net daytime production and net nighttime respiration, in mg/L of DO change.

(13) Ratio of production to respiration (P/R ratio).

(14) Concentrations of the test substance in both particulate and dissolved fractions of the water column.

(15) Concentration of test substance in representative species of zooplankton and benthos.

(16) Concentration of test substance in periphyton.

(17) Vertical distribution of the test substance in the sediment core.

(18) Concentrations of the test substance in total biota.

(19) Concentrations of the test substance which may include its transformation products, at steady state in the water column and sediment profile, and the amount in the periphyton on the glass surface.

(20) Effect of the test substance concentration applied to the microcosm on the residual concentration of the test substance in each compartment.

(21) Bioconcentration factors of the test substance or its total residues.

(22) Effect of the initial concentration of test substance on its bioconcentration factors.

(D) A description of any circumstance that may have affected the quality or integrity of the data, including reporting and explaining any significant excursions from normal for microcosm parameters during the test.

(xiii) The name of the sponsor, study director, principal investigator, names of other scientists or professionals, and the names of all supervisory personnel involved in the study.

(xiv) A description of the transformations, calculations, or operations performed on the data, and a statement of the conclusion drawn from the analysis.

(xv) The signed and dated reports of each of the individual scientists or other professionals involved in the study, including each person who, at the request or direction of the testing facility or sponsor, conducted an analysis or evaluation of data or specimens from the study after data generation was completed.

(xvi) The locations where all specimens, raw data, and the final report are stored.

(xvii) The statement prepared and signed by the quality assurance unit.

(f) *Literature references.* For additional background information on this guideline, the following references should be consulted:

§ 797.3100 Site-specific aquatic microcosm test.

(a) *Purpose.* This guideline is intended for use in developing site-specific data on the chemical fate and ecological effects of chemical substances and mixtures ("test substances") subject to environmental effects test regulations under the Toxic Substances Control Act (TSCA) (Pub. L. 94–469, 90 Stat. 2003, 15 U.S.C. 2601 *et seq.*). This guideline prescribes methodologies to predict the potential fate and/or effects of either organic or inorganic substances in a natural aquatic ecosystem using a microcosm made of an indigenous water column and sediment core. This test system is capable of evaluating organic chemical substances, either soluble or insoluble, which may form either air-water surface films or aggregates which sink to bottom sediments. The United States Environmental Protection Agency (EPA) will use data from this test in assessing the potential hazard of a chemical substance to a particular natural aquatic system (natural system).

(b) *Definitions.* The definitions in section 3 of TSCA and Part 792—Environmental Effects Testing Good Laboratory Practice Standards, of this Chapter, apply to this test guideline. The following definitions also apply to this guideline:

"Benthic community" or benthos means numbers, species composition, size range, and feeding types of organisms present in the sediment of the natural system.

"Benthic subsystem" means an undisturbed core collected from the natural system and placed in the microcosm.

"Bioaccumulation factor" or "bioconcentration factor" means the ratio of the concentration of the test substance in an aquatic organism (i.e., biota) to the associated exposure concentration of the test substance from the food particles and the surrounding exposure medium (i.e., water or sediments).

"Carrier" means the organic solvent, solubilizer and/or other substance used to disperse the test substance into microcosm water.

"Chemical residues" means the test substance and its transformation products retained in the water, sediment, surface film, biota, and glass surfaces of the microcosm during the experiment period.

"Exposure concentration" means the concentration of test substance in the water or the sediment in which the aquatic organisms live.

"Natural aquatic system" or "natural system" means a particular geographic location consisting of a water column and its associated benthic component.

"Radioactivity budget" or "radioactivity mass balance" means a quantitative relationship among the input, retention, and export of radioactivity in a microcosm after applying a radiolabeled test substance into the microcosm. The amount of radioactivity added to the microcosm during the test usually is equal to the sum of the radioactivity remaining in the microcosm compartments and the radioactivity exported from the microcosm with the departed water, surface film, and exhaust air.

"Ratio of benthic surface area to water volume" means the ratio obtained by dividing the calculated benthic surface area of the natural system by the best estimate of water volume of the system.

"Sediment" means the bottom substrate existing at the mean water depth within the natural system during the period of the test.

"Site-specific aquatic microcosm" means a miniaturized mimic of a specific natural aquatic system.

"Stick protector" means a partially submerged glass cylinder within which surface film is removed.

"Water column" means the water within the natural system or the microcosm tank.

"Water flow rates over the sediment surface" means the rate of average water flow over the surface of the sediment as measured in the natural system or in the microcosm tank.

"Water replacement" or "replacement water" means the natural water added to the microcosm at specific intervals to simulate water turnover rate.

"Water turbulence" means the average water motion in the water column of the natural system or the microcosm tank during the test.

"Water turnover rate" or "residence time" means the time required for one complete water replacement or exchange within the natural system.

(c) *Test procedures*—(1) *Summary of the test.* A site-specific microcosm is constructed with an indigenous water column and the intact sediment core associated with it. The water and sediment retain their associated organisms in the pelagic and benthic components, respectively, of the natural aquatic system. Environmental variables such as temperature, water turbulence, and water turnover rate are manipulated to be similar to the conditions found in the natural aquatic system. After the test substance is initially introduced into the microcosm, the fate of the test substance as well as properties indicative of the structure and function of the microcosm are monitored for at least 30 days. Effects of the test substance on the abundance and diversity of aquatic life, and on elemental cycling in the microcosm are determined by comparisons with microcosms that do not contain the test substance.

(2) *Administration of test substance.* (i) Only test substances that are resistant to photolysis (i.e., $t_{1/2}$=30 days) should be tested in this microcosm system.

(ii) All the test substance added to the microcosms during the study shall be accounted for by mass balance. If the test substance is degradable (not persistent), then it is recommended that the test substance be radiolabeled.

(iii) Test substances can be either gases, liquids, or solids and may or may not be soluble in water.

(A) If the test substance is soluble in water, it should be dissolved in distilled water to make a stock solution of known concentration. Measured portions of the stock solution shall be added to the water in the microcosms and thoroughly dispersed by adequate stirring.

(B) If the test substance is insoluble in water but soluble in a relatively nontoxic, water-miscible solvent such as acetone, it should be dissolved in the minimum volume of carrier solvent required to form a homogeneous stock solution of known concentration. A measured portion of the stock solution should be dispersed into the microcosm water at the beginning of the test to form a homogeneous suspension. Carrier controls shall be included in the experimental design and monitored simultaneously with the microcosms treated with the test substance.

(C) If the test substance is a solid and is insoluble in either water or a suitable carrier, it should be ground to a fine powder, weighed to achieve the mass required, and added to a 1-liter aliquot of the test water contained in a 2-liter separatory funnel. The separatory funnel should be shaken vigorously to achieve as homogeneous a suspension as possible and then the suspension should be added to the microcosm water.

(D) If the test substance is a liquid, the measured portion should be added to 1 liter of the microcosm water contained in a 2-liter separatory funnel, and shaken to achieve as homogenous a suspension as possible. The suspension should then be mixed and added to the microcosm tanks.

(E) The amount of test substance remaining in the separatory funnel must be determined by suitable solvent extraction and analyses to accurately determine the amount added to the microcosms.

(iv) Sufficient quantities of the stock solution should be made as needed to minimize storage time and disposal volume.

(v) A test substance that is insoluble in both water and water-miscible carriers should be dissolved in more than one carrier, for example, consisting of a lipophilic solvent and an emulsifier, and then a measured portion of stock solution should be dispersed into the microcosm water to form a homogeneous suspension.

(vi) The method and pattern of applying a test substance to microcosms should reasonably reflect the release pattern expected in the natural system. If the input of the test substance to the natural system is other than a one dose application (i.e., multiple application, runoff), the test substance must be added to the microcosm tank in the same manner as the initial dose and each time there is a microcosm water replacement, but only in quantities sufficient to achieve the desired test concentrations in the replacement water.

(3) *Selection of treatment concentration.* (i) Range-finding tests are not recommended, but may be needed to determine treatment concentrations.

(ii) Initially, the microcosms should be treated with concentrations of the test substance that are 0.1, 1, and 10 times as high as the average ambient concentration of the test substance

observed or predicted in the natural system.

(iii) The test substance should be tested in concentrations of 1, 10, and 100 μg/L, if reliable data on observed or predicted average ambient concentrations are not available.

(4) *Definitive test.* (i) The purpose of the definitive test is to determine the potential fate and ecological effects of a test substance in a specific aquatic ecosystem.

(ii) At least three concentrations of the test substance, exclusive of controls, shall be tested for at least 30 days. A minimum of five replicate microcosms shall be used for each concentration. All tanks within a given airtight compartment shall be treated with the same concentration of the test substance.

(iii) A minimum of five control microcosms shall be used in the test for each water-soluble test substance. For those test substances that require a carrier, two of the five control microcosms shall be designated carrier controls and treated with the carrier leaving the remaining microcosms as carrier-free controls.

(iv) Two tests are recommended for each test substance. One should be performed in the summer and another in the winter if the fate and ecological effects of the test substance are expected to vary significantly with seasons.

(v) Microcosms should be installed and maintained in the following manner:

(A) All microcosm tanks should be placed in a water bath maintained within ±1 °C of the ambient water temperature in the natural system. Water may be pumped from the natural system into the water bath to regulate the temperature in the microcosms if the test laboratory is nearby.

(B) Water for the microcosm shall be collected from the natural system, at mid-tide for estuaries, by hand bucketing or non-destructive pumping, e.g., diaphragm pump. If the natural water column in the natural system is stratified, the microcosm water should contain subsamples taken from various depths.

(C) Water samples should be transported to the test facility in glass containers. On arrival at the test facility, water in each container shall be distributed equally among microcosms to a prescribed volume of approximately 140 liters. Plankton samples must be collected from each microcosm tank and analyzed to ensure homogeneous distribution.

(D) Each sediment core shall be collected undisturbed from the natural system by inserting a glass cylinder into the sediment and extracting the core from a prescribed location. The bottom of the core is sealed by seating it in a crystallization dish slightly larger than the cylinder (in the following Figure 1). It is desirable to use scuba divers to inspect the uniformity of the benthic component in the natural system, to select representative cores of appropriate length to preserve intact habitats, and then to collect the cores with as little disturbance as possible.

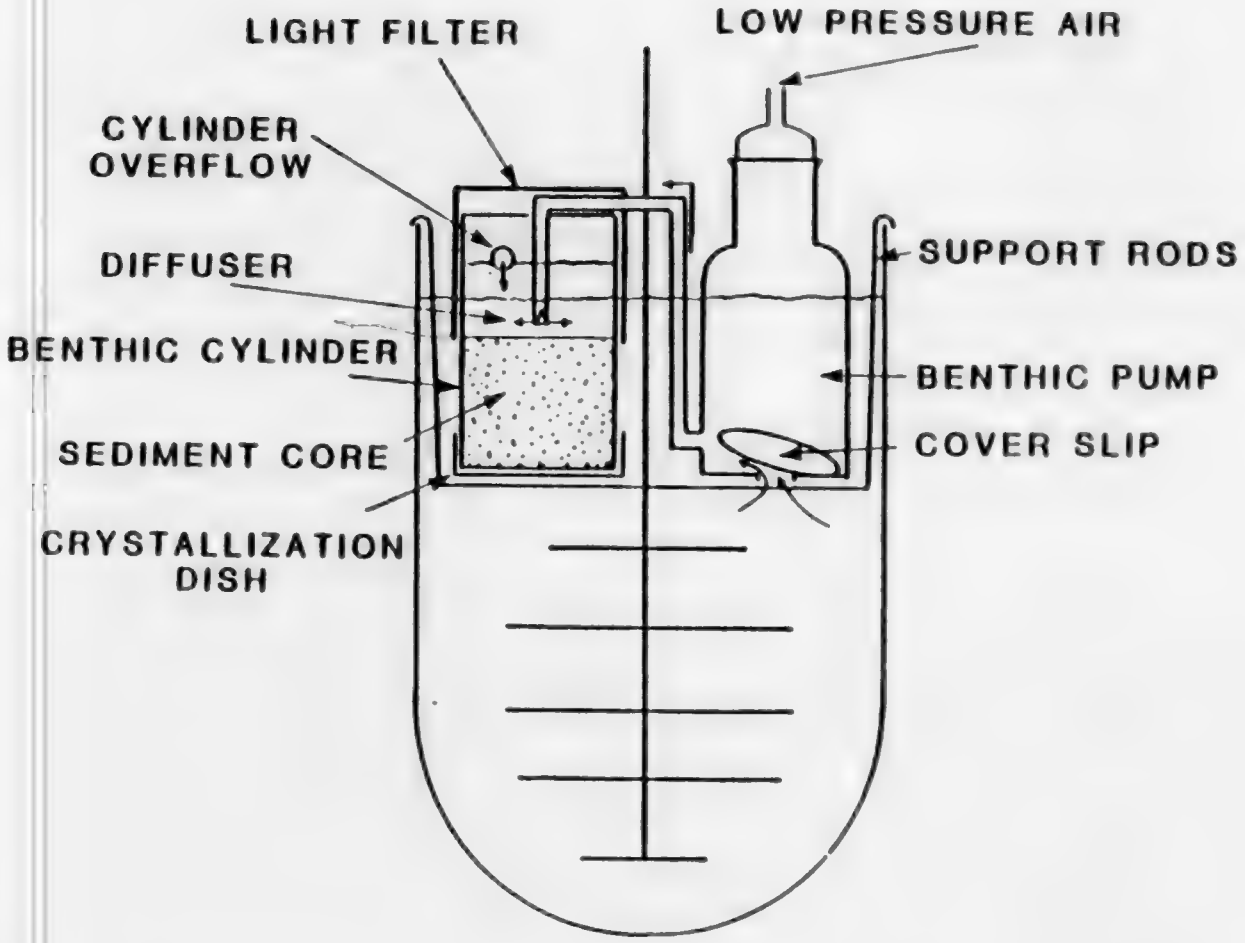
VOL 52 ISS 187 SE 28 1987 UMI

FIGURE 1--EXPERIMENTAL MICROCOSM (not drawn to scale)



(E) The ratio of benthic surface area to water volume in the microcosm should be made equal to that ratio in the natural system being simulated. Because the water volume in the microcosm is fixed, the desired ratio is obtained by selecting benthic cylinders with the appropriate inner diameter.

(F) The benthic cylinder housing the sediment core shall be mounted in the microcosm tank so that the overflow port of the box is 5 cm above the water level in the tank (see Figure 1 in paragraph (c)(4)(v)(D) of this section). Any disturbed sediment shall be allowed to settle for at least 30 minutes before starting water circulation in the benthic box and water turbulence in the microcosm tank.

(G) The benthic pump shall be mounted beside the benthic cylinder with the outlet diffuser of the pump submerged below the surface of the water (overflow port of the cylinder) but above the sediment surface (see Figure 1 in paragraph (c)(4)(v)(D) of this section). The rate of water flow over the sediment surface in the microcosm tank shall be adjusted to be equivalent to the average water flow rate over the sediment surface in the natural system.

(H) The light intensity over the microcosms shall be adjusted to produce an abundance of phytoplankton statistically equivalent to that in the natural system. Preliminary tests should be performed to establish the proper light intensity over the microcosms and should be done with all the microcosm equipment and facilities (i.e., water bath, tank paddle, benthic cylinder and pump) in place. The preliminary tests should be performed at several light intensities for at least 14 days. The photoperiod in both preliminary and definitive tests shall be set once every 7 days to match the actual photoperiod within 0.5 hour in the location of the natural system.

(I) The light intensity on the surface of the sediment core in the microcosms

shall be adjusted to the level that is equivalent to the average light intensity on the sediment surface in the natural system. Light intensity can be adjusted by covering the upper portion of the benthic cylinder with a screen, such as a nylon net, or other spectrally-neutral light filters.

(J) The speed of the stirring paddle installed in the microcosm tanks shall be adjusted to generate a water turbulence level statistically equivalent to that in the natural system, as measured in the gypsum dissolution method. This method measures the turbulence level by the average dissolution of pure gypsum. Weight loss shall be at least 5–10 percent. This may take several hours depending on temperature and turbulence. Dissolution rates shall be measured and water turbulence should be adjusted in the microcosms before each test.

(K) Any resuspended sediment that settles on the bottom of a microcosm tank shall be collected with a tubing pump and returned to the benthic cylinders when water turnover is simulated.

(L) Water turnover in the natural system shall be simulated in the microcosm as follows:

(*1*) A measured portion of the water in each microcosm tank shall be replaced at least three times every 7 days with water newly collected from the natural system;

(*2*) The water replacement shall match the water turnover rate observed in the natural system;

(*3*) Water replacement shall be scheduled immediately after sampling of microcosm water and shall occur on the same day.

(*4*) The volume of microcosm water to be removed each time should be the difference between the calculated volume to be replaced and the total volume of water samples removed to keep the water volume at 140 L.

(M) If the test substance accumulates in a thin film on the surface of water in the microcosm tank, a portion of the film should be removed with a filter pad or other absorbent material prior to removal of the volume of water to be replaced. This simulates the surface film advective transport from the natural system. The area (cm^2) of surface film to be removed should be equal to the product of (a) the ratio of the replacement water volume to total tank volume ratio, and (b) the surface area of the tank water minus (c) the area displaced by the benthic pump and cylinder.

$$\text{Film area removed} = \frac{\text{Replacement water}}{\text{Total tank volume}} \times \left[\text{Tank water surface area} - \left(\text{Benthic pump area} + \text{Benthic cylinder area}\right)\right]$$

(vi) Sampling procedures for the study of chemical fate should be performed as follows:

(A) Water samples should be taken at approximately 0, 1, 2, 3, 6, 12, and 24 hours after the initial application of the test substance. Thereafter, samples should be taken before each water replacement. Water samples should be collected through a slick protector within which the surface film has been removed. Samples may be taken more frequently to follow the fate of a chemical substance that is disappearing from the system at a relatively rapid rate. The samples should be collected at a location at least 3 cm from the side of the tank and 10 cm below the water surface while both the stirring paddle and the benthic pump are in operation.

(B) If the test substance accumulates in a thin film on the water surface, it should be sampled with a filter pad before each water replacement. The quantity of a radiolabeled test substance absorbed onto the filter membrane can be easily determined with liquid scintillation counting assuming all radioactivity represents the original form of the test substance. If the test substance has degraded, the percentage of the total radioactivity that is the test substance should be determined.

(C) Samples of selected zooplankton species in the microcosm should be collected once every 7 days to be analyzed for the test substance and, if practical, for its transformation products.

(D) Air samples should be collected once every seven days with a suitable sampler. For example, an inverted crystallization dish equipped with inlet and outlet tubes on the side may be placed above the water surface to collect air samples for chemical analysis; fresh air could be drawn by a vacuum pump at the end of the sampling train, entering the modified dish through the inlet tube, sweeping over the water surface, and carrying any volatilized forms of the test substance through the outlet tube to a suitable trap for subsequent quantification. Under the inverted dish, air flow over the water surface should be adjusted to match the flow rate over the rest of the water surface in the microcosm. The duration for each sample collection should be kept as short as possible.

(E) The quantity of test substance adsorbed onto the glass surfaces of the microcosm above and below the water surface should be sampled and estimated as follows:

(*1*) For estimates of the test substance adsorbed onto the glass of the microcosm tanks below the surface, glass rods of known surface area should be suspended in the water column, and removed periodically from the water and placed in a scintillation counting vial for radioassay. If a surface film is present, glass rods should be removed through a slick protector. If possible, the estimated quantity of the radiolabeled chemical substance on the glass surfaces using the glass rod method should be verified with extraction of the test substance from all subsurface glass surfaces whenever a microcosm is sacrificed during the test.

(*2*) A portion of the interior microcosm tank wall extending from the water surface to the lip of the tank should have an appropriate absorbent material attached to it. This material should be removed and extracted at the conclusion of the test to provide an estimate of the amount of the test substance adsorbed to the tank walls above the water.

(*3*) Any unlabeled test substance on the glass surface shall be thoroughly extracted and quantified after the water and sediment are removed from the microcosm.

(F) The quantities of the test substance in the benthic component should be determined as follows: (*1*) One of the five replicate microcosm

tanks for each of the three treatments should be randomly selected for sampling and samples of the core contents shall be collected on day 10; another of the remaining replicate microcosm tanks should be selected for sampling and samples shall be collected on day 20. The three remaining treated replicates and the controls shall be sampled at the end of the test on day 30.

(*2*) Three sediment subcores, at least 25 cm in diameter x 7 cm in depth, shall be collected from each benthic component to determine the vertical distribution of the test substance in the benthic component, i.e., concentration of test substance in each centimeter of the sediment core.

(*3*) Before triplicate sediment subcores are taken, the surface film (if present) on both the microcosm tank and the benthic cylinder should be removed with suitable tools such as a suction skimmer or a sheet of absorbent material, and then the water in both the tank and the benthic cylinder should be drained.

(*4*) Samples of each of the major animal species in the benthic component should be analyzed for the test substance and its transformation products, if possible.

(vii) Sampling procedures for ecological effects study should be performed as follows: (A) Water samples from microcosms should be taken as described in paragraphs (c)(4)(vi) (A) and (B) of this section.

(B) When water replacement and ecological effects sampling occur on the same day, biological samples shall be taken first.

(C) Samples of at least 2 mL of water should be collected daily from the microcosms and such samples shall be analyzed for enumeration and identification of phytoplankton.

(D) Samples of at least 2 liters of water should be collected from the microcosms at least twice each week and such samples shall be analyzed for enumeration and identification of zooplankton and transient larval forms. The water samples shall be collected at a rate sufficient to overcome the zooplankters' avoidance reaction and should be screened through a 20–uM plankton net. The retained organisms should be rinsed into a Petri dish and preserved for subsequent determination of population density and species composition.

(E) The ammonium-nitrogen concentration in the water column of the microcosms and the natural system should be determined once every 7 days.

(F) Population densities of phytoplankton and zooplankton in the natural system should be determined at least twice each week, and ammonium-nitrogen concentration in natural water should be measured at least once every 7 days. This can be done conveniently at the time for water replacement.

(G) The flux rate of ammonium-nitrogen between the benthic component and its associated water column should be determined weekly by stopping the benthic pump for a period of 1 to 3 hours. Ammonia concentrations in water above the benthic component should be measured at the beginning and end of this period. The flux rate should be expressed as the weight of ammonium-nitrogen produced by each square meter of sediment surface area per hour.

(H) The abundance and diversity of benthos shall be determined. Benthic animals shall be captured by sieving the wet sediment through a 0.5 mm screen. All animals retained on the screen should be identified and counted. Similar characterization of the benthic community of the natural system shall be established at the time of the experiment.

(5) [Reserved]

(6) *Analytical measurements*—(i) *Instrumental methods.* Atomic absorption and gas chromatography are preferrable to colorimetric methods for quantitative analyses of metals and organic compounds, respectively. Liquid scintillation counting is recommended for quantitative analysis of radiolabeled test substances, and high-pressure liquid chromatography is recommended in conjunction with liquid scintillation counting for separation and quantification of the test substance and its transformation products.

(ii) *Chemical.* (A) A stock solution of the test substance shall be prepared just before use, and its nominal concentration and purity shall be confirmed by chemical analysis. Standard analytical methods, if available, shall be used to determine the chemical concentration in microcosm samples and stock solution. The analytical methods used to measure all environmental samples shall be validated before the beginning of the test.

(B) Concentrations of the test substance, and its transformation products, if possible, shall be measured for the following components of the microcosm:

(*1*) Air.

(*2*) Surface film, if present.

(*3*) Water column, both particulate and dissolved fractions.

(*4*) Various layers of the benthic component.

(*5*) Representative species of zooplankton.

(*6*) Representative benthic organisms.

(*7*) Glass surfaces above and below the water surface.

(C) If a radiolabeled test substance is used, a complete budget of all radioactivity shall be calculated, including the amount of radioactivity added to the microcosm, removed by gas transport and water replacement, and remaining among the compartments of the microcosm.

(iii) *Numerical.* (A) Mean and standard deviations of biological attributes shall be calculated for each treatment and control. The following information shall be determined: Abundance of phytoplankton, zooplankton, and each type of benthic fauna. If the species of plankton can be identified, abundance shall be calculated for each one.

(B) Statistical analyses shall be performed to determine: (*1*) Whether significant differences exist in biological attributes between:

(*i*) The control microcosms and the natural system.

(*ii*) The carrier control and the carrier-free control.

(*iii*) The control and the microcosms treated with the test substance.

(*2*) Whether significant differences exist in the amount, export, and bioconcentration of the test substance among:

(*i*) Different compartments of the microcosms receiving the same treatment, and

(*ii*) The microcosms receiving different treatments.

(d) *Test conditions*—(1) *Test species.* (i) The organisms tested shall include the indigenous fauna and flora representing both the pelagic and benthic communities of the natural system, except the macrofauna.

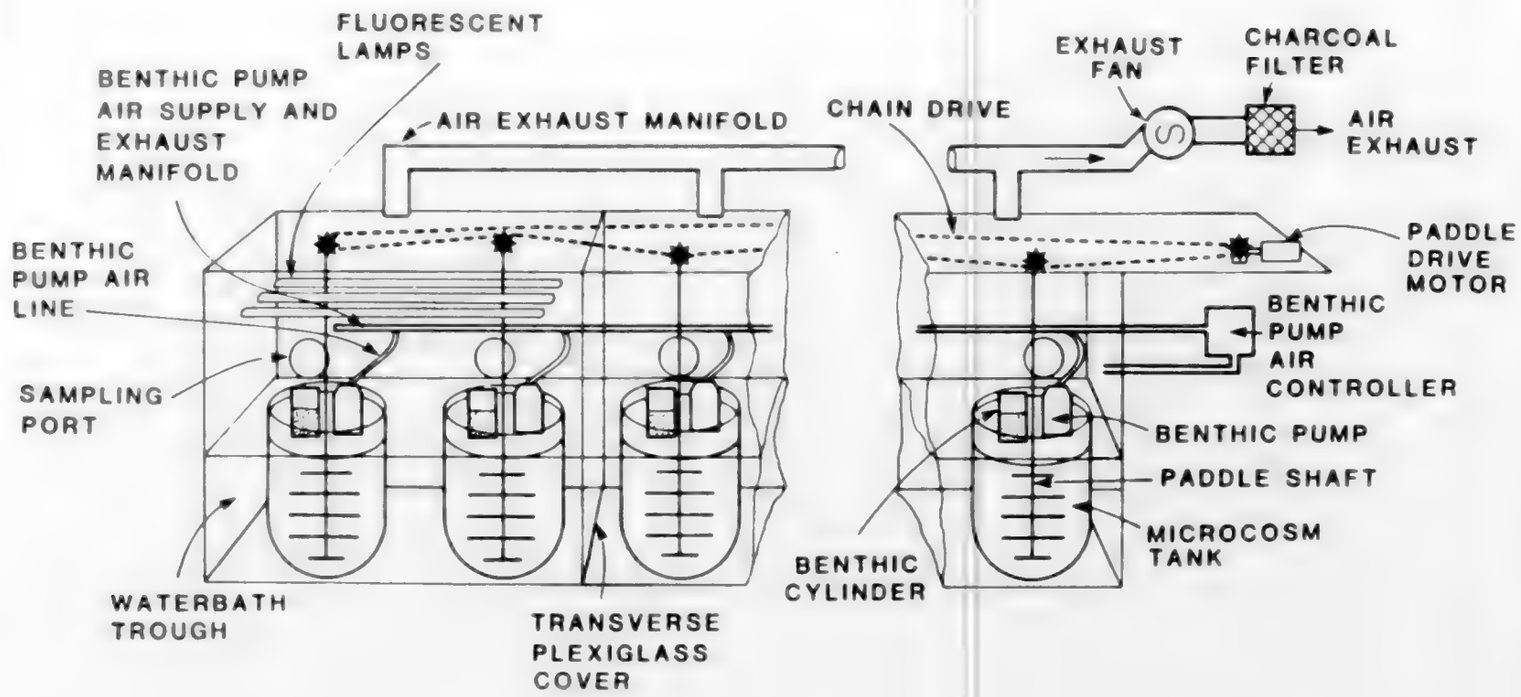
(ii) Neither acclimation nor supplemental food is necessary for the test organisms.

(2) *Facilities*—(i) *Supporting equipment.* (A) The capacity of the water bath used to maintain the water temperature and the flow rate of the water through the water bath shall be such that the water temperature in all microcosms will be kept within ±1 °C of the ambient water temperature in the natural system.

(B) "Cool white" fluorescent light should uniformly illuminate the water surface of all microcosms. The fluorescent lights should be mounted on a canopy above the microcosm tanks, (in the following Figure 2). The desired, uniform light intensity is achieved by wrapping the fluorescent lamps with aluminum foil.

BILLING CODE 6560-50-M

FIGURE 2--EXPERIMENTAL MICROCOSM FACILITY



BILLING CODE 6560-50-C

(C) In the room containing the microcosms, no light source except that specifically for the microcosms shall be allowed.

(D) To match the water turbulence in the natural system, the water turbulence level in the microcosms should be controlled by the speed of an electric motor that is mounted with its chain drive and drive shafts above the canopy and controls the speed of all stirring paddles (see Figure 2 in paragraph (d)(2)(i)(B) of this section).

(E) The gypsum dissolution method measures the water turbulence level by the average dissolution rate (i.e., weight loss/time) of cubes (2.5 cm x 1.5 cm x 1.0 cm) of pure gypsum ($CaSO_4$) suspended in the microcosm tank or in the natural system. Gypsum cubes from the same source and lot should be used for the entire set of dissolution tests in the microcosms and in the natural system.

(F) The airspace between the canopy and water bath should be enclosed and sealed with acrylic plastic sheets to facilitate containment of the test substance transported into the gas phase (atmosphere) from the water (see Figure 2 in paragraph (d)(2)(i)(B) of this section).

(*1*) The enclosed volume under the canopy and above the water bath should be divided into relatively airtight compartments with Plexiglas ® panels mounted transversely to the module and extending approximately 5 cm below the water surface of the water bath.

(*2*) Each airtight compartment should have its own air outlet to the exhaust, a removable front cover to facilitate setting up and filling the microcosm tanks, and hinged ports in the front cover to provide access to the tanks during testing.

(G) Airflow over the water surface (microcosms and water bath) in each compartment should be maintained by a manifold connected to an exhaust fan which draws the air from all compartments through its outlet tube and then vents the exhaust air through a charcoal filter and a stack outside the laboratory building (see Figure 2 in paragraph (d)(2)(i)(B) of this section).

(ii) *Microcosm.* Each microcosm is a multi-trophic level model that combines pelagic and benthic communities similar to those existing in the natural system.

(A) Hard glass (e.g., Pyrex®) containers are preferred to soft glass or plastic ones for the testing of organic chemicals.

(B) For each experiment, at least 20 microcosm tanks shall be required. Each tank, about 140 L in capacity shall hold enough water and sediment to support the quantity of benthic invertebrates present in the benthic subsystem, such as a medium-sized shellfish, for 30 days or more.

(C) The benthic cylinder, up to 30 cm tall, shall have an inner diameter that makes the ratio of the sediment surface area to water volume in the microcosm equal to that in the natural system.

(D) The benthic cylinder, which holds the sediment core, should be sealed at the bottom end with a crystallization dish.

(E) The benthic pump (Figure 1 of this section) should be an all-glass, air displacement pump. It shall be large enough to provide the appropriate water flow rate over the sediment surface.

(F) To minimize disturbance of the sediment core by the discharge from the benthic pump, a diffuser shall be attached to the water outlet tube of the benthic pump to direct the outgoing water into several horizontal streams over the sediment surface.

(G) If the test substance forms a thin film covering the microcosm water surface, a 6-cm length of glass cylinder, or surface film protector, should be partially submerged in the water to provide a sampling port for uncontaminated water samples after the surface film inside the cylinder is removed.

(iii) *Cleaning.* Microcosm tanks, benthic cylinders, crystallization dishes, benthic pumps, support rack, slick protectors, and glass rods should be cleaned before use. All equipment should be washed according to standard laboratory practices to remove any residues remaining from manufacturing or previous use. A dichromate solution should not be used for cleaning glass containers. Solvents and/or high temperature (450 °C for 8 hours) combustion may be necessary to ensure the ultimate cleanliness of the microcosms and associated glass components. If cleansing solvents are used, disposal should conform to existing federal regulations.

(3) *Test parameters.* Environmental conditions in the microcosm shall simulate the natural aquatic system as closely as possible.

(e) *Reporting.* (1) The final report shall include, but not necessarily be limited to, the following information:

(i) Name and address of the facility performing the study and the dates on which the study was initiated and was completed, terminated, or discontinued.

(ii) Objectives and procedures stated in the approved protocol, including any changes in the original protocol.

(iii) Statistical methods employed for analyzing data.

(iv) The test substance identified by name, Chemical Abstracts Service (CAS) number or code number, source, lot or batch number, strength, purity, and composition or other appropriate characteristics.

(v) Stability of the test substance under the conditions of administration.

(vi) A description of the methods used, including: (A) Description of microcosm facilities and supporting equipment; and

(B) Description of natural system being simulated, including boundaries of natural system, pelagic community, benthic community, sediment type, water quality, history of natural system, light regime, ratio of benthic surface area to the water volume, water turbulence rate, water flow rate over sediment surface, water turnover rate, light intensity over sediment surface, seasonal attributes (e.g., water temperature), and ecological attributes (e.g., productivity).

(vii) A description of the test system used, including: microcosm tank size, sediment core size, ratio of benthic surface area to water volume, light intensity on water surface, light intensity on sediment surface, water flow rate over sediment surface, and water turbulence.

(viii) A description of the experimental design, treatment concentrations, and methods and pattern of administration. The report results should include:

(A) The results of the preliminary tests.

(B) For the definitive test, various ecological effects and chemical fate parameters may include:

(*1*) *Ecological effects.* (*i*) Phytoplankton abundance, in numbers per mL, for the community or for each species.

(*ii*) Zooplankton and transient larval forms abundances, in numbers per liter, for the community or for each life stage of each species.

(*iii*) Number of organisms in the benthic community or, if known, in each species, expressed in numbers per m^2. Indicate the categories of benthic organisms if species identification is not feasible.

(*iv*) Concentrations of major nutrients, such as ammonium-nitrogen, in the water column.

(*v*) Carrier effects when a carrier solvent is used.

(*vi*) Assessment of microcosm realism by comparing the biological attributes in the natural system to that in the control microcosms.

(*vii*) Effects of the test substance are assessed by comparing the treated microcosms to carrier controls.

(*2*) *Chemical fate.* (*i*) The concentrations of test substance in

representative species of zooplankton and benthic organisms.

(*ii*) The amount of test substance transported to the atmosphere.

(*iii*) The amount of test substance adsorbed onto the glass surface of the microcosm.

(*iv*) The vertical distribution of the test substance in the sediment core of the benthic component.

(*v*) The uptake and biotransformation of the test substance in biota.

(*vi*) A mass balance consisting of the total quantity of the test substance added to the microcosm, the quantities exported from the microcosm and the quantities remaining in the microcosm.

(*vii*) Concentrations of the test substance and its transformation products, at steady state in the water column and sediment core, and the amount on the glass surfaces both above and below the water surface and on the surface film, if present.

(*viii*) The effect of treatments on the residual concentrations of the test substance in each ecosystem compartment.

(*3*) *Transport of test substance and its transformation products.* (*i*) Amount of test substance and transformation products exported from the microcosm through the air, water replacement, and removal of surface film.

(*ii*) The effect of the treatments on the export rate of test substance and transformation products from each ecosystem compartment and on the total amount of test substance being exported.

(*4*) *Bioaccumulation potential of test substance in aquatic organisms.* (*i*) The concentrations of test substance residues in aquatic organisms (mass of test substance per kilogram wet weight).

(*ii*) The bioaccumulation factor for selected benthos as well as water column species, such as zooplankton.

(*iii*) The effect of the treatments concentration on the bioaccumulation factor.

(ix) A description of all circumstances that may have affected the quality or integrity of the data.

(x) The name of the sponsor, study director, principal investigator, names of other scientists or professionals, and the names of all supervisory personnel involved in the study.

(xi) A description of the transformations, calculations, or operations performed on the data, a summary and analysis of the data, and a statement of the conclusions drawn from the analysis.

(xii) The signed and dated reports of each of the individual scientists or other professionals involved in the study, including each person who, at the request or direction of the testing facility or sponsor, conducted an analysis or evaluation of data or specimens from the study after data generation was completed.

(xiii) The locations where all specimens, raw data, and the final report are stored.

(xiv) The statement prepared and signed by the quality assurance unit.

§ 797.3700 Soil microbial community toxicity test.

(a) *Purpose.* This guideline is intended for use in developing data on the toxicity of chemical substances and mixtures ("test substances") subject to environmental effects test regulations under the Toxic Substances Control Act (TSCA) (Pub. L. 94–469, 90 Stat. 2003, 14 U.S.C. 2601 *et seq.*). The guideline prescribes a test using natural soil samples to develop data on the toxicity of test substances to microbial populations indigenous to the soil. The United States Environmental Protection Agency (EPA) will use data from these tests in assessing the hazard of a test substance to the environment.

(b) *Definitions.* The definitions in section 3 of TSCA and Part 792—Good Laboratory Practice Standards, of this chapter, apply to this guideline. The following definitions also apply:

"Ammonification" means conversion of organic nitrogen compounds to ammonia (NH_3) or ammonium (NH_4) compounds, performed by a variety of microorganisms in soil and water.

"Carbon dioxide (CO_2) efflux" means the evolution of CO_2 gas from substrates mineralized by microbial action; indicative of respiration.

"EC X" means the experimentally-derived test substance concentration that is calculated to affect X percent of the test species.

"kiloPascal (kPa)" means a unit of pressure in the meter-kilogram-second system equivalent to one newton per square meter (i.e., one Pa) x 1,000; used as a measure of water availability in soils.

"Mineralization" means the complete or ultimate degradation by microorganisms of organic material to form inorganic end-products, e.g., carbon dioxide, water, chloride, ammonium, nitrates, or orthophosphate.

"Nitrification" means the oxidation of ammonium salts to nitrites (NO_2) and nitrates (NO_3), performed by relatively specialized microorganisms.

"Surface soil" means that layer of soil representing the top 15 cm of the area to be sampled, excluding the litter horizon.

(c) *Test procedures*—(1) *Summary of the test.* Surface soil is sieved and supplemented with ground, dry alfalfa. The test substance, if soluble, is added as a solution to moisten the soil, or is added in a manner that best simulates its anticipated mode of entry in nature. All soil samples are then incubated in darkness at approximately 22 °C. On days 5 and 28 after introduction of the test substance, samples are analyzed for NH_3 and NO_3 content to establish ammonification and nitrification values, respectively, and for CO_2 efflux as an indication of microbial respiration.

(2) *Application of test substance.* (i) Deionized or glass-distilled water shall be used in making stock solutions of a water-soluble test substance. Sufficient quantities of each concentration should be made as needed to minimize storage time and disposal volume. A constant volume of the stock solution shall be added at the beginning of the test to each soil sample designated to receive the test substance.

(ii) A test substance that is insoluble in water, but which can be suspended in an aqueous solution by a carrier, should be added, with the carrier, to those soil samples designated to receive the test substance. The carrier should be soluble in water, nontoxic to microbial life at the concentration applied, and used in the minimum amount required to dissolve or suspend the test substance. There are preferred carriers; however, acetone, gum arabic, ethanol, and others have been used extensively in testing herbicides, plant growth regulators, fungicides, and other chemical substances that affect plants. Any such carrier may be used for this test, providing it neither enhances nor inhibits the activities of the soil microbes. Carrier controls shall be included in the experimental design and tested simultaneously with the test substance.

(iii) A water-insoluble test substance for which no nontoxic, water-soluble carrier is available should be dissolved in an appropriate volatile solvent. The solution should be mixed with the ground alfalfa soil supplement, then placed in a rotary vacuum apparatus and evaporated, leaving a uniform coating of the test substance on the alfalfa. A portion of the alfalfa shall be weighed and the test substance shall be extracted with the same organic solvent. Then the test substance shall be assayed before the alfalfa is mixed with the soil in the test containers. Solvent controls (i.e., alfalfa treated only with solvent) shall be included in the experimental design and tested simultaneously with the test substance.

(iv) If the test substance is not readily soluble in water or in another commonly-used carrier, and is known to

be applied or transported in nature directly to the soil as a previously prepared liquid or powder, it should be mixed, in its liquid or dry form, directly into the soil samples. Mixing must be thorough, however, to ensure equal distribution of the test substance throughout each test sample.

(3) *Range-finding test.* (i) A range-finding test shall be conducted to establish (A) if definitive testing is necessary and (B) the concentrations of test substance to be used in the definitive test.

(ii) If the maximum concentration of test substance to which the soil microbial community is likely to be exposed in nature can be predicted, soil samples should be treated with concentrations that are 0.1, 1, and 10 times the anticipated environmental exposure concentration. On days 5 and 28 after introduction of the test substance, the effects of treatment shall be assessed as the CO_2 efflux rate and the NO_3 and NH_3 concentrations per gram of dry soil in treated samples, relative to untreated controls and, if applicable, carrier controls, and to values in freshly sieved (pretreatment) soil. Should reasonable predictions of anticipated environmental exposure concentrations not be possible, soil samples shall be exposed to a series of widely-spaced concentrations (e.g., 1, 10, 100, 1,000, 10,000 $\mu g/g$) of the test substance. In general, the highest concentration in the series should not be less than 1,000 $\mu g/g$, although for water-soluble test substances, it is recommended that levels not exceed 50 percent of the saturation concentration. As before, CO_2 efflux and NO_3 and NH_3 concentrations shall be compared with controls.

(iii) The test shall consist of exposing at least two samples of soil from the same source to each concentration of test substance and to each control, with the exception of the controls for which one sample will suffice. To be appropriate for this guideline, a soil shall possess a pH of 4 to 8, an organic matter content between 1 and 8 percent, a cation exchange capacity greater than 7 meq/100g, and consist of less than 70 percent sand. Soils to which fertilizer or pesticide(s) have been applied within the past 24 months should be avoided. Soil collections shall be restricted to the surface soil. Large objects shall be removed manually, and the remaining soil allowed to air-dry until sievable (approximately 12 percent water content), after which it is passed through a 2-mm mesh screen. For each sample, an amount of soil equivalent to approximately 50 g oven-dry weight shall be placed in an inert container. Wide-mouth jars (for example, glass canning, 0.5 pint or 110-mL capacity) are adequate for this purpose. At least one of these samples, considered to be the control, should be extracted immediately to determine NH_3 and NO_3 content (see paragraph (c)(4)(vii) of this section). Alfalfa, dried and ground to pass through a 0.6-mm mesh screen, shall be added (0.3 g) to each remaining sample and the sample shall be thoroughly mixed. Water content of the soil shall be adjusted to approximately 10 kPa by adding distilled water containing the desired concentration of test substance (in carrier, if necessary). If insoluble in both water and commonly used carriers, the test substance should be mixed into the soil as a solid and the appropriate amount of water added subsequently. The test containers may be covered with 0.13 μm (0.5 mil) polyethylene to minimize water loss, yet permit gas exchange, or left open and watered to their original weight every 7 days. Regardless, the test substance shall be applied only during the original watering.

(iv) Controls shall receive an equal volume of water without the test substance. If a carrier solvent is required to dissolve or suspend the test substance, a carrier control (i.e., solvent in water without the test substance) shall also be included. Should the test substance be a powder that is mixed directly into soil and subsequently moistened with distilled water, the control shall receive an equal volume of such water only. All samples shall be incubated in darkness at 22 °C (or at the temperature to which the microorganisms are most accustomed in their soil environment).

(v) Of the soil samples prepared for each concentration of test substance or control, one sample shall be assayed after 5 days of exposure to the test substance for NH_3 and NO_3 content, and then discarded. A second sample shall be analyzed the same day for CO_2 evolution and then reincubated (dark, 22 °C). On day 28, after exposure to the test substance, all remaining (reincubated) samples shall be assayed first for CO_2 efflux and then again for nitrogen content.

(vi) The test substance shall be chemically stable in distilled water or in any chemical substance used as a carrier.

(vii) No replicates are required, and nominal concentrations are acceptable unless definitive testing is not required.

(viii) Definitive testing is not necessary if the highest concentration of test substance tested (but not less than 1,000 $\mu g/g$) results in less than a 50-percent reduction of ammonification, nitrification, and CO_2 evolution; or if that concentration representing the analytical detection limit (if tested) results in greater than a 50-percent reduction of NH_3 and NO_3 content of the soil and of CO_2 generation.

(4) *Definitive test.* (i) The purpose of the definitive test is to determine whether the test substance is toxic to the community of microorganisms residing in a particular soil and, if so, to delineate its concentration-response curves and EC_{50}s for each of three variables (CO_2 evolution and NH_3 and NO_3 soil content) that indicate the capacity of the soil microbial community to decompose organic matter and release plant nutrients.

(ii) Preparations for the test shall be made as described for the range-finding test (see paragraphs (c)(3) (iii) through (v) of this section) except that more samples of each soil source to be tested are required. As before, at least two series of soil samples should be prepared for each concentration; one series to be analyzed 5 days after exposure, the other to be analyzed on the 28th day after exposure. Series replicates of at least five concentrations of test substance, exclusive of controls, shall be used for each of the two series. For each soil source tested, the concentration range should be selected to define, as closely as possible, the concentration-response curve between the EC_{10} and EC_{90} for each variable.

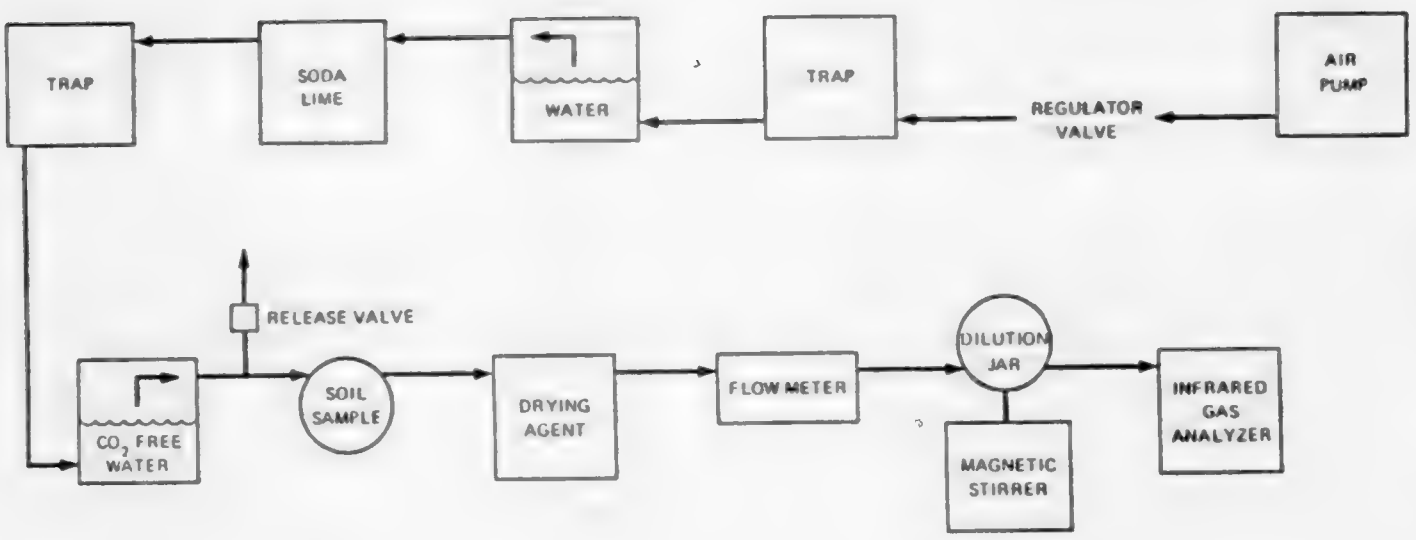
(iii) Every test shall include controls consisting of the same distilled water, soil, and alfalfa supplement used in the treated soil samples, that none of the test substance is added. Environmental conditions shall likewise be the same. If a carrier is needed to dissolve or suspend the test substance, a carrier control shall also be included.

(iv) Test containers may be covered with polyethylene film (0.13-μm; 0.5-mil) to prevent water loss. Control containers should be handled identically to the test containers except that none of the test substance is added.

(v) The definitive test consists of testing soil (containing the natural microbial population) from a particular source with the test substance (see paragraph (c)(3)(iii) of this section). For a particular test substance, a test is the exposure of the selected soil to two identical series of five concentrations of the test substance in a minimum of five replicate containers per concentration, and includes appropriate controls, with analyses of CO_2, NH_3, and NO_3 on the 5th and 28th days after exposure to the test substance.

(vi) To measure CO_2 efflux, each container of test substance and control container is closed with a two-hole stopper fitted with Teflon tubes and twistcock connectors for attachment to the measurement apparatus. The apparatus (see Figure 1 in this paragraph) shall deliver a stream of humid, CO_2-free air to the test system, and the effluent air shall be dried, diluted, and delivered for infrared gas analysis (IRGA). The period of incubation should be adjusted to match the CO_2 efflux rate with the detection capability of the IRGA, and may vary from one to 77 hours. In lieu of IRGA, CO_2 may be trapped in a hydroxide solution and titrated, or measured gas-chromatographically.

FIGURE 1--FLOW DIAGRAM FOR THE IRGA METHOD OF DETERMINING CO_2 EVOLUTION FROM SOIL SAMPLES



(vii) Accumulation of inorganic nitrogen is measured by extracting each soil sample with 80 mL of 1 *N* potassium chloride (KC1). After adding KCl and shaking each container by hand to suspend the soil, sample containers shall be placed on a rotary shaker at high speed for 1 hour, then shaken again by hand to resuspend the soil. Samples shall be filtered (Whatman #42 low-nitrate filter paper) and the extract (filtrate) shall be analyzed for NO_3 and NH_3. Being rapid and precise, standard Autotechnicon analysis techniques are recommended. Acceptable alternative methods are available, however.

(viii) The assignment of soil containers to test substance concentrations shall be random. In addition, placement of the containers in the incubation chamber shall be randomized.

(ix) Temperature in the incubation chamber shall be monitored continuously.

(5) [Reserved]

(6) *Analytical measurements*—(i) *Chemical.* For readily aqueous-soluble test substances, stock solutions of the test substance shall be diluted with glass-distilled or deionized water to obtain the test solutions. Standard analytical methods shall be used to establish concentrations of these solutions and shall be validated before beginning the test. An analytical method is not acceptable if likely degradation products of the test substance, such as hydrolysis and oxidation products, give positive or negative interference. The pH of these solutions shall also be measured before use.

(ii) *Numerical.* CO_2 efflux rates (μg/g of dry soil/hr) and NO_3 and NH_3 concentrations (μg/g of dry soil) in treated samples should be determined and compared with values obtained from untreated controls, carrier controls (if a carrier is used), and from the freshly sieved, pretreatment soil. The significance of differences between means may be established using Duncan's Multiple Range Test. Means and standard deviations should be plotted for each treated sample and each control. Appropriate statistical analyses should provide a goodness-of-fit determination for the concentration-response curves.

(d) *Test conditions*—(1) *Test species.* (i) No particular species of test organisms are recommended for use in this test due to the emphasis placed on maintaining the natural state of the soil samples and their resident populations of microorganisms. The test organisms

are, therefore, those that occur naturally in the soil, and no others are to be introduced.

(2) *Facilities*—(i) *Apparatus.* (A) Test chambers shall provide adequate space and controls necessary to incubate numerous soil samples in total darkness at a constant temperature for prolonged periods of time. Chambers shall be designed to prevent escape of internal air into the external environment other than through appropriate filtering material or media to prevent contamination of the external environment with the test substance.

(B) Laboratory facilities for test substance determinations should include nonporous floor covering; absorbent bench covering with nonporous backing, and adequate disposal facilities to accommodate test and wash solutions containing the test substance at the end of each test, and any bench covering, lab clothing, or other contaminated materials.

(ii) *Containers.* For each test, at least 60 to 70 soil containers (two series of 5 per concentration of test substance, two series of 5 for the control, and two series of 5 if a carrier control is necessary) shall be used. In addition, soil to be extracted immediately as the control is most easily handled in an identical container. All containers used in each experiment shall be of equal size and volume, possess the same configuration, and shall be made of the same inert material.

(iii) *Cleaning and sterilization.* (A) Soil containers and test solution storage containers shall be cleaned before use. All equipment should be washed according to good standard laboratory procedures to remove any residues remaining from manufacturing or prior use. A dichromate solution shall not be used for cleaning containers.

(B) If cleaning and rinsing of previously used soil containers has been thorough, the effects of any microorganisms remaining on the interior surface of the containers should be insignificant in the presence of the new test soil. Sterilization should not be necessary, but is considered an acceptable option.

(C) Soil treated with the test substance and solvent control soil shall be discarded at the end of the experiment. Disposal shall conform to applicable federal regulations.

(3) *Test parameters.* Environmental conditions shall be maintained as follows:

(i) Constant incubation temperature of 22 °C (or that temperature to which the microorganisms are most accustomed in nature).

(ii) Total darkness during incubation to prevent photosynthesis by algae or the growth of moss.

(e) *Reporting.* (1) The final report shall include, but not necessarily be limited to, the following information.

(i) Name and address of the facility performing the study and the dates on which the study was initiated and was completed, terminated, or discontinued.

(ii) Objectives and procedures stated in the approved protocol, including any changes in the original protocol.

(iii) Statistical methods used for analyzing the data.

(iv) The test substance identified by name, Chemical Abstracts Service (CAS) number or code number, source, lot or batch number, strength, purity, and composition or other appropriate characteristics.

(v) Stability of the test and, if used, control substances under the conditions of administration.

(vi) A description of the methods used, which should include the following:

(A) Description of environmental conditions, including type and size of incubation chamber and temperature used.

(B) Description of test diluent/solvent if other than distilled water, e.g., if carrier is required.

(C) Description of experimental design and/or arrangement of equipment, including a diagram, if complex.

(D) Method(s) used to determine the placement of soil containers in the incubation chamber and the assignment of test concentrations to containers to ensure randomization of exposure.

(E) Frequency and methods of adding water to soil containers during the test period.

(vii) A description of the test system used, including the source of the test soil, the type of ecosystem from which it was removed, its chemical and physical characteristics (mechanical analysis), and any available geological information including soil type (classification).

(viii) A description of the amount of soil tested per concentration, number of replicates, carrier (if any), and incubation periods.

(ix) The concentration of the test substance per unit dry weight of test soil when the test substance is dissolved in water, solubilized with a carrier, or coated on the alfalfa supplement and/or mixed into the soil.

(x) pH of the test solution applied to the soil samples. The reported results should include:

(A) The results of the range-finding test expressed as μg of CO_2 evolved/g of dry soil/hr, and μg of each of NH_3 and NO_3 present/g of dry soil, in treated and untreated samples. If the range-finding test indicated that the highest concentration of the test substance tested (but not less than 1,000 $\mu g/g$) had no effect on the test system, report the results by soil source and type and state that the test substance has a low potential for adversely affecting microbial functions in such soils. If the range-finding test indicated a greater than 50-percent reduction of the endpoints of the test at a concentration of the test substance that represents the analytical detection limit (if tested), report the results by soil source and type and state that the test substance is toxic to microbial life in such soils at concentrations at or below the analytical detection limit used in this study.

(B) For the definitive test, the soil source and type, concentrations of test substance used ($\mu g/g$ dry soil), and data for the same variables used in the range-finding test (see paragraph (e)(1)(x)(A) of this section) shall be reported.

(xi) A description of all circumstances that may have affected the quality or integrity of the data.

(xii) The name of the sponsor, study director, principal investigator, names of other scientists or professionals, and the names of all supervisory personnel involved in the study.

(xiii) A description of the transformations, calculations, or operations performed on the data, a summary and analysis of the data, and a statement of the conclusions drawn from the analysis. Results of the analysis of data should include the concentration-response curves with 95-percent confidence limits, the results of a goodness-of-fit test, e.g., chi-square test, and EC_{50}'s.

(xiv) The signed and dated reports of each of the individual scientists or other professionals involved in the study including each person who, at the request or direction of the testing facility or sponsor, conducted an analysis or evaluation of data or specimens from the study after data generation was completed.

(xv) The locations where all specimens, raw data, and the final report are stored.

(xvi) The statement prepared and signed by the quality assurance unit.

(2) [Reserved]

§ 797.3775 Soil-core microcosm test.

(a) *Purpose.* This guideline is intended for use in developing data on the toxicity and fate of chemical substances and mixtures ("test substances") subject to environmental effects test regulations

under the Toxic Substances Control Act (TSCA) (Pub. L. 94–469, 90 Stat. 2003, 14 U.S.C. 2601 *et seq.*). This guideline prescribes tests using soil-core microcosms to provide information on the potential fate and ecological effects of chemical substances released to a specific terrestrial ecosystem. The United States Environmental Protection Agency (EPA) will use data from these tests in assessing the hazard of a test substance to the environment.

(b) *Definitions.* The definitions in section 3 of TSCA and Part 792—Good Laboratory Practice Standards, of this chapter, apply to this test guideline. The following definitions also apply:

"Bioconcentration factor (BCF)" means the ratio of the concentration of test substance in plant tissue (i.e., biota) to that in soil.

"Biota" means the organisms in the soil at the time of extraction of the core and the natural vegetation or crop species introduced as the autotrophic component. Biota includes all heterotrophic and carnivorous invertebrates in the soil and all soil and plant bacteria, fungi, and viruses.

"Carrier" means the organic solvent, solubilizer and/or other substance used to disperse the test substance into microcosm water.

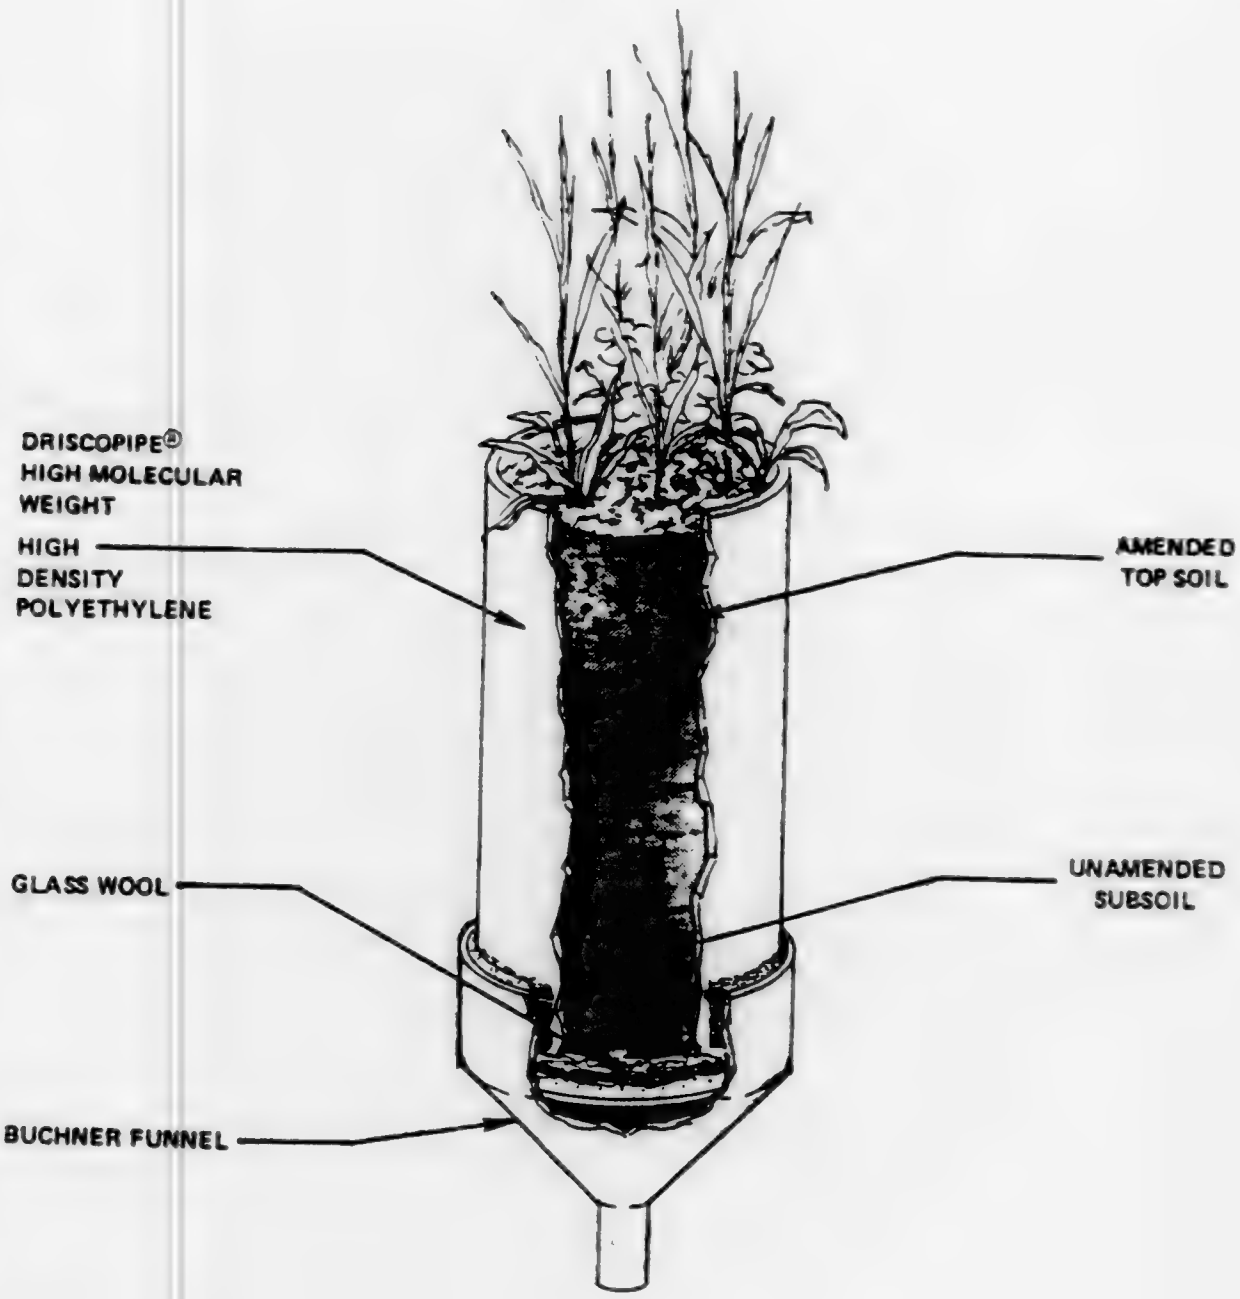
"Soil-core" means an intact, undisturbed (nonhomogenized) core that is extracted in situ from a soil type typical of the region or site of interest and that is of sufficient depth to allow a full growing season for the natural vegetation or the crops selected, without causing the plants to become significantly root bound.

"Soil-core microcosm" means a physical miniaturized model of an interacting community of autotrophs, omnivores, herbivores, carnivores, and decomposers within an intact soil profile.

(c) *Test procedures*—(1) *Summary of the test.* The purpose of the soil-core microcosm test is to determine the potential fate and ecological effects of a chemical substance, including its transformation products, released to a specific terrestrial ecosystem. A soil core, as shown in the following Figure 1, containing biota typical of the region of interest, is treated with the test substance under controlled conditions in either a growth chamber or greenhouse. The test is usually continued for a minimum of 12 weeks from first application of the test substance to final harvest. Single or multiple applications of the test substance may be chosen, depending on the expected mode of introduction of the test substance into the environment. Leachate, soil, and plant samples are analyzed to evaluate the environmental fate of the test substance. Ecological effects of the substances are evaluated on the basis of measurements of primary productivity and nutrient loss, as well as on determinations of BCFs and observations of plant condition.

BILLING CODE 6560-5-M

FIGURE 1--MICROCOSM STRUCTURE AND MATERIALS



BILLING CODE 6560-50-C

BEST COPY AVAILABLE

(2) *Application of the test substance.* (i) Whenever possible, the test substance should be radiolabeled. The label may be ^{14}C, stable isotopes such as ^{15}N, or other suitable labels and, if possible, should be located in a portion (or portions) of the molecule known or expected to persist and/or have biological activity. For single chemical substances, two or more portions of the molecule may need to be labeled; in the case of mixtures, each component must be labeled and studied separately.

(ii) The test substance should be applied in a form which is reasonably consistent with the form in which it is expected to be released into the environment. The method and pattern of application should also reflect the actual or predicted field situation.

(A) If the primary mode of exposure to the test substance is anticipated to be by addition of pH-adjusted, reverse osmosis (RO) water or rainwater containing appropriate concentrations of the substance, the following procedure is recommended.

(*1*) Test substances which are likely to be released into the environment as a liquid or powder, and which can be mixed with water, should be applied as a single dose of liquid in a volume sufficient to bring the A horizon of the soil surface of the microcosm to field capacity.

(*2*) Water simulating rainfall or leaching should be filtered rainwater from the site being evaluated or purified (i.e., reverse osmosis) untreated laboratory water with a known chemical composition.

(*3*) The volume of reverse osmosis (RO) water or rainwater required for laboratory microcosms may be determined on-site using a microcosm of the same soil type without vegetation. The volume selected shall be identical for all microcosms and be sufficient to bring the A horizon of the soil surface to field capacity.

(*4*) Carriers other than water should not be used unless they are likely to be released into the environment with the test substance. If a carrier is necessary, acetone or ethanol should be considered; however, the use of carriers should be avoided unless they are essential to produce a realistic exposure.

(B) Several typical methods of application are suggested for particular types of test substances:

(*1*) If the test substance is likely to be a contaminant of irrigation water, it should be applied periodically, such as daily or weekly, in proportionate concentrations, such that the total amount applied equals the desired level of treatment.

(*2*) If the test substance does not mix with water, it should be applied as evenly as possible to the top of the microcosm. If the microcosm is simulating an agricultural system, the test substance should be mixed into the topsoil before planting.

(*3*) If the test substance is normally sprayed on growing plants, the desired amount should be mixed with the volume of water necessary to wet the soil surface and wet the plants to the point at which they begin to drip. A chromatography sprayer should be used to spray plants that are past the seedling stage. The manufacturer's recommendations for field spraying the test substance should be followed as closely as possible, and the test should be terminated at least 8 weeks after plants are sprayed.

(C) Water solubility and dissociation constant(s) of the test substance and soil pH must be considered in determining the formulation of the test substance.

(*1*) The treatment concentrations should bracket the known or expected environmental concentration of the test substance. However, if the environmental concentration is unknown and cannot be estimated, the maximum concentration of the substance in solution should not exceed half of saturation.

(*2*) [Reserved].

(3) *Range-finding test.* (i) A range-finding test may be conducted if definitive testing is necessary and to determine the concentrations of test substance to be used in the definitive test.

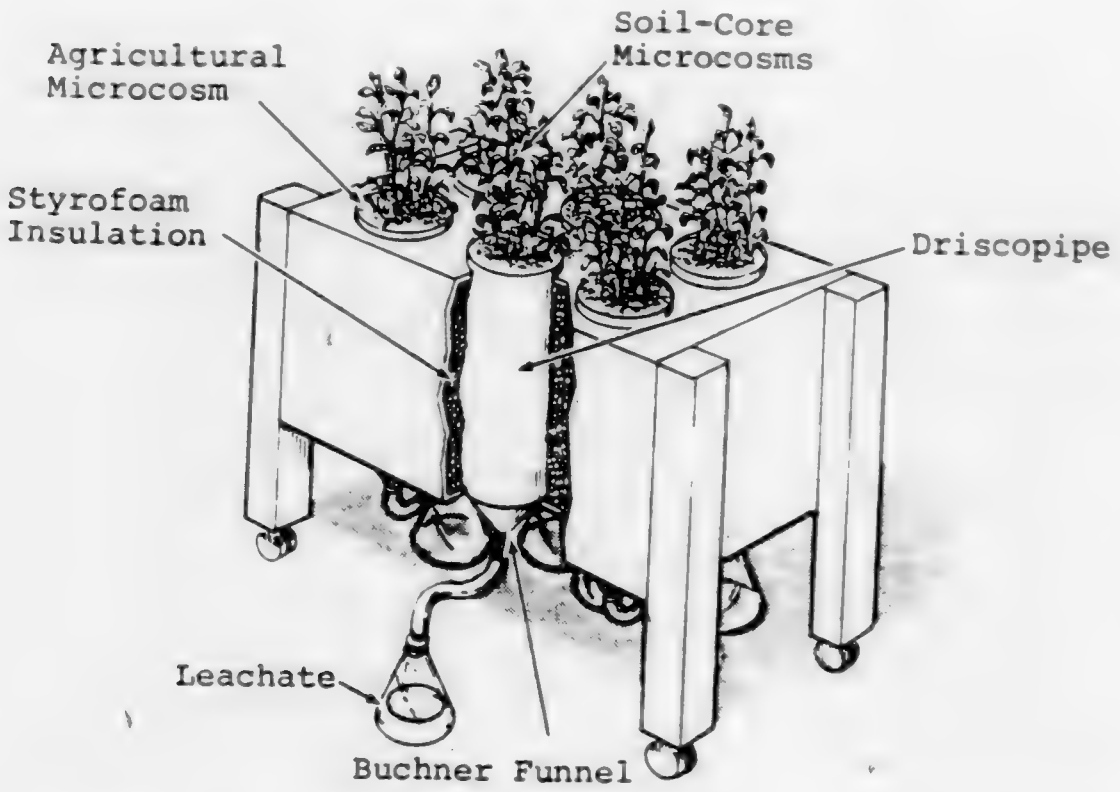
(ii) Physicochemical information supplied for the test substance should be used to tailor the general range-finding test procedures to the specific substance.

(iii) Phytotoxicity and/or bacteriostatic action, if known, should be considered in selecting exposure concentrations for the range-finding test. Only one concentration greater than that known to cause at least a 50-percent change in plant growth or a 50-percent change in bacterial growth/respiration should be tested. Also, the lowest concentration to be used should not be lower than a factor of 10 times the analytical detection limit in soil and 100 times the analytical detection limit in water.

(iv) The range-finding test should last at least 4 weeks from first application of the test substance to plant harvest. At the beginning of the test, microcosms should be treated with a minimum of five concentrations of the test substance. Three replicate microcosms are used for each concentration and for the control, resulting in a total of at least 18 microcosms. Concentrations typically used for treatment are 0.1, 1.0, 10, and 100 mg/L (ppm), if actual environmental concentrations are not known and cannot be predicted. If appropriate, 1,000 μg of test substance per g of top 15 cm of dry soil should also be used. The bulk density (g/cm^3) of the dry soil should be used to calculate the exposures. Depending on the expected mode of release of the test substance, each recommended concentration may be applied as a single dose or may be divided into multiple doses. In either case, the total amount of test substance applied for any given concentration must be the same.

(v) Each microcosm cart, in the following Figure 2, holding one replicate of each test substance concentration and a control, should be moved once per 7 days in the greenhouse to minimize location-induced effects.

FIGURE 2--ARRANGEMENT OF MICROCOSMS IN STYROFOAM CART



(vi) Losses of calcium, potassium, nitrate-nitrogen, orthophosphate, ammonium-nitrogen, and dissolved organic carbon (DOC) should be measured in soil leachates. Leachate should be collected in acid-washed, 500-mL flasks attached to the end of the Buchner funnel by inert plastic tubing. Leaching is induced by adding a volume of rainwater or RO water above that necessary to bring the soil profile to field capacity. The volume of additional water needed to induce leaching in a specific core should be determined when the cores are extracted from the field. The volume of rainwater or RO water needed should be recorded. Flasks to collect the leachate may be supported by a wooden board fastened under the microcosm cart. The volume of leachate should be recorded and the pH determined using a glass electrode. Samples should be centrifuged at low speed (e.g., 5,000 rpm) and filtered through a 0.45-micron filter. The sample should be divided into two aliquots and stored in the dark at 4 °C with blanks consisting of distilled water and reference standards in quantities sufficient for instrument calibration.

(vii) At the termination of the range-finding test, soil samples should be collected from the top, middle, and bottom of the 60-cm soil cores. If the radiolabeled test substance or its transformation products are not detected in the deeper soil samples by liquid scintillation counting, soil samples at the end of the definitive test should be taken nearer the top of the soil column.

(viii) If no discernible effects of the test substance are detected during the range-finding test at one-half of saturation or 1,000 μg/g (whichever is higher), including visible effects of plant injury, no definitive test is necessary.

(4) *Definitive test.* (i) The purpose of the definitive test is to determine the potential fate and ecological effects of a test substance, including its transformation products, in a site-specific natural grassland or agricultural ecosystem.

(ii) Chemical substances with high vapor pressures or high Henry's law constants should not be tested in the soil-core microcosm as prescribed in this guideline.

(iii) Soil cores (17-cm diameter by 60-cm deep) shall be extracted from either a natural grassland ecosystem or a typical agricultural soil in the region of interest. The intact system should be extracted with a specially designed, steel extraction tube, as shown in the following Figure 3, and a backhoe. Disturbances during extraction and preparation of the soil core should be minimized.

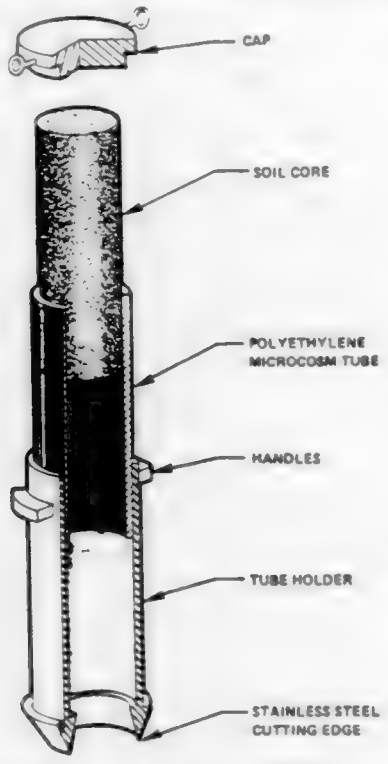


FIGURE 3--DIAGRAM OF MICROCOSM EXTRACTION TUBE

(iv)(A) For an agricultural microcosm, the soil which is plowed (generally, the top 15 cm of soil) should be moved aside and saved. Once the core is cut by the leading edge of the driving tube, it should be forced up into the microcosm tube or Driscopipe® as demonstrated in Figure 1 in paragraph (c)(1) of this section. The Driscopipe® should then contain a 45-cm core of subsoil. The homogenized topsoil that was saved should be backfilled into the upper 15 cm of the microcosm tube after it has been returned to the laboratory.

(B) A mixture of grasses and broad leaves (e.g., legumes) should be included in the agricultural microcosm. Seeds from two or three species of grasses or legumes that are typically grown together as an agricultural crop in the region of interest should be chosen and planted. The rate of seed application should duplicate standard farming practice for the region of interest. Seeds should be planted evenly and covered to an appropriate depth with soil.

(v)(A) For a natural grassland microcosm, the vegetation covering the natural grassland ecosystem shall be clipped to a uniform height before the core is extracted. Natural plant cover should be sufficiently diverse to be representative of plant species in the region of interest.

(B) The soil core from the grassland ecosystem should be removed as a single unit (soil and Driscopipe®) from the extraction tube, taken to the laboratory, and placed on a Buchner funnel covered by a thin layer of glass wool. The funnel and tube should be washed with acid (50-percent conc. HNO_3) before use and then rinsed with RO water.

(vi) Six microcosms are typically contained in a moveable cart which is packed with Styrofoam® beads, as shown in Figure 2 in paragraph (c)(3)(v) of this section.

(vii) An appropriate random process shall be used, such as completely randomized, randomized block, or Latin-square design, to assign microcosms to different concentrations of the test substance.

(viii) The method and pattern of application and the form of the test substance used should approximate a reasonable scenario of how the substance is expected to be released at the site in question (see paragraph (c)(2)(ii) of this section).

(ix) At the beginning of the test, microcosms shall be treated with at least three concentrations of the test substance. Ten replicate microcosms shall be used for each of the three concentrations and for the control, for a total of 40 microcosms. The treatment concentrations should be selected to produce a 20- to 25-percent change in plant productivity in each treatment based on results from the range-finding test. The ten replicate microcosms in each treatment group should be used as five replicate pairs.

(x) Microcosms that have been paired for analysis shall be placed in different carts to ensure that environmental conditions are as uniform as possible.

(xi) The structure, materials, and treatment of control microcosms shall be the same as that of exposed microcosms except that none of the test substance is applied.

(xii) Microcosms should be watered as dictated by a predetermined water regime based on site history with either reverse osmosis (RO) water or with rainwater that has been collected from the region of interest, filtered, and stored in a cooler at 4 °C. Care shall be taken to provide sufficient water for normal plant functions without over-watering. If the test substance is applied as an aerosol or powder, plants should be sprinkled immediately after treatment to avoid resuspension of particulates and reduce the potential for cross-contamination of exposure concentrations.

(xiii) Data regarding solubility of the test substance in water and its capacity to sorb to soils should be used, along with the results of the range-finding test, to help determine the appropriate regime for soil leachate collection and analysis. Microcosms should be leached, as described in paragraph (c)(3)(vi) of this section, at least twice before application of the test substance and once every 2 or 3 weeks after such application. The frequency of rainfall in the region of interest should be considered when a leaching regime is selected. Water to leach the microcosm should be added to each microcosm over an 8 to 12-hour period to avoid waterlogging the soil surface. To ensure that all test microcosms will leach within a 2-day period, at least 15 percent more soil cores should be extracted than are required for the tests. When the microcosms are leached before planting, those which do not leach, leach too quickly, or take longer than 2 days to produce 100 mL of leachate after the soil has been brought to field capacity shall be discarded.

(xiv) Light intensity measurements should be taken daily, but shall be taken at least at the beginning and end of the test.

(xv) Temperatures shall be monitored continuously at the top of the plant canopy.

(xvi) Plants shall be carefully monitored for changes in physical appearance, such as stunting, discoloration, or chlorosis and/or necrosis of the leaves.

(xvii) To measure plant primary productivity, plants from the natural grassland or agricultural microcosm shall be harvested at the end of the test period (a minimum of 12 weeks) and, possibly, once or twice during that period, depending on the types of plants grown. For example, vigorously growing grasses may be sampled during the middle of the test. Plants should be clipped to approximately 2.5 cm above the soil surface. Harvested plants should be stored in separate paper bags for each microcosm, and air-dried, oven-dried, or both soon after harvest. The test may be extended beyond 12 weeks to accommodate plant species which take longer to reach the desired maturity (e.g., seed production). Plant productivity, depending on the plant species, may be measured as total yield and/or yield by plant part, e.g., total biomass or grain. Minimally, plant productivity shall be measured as oven-dry weight expressed in g/m^2; in the grassland microcosms, monocotyledons and dicotyledons should be separated for both plant productivity measurements and radiochemical assay.

(xviii)–(xix) [Reserved]

(xx) Nutrient losses should be sampled in soil leachates. Nutrients to be measured should be selected based on the properties of the test substance

and the results of the range-finding test (see paragraph (c)(3)(vi) of this section).

(xxi) Samples of soil leachate, plant tissue (including roots and shoots), and soil from three depths should be analyzed for radioactivity, and identification and quantification of the test substance. The three soil depths should be selected based on soil sorption of the test substance and results from the range-finding test. These depths should be relatively close to the soil surface (1 to 2 cm) for radiolabeled chemicals that are strongly sorbed to soils. If any isotope appears in the leachate during the range-finding test, the depth selection should be lower in the soil profile. The entire soil layer should be taken as the sample, and then subsamples should be homogenized and extracted with solvents appropriate for the test substance. Additional extraction steps, such as acidification and extraction with non-polar solvents, Sohxlet extractions with polar and/or nonpolar solvents, alkaline or acid hydrolysis with or without heat, detergent extractions, or protease digestion may be necessary. The ^{14}C in the soil or plant samples which cannot be extracted should be oxidized and analyzed as $^{14}CO_2$ and reported as bound residue. Extracts and the oxidized or dissolved samples should be counted by ^{14}C liquid scintillation.

(xxii) Soil invertebrates and microbes may be sampled at the end of the test.

(5) [Reserved]

(6) *Analytical measurements*—(i) *Chemical.* (A) Standard analytical methods, if available, shall be used to establish actual concentrations of solutions of the test substance and shall be validated before beginning the test. An analytical method is not acceptable if likely degradation products of the test substance, such as hydrolysis and oxidation products, cause positive or negative interference. The pH of these test solutions should also be measured before use.

(B) The fate or final distribution of the test substance and its transformation products shall be determined by methods appropriate to the test, including sensitivity factors adequate to verify exposure and distinguish between the test substance, its transformation products, and naturally occurring materials present in the test system. Whenever possible, this should involve use of a radiolabeled test substance, and subsequent analysis of the primary microcosm compartments and soil leachate for radioactivity and chemical identity.

(C) Identification and quantification of the test substance or its transformation products, expressed as a percent of the original application, in various compartments of the microcosm should be performed using gas-liquid chromatography (GLC), thin-layer chromatography (TLC) or high-pressure liquid chromatography (HPLC). TLC autoradiography using no-screen x-ray film for chromatographed fractions which are found to be radioactive by liquid scintillation counting may be most cost-effective. However, whenever possible, the identity of the test substance and its transformation products in fractions which are found to be radioactive by liquid scintillation counting should be verified by GLC, HPLC, or other appropriate methods. Also, the concentration of the test substance and transformation products should be verified by an alternative chromatographic method (e.g., HPLC or GLC) with known standards.

(D) Standard techniques suitable for nutrient analysis may include atomic absorption spectrophotometry for calcium and potassium, and a Technicon Autoanalyzer II for nitrate-nitrogen, orthophosphate, DOC, and ammonium-nitrogen.

(ii) *Numerical*—(A) *Experimental design.* Analysis of variance (ANOVA) calculations should be performed to test for position effects within the carts and within the environmental area where the test is performed. If these tests are significant at the 5-percent level ($P < 0.05$), this should be accounted for in subsequent statistical analyses.

(B) *Productivity.* (*1*) The effects of different concentrations of the test substance on productivity can be evaluated initially by using side-by-side histograms displaying calculated means (expressed in g/m^2), variances, 95-percent confidence intervals, and two standard errors for air-and oven-dried biomass collected from control and treatment groups. Early evaluation will indicate whether logarithmic or some other transformation of the data is necessary for graphic display and analysis. Pair-wise comparisons may be necessary for variables which were measured only once during the 12-week test.

(*2*) Biomass data should be analyzed by ANOVA and least significant differences multiple-range procedures. The level of significance for all tests should be at the 5-percent level. Where treatment effects and interactions between and among various factors are important, a two-way ANOVA or factorial analysis should be performed.

(*3*) Regression/correlation analysis should be performed on plant productivity results. Obvious recording or reporting errors in the data should be excluded but noted in the final report. If substantial data are excluded, deficiencies in quality control may necessitate repeating the test. Once outlying values have been detected and removed from further statistical evaluations, regression models or probit analysis should be used to estimate the concentration at which 50 percent of the productivity observed in controls occurred in the treated groups (EC_{50}). Ordinary linear-least-squares-regression analysis should initially be performed, and predicted responses in each group should be compared using a Student t-test (one-sided). If productivity appears to be bimodal when compared to controls, a two-sided Student t-test may be necessary. It may also be necessary to transform the data or fit a quadratic or cubic least-squares-regression model to the data for this type of response. Positional effects should be included in the data. Computer software packages such as SAS (Statistical Analysis System) or BMCP (Biomedical Computer Program) may be useful.

(C) *Plant injury.* Statistical analyses of the effects of the test substance and transformation products on the appearance of plants are not necessary unless there is a clearly identifiable pattern of effects. If deemed necessary, types of injury should be ranked by severity. A non-parametric test, such as the Kruskal-Wallis test, should then be performed.

(D) *Nutrient losses.* (*1*) Based on the nutrients selected for analysis in soil leachate, the total cumulative loss of each nutrient from each microcosm shall be calculated by multiplying the concentration of the nutrient collected at each sampling time by the total volume leached from that microcosm for that collection date and adding the product to the previous sum of total loss.

(*2*) Means (+/−SE) of the cumulative nutrient losses for each treatment concentration for each collection date should be plotted as a function of days after seeding for the agricultural microcosm or days after application of the test substance for the natural grassland microcosm. Zero loss should be the starting point. If there was no leachate for any microcosm during a particular collection period, the data point should be recorded as zero so that no data are considered missing.

(*3*) A one-way ANOVA should be performed on total cumulative nutrient loss data at the end of the test, to evaluate effects of different concentrations of the test substance. A multiple-range procedure, such as Duncan's, should be used to determine which specific treatment means are different from each other.

(4) Regression and/or correlation analysis comparing losses of each nutrient analyzed versus plant productivity should be performed.

(E) *Chemical fate analysis.* (1) At the end of the test, the mass balance or final distribution of the test substance and its transformation products in above-and below-ground plant tissues, selected depths through the soil profile, and losses through soil leaching and gaseous transport shall be calculated for each concentration of the substance tested.

(2) Calculations should be based on measured radioactivity in a specific compartment of the microcosm, on a per-gram basis, times the total weight or volume of test substance in that compartment, expressed as dry weight when appropriate. All calculations should be corrected for radioactive decay (as appropriate) that has occurred since the beginning of the test. Quantities of the test substance and its transformation products should be expressed as a percent of the original application of the test substance.

(3) Statistical analyses shall be performed for each exposure concentration on any differences in distribution of the test substance in the primary compartments of the microcosm and in soil leachate. Multi-compartmental modeling and multivariate analysis of variance may also prove useful in assessing the fate of a test substance and its transformation products.

(4) The time to reach steady-state loss through leaching and the time to initiate leaching shall be calculated for each exposure concentration.

(F) *Radioactivity budget.* Calculation of a complete mass balance of all radioactivity should be performed as follows:

(1) Total radioactivity added per microcosm should be calculated based on the decay rate of the radioactive label (e.g., ^{14}C), the total amount of radioactive label added to the test substance initially, the length of time between formulation and microcosm exposure (radioactive decay), and the particular concentration of the test substance added to the microcosm.

(2) Total radioactivity removed from the microcosm should be calculated based on the following data:

(*i*) Soil leachate concentration times the volume of soil leachate lost per collection date;

(*ii*) Calculated gaseous losses of the test substance; and

(*iii*) The type of radiolabel and rate of radioactive decay of that label during the test.

(3) Total radioactivity remaining in the microcosm can be calculated based on analysis of the radioactivity in each of the following primary compartments:

(*i*) Above-ground plant tissues;

(*ii*) Below-ground plant tissues, i.e., cleaned of soil particles; and

(*iii*) The soil profile.

(G) *Bioconcentration.* The ratio of the amount of radioactivity in above-ground plant tissues to the amount in the top 15 cm of soil should be calculated on a concentration-per-unit, dry-weight basis. Side-by-side histograms of the BCFs should be compared for statistical differences.

(H) *Soil organisms.* Appropriate statistical methods shall be used to evaluate the distribution and abundance of soil invertebrates and function of the soil microbial community with respect to treatment concentrations.

(d) *Test conditions*—(1) *Test species*—(i) *Selection.* Biota shall be included in the microcosm. A mixture of two or three species of grasses or broad leaves, such as legumes, representative of the area or region where the test substance is expected to be released or applied to crops or soil, should be included in the agricultural microcosm. Chosen species shall be compatible and able to grow to maturity in the limited surface area of the microcosm. Thus, large crops such as corn or sorghum cannot be used under these guidelines.

(ii) *Seed selection.* Information on seed lot, seed year, or growing season collected and germination percentage shall be provided by the source of the seed. Only untreated seed (not treated with fungicides, repellants, etc.) taken from the same lot and year or season of collection shall be used in a given test. In addition, all seed of a species used in a test should be of the same size class, and that size class which contains the most seed should be selected and used in a given test. Any damaged seed shall be discarded.

(2) *Facilities*—(i) *Apparatus.* (A) The greenhouse or growth chamber shall provide adequate environmental controls to meet light and temperature specifications.

(B) Laboratory facilities for test substance determinations should include: Nonporous floor covering; absorbent bench covering with nonporous backing; and adequate disposal facilities to accommodate radiolabeled test solutions and wash solutions containing the test substance at the end of each test, and any bench covering, lab clothing, or other contaminated materials; appropriate equipment for analytical determinations; drying ovens; refrigerators; and standard laboratory glassware.

(C) A specially designed steel extraction tube and a backhoe are needed to extract soil cores.

(ii) *Containers and supporting equipment.* (A) For the definitive test, at least 18 microcosms are required. The three basic materials used for a single microcosm are: a 60-cm-long Driscopipe® tube (17.5 cm diameter), a 186 mm-diameter porcelain Buchner funnel, and a thin layer of glass wool (see Figure 1 in paragraph (c)(1) of this section). Containers used in each test shall be of equal size and volume and possess the same configuration.

(B) Three mobile carts shall be used to hold 18 microcosms. The carts should be designed to hold adequate Styrofoam® beads for insulation in Figure 2 under paragraph (c)(3)(v) of this section.

(iii) *Cleaning.* All equipment used in the test shall be cleaned before use and should be washed according to good standard laboratory practices, to remove any residues remaining from manufacture or use. A dichromate solution should not be used for cleaning containers. Disposal of all detergents and acids that have been used to clean the Driscopipe®, funnels, and laboratory glassware, and disposal of all liquid and solid samples and remaining undisturbed portions of the test system shall conform to applicable existing federal regulations.

(3) *Test parameters.* Microcosms shall be kept in a greenhouse or environmental chamber with controlled environmental conditions.

(i) The temperature shall approximate outdoor temperatures that occur during a typical growing season in the region of interest.

(ii) The photoperiod and intensity of light typical for the growing season in the region of interest shall be simulated. Light for the test system can be supplied by artificial lighting suitable for plant growth in either an environmental chamber or greenhouse or can be the natural photoperiod occurring in a greenhouse. If the test is performed in an environmental chamber, the daily photoperiod for the microcosm shall be at least the average monthly incident radiation (quantity and duration) for the month in which the test is being performed, with a cycle equivalent to the natural photoperiod.

(e) *Reporting.* (1) The report shall include, but not necessarily be limited to, the following information:

(i) Name and address of the facility performing the study and the dates on which the study was initiated and was completed, terminated, or discontinued.

(ii) Objectives and procedures stated in the approved protocol, including any changes in the original protocol.

(iii) Statistical methods used for analyzing the data.

(iv) The test substance identified by name, Chemical Abstracts Service (CAS) number or code number, source, lot or batch number, strength, purity, and composition or other appropriate characteristics, such as water solubility and vapor pressure at 25 °C.

(v) Stability of the test substance and, if used, control substances under the conditions of administration.

(vi) A description of the methods used, including:

(A) Greenhouse or environmental chamber conditions, including type and size, temperature, photoperiod, and light intensity.

(B) Source, any special treatment, and chemical composition of the water used.

(C) Method and equipment used to extract the soil core.

(D) Randomization procedures used to position microcosms and assign test concentrations to particular microcosms.

(E) Frequency, duration, and methods of observations.

(vii) A description of the test system used, including:

(A) The soil core, including chemical, biological, and physical characteristics, source, soil type, and when applicable, identification of plant species included in the natural vegetation or the scientific names and sources of the agricultural plants selected and histories of the species, e.g., percentage of seeds germinating and seed size class.

(B) Planting procedures and any special handling of seed before planting.

(C) Number or total weight (for smaller species) of seeds tested per concentration (in agricultural microcosm).

(viii) A description of the experimental design, test substance concentrations, method and pattern of application, replicates, controls, and carriers. The reported results should include:

(A) Results of the range-finding test and measurements.

(B) Results of the definitive test including:

(*1*) Visible effects of the test substance on intact plants.

(*2*) Total productivity and/or yield by plant part (e.g., total biomass or grain) expressed as g/m^2 oven-dry weight.

(*3*) Losses of selected nutrients in leachates.

(*4*) Percent distribution of the test substance and its transformation products in the primary compartments of the microcosm, including above- and below-ground plant tissues and selected depths through the soil profile expressed as dry weight, and in soil leachate expressed as g/m^2. Losses via gaseous transport should be estimated and expressed as mg/m^3.

(*5*) A radioactivity budget including total radioactivity added to, removed from (via soil leaching, gaseous transport, and radioactive decay), and remaining in each microcosm (plant tops and roots and selected soil depths).

(*6*) Bioconcentration of the test substance in above-ground plant tissue expressed as the ratio of the concentration in plant tissue to the concentration in the top 15 cm of dry soil.

(ix) A description of all circumstances that may have affected the quality or integrity of the data.

(x) The name of the sponsor, study director, principal investigator, names of other scientists or professionals, and the names of all supervisory personnel involved in the study.

(xi) A description of the transformations, calculations, or operations performed on the data, a summary and analysis of the data, and a statement of the conclusions drawn from the analysis. Results of the analysis of data should include the concentration response curves with 95-percent confidence limits, the results of a goodness-of-fit test, e.g., chi-square test, and EC_{50}'s.

(xii) The signed and dated reports of each of the individual scientists or other professionals involved in the study including each person who, at the request or direction of the testing facility or sponsor, conducted an analysis or evaluation of data or specimens from the study after data generation was completed.

(xiii) The locations where all specimens, raw data, and the final report are stored.

(xiv) The statement prepared and signed by the quality assurance unit.

DEPARTMENT OF EDUCATION

34 CFR Part 628

Endowment Challenge Grant Program

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary issues final regulations for the Endowment Challenge Grant Program, formerly called the Endowment Grant Program. The regulatory changes conform the regulations to the changes made to the statute governing the Endowment Challenge Grant Program, Parts C and D of Title III of the Higher Education Act of 1965 (HEA), as amended by the Higher Education Amendments of 1986, Pub. L. 99–498.

EFFECTIVE DATE: These regulations take effect either 45 days after publication in the **Federal Register** or later if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the U.S. Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Dr. Caroline J. Gillin, Institutional Aid Programs, U.S. Department of Education, L'Enfant Plaza, Post Office Box 23868, Washington, DC 20026. Telephone: (202) 732–3308.

SUPPLEMENTARY INFORMATION:

A. Background

The Endowment Challenge Grant Program is one of several programs authorized by Title III of the HEA and known collectively as the Institutional Aid Programs. Under the Endowment Challenge Grant Program, the Secretary awards grants to eligible institutions of higher education to enable them to establish or increase endowment funds. Grantees must match the Federal grant funds that they receive. The Federal grant and the institutional match are called the endowment fund corpus. Institutions must invest and may not spend the endowment fund corpus for a 20-year grant period. When the grant expires, the institution may use the endowment fund corpus for any educational purpose.

In general, a grantee may spend up to 50 percent of the endowment fund income earned before the date of each proposed expenditure. Endowment fund income is an amount equal to the difference between the total value of the endowment fund and the endowment fund corpus. The total value of the endowment fund includes the endowment fund corpus plus appreciation (or minus depreciation, if applicable), cumulative interest and dividends. A grantee may use that 50 percent of endowment fund income to defray any expenses necessary to operate the institution. A grantee must invest the other 50 percent of endowment fund income for the entire grant period. When the grant expires, the grantee may use all the income for any educational purpose.

B. Explanation of Changes

The Higher Education Amendments of 1986, Pub. L. 99–498, amended the authorizing statute governing the Endowment Challenge Grant Program, Parts C and D of Title III of the HEA, in several areas. The Secretary is amending the regulations in the following areas: Institutional eligibility, limitations on the receipt of endowment challenge grants, and the penalty for use of the endowment fund corpus.

The Secretary published final regulations for the Endowment Challenge Grant Program in the **Federal Register** of April 8, 1987, 52 FR 11256. In the preamble to those final regulations, the Secretary stated that regulations addressing institutional eligibility for the Endowment Challenge Grant Program would be published when the regulations for the Strengthening Institutions and the Strengthening Historically Black Colleges and Universities Programs were published. The regulations for these programs were published in the **Federal Register** of August 14, 1987, 52 FR 30526, and 30536. In addition, the Secretary believes that the Endowment Challenge Grant Program regulations published on April 8, 1987 were not clear regarding the statutory limitation on how often an institution is eligible to receive an endowment challenge grant and the penalty for a grantee's use of endowment fund corpus. These regulations clarify those matters.

Waiver of Notice of Proposed Rulemaking

In accordance with section 431(b)(2)(A) of the General Education Provisions Act, 20 U.S.C. 1231(b)(2)(A), and the Administrative Procedure Act, 5 U.S.C. 553, it is the practice of the Secretary to offer interested parties the opportunity to comment on proposed regulations. However, these regulations only include provisions implementing mandatory statutory changes to the Endowment Challenge Grant Program required by the Higher Education Amendments of 1986, Pub. L. 99–4.98 and clarifications of existing regulations. Therefore, the Secretary has determined that publication of a proposed rule is unnecessary and contrary to the public interest under 5 U.S.C. 553(b)(B).

Executive Order 12291

These regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the Order.

Regulatory Flexibility Act Certification

The Secretary certifies that these proposed regulations would not have a significant economic impact on a substantial number of small entities. The changes made in these regulations will not create any additional burden on small institutions that will participate in the program.

Paperwork Reduction Act of 1980

The regulations have been examined under the Paperwork Reduction Act of 1980 and have been found to contain no information collection requirements.

Assessment of Educational Impact

The Secretary has determined that the regulations in this document do not require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

List of Subjects in 34 CFR Part 628

Colleges and universities, Education, Reporting and recordkeeping requirements.

(Catalog of Federal Domestic Assistance Number 84.031—Endowment Challenge Grant Program)

Dated: September 9, 1987.

William J. Bennett,

Secretary of Education.

The Secretary amends Part 628 of Title 34 of the Code of Federal Regulations as follows:

PART 628—[AMENDED]

1. The authority citation for Part 628 continues to read as follows:

Authority: 20 U.S.C. 1065a, unless otherwise noted.

2. Section 628.2 is revised to read as follows:

§ 628.2 Which institutions of higher education are eligible to apply for an endowment challenge grant?

An institution of higher education is eligible to apply for an endowment challenge grant if—

(a) It qualifies as an eligible institution for the Strengthening Institutions Program under 34 CFR 607.2;

(b) It qualifies as an eligible institution for the Strengthening Historically Black Colleges and

Universities Program under 34 CFR 608.2;

(c) It would have qualified as an eligible institution for the Strengthening Institutions Program if 34 CFR 607.2(a)(3) referred to a postgraduate degree rather than a bachelor's degree;

(d) It would have qualified as an eligible institution for the Strengthening Historically Black Colleges and Universities Program if 34 CFR 608.2(a)(4)(i) referred to a postgraduate degree rather than a bachelor's degree; or

(e) It qualifies as an institution that makes a substantial contribution to graduate or postgraduate medical educational opportunities for minorities and the economically disadvantaged.

(Authority: 20 U.S.C. 1064)

3. In § 628.4, paragraphs (a) and (b) are revised to read as follows:

§ 628.4 How often is an institution eligible to receive an endowment challenge grant?

(a) Except as provided in paragraphs (b) and (c) of this section, an institution is eligible to receive an endowment challenge grant in a fiscal year, even if it has already received another endowment challenge grant in a previous fiscal year, as long as it does not receive endowment challenge grants in more than two fiscal years out of any five consecutive fiscal years.

(b) An institution that receives an endowment challenge grant in excess of $1,000,000 is ineligible to receive another endowment challenge grant in any amount for a period of ten years from the date it received the grant in excess of $1,000,000.

* * * * *

4. In § 628.5, paragraph (a)(2) is removed and reserved, paragraph (a)(3) is removed and paragraph (a)(1) is revised to read as follows:

§ 628.5 What regulations apply to the Endowment Challenge Grant Program?

(a) The following regulations apply to the Endowment Challenge Grant Program:

(1) The regulations in this Part 628.

(2) [Reserved]

* * * * *

5. In § 628.6, the introductory text is revised to read as follows:

§ 628.6 What definitions apply to the Endowment Challenge Grant Program?

The following definitions apply to the regulations in this part:

* * * * *

6. In § 628.48, paragraph (a)(2) is removed, paragraph (a)(1) is redesignated as paragraph (a)(2) and a new paragraph (a)(1) is added to read to follows:

§ 628.48 What happens if a grantee fails to administer the endowment grant in accordance with applicable regulations?

(a) * * *

(1) Withdraws or spends any part of the endowment fund corpus in violation of § 628.44(a)(1);

* * * * *

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1926

[Docket No. S–020A]

Revision of Construction Industry Test and Inspection Records

AGENCY: Occupational Safety and Health Administration (OSHA); Labor.

ACTION: Final rule.

SUMMARY: The Occupational Safety and Health Administration (OSHA) hereby revises three construction industry recordkeeping requirements to minimize the paperwork burdens imposed on employers and to clarify what information is required. The final rule eliminates certain requirements under which an employer must prepare and maintain written records. The revised provisions require, instead, that the employer simply prepare a certification record at the time the required work (inspection or test) is done, which includes the date the inspection or test was performed; the signature of the person who performed the work; and the identity of the equipment or machinery that was inspected or tested. OSHA has determined that the implementation of this final rule will minimize the paperwork burden on employers as required by the Paperwork Reduction Act of 1980, without reducing the protection of employee safety and health.

DATES: These revisions will become effective October 28, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. James F. Foster, U.S. Department of Labor, Occupational Safety and Health Administration, Room N3647, 200 Constitution Avenue, NW., Washington, DC 20210, (202) 523–8148.

SUPPLEMENTARY INFORMATION:

I. Background

The Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*) was enacted to minimize the Federal paperwork burden and maximize the efficiency and usefulness of Federal information-gathering activities. That Act set goals for the phased reduction of Federal information-gathering burdens. The Paperwork Reduction Act also required the Office of Management and Budget (OMB) to promulgate regulations which would guide the Federal agencies in their compliance efforts. OMB has published implementing regulations at 5 CFR Part 1320 and has issued supplemental directives.

In addition, section 8(d) of the Occupational Safety and Health Act (the OSH Act) states that "Any information obtained by the Secretary * * * under this Act shall be obtained with a minimum burden upon employers. * * *"

In an effort to meet these statutory goals, OSHA conducted a comprehensive review of the OSHA standards to identify all recordkeeping requirements. OSHA then analyzed each of the 38 requirements identified to determine which recordkeeping burdens could be reduced.

Each requirement was reviewed to determine:

—What kind of information was required;
—How this information would be used;
—Whether this information was collected by other authorities (e.g. pursuant to state and local law or regulation);
—Whether this record would provide information that a compliance officer would not otherwise ascertain at the time of inspection; and,
—Which requirements contributed directly to employee safety and health.

On the basis of this careful review and analysis, OSHA identified 22 provisions in the standards found in 29 CFR Parts 1910, 1915, and 1926 that, in its opinion, did not directly contribute to worker safety and health and, therefore, unnecessarily burdened employers with requirements that they prepare and maintain records of tests, inspections, and maintenance checks.

In particular, OSHA determined that the recordkeeping requirements in question were adopted because the Agency wanted the employer to provide evidence that the required tests and inspections had been performed. Having made that determination, OSHA compared the purposes for the recordkeeping requirements with their language and found that they required more information than OSHA needed to determine if equipment or machinery was safe to operate. Therefore, OSHA determined that revisions were appropriate.

OSHA also identified as appropriate for deletion, a duplicative recordkeeping provision and another which dealt with concerns outside OSHA's jurisdiction.

On January 3, 1986, OSHA published a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** (51 FR 312) to revise the 22 provisions in question and to revoke the other two provisions. The NPRM included three recordkeeping requirements in the existing Construction Safety and Health Standards, 29 CFR Part 1926. The three recordkeeping requirements in question are § 1926.550(b)(2)—Cranes and derricks; § 1926.552(c)(15)—Material hoists, personnel hoists and elevators; and § 1926.903(e)—Underground transportation of explosives.

OSHA determined during the NPRM comment period that it had not formally consulted with the Advisory Committee on Construction Safety and Health (ACCSH) regarding those three proposed revisions as required by section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333). The Agency, therefore, withdrew the three construction recordkeeping requirments from consideration when it issued a Notice of Informal Public Hearing on March 14, 1986 (51 FR 8844). The remaining 19 provisions were revised through the publication of a Final Rule in the September 29, 1986, **Federal Register** (51 FR 34552).

On April 29, 1986, OSHA formally consulted with the ACCSH to obtain the Committee's recommendations on revising the three recordkeeping requirements which, as has been discussed above, were removed from consideration for revision in the March 14, 1986 hearing notice. The transcript of the Advisory Committee meeting is Exhibit 2 in Docket S–020A.

On April 14, 1987, OSHA published a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** (52 FR 12120) to revise the three construction provisions in question. In the preamble to the NPRM, a discussion of the Advisory Committee's recommendations concerning this revision effort can be found. In the NPRM, OSHA proposed to eliminate certain requirements for written, detailed records and reports and replace them with provisions under which employers would prepare a certification record at the time the required test or inspection was performed. The certification record would include the date the test or inspection was performed, the signature of the person who performed the test or inspection, and the identity of the equipment or machinery which was tested or inspected.

The NPRM established a 60-day period, which ended June 15, 1987, for submission of written comments and hearing requests. There were six comments received on the NPRM and no hearing requests.

As stated above, OSHA adopted the recordkeeping requirements in question to provide assurance that employers have performed the required tests and inspections. OSHA has determined, based on its 15 years of experience

enforcing those requirements, that requiring an employer to maintain detailed test or inspection records does not add to compliance with the test and inspection requirements. Therefore, OSHA is revising the pertinent requirements so that employers are required to prepare a contemporaneous certification record, as provided herein.

The contemporaneous certification record can be kept in any manner which provides the required information. For example, a list of the pieces of equipment which were inspected would have to be signed and dated only once if the same person performed all of the inspections or tests on the same date. With such a list, the person performing the inspections or tests would not have to sign and date a separate record identifying each piece of equipment.

If employers keep track of their inspections or tests with automated data processing, and if, as above, the same person performed all of the inspections or tests on the same date, compliance can be achieved by having that person sign and date a printout of equipment identifiers. The signed and dated computer printout would, of course, have to be maintained, until superseded, and made available for review at the time of an OSHA inspection.

Employer can comply with this certification requirement in the manner which least disrupts their operations. They may find that they need to place a tag on the equipment in question or they may find that the addition of an entry to a checklist or log they already maintain will suffice. Some employers may even find that they do not need to change their recordkeeping methods to comply with these revised requirements.

OSHA estimates that the revisions will reduce its imposed paperwork burden by approximately 670,000 hours and that employers will save approximately $1.8 million annually. In addition, employers will gain clear guidance as to what information must be included when verifying compliance.

OSHA has determined that the revisions will not reduce the protection of employee safety and health since the testing and inspection requirements will remain in effect. OSHA believes that a certification record will provide evidence of compliance with the pertinent testing or inspection requirements which is equivalent to that provided by the detailed records formerly required.

OSHA will continue to review its recordkeeping requirements in an effort to ensure that they provide the necessary protection for employees while imposing the minimum burden on employers.

II. Discussion of Issues Raised in the Comments

A. General Comments

OSHA received six comments in response to the Notice of Proposed Rulemaking. Four of the comments pertained to the proposed recordkeeping revisions in general. Those comments are discussed below. The comments which refer to individual provisions are discussed in the Summary and Explanation.

The New York State Conference of the International Union of Operating Engineers (Ex. 3–2) opposed the revision of the recordkeeping requirements in §§ 1926.550(b)(2) and 1926.552(c)(15). The Operating Engineers felt that OSHA was inviting "falsification of equipment inspections by unscrupulous contractors," and that the recordkeeping provisions are invaluable in preventing serious accidents. In addition, they commented that "the primary tool for inspecting a crane, a components checklist, was being replaced by a meaningless scrap of paper." The Operating Engineers, however, did not submit information to support their positions.

Concerns regarding record falsification, the value of records in preventing accidents, and the use of checklists were raised as concerns in the rulemaking relating to certain recordkeeping requirements in the General Industry and Maritime Standards (51 FR at 34553). OSHA will address these three issues in turn.

First, in the earlier rulemaking, OSHA responded to commenters' concerns regarding employer error and dishonesty by adopting the suggestion that "contemporaneous certification" would provide the necessary assurance of compliance, because a record prepared at the time work is performed is more likely to be accurate.

Second, at the public hearing held to develop the record for the earlier rulemaking, the International Union of Operating Engineers testified regarding the value of records in preventing accidents involving cranes used in general industry. This testimony also dealt with false recordkeeping. Excerpts from the Agency's discussion of that testimony in the final rule for the previous recordkeeping revisions (50 FR 34553) follows:

> Commenters who opposed the proposal, such as the United Brotherhood of Carpenters and Joiners of America [Exs. 4–4, 4–7 and 14 and Tr. 55–56] and the International Union of Operating Engineers [Exs. 4–12 and 16 and Tr. 69–70 and 73–77], have stated that the retention of currently required records is essential, or at least beneficial, to employee protection. The opponents stated that access to records enables workers to verify compliance with the substantive requirements of the standards. They, however, did not document a single instance where a hazardous situation was detected and cited or abated because an employee examined records.
>
> The International Union of Operating Engineers, for example, testified [Tr. 121–124] that having the record of a previous inspection would be beneficial to a crane operator who was inspecting equipment. However, the union witness added that, even without the record, a good inspection would be done * * *.
>
> Indeed, the Operating Engineers presented testimony at the hearing [Tr. 92–93] which indicated that a crane operator provided with inspection record information would inspect the crane anyway and not rely on the inspection record when deciding whether or not the equipment was in safe condition. Also, the Operating Engineers provided examples of "bogus" recordkeeping to explain why a written record of a test or inspection would not provide assurance that the equipment in question was safe.

OSHA notes that the Operating Engineers also testified that in at least two cases violations of recordkeeping requirements led to serious accidents. However, neither their testimony nor their post-hearing submission substantiated the existence of a causal relationship (51 FR at 34553). In the absence of evidence that the specific crane test or inspection records are necessary, OSHA has determined that compliance with the test or inspection provisions will not be affected by the shift to certification.

Finally, regarding the use of a checklist as a certification record, OSHA has specifically stated that "Employers can comply with this certification requirement in the manner which least disrupts their operations . . . they may find that the addition of an entry to a checklist or log they already maintain will suffice" (52 FR at 12121). In addition, OSHA observes that the regulations have never required that employers use a checklist to comply with the crane test or inspection requirements. Accordingly, if an employer has used a checklist, it was for purposes other than to comply with OSHA regulations. Therefore, OSHA does not expect that employers would stop using a checklist simply because OSHA has revised its requirement for information to verify compliance. Once again, OSHA emphasizes that the requirements to test or inspect the critical crane components are unchanged.

Another commenter, the National Institute for Occupational Safety and Health (NIOSH), concurred with the

substitution of certification records for detailed records. NIOSH also suggested, in general, that

—OSHA require employers to keep their certification records on file for 12 months from time of preparation so that employers will have more information on which to base equipment use decisions;
—The certification records indicate whether the inspected or tested equipment passed or failed; and,
—Sections 1926.550(b)(2) and 1926.903(e) contain the requirement already in § 1926.552(c)(15) that a "competent person," as defined in § 1926.32(f), shall perform the requisite tests and inspections.

OSHA believes that compliance with the proposed requirement for record retention will provide the necessary assurance that the employer has complied with the test or inspection requirements. The Agency does not believe that retaining the certifications for a longer period would be useful, becuase the required information would not include any of the details which might assist an employer in making decisions. Furthermore, OSHA reiterates that it adopted the recordkeeping provisions in question solely in order to obtain verification of compliance. Therefore, the suggested change, even if it provided useful information, is not relevant to the Agency's concern.

OSHA also believes that the suggested addition of pass/fail information is unnecessary because it would not contribute to verification of compliance with the test or inspection requirements. Indeed, regardless of any previous test or inspection experience, OSHA requires that employers perform the scheduled tests and inspections so that any equipment defects would be discovered. In addition, in the case of cranes, the ANSI B30.5–1968, as referenced in § 1926.550(b)(2), specifies that any "critical" crane components found to be defective be repaired or removed from service.

In addition, as OSHA stated in the final rule for the earlier recordkeeping revisions, "Just because a particular piece of equipment was in safe condition 29 days ago does not mean it is in safe condition today" [51 FR at 34554]. Regardless of the outcome of a previous inspection or test, OSHA requires the employer to conduct each scheduled test and inspection with such thoroughness that it will disclose any deficiency.

Thus, there is no need to make a written notation that the equipment or machinery passed or failed. If equipment or machinery failed the inspection or test, then it is unsafe and must be repaired or replaced. Otherwise, its use is prohibited by other construction regulations.

OSHA notes that NIOSH's suggestion for use of the term "competent person" in §§ 1926.550(b)(2) and 1926.903(e) is not related to the purpose of this rulemaking. Accordingly, OSHA has not made the suggested changes. OSHA further observes, however, that § 1926.20(b)(2) of the general safety and health provisions for construction already requires that employers designate competent persons to perform workplace inspections. Also, as regards § 1926.550(b)(2), OSHA notes that the general requirements for cranes and derricks, § 1926.550(a)(5), provide that the employer must designate a competent person to inspect all equipment and make sure that the equipment is in safe operating condition. OSHA believes, therefore, that the above-cited existing provisions already address the concern expressed by NIOSH.

OSHA is aware that some employers keep records for purposes other than complying with the OSHA standards and may desire to keep records beyond what OSHA requires. Indeed, OSHA has no objection if employers feel they need certification records which, for example, cover an extended period, such as 12 months, or which state whether the equipment passed or failed a test or inspection.

The Associated General Contractors of America (AGC) (Ex. 3–4) and Bechtel Construction, Inc. (Ex. 3–6) expressed support for the proposed changes. The Bechtel Construction, Inc. stated that, "We are pleased that the agency is making meaningful, cost effective changes * * *" The AGC stated that "AGC believes that all recordkeeping requirements for construction should be included in future proposals. If an employer is permitted to certify that he has performed certain requirements pertaining to a particular standard, there should be no differentiation." Again, OSHA reiterates that it will continue its efforts to identify provisions where the recordkeeping burdens could be reduced without reducing employee protection.

III. Summary and Explanation

Section 1926.550(b)(2)—Crawler, locomotive and truck cranes.

The final rule revises the recordkeeping portion of the provision and requires the employer to prepare a certification record. The certification record must contain the date the inspection was performed, the signature of the person who performed the inspection and the identity of the crane inspected. The final rule does not alter the existing requirements to comply with the crane inspection procedures of the ANSI B30.5–1968.

The final rule is identical to the proposed rule. In the proposed rule OSHA explained that the existing rule requires compliance with the provisions of ANSI B30.5–1968, Safety Code for Crawler, Locomotive and Truck Cranes. Section 5–2.1.5 of ANSI B30.5–1968 requires that written, dated, and signed inspection reports and records be prepared monthly on critical items such as brakes, crane hooks and ropes. The latest ANSI standard, B30.5–1982, Mobile and Locomotive Cranes, in Section 5–2.1.5 contains slightly different wording with regard to the recordkeeping requirements. It requires a dated record for periodic inspections of critical items. Neither edition of ANSI B30.5 specifies the information to be included in the record or report. Both editions are in Exhibit 2 of Docket S–020A.

OSHA received three comments on this provision. the California Department of Industrial Relations (CAL/OSHA) and the Tennessee Valley Authority (TVA) (Exs. 3–1 and 3–5) suggested that OSHA revise the existing standard to require compliance with the 1982 edition of ANSI B30.5 instead of the 1968 edition. CAL/OSHA also suggested that OSHA require the modification of cranes put in service before 1968 to comply with B30.5–1968, to the extent feasible. OSHA observes that these comments pertain to matters outside the scope of this rulemaking. Therefore, it would be necessary for OSHA to initiate a separate rulemaking proceeding in order to act on the CAL/OSHA and TVA suggestions.

In addition, NIOSH suggested that OSHA add the word "critical" to specify which crane items were covered by paragraph (b)(2). OSHA, however, believes that the suggested change is not within the scope of this rulemaking and that the standard already clearly states its requirements. The term "critical," which appears in Section 5–2.1 of ANSI B30.5–1968, effectively differentiates those crane components which are to be inspected at frequent or periodic intervals from those which need not be inspected at specified times. The 1982 edition uses the same language. Therefore, OSHA believes that no further revision of this provision is necessary.

OSHA has determined that the revised standard will not reduce the protection of employee safety and health because the existing inspection requirements are retained and employers are still required to correct

any defects found at the time of inspection.

Section 1926.552(c)(15)—Material hoists, personnel hoists and elevators.

The final rule revises the recordkeeping portion of the provision and requires the employer to prepare a certification record. The revised standard eliminates unnecessary recordkeeping burdens, and clarifies what information is to be recorded. The certification record must contain the date the work was performed, the signature of the person who performed the inspection and test, and the identity of the hoist that was inspected and tested. The final rule does not alter the inspection and test requirements of this paragraph.

In the proposed rule, OSHA explained that the existing standard requires the employer to inspect and test all hoist functions and safety devices at least every three months following assembly and erection. A similar inspection and test is required following major alterations of an existing installation. The existing standard further requires that records be maintained. However, the existing standard does not state what information should be kept on the record.

CAL/OSHA (Ex. 3–1) recommended adoption of the proposed revision because it felt, "this change clarifies the inspection test information that is to be recorded and the file retention time."

OSHA has determined that the revised standard will not reduce the protection of employee safety and health because the existing testing and inspection requirements are retained. Employers are still required to detect any defects in hoist functions or safety devices during these tests and inspections and to correct them.

Section 1926.903(e)—Underground transportation of explosives.

The final rule revises the recordkeeping requirements of this provision and requires the employer to prepare a certification record. The revised standard clarifies what information the employer must record. The certification record must contain the date the inspection was performed, the signature of the person who checked the electrical system and the identity of the truck inspected. The final rule retains the inspection requirements.

In the proposed rule, OSHA explained that the existing standard requires employers to conduct a weekly check of the electrical systems of trucks used to transport explosives underground to detect failure which may constitute electrical hazards. The standard further provides that a written record of the inspection must be kept, but does not state what information this written record must contain.

OSHA received one comment on this paragraph. CAL/OSHA (Ex. 3–1) suggested that OSHA extend the existing inspection requirements to cover vehicles other than trucks. CAL/OSHA was concerned that other vehicles might be used to transport explosives underground or might emit explosive vapors. OSHA notes that the suggestion falls outside the scope of this rulemaking. The Agency has not proposed any changes to the pertinent inspection requirements. Therefore, OSHA would have to initiate a separate rulemaking proceeding in order to act on CAL/OSHA's suggestion.

OSHA has determined that the revised standard will not reduce employee safety and health because it retains the requirement that employers conduct the weekly check of covered electrical systems.

IV. Regulatory Impact Assessment and Regulatory Flexibility Assessment

OSHA has determined that this rule is not a "major rule" under Executive Order 12291 because it is not likely to result in: (1) An annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets. Therefore, no regulatory impact analysis is required.

Based on a review of the relevant information, OSHA concludes that a regulatory flexibility analysis under the Regulatory Flexibility Act (5 U.S.C. 603, 605), is not necessary. OSHA estimates that the construction industry expends approximately $2.2 million annually in complying with the recordkeeping provisions which will be revised by this rule. OSHA also estimates that compliance costs after this rule is promulgated will be approximately $430,000 annually. Therefore, the compliance cost differential will be $1.8 million. This total economic impact will generally be distributed over numerous construction firms, so OSHA concludes that this rule will not have a significant economic impact on a substantial number of small entities.

V. OMB Approval Under the Paperwork Reduction Act

The revised provisions require that employers prepare certifications. Under the terms of 5 CFR 1320.7(k)(1), certifications are not subject to the Paperwork Reduction Act or its implementing regulations. Hence, OMB approval under the Paperwork Reduction Act is not required.

VI. State Plan States

The 25 States and territories with their own OSHA-approved occupational safety and health plans must revise their existing standards within six months of the publication date of the final standard or show OSHA why there is no need for action, e.g., because an existing State standard covering this area is already "at least as effective" as the revised Federal standard. These States and territories are: Alaska, Arizona, California, Connecticut [1], Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York [1], North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington, and Wyoming.

Authority

This document was prepared under the direction of John A. Pendergrass, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 6(b), 8(c), 8(d) and 8(g) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655, 657), section 107 of the Construction Safety Act (40 U.S.C. 333), Secretary of Labor's Order No. 9–83 (48 FR 35736) and 29 CFR Part 1911, OSHA amends 29 CFR Part 1926 as set forth below.

Signed at Washington, DC this 23rd day of September, 1987.

John A. Pendergrass,

Assistant Secretary of Labor.

List of Subjects in 29 CFR Part 1926

Certification, Occupational safety and health, Recordkeeping, Safety.

PART 1926—SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION

1. The authority citation for Subpart N of Part 1926 continues to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); secs. 4, 6, 8,

[1] Plan covers only State and local government employees.

Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), or 9–83 (48 FR 35736), as applicable.

2. In § 1926.550, paragraph (b)(2) is revised to read as follows:

§ 1926.550 Cranes and derricks.

* * * * *

(b) * * *

(2) All crawler, truck, or locomotive cranes in use shall meet the applicable requirements for design, inspection, construction, testing, maintenance and operation as prescribed in the ANSI B30.5–1968, Safety Code for Crawler, Locomotive and Truck Cranes. However, the written, dated, and signed inspection reports and records of the monthly inspection of critical items prescribed in section 5–2.1.5 of the ANSI B30.5–1968 standard are not required. Instead, the employer shall prepare a certification record which includes the date the crane items were inspected; the signature of the person who inspected the crane items; and a serial number, or other identifier, for the crane inspected. The most recent certification record shall be maintained on file until a new one is prepared.

* * * * *

3. In § 1926.552, paragraph (c)(15) is revised to read as follows:

§ 1926.552 Material hoists, personnel hoists and elevators.

* * * * *

(c) * * *

(15) Following assembly and erection of hoists, and before being put in service, an inspection and test of all functions and safety devices shall be made under the supervision of a competent person. A similar inspection and test is required following major alteration of an existing installation. All hoists shall be inspected and tested at not more than 3-month intervals. The employer shall prepare a certification record which includes the date the inspection and test of all functions and safety devices was performed; the signature of the person who performed the inspection and test; and a serial number, or other identifier, for the hoist that was inspected and tested. The most recent certification record shall be maintained on file.

* * * * *

PART 1926—[AMENDED]

4. The authority citation for Subpart U of Part 1926 continues to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); secs. 4, 6, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059), or 9–83 (48 FR 35736), as applicable.

5. In § 1926.903, paragraph (e) is revised to read as follows:

§ 1926.903 Underground transportation of explosives.

* * * * *

(e) Trucks used for the transportation of explosives underground shall have the electrical system checked weekly to detect any failures which may constitute an electrical hazard. A certification record which includes the date of the inspection; the signature of the person who performed the inspection; and a serial number, or other identifier, of the truck inspected shall be prepared and the most recent certification record shall be maintained on file.

DEPARTMENT OF LABOR

29 CFR Part 1910

[Docket No. S-020B]

Revision of Telecommunications Training Records

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Final rule.

SUMMARY: The Occupational Safety and Health Administration (OSHA) hereby revises the recordkeeping requirements in the training provisions of the Telecommunications Standard (29 CFR 1910.268(c)), in order to minimize the paperwork burdens imposed on employers and to clarify what information is required. The final rule eliminates the requirement that the employer prepare a written description of the training program. It also revises the requirement that the employer maintain a record of employees trained, substituting a requirement that the employer prepare a certification record to demonstrate compliance with the training requirements. This certification record will be prepared at the time the training is completed and will include the identity of the employee trained, the signature of the employer or the person who conducted the training, and the date the training was completed. OSHA believes that this action will minimize the paperwork burden on employers, as intended by the Paperwork Reduction Act of 1980, without reducing the protection of employee safety and health.

DATES: This revision will become effective October 28, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. James F. Foster, U.S. Department of Labor, Occupational Safety and Health Administration, Room N3647, 200 Constitution Avenue, NW., Washington, DC 20210, (202) 523–8148.

SUPPLEMENTARY INFORMATION:

I. Background

The Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*) was enacted to minimize the Federal paperwork burden and maximize the efficiency and usefulness of Federal information-gathering activities. That Act set goals for the phased reduction of Federal information-gathering burdens. The Paperwork Reduction Act also required the Office of Management and Budget (OMB) to promulgate regulations which would guide the Federal agencies in their compliance efforts. OMB has published implementing regulations at 5 CFR Part 1320 and has issued supplemental directives.

In addition, section 8(d) of the Occupational Safety and Health Act (the OSH Act) states that "Any information obtained by the Secretary * * * under this Act shall be obtained with a minimum burden upon employers * * *."

In an effort to meet these statutory goals, OSHA conducted a comprehensive review of the OSHA standards to identify all recordkeeping requirements. OSHA then analyzed each of the 38 requirements identified to determine which recordkeeping burdens could be reduced.

Each requirement was reviewed to determine:

—What kind of information was required;

—How this information would be used;

—Whether this information was collected by other authorities (e.g., pursuant to State and local law or regulation);

—Whether this record would provide information that a compliance officer would not otherwise ascertain at the time of inspection; and,

—Which requirements contributed directly to employee safety and health.

On the basis of this careful review and analysis, OSHA identified 22 provisions in the standards found in 29 CFR Parts 1910, 1915, and 1926 that, in its opinion, did not directly contribute to worker safety and health and, therefore, unnecessarily burdened employers with requirements that they prepare and maintain records of tests, inspections, and maintenance checks.

In particular, OSHA determined that the recordkeeping requirements in question were adopted because the Agency wanted the employer to provide evidence that the required tests and inspections had been performed. Having made that determination, OSHA compared the purposes for the recordkeeping requirements with their language and found that they required more information than OSHA needed. Therefore, OSHA determined that revisions were appropriate.

OSHA also identified, as appropriate for deletion, a duplicative recordkeeping provision and another which dealt with concerns outside OSHA's jurisdiction.

On January 3, 1986, OSHA published a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** (51 FR 312) to revise the 22 provisions in question and to revoke the other two provisions. The three construction industry recordkeeping requirements which were proposed for revision were removed from consideration for revision in the March 14, 1986, Notice of Public Hearing (51 FR 8844), because OSHA determined that it had not formally consulted with the Advisory Committee on Construction Safety and Health (ACCSH) regarding them. These three provisions have subsequently been formally reviewed by ACCSH and are the subject of a separate rulemaking. A public hearing was held on April 15, 1986, on the nineteen remaining provisions and they were revised by publication of a Final Rule in the September 29, 1986, **Federal Register** (51 FR 34552).

OSHA indicated in that Final Rule that it would continue its efforts to identify provisions where the recordkeeping burdens could be reduced without reducing worker protection (51 FR 34553). Consistent with this statement, OSHA reviewed the recordkeeping requirements in the training provisions of the Telecommunications Standard (§ 1910.268(c)). Currently, this standard requires that an employer develop a training program which includes a list of the subject courses and the types of personnel to be trained. The employer is also required to provide OSHA, upon request, with a written description of the program and a record of the employees trained. OSHA determined that this paragraph required more information than was needed to demonstrate compliance with the training requirement.

Based on that determination, OSHA published a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** on April 14, 1987 (52 FR 12116). The Agency proposed to revise paragraph (c) of the existing standard so that employers would be required to prepare certification records to demonstrate that employees had been trained as required by the standard.

The NPRM established a 60-day period, which ended June 15, 1987, for submission of written comments and hearing requests. OSHA received four comments on the NPRM and no hearing requests. Those comments will be discussed in the Summary and Explanation section.

As OSHA noted in the NPRM, the Telecommunications Standard already specifies the elements to be included in the training program. Therefore, OSHA determined that requiring employers to write out descriptions of their training programs was redundant and unnecessarily burdensome. In addition, OSHA notes that employers have generally complied with the "written description" requirement by simply preparing a course outline for each subject listed in the training program.

The "written description," therefore, actually provided less information than would be gained from reading § 1910.268.

OSHA has also determined that employers should not be required to list the types of personnel to be trained because the stated purpose of existing paragraph (c) is to "insure that employees do not engage in the activities to which this section applies until such employees have received proper training; * * *." Therefore, the key concern is whether a given employee will be performing work covered by § 1910.268, not whether that employee has a particular job title.

In addition, OSHA has determined that the existing standard does not clearly state what constitutes a "record." The final rule clarifies the requirement so that an employer can comply by preparing a certification record which contains the identity of the employee(s) trained, the signature of the employer or the person providing the training, and the date of the training. The certification record is to be prepared when the training has been completed and will be maintained on file for review by the OSHA Compliance Officer at the time of an inspection.

As stated above, OSHA adopted the recordkeeping requirements in question to provide assurance that employees were trained as required by the standard. OSHA has determined, based on its 15 years of experience enforcing similar types of requirements, that the written documents currently required under this standard are not necessary to verify compliance with the training requirements. Therefore, OSHA is revising the pertinent requirements so that employers are required to prepare a contemporaneous certification record, as provided herein.

The contemporaneous certification record can be kept in any manner which provides the required information. For example, a list of the employees who were trained would have to be signed and dated only once if all the employees were trained on the same date. With such a list, the employer or the person performing the training would not have to sign and date a separate record for each trained employee. In addition, employers may find that they need only to sign an entry in the employee's personnel file which indicates the date the training was received. Some employers may find that they do not need to change their recordkeeping methods at all to comply with these revised requirements.

If the employer keeps track of training with automated data processing, and several employees are trained on the same date, compliance can be achieved by having the person who conducted the training, or the employer, sign and date a printout which identifies the persons trained. The computer printout would, of course, have to be maintained and made available for review at the time of an OSHA inspection.

OSHA estimates that the revision will reduce its imposed paperwork burden by about 21,000 hours and that employers in the telecommunications industry would save approximately $164,000 annually. In addition, employers will gain clear guidance as to what information must be included when the employer verifies compliance.

OSHA has determined that the revision will not reduce the protection of employee safety and health, since the requirement in § 1910.268(c) to train employees will not be changed. OSHA believes that a certification record will provide evidence of compliance with the pertinent training requirement which is equivalent to that provided by the specific records formerly required.

OSHA will continue to review its recordkeeping requirements in an effort to ensure that they provide the necessary protection for employees while imposing the minimum burden on employers.

II. Summary and Explanation

The final rule is identical to the proposed rule. In the proposed rule OSHA explained that the existing provisions of paragraph § 1910.268(c) require the employer to train employees in the precautions and safe practices required by the standard before the employer assigns employees to perform work covered by the standard. To demonstrate compliance with the training requirements, employers are required to prepare a written description of their training program, including a list of subject courses and the types of personnel to be trained. As explained in the Background section, above, OSHA determined that requiring a "written description" of the training program is redundant and unnecessary because the written description is not an elaboration of how the training will be accomplished; but, rather, a brief description of what subject areas would be covered. Therefore, the Agency has concluded that the "written description" requirement does not provide any information which the Agency could use to verify compliance with the pertinent training requirements of the standard.

In addition, under the existing standard, employers are required to prepare and maintain a record of employees who have received such training. OSHA agrees that recording the identity of employees who have been trained provides useful information by which to verify compliance with the training requirements. Therefore, the Agency has retained this provision as part of the certification requirement.

The final rule revises the recordkeeping provisions of the telecommunication standard by requiring employers to prepare a certification record which indicates that employees have been trained as required by the standard. This certification record must contain the identity of the person trained, the signature of the employer or the person who conducted the training, and the date the training was completed. The final rule does not alter the existing requirement to train employees, but eliminates the requirement to prepare a written description of the training program.

The California Department of Industrial Relations (CAL/OSHA) (Ex. 3–1) recommended adoption of the proposal and also suggested that OSHA add "Work area protection and traffic control" to the list of subjects covered by the training. OSHA observes that this suggested addition relates to matters outside the scope of this rulemaking. Therefore, it would be necessary to initiate a separate rulemaking proceeding in order to act on CAL/OSHA's recommendation.

The Connecticut Union of Telephone Workers, Inc. (CUTW) (Ex. 3–2) commented that "In order to guarantee that employees received adequate safety training, employers should continue to maintain a written description of their training program * * *." The CUTW supported their comment by explaining that "Maintaining up to date safety training records is one small step toward accomplishing this end" and that "These records are necessary for OSHA to determine whether employers are providing adequate training * * *." CUTW further stated that "In order for employees to be made aware of how this standard affects them, each training program should continue to include a list of the subject courses and the types of personnel (job titles) required to receive the instruction." The CUTW did not, however, submit any information, examples, or evidence to demonstrate that worker safety would be endangered if the training program (including the list of subject courses and types of personnel required to receive the instruction) were not written down. Nor did the CUTW submit any evidence to demonstrate that worker safety would be endangered if the employer were

BEST COPY AVAILABLE

allowed to prepare and maintain a certification record to demonstrate that the employee had been trained. The CUTW, also, did not explain how requiring the training program to be written would "* * * guarantee that employees received adequate safety training * * *." In the absence of information supporting the CUTW position, the Agency adheres to its determination explained above, that the deleted information requirements were not needed to verify compliance. OSHA reiterates that the requirement to train employees is not being altered by this revision.

The National Institute for Occupational Safety and Health (NIOSH) (Ex. 3–3) agreed with the certification approach to determining compliance, but recommended that the certification record include the signature of the employee trained and either a table of contents or course agenda for the training program.

As has been explained above, OSHA believes that the proposed revision will provide the necessary assurance that employers have complied with the training requirements. As with the CUTW, NIOSH has presented no evidence to substantiate the view that the recordkeeping requirements it recommends are necessary for the protection of employee safety and health. In particular, the Agency has determined that requiring the identity of trained employees on the certification record provides adequate assurance of compliance, so that also requiring the trained employees to sign the certification record is unnecessary.

Further, with regard to NIOSH's suggestion that the employee sign the training certification record, OSHA believes that the responsibility for demonstrating compliance with the training requirement should remain with the employer or the person who conducts the training. OSHA notes that employers, not employees, are required to ensure that the training requirements are followed, so trained employees are not the appropriate parties to prepare the certification of compliance.

The NIOSH suggestion that the certification record include a table of contents or course agenda would, if adopted, require employers to, in effect, continue to prepare "written descriptions" of the training programs. As has already been discussed above, OSHA had determined that such a requirement is unnecessary.

In addition, NIOSH recommended that OSHA replace the term "artificial respiration" with the more precise and commonly used term "cardio-pulmonary resuscitation (CPR)." OSHA notes that this suggestion falls outside the scope of the rulemaking. Therefore, it would be necessary for OSHA to initiate a separate rulemaking proceeding in order to act on NIOSH's recommendation.

The National Arborist Association, Inc. (NAA) (Ex. 3–4) raised two concerns related to matters outside the scope of this rulemaking. To act on either of these matters would require OSHA to initiate a separate rulemaking proceeding. The first concern was that, on one hand, the proposed standard would require that employees be "trained" before working, while, on the other hand, it would permit "on-the-job training." The NAA stated that, given the apparent conflict in the proposed regulatory language, "trainees are allowed to receive on-the-job training, but are not allowed to receive it by performing covered work!" The Agency observes that the pertinent regulatory language is not proposed for revision and, therefore, will be not changed by this final rule. As a point of clarification, however, OSHA does not consider employees receiving on-the-job training to be engaged in activities for which they have not received the required training.

The NAA also stated that the certification requirement would be too burdensome for its members because they must train large numbers of transient workers at many different times and locations. OSHA notes that although it is concerned with reducing paperwork burdens, it cannot exempt employers from complying with this standard simply because employers find any paperwork to be "too burdensome." OSHA observes that the NAA's comment could just as well be addressed to the existing recordkeeping requirements as to the revised requirement. Indeed, if anything, the NAA's members have had heavier recordkeeping burdens under the existing requirements than they will have under the new certification record provision. Accordingly, OSHA believes that the NAA's members, like other employers subject to this standard, will find that this revision provides the appropriate relief from unnecessary recordkeeping burdens.

OSHA has determined that the revised standard will not reduce the protection of employee safety and health because the existing requirement that employers train their employees before they engage in activities covered by § 1910.268 has not been revised.

III. Regulatory Impact Assessment and Regulatory Flexibility Assessment

OSHA has determined that this rule is not a "major rule" under Executive Order 12291 because it is not likely to result in: (1) An annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets. Therefore, no regulatory impact analysis is required.

Based on a review of the relevant information, OSHA concludes that a regulatory flexibility analysis under the Regulatory Flexibility Act (5 U.S.C. 603, 605), is not necessary. OSHA estimates that the telecommunications industry expends approximately $204,000 annually to comply with the recordkeeping requirement which will be revised by this rule. OSHA also estimates that compliance costs after this rule is promulgated will be approximately $40,000 annually. Therefore, the compliance cost savings will be $164,000. This total economic impact will generally be distributed over numerous employers, so OSHA concludes that this rule will not have a significant economic impact on a substantial number of small entities.

IV. OMB Approval Under the Paperwork Reduction Act

The revision requires that employers prepare a certification. Under the terms of 5 CFR 1320.7(k)(1), certifications are not subject to the Paperwork Reduction Act or its implementing regulations. Hence, OMB approval under the Paperwork Reduction Act is not required.

V. State Plan States

The 25 States and territories with their own OSHA-approved occupational safety and health plans must revise their existing standards within six months of the publication date of the final standard or show OSHA why there is no need for action, e.g., because an existing State standard covering this area is already "at least as effective" as the revised Federal standard. These States and territories are: Alaska, Arizona, California, Connecticut [1], Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York [1], North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia,

[1] Plan covers only State and local government employees.

Virgin Islands, Washington, and Wyoming.

Authority

This document was prepared under the direction of John A. Pendergrass, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 6(b), 8(c), 8(d) and 8(g) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655, 657), Secretary of Labor's Order No. 9–83 (48 FR 35736), and 29 CFR Part 1911, OSHA amends 29 CFR Part 1910 as set forth below.

Signed at Washington, DC, this 23rd day of September, 1987.

John A. Pendergrass,

Assistant Secretary of Labor.

List of Subjects in 29 CFR Part 1910

Certification, Occupational safety and health, Recordkeeping, Safety, Telecommunications, Training.

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

1. The authority citation for Subpart R of Part 1910 continues to read as follows:

Authority: Secs. 4, 6, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12–71 (36 FR 8754), 8–76 (41 FR 25059) or 9–83 (48 FR 35736), as applicable.

Sections 1910.261, 1910.262, 1910.265, 1910.266, 1910.267, 1910.268, 1910.274, and 1910.275 also issued under 29 CFR Part 1911.

2. In § 1910.268, paragraph (c) is revised to read as follows:

§ 1910.268 Telecommunications.

* * * * *

(c) *Training.* Employers shall provide training in the various precautions and safe practices described in this section and shall insure that employees do not engage in the activities to which this section applies until such employees have received proper training in the various precautions and safe practices required by this section. However, where the employer can demonstrate that an employee is already trained in the precautions and safe practices required by this section prior to his employment, training need not be provided to that employee in accordance with this section. Where training is required, it shall consist of on-the-job training or classroom-type training or a combination of both. The employer shall certify that employees have been trained by preparing a certification record which includes the identity of the person trained, the signature of the employer or the person who conducted the training, and the date the training was completed. The certification record shall be prepared at the completion of training and shall be maintained on file for the duration of the employee's employment. The certification record shall be made available upon request to the Assistant Secretary for Occupational Safety and Health. Such training shall, where appropriate, include the following subjects:

(1) Recognition and avoidance of dangers relating to encounters with harmful substances and animal, insect, or plant life;

(2) Procedures to be followed in emergency situations; and,

(3) First aid training, including instruction in artificial respiration.

LIST OF PUBLIC LAWS

Last List August 31, 1987

This is a continuing list of public bills from the current session of Congress which have become Federal laws. The text of laws is not published in the **Federal Register** but may be ordered in individual pamphlet form (referred to as "slip laws") from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone 202–275–3030).

H.J. Res. 134/Pub. L. 100–114

Designating the week of September 20, 1987, through September 26, 1987, as "Emergency Medical Services Week." (Sept. 23, 1987; 101 Stat. 748; 1 page) Price: $1.00

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

New units issued during the week are announced on the back cover of the daily **Federal Register** as they become available.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The annual rate for subscription to all revised volumes is $595.00 domestic, $148.75 additional for foreign mailing.

Order from Superintendent of Documents, Government Printing Office, Washington, DC 20402. Charge orders (VISA, MasterCard, CHOICE, or GPO Deposit Account) may be telephoned to the GPO order desk at **(202) 783-3238** from 8:00 a.m. to 4:00 p.m. eastern time, Monday—Friday (except holidays).

The Federal Register: What It Is and How to Use It

A Guide for the User of the Federal Register — Code of Federal Regulations System

This handbook is used for the educational workshops conducted by the Office of the Federal Register. For those persons unable to attend a workshop, this handbook will provide guidelines for using the *Federal Register* and related publications, as well as an explanation of how to solve a sample research problem.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340.00 per year, or $170.00 for 6 months, payable in advance. The charge for individual copies is $1.50 for each issue, or $1.50 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

How To Cite This Publication: Use the volume number and the page number. Example: 52 FR 12345.

Rules and Regulations

Federal Register
Vol. 52, No. 188
Tuesday, September 29, 1987

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 843

Federal Employees Retirement System; Death Benefits and Employee Refunds

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The Office of Personnel Management (OPM) is revising (1) the table of reduction factors for early commencing dates of survivor annuities for spouses of separated employees who die before the date on which they would be eligible for unreduced deferred annuities and (2) the annuity factor for spouses of deceased employees who die in service when those spouses elect to receive the basic employee death benefit in 36 installments under the Federal Employees Retirement System (FERS) Act of 1986. These rules are necessary to conform the tables to the previously published economic assumptions approved by the Board of Actuaries.

EFFECTIVE DATE: October 1, 1987.

FOR FURTHER INFORMATION CONTACT: Harold L. Siegelman, (202) 632–5560.

SUPPLEMENTARY INFORMATION: On June 18, 1987, OPM published (52 FR 23222) a notice in the **Federal Register** to revise the normal costs percentages under the FERS Act of 1986, Pub. L. 99–335, based on changed economic assumptions. Those changed economic assumptions (principally the change in expected investment return from 6.5% to 7.0%) require corresponding changes in factors used to produce actuarially equivalent benefits when required by the FERS Act.

Section 843.309 of Title 5, Code of Federal Regulations, regulates the payment of the basic employee death benefit. Under section 8442(b) of Title 5, United States Code, the basic employee death benefit may be paid as a lump sum or as an equivalent benefit in 36 installments. These rules amend § 843.309(b)(2) of Title 5, Code of Federal Regulations, to conform the factor used to convert the lump sum to 36-installment payments with the revised economic assumptions.

Section 843.311 of Title 5, Code of Federal Regulations, regulates the benefits for the survivors of separated employees under section 8442(c) of Title 5, United States Code. This section provides a choice of benefits for eligible current and former spouses. If the current or former spouse is the person entitled to the unexpended balance under the order of precedence in section 8424 of Title 5, United States Code, he or she may elect to receive the unexpended balance instead of an annuity. Alternatively, an eligible current or former spouse may elect to receive an annuity commencing on the day after the employee's death or on the deceased separated employee's 62nd birthday. If the annuity commences on the deceased separated employee's 62nd birthday, it equals 50 percent of the annuity that the separated employee would have received when he or she attained age 62. If the current or former spouse elects the earlier commencing date, the annuity is reduced using the factors in Appendix A to Subpart C of Part 843 to make the annuity actuarially equivalent to the annuity that he or she would have received if it commenced on the retiree's 62nd birthday. These rules amend that appendix to conform with the revised economic assumptions.

Under section 553 (b)(3)(B) and (d)(3) of Title 5, United States Code, I find that good reason exists for waiving the general notice of proposed rulemaking and for making these amendments effective in less than 30 days. These rules are required by changes in economic assumptions that have already been published. Providing a comment period on the result of mathematical computations resulting from the changed economic assumptions is unnecessary, and to the extent that it would delay benefit payments is contrary to the public interest.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because the regulation will only affect retirement payments to retired Government employees, spouses, and former spouses.

List of Subjects in 5 CFR Part 843

Administrative practice and procedure, Claims, Disability benefits, Firefighters, Government employees, Income taxes, Law enforcement officers, Pensions, Retirement.

U.S Office of Personnel Management.

James E. Colvard,

Deputy Director.

Accordingly, OPM is amending 5 CFR Part 843 as follows:

PART 843—FEDERAL EMPLOYEES RETIREMENT SYSTEM—DEATH BENEFITS AND EMPLOYEE REFUNDS

1. The authority citation for Part 843 continues to read as follows:

Authority: 5 U.S.C. 8461; Sections 843.205, 843.208, and 843.209 also issued under 5 U.S.C. 8424; Section 843.309 also issued under 5 U.S.C. 8442; Section 843.406 also issued under 5 U.S.C. 8441.

2. In § 843.309, paragraph (b)(2) is revised to read as follows:

§ 843.309 Basic employee death benefit.

* * * * *

(b) * * *

(2)(i) For deaths occurring before October 1, 1987, 36 equal monthly installments of 3.05642 percent of the amount of the basic employee death benefit.

(ii) For deaths occurring on or after October 1, 1987, 36 equal monthly installments of 3.06921 percent of the amount of the basic employee death benefit.

3. Appendix A to Subpart C is revised to read as follows:

Appendix A to Subpart C of Part 843—Present Value Conversion Factors for Earlier Commencing Date of Annuities of Current and Former Spouses of Deceased Separated Employees

With at least 10, but less than 20 years of creditable service—

Age of separated employee at birthday before death	Multiplier

Food and Nutrition Service

7 CFR Parts 271, 272, 273 and 277

[Amendment No. 298]

Food Stamp Program; Provisions of the Stewart B. McKinney Homeless Assistance Act and the Provision on the Treatment of Third-Party Payments From the Food Security Act of 1985

AGENCY: Food and Nutrition Service, USDA.

ACTION: Interim rule and correction.

SUMMARY: This action amends Food Stamp Program (FSP) regulations to address all the FSP provisions contained in Pub. L. 100-77, the Stewart B. McKinney Homeless Assistance Act enacted July 22, 1987. The majority of the provisions are intended to help homeless individuals obtain Food Stamp Program eligibility and benefits. The provisions of Pub. L. 100-77 included in this action affect the areas of Program informational activities, definitions, household concept, expedited service, excess shelter expense deduction amounts for October 1987, annual adjustments to the standard and shelter deductions, annual adjustments to the income eligibility limits, and the calculation of claims. This action also addresses a provision contained in Pub. L. 99-198, the Food Security Act of 1985 relative to the treatment of third-party payments made on behalf of food stamp households. The 1985 provision was amended by the Stewart B. McKinney Homeless Assistance Act. Thus, both legislative provisions are addressed in this action. In addition, this action corrects a regulatory cite in Part 277.

DATES: The provisions of this action are effective, and must be implemented, as follows: the definition of "General assistance" in § 271.2, § 273.9(b)(2)(i), new § 273.9(c)(1)(ii)(A), § 273.9(c)(1)(ii)(B), § 273.9(c)(1)(ii)(C), and § 273.9(c)(1)(iv)(B) are effective retroactively to April 1, 1987; § 271.2 the removal of the definition of "Homeless food stamp household" and addition of the definition of "Homeless individual" in § 271.2 is effective retroactively to July 22, 1987; § 273.1(a)(2)(i)(C), § 273.1(a)(2)(i)(D), § 273.10(f)(2), § 273.9(d)(7)(i), and first, second, and third sentences of § 273.9(d)(8)(i) are effective October 1, 1987; § 273.9(c)(1)(ii)(D) is effective for the period beginning October 20, 1987 and ending September 30, 1989; § 273.2(i) is effective December 1, 1987; § 273.9(a)(3) is effective July 1, 1988; the last sentence of § 273.9(d)(8)(i) is effective October 1, 1988; § 272.5 is effective retroactively to July 22, 1987; § 273.18 is effective retroactively to September 5, 1987. Section 272.1(g)(93) and the technical amendments to Part 277 are effective September 29, 1987. Comments must be received on or before December 28, 1987 to be assured of consideration.

ADDRESSES: Comments should be submitted to Bruce Clutter, Eligibility and Monitoring Branch, Program Development Division, Family Nutrition Programs, Food and Nutrition Service, USDA, 3101 Park Center Drive, Alexandria, Virginia 22302. All written comments shall be open to public inspection at the office of the Food and Nutrition Service during regular business hours (8:30 a.m. to 5:00 p.m., Monday through Friday) at 3101 Park Center Drive, Alexandria, Virginia, Room 708.

FOR FURTHER INFORMATION CONTACT: Questions regarding this rulemaking should be addressed to Judith M. Seymour, Supervisor, Certification Rulemaking Section at the above address or by telephone at (703) 756-3429.

SUPPLEMENTARY INFORMATION:

Classification

Executive Order 12291

This action has been reviewed under Executive Order 12291 and Secretary's Memorandum No. 1512-1. The Department has classified this action as nonmajor. This action will not have a significant effect on the economy. This action will have little, if any, effect on cost or prices. Competition, employment, investment, productivity, and innovation will remain unaffected. There will be no effect on the competition of United States-based enterprises with foreign-based enterprises.

Executive Order 12372

The Food Stamp Program is listed in the catalog of Federal Domestic Assistance under No. 10.551. For the reasons set forth in the Final rule and related Notice to 7 CFR 3015, Subpart V (48 FR 29115, June 24, 1983), this program is excluded from the scope of Executive

Order 12372 which requires intergovernmental consultation with State and local officials.

Regulatory Flexibility Act

This action has been reviewed with regard to the requirements of the Regulatory Flexibility Act of 1980 (Pub. L. 96–354, 94 Stat. 1164, September 19, 1980). Anna Kondratas, Administrator of the Food and Nutrition Service, has certified that this rule does not have a significant economic impact on a substantial number of small entities. State welfare agencies are affected to the extent that they must implement the provisions described in this action. Some potentially eligible households will become aware of the availability of the Program. Some currently ineligible households will become eligible for Program benefits. Some currently participating households will realize an increase in Program benefits.

Interim Rule

The provisions of this rulemaking which implement Pub. L. 100–77, are required to be effective on the specific dates mandated for each provision in accordance with the statute. The provisions of this rulemaking which implement Pub. L. 99–198, are specifically required by section 1508(2) of that statute to be effective not later than April 1, 1987. Since prior notice and comment rulemaking procedures cannot be completed before the statutory effective dates for the majority of the provisions contained in this action, Anna Kondratas, Administrator of the Food and Nutrition Service, has determined, pursuant to 5 U.S.C. 553, that public comment on this rulemaking prior to implementation is impracticable. For the same reason, good cause is found pursuant to 5 U.S.C. 553(d) for the publication of this rulemaking less than thirty days prior to the effective dates for some of the provisions. In addition, a number of the provisions in this rulemaking, including the expedited service provision, § 273.2(i), are interpretive rules. However, because the Department believes that the administration of the rule may be improved by public comment, comments are solicited on this rule for 90 days. All comments will be analyzed and any appropriate changes to the rule will be incorporated in the subsequent publication of a final rule.

Paperwork Reduction Act

Information collection requirements associated with the Food Stamp Program application form are approved under OMB No. 0584–0064. Changes required to be made to the application as a result of the provision in § 273.2(i) of this action do not significantly alter the methodologies used to determine the burden estimates currently approved for the application under OMB No. 0584–0064.

Background

Program Information for the Homeless—Section 272.5 and Part 277

Section 808 of Pub. L. 100–77 amends section 11(e) of the Food Stamp Act to allow State agencies the option of carrying out Program informational activities directed toward homeless individuals. The statute also amends section 16(e) of the Food Stamp Act to provide for Federal funding of one-half the cost of such activities. Use of this option is intended to ensure that the homeless are aware of their potential eligibility for food stamp benefits.

Under the Food Stamp Act, State agencies were required to conduct outreach activities to encourage persons who were potentially eligible for food stamps to apply for them. Legislation enacted in 1981 prohibited the Department from reimbursing State agencies for outreach activities. However, State agencies still had the option to conduct outreach activities provided they used their own funds. State agencies may have continued to conduct outreach activities using their own funds.

These regulations allow State agencies, at their option, to carry out Program informational activities for the homeless in the Food Stamp Program. The regulations also exclude the costs of these activities from nonreimbursable outreach costs. The rule clarifies that the Department will only reimburse State agencies that choose to implement this provision for the cost of Program informational activities aimed specifically at the homeless. Costs of Program informational activities designed to inform the general public about the availability of the Program will not be reimbursed, even though the homeless would be included in that population. The rules do not impose specific standards for providing Program information to the homeless because the Department believes that State agencies are in the best position to determine how to reach the homeless. Thus, the regulations give State agencies maximum flexibility to implement the provision. State agencies may wish to focus their efforts in this area on shelters for the homeless, soup kitchens, emergency feeding facilities, and the like.

The Department is also taking this opportunity to make a technical amendment to current rules. A reference to § 272.6 contained in 7 CFR 277, Appendix A, paragraph C(14) is being changed to a reference to § 272.5. Section 272.6 was redesignated as § 272.5 by a previous rule and is hereby corrected.

Expedited Service—Section 273.2(i)

Section 809 of Pub. L. 100–77 amends section 11(e)(9) of the Food Stamp Act to include two more types of households that would be entitled to receive benefits under the Food Stamp Program's expedited service procedures.

Current regulations at 7 CFR 273.2(i) provide for expedited service to migrant and seasonal farm workers who are destitute and households with less than $150 in monthly gross income. Both of these types of households must also have liquid resources of $100 or less to qualify for expedited service. The Food Stamp Act requires that State agencies provide such households with coupons not later than five calendar days following the household's date of application.

Pub. L. 100–77 requires that benefits also be provided not later than five days following a household's date of application for eligible households in which all members are homeless individuals and eligible households whose combined gross income and liquid resources are less than the household's monthly rent or mortgage and utilities. Legislative history clarifies that this provision is intended to apply only to those households that otherwise meet food stamp eligibility standards, including rules governing household composition and the eligibility of those in institutions. (H.R. Rep. No. 100–174, 100th Cong., 1st Sess. 104 (1987)). Accordingly, this action amends 7 CFR 273.2(i) to provide that expedited service shall be available to eligible homeless households and households whose monthly gross income and liquid resouces are less than their monthly rent or mortgage, and utilities costs.

Definitions—Section 271.2

Current regulations at 7 CFR 271.2 define a "homeless food stamp household" as an eligible food stamp household which does not have a fixed mailing address or does not reside in a permanent dwelling. This definition was adopted for Program purposes by regulations published March 11, 1987 for implementing the Homeless Eligibility Clarification Act (1986). With enactment of Pub. L. 100–77, this definition is no longer necessary. Section 801 of Pub. L. 100–77 amends section 3 of the Food Stamp Act to establish a statutory

definition of "homeless individual". The statute defines a homeless individual as an individual who lacks a fixed and regular nighttime residence or an individual whose primary nighttime residence is: (1) A supervised shelter designed to provide temporary accommodations (such as a welfare hotel or congregate shelter); (2) a halfway house or similar institution that provides temporary residence for individuals intended to be institutionalized; (3) a temporary accommodation in the residence of another individual; or (4) a place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings (a hallway, a bus station, a lobby or similar places). This action amends 7 CFR 271.2 to remove the current definition of homeless food stamp household and add the statutory definition of homeless individual. This definition is generally consistent with the current definition of homeless food stamp household and with Congressional intent surrounding enactment of the Homeless Eligibility Clarification Act.

Individuals Living with Parents/ Siblings—Sections 273.1(a) and 273.10(f)

Prior to the passage of Pub. L. 100–77, the Food Stamp Act provided that parents and children living together and siblings living together shall be considered as one household for Food Stamp Program purposes, unless at least one of the parents/siblings is elderly or disabled.

Section 802 of Pub. L. 100–77 amends section 3 of the Food Stamp Act to allow a parent, with his/her minor children, to live together with the parent's sibling and yet be considered a separate household if the parent with minor children purchases food and prepares meals separately from the parent's sibling. The statute also allows three generations living together to form two separate households if the parent with minor children purchases and prepares meals separately from the children's grandparent(s). Accordingly, this action amends 7 CFR 273.1(a) to provide that an individual who is the parent of minor children, along with that individual's children and spouse, may be granted separate household status if the individual and that individual's children are living with the individual's parent or sibling and purchasing and preparing meals separate from the parent/sibling. It is the Department's intent that current policy be applied to this provision when determining who constitutes a minor child. Current policy has traditionally considered children under 18 years of age who are under the parental control of an adult household member to be minors.

Additionally, this action amends 7 CFR 273.10(f) to provide that such households shall be assigned a certification period that shall not exceed six months. Section 802 of Pub. L. 100–77 specifically provides that such households be subject to reexamination at least once every six months.

Income Eligibility Limit Updates—Section 273.9(a)(3)

The eligibility of households for the Food Stamp Program, except those in which all members are receiving public assistance (PA) or supplemental security income (SSI) benefits, is determined by comparing their incomes to the appropirate income eligibility limits. Households containing an elderly or disabled member only need to have net incomes below the net income limit. Households which do not contain an elderly or disabled member must have net incomes below the net income limits and gross incomes below the gross income limits. Households in which all members are receiving PA or SSI benefits are categorically eligible and do not have to meet the income limits.

The gross and net income limits are derived from the Federal income poverty guidelines. The gross income limit is 130 percent of the guidelines; the net income limit is 100 percent of the guidelines. The guidelines are updated annually. Based on that update, the Food Stamp Program's income eligibility limits are updated annually.

Currently, the updates of the Food Stamp Program's income eligibility limits are effective July 1 each year. This schedule was changed by section 803 of Pub. L. 100–77. Beginning with the 1988 update, the change in the income eligibility limits will be effective each October 1. The update effective on July 1, 1987, will remain in effect until Ocotober 1, 1988. Accordingly, this action amends 7 CFR 273.9(a)(3) to reflect that the Program's income eligibility limits for Fiscal Year 1989 and each subsequent year will be updated each October 1.

Third-party Payments—Section 273.9(c)(1)

Congress passed legislation on December 23, 1986 (Pub. L. 99–198) which contained a provision governing the treatment of public assistance (PA) and general assistance (GA) vendor payments as income. Before the Department promulgated regulations to implement this provision, the provision was further amended by Pub. L. 100–7. Pub. L. 100–77 contains a provision which supercedes, for a limited time, a portion of the vendor payment policies based on the provisions of Pub. L. 99–198 which are implemented by this rulemaking. The following preamble discussion will first address the provisions of Pub. L. 99–198 and related policy determinations by the Department. Then the preamble will address the effect of the provisions of Pub. L. 100–77 which are being implemented.

Public Law 99–198

Section 5(d) of the Food Stamp Act of 1977 (7 U.S.C. 2014(d)) excludes from the definition of income any gain or benefit which is not in the form of money payable directly to a household. The legislative history accompanying this provision clarified that any money payable to a household, but diverted to a third party (vendor payments) either of the household's own free will or involuntarily would be counted as income and would not be excluded. House Report No. 95–464, 95th Cong., 1st Sess., June 24, 1977, page 34. Based on this legislative history and notice and comment rulemaking in 1978, the Program's regulations at 7 CFR 273.9(c)(1)(iii) provide that money obligated or otherwise payable to the household, but diverted to a third party, shall be considered income and not excluded as a vendor payment. For more details *see* preamble discussions at 43 FR 18888, 47865 and 47904 (1978).

Longstanding Department regulatory policy is that public assistance (PA) and most general assistance (GA) vendor payments provided by State and local governments fall under this provision because the payments are provided from funds that otherwise would be payable to the household. However, for GA vendor payments this policy has been challenged in court suits. Some States, localities and households have argued that some GA payments should be excluded from income even where they are otherwise payable to the household. Partially in response to that litigation, "the Senate Committee has included a new statutory provision to help assure that the Federal Government's position is upheld and Congressional intent is served." S. Rept. 145, 99th Cong., 1st Sess., pg. 234; reprinted at 1985 U.S. Code Cong. & Ad. News, 1900. This new provision, section 1508(2) the Food Security Act of 1985, Pub. L. 99–198, amended section (5) of the Food Stamp Act to specifically provide that assistance payable for living expenses by PA or State or local GA programs, or other basic assistance programs comparable to GA as determined by the Secretary, shall be, with certain

exceptions, considered income to the household if diverted to a third party on behlaf of the household. *See* Senate Report 99–145, 99th Cong., 1st Sess., page 234; reprinted at 1985 U.S. Code Cong. & Ad. News 1899–1900. That Senate Report notes that this provision "will reinforce Congress' historical intent that payments from governmental assistance programs be included as income regardless of their form * * *." Id. This action amends 7 CFR 273.9(c) to specifically state that PA and State and local GA grants or benefits issued in the form of vendor payments are income and not excluded as a vendor payment, except under certain specified conditions.

As provided by the statute, the Secretary must determine which State and local basic assistance programs are comparable to a GA program. It is the Department's opinion that any State or local program which provides assistance on a regular or on an as needed basis to meet a household need which would safeguard health or improve personal well-being is a program consistent with the characteristics of most State and local GA programs. For example, the State or local program may provide the household with a check or voucher to present to a store to deal with a wide variety of needs such as food, furniture and clothing. These types of programs are, in the Department's opinion, providing assistance to meet household needs that would safeguard health or improve well-being.

Accordingly, this action amends the definition of "general assistance" at 7 CFR 272.2 to provide that general assistance means assistance financed by State or local funds and provided through a program intended to cover living expenses or other basic household needs which would safeguard health or improve well-being. A program which provides only in-kind assistance (i.e.; gives the recipient food, rather than a vendor payment), would continue to be excluded under the definition. Any State or local program which meets the amended definition would be considered to be a GA program for FSP purposes and the assistance would be considered income, even if provided in the form of a vendor payment.

The Department believes that implementing the statutory provision through a redefinition of general assistance is administratively more feasible than identifying various State or local programs by name or some other special characteristic. The characteristics of the definition would encompass a State or local GA program and those programs which the Department considers to be comparable to GA, but are not so named by the State or local government. The Department believes that the definition of general assistance implements the statutory reaffirmation of Department rules and meets the intent of Congress "that payments from government assistance programs be included as income * * *" and to "ensure equity between groups of individuals who receive assistance in varying forms." *See* Senate Report 99–145 as cited above.

Additionally, some States and localities which disburse payments in the form of two-party checks or vouchers have challenged that the assistance is not "general assistance" as defined at 7 CFR 271.2 which currently implies that general assistance means "cash assistance" financed by State and local funds. Legislative history accompanying Pub. L. 99–198 clarifies that general assistance is provided in many different names and in different forms but that "none of these distinctions would matter, since any governmental payments made to the provider of goods or services on behalf of a household (in lieu of payment made directly to a household) would be included as income unless specifically excluded by regulation under 7 U.S.C. 2014(k)(2)(E) * * *." S. Rept. 99–145, Id. The Department has the discretion to determine whether payments, by whatever name, are for living expenses, and, in effect, part of a regular program of aid and thus subject to treatment as income under the provision. *See* Senate Report 99–145 as cited above. Therefore, this action further amends the definition of general assistance at 7 CFR 271.2 to include cash assistance and other forms of assistance financed by State or local funds.

Section 5 of the Food Stamp Act, as amended by section 1508(2) of Pub. L. 99–198, provides that medical, child care and energy assistance, and assistance provided by State or local housing authorities are excluded from the provision. The legislative history accompanying Pub. L. 99–198 clarifies that "* * * *as specified in current regulations,* medical, energy and child care assistance would not be included as income" under this provision. Senate Report 99–145, at 233; reprinted at 1985 U.S. Code Cong. & Ad. News 1899–1900. The reference to an exclusion for assistance provided by State and local housing authorities was added to the statute during Congressional Conference and it is assumed that this additional exclusion was also intended to exclude such assistance in the same manner as it is currently excluded. *See* House Conf. Rept. 99–447, 99th Cong., 1st Sess., p. 523; reprinted at 1985 U.S. Code Cong. & Ad. News 2449. Current rules at 7 CFR 273.9(c)(1) already contain a provision that address the exclusion from income of assistance from State and local housing authorities as vendor payments. This action amends 7 CFR 273.9(c)(1) to add a specific income exclusion provision for public assistance and general assistance vendor payments for medical, child care or energy assistance. Current rules at 7 CFR 273.9(c)(11) define energy assistance for the purpose of providing an income exclusion for cash energy assistance. The rule clarifies that the same definition of energy assistance is applicable for the purpose of providing an income exclusion of a PA or GA vendor payment for energy assistance. The Department does not believe it necessary to further define medical or child care assistance for this income exclusion provision.

Pub. L. 99–198 also provides a specific exclusion for State or local emergency or special assistance vendor payments, as determined by the Secretary. Current rules at 7 CFR 273.9(c)(1)(iii)(B) allow an exclusion for such assistance in that payments are excluded to the extent that the payment is not normally provided as part of a PA grant and is provided over and above the normal PA grant even if it is otherwise payable to the household.

The Department intends to continue to use the general policy that excluded assistance cannot be part of the normal PA grant and must be provided over and above the normal PA grant to be considered "emergency" or "special" assistance" and expands this policy to include GA. Accordingly, this action amends 7 CFR 273.9(c)(iii)(B) to allow an income exclusion for any State or local assistance payments that would not normally be provided as part of the normal PA or GA grant or benefit and that are provided over and above the normal PA or GA grant or benefit, where such payments are made to a third party on behalf of the household for a household expense.

There has been some confusion as to what is considered to be "part of the normal PA grant and over and above the normal PA grant." The Department is taking this opportunity to clarify this policy. By way of explanation, most PA and GA grants are composed of various needs-based components or standards for such expenses as, but not limited to, shelter, transportation, food and clothing for categories of persons in need of or eligible for such aid. A

maximum payment amount and/or rate of payment is established for each component. To the extent that State or local assistance is not included as a regular component of a PA or GA grant or benefit or to the extent that the amount exceeds the maximum rate of payment estabished for the relevant component, the assistance would be considered over and above the normal grant and not part of the grant. For example, if this same PA or GA program provides all persons with school age children a monthly "extra" children's clothing allowance, and this was paid through a vendor payment directly to a clothing store, that allowance would not be excluded under this provision because it is part of the regular monthly assistance for all households in that category and is not really an "extra" payment. On the other hand, if a fire destroyed the household's clothing and it receives an "emergency" amount paid to a clothing store, that amount could be excluded under the provision. Where the program is not composed of various standards or components, but is simply designed to provide assistance on an as needed basis for the particular household need in question, it is the Department's view that such assistance is not provided over and above the normal grant. For example, if the program provides the household with a food voucher to present to a store, the value of the voucher is not excluded as emergency or special assistance under this provision because it is not over and above the normal grant, it is the normal grant. These examples have been incorporated into the regulations at 7 CFR 273.9(c)(1)(iii)(B) for clarification of the provision. Please note that 7 CFR 273.9(c)(1)(iii)(B) is redesignated by this action as 7 CFR 273.9(c)(1)(iv)(B).

This clarified policy establishes the framework for considering certain vendor payments as "emergency" or "special". However, FNS has reviewed various State and local vendor payment assistance programs and believes that it would be difficult to establish rules to cover all situations that might arise in the nation. Thus, this action also amends 7 CFR 273.9(c)(iii)(B) to provide that if it is not clear that certain PA or GA vendor payments established for dealing with emergency and special situations are excluded under the general policy, the State agency must apply to FNS for an exclusion determination. Under the rule, State agencies would apply to the appropriate FNS regional office. The State would have to precisely explain the nature of the vendor payment, the type of assistance it provides, who is eligible to receive the assistance, how the State or local government makes the payment and how the vendor payment fits into the overall public assistance or general assistance scheme. A copy of the rules, ordinances or statutes which create and authorize the program should accompany the application for the exclusion. Once FNS has gained more experience in this area it is possible that other more specific rules may be published.

Public Law 100–77

Based on current regulations at 7 CFR 273.9(c)(1), a PA or GA housing assistance payment made to a third party on behalf of a household residing in temporary housing facilities for the homeless can only be partially excluded form income as emergency or special assistance. (*See* 7 CFR 273.9(c)(1)(iii)(B)) The only portion which is excluded is that portion of the assistance provided over and above the normal shelter cost component of a regular PA or GA grant. For example, where a PA or GA program is designed to provide a monthly grant or allowance which contains a standard shelter cost component of $200 for all households and the State or local government provides a total of $500 ($200 plus an additional $300 monthly rental allowance) for households residing in welfare hotels, only the $300 additional rental allowance is excluded as income because it exceeds the normal shelter cost component ($200 in this example) and, therefore, is considered to be over and above the normal PA or GA grant.

However, Congress recently passed legislation that supercedes this policy, for a limited time, for particular households in temporary housing facilities. Section 807 of Pub. L. 100–77, amends section 5(k)(2) of the Food Stamp Act to provide an income exclusion for PA or GA housing assistance made to a third party on behalf of households residing in temporary housing facilities, if the temporary housing unit provided to the household as a result of such assistance lacks facilities for the preparation and cooking of hot meals or the refrigerated storage of food for home consumption.

Using the example described above, under the provisions of Pub. L. 100–77 the normal shelter cost component of $200 as well as the additional $300 rental allowance would be excluded from income of the specific households covered by the statute.

Accordingly, this action amends 7 CFR 273.9(c)(1) to provide a specific income exclusion for a PA or GA housing assistance payment made on behalf of a household and paid by the State or local government directly to a housing provider, for households residing in temporary housing, if the temporary housing unit provided for the household lacks facilities for the preparation and cooking of hot meals or the refrigerated storage of food for home consumption.

In accordance with Pub. L. 100–77, this action also provides that the income exclusion under this provision shall expire September 30, 1989. This action also amends 7 CFR 273.9(c)(1)(iii)(B), which is redesignated by this action as 7 CFR 273.9(c)(1)(iv)(B), to conform that provision to the income exclusion policies discussed above set forth in § 273.(c)(1)(i) of this action.

Additionally, this action amends 7 CFR 273.9(b)(2)(i) to conform that provision to the vendor payments provisions outlined in § 273.9(c) of this action when determining if a PA or GA vendor payment is considered as unearned income under 7 CFR 273.9(b)(2)(i).

Standard and Shelter Expense Deductions—Section 273.9(d) (7) and (8)

Food Stamp Program benefits are calculated on the basis of an individual household's net income. The lower the household's net income, the higher the food stamp benefit it may be entitled to receive. Section 5(e) of the Food Stamp Act of 1977, as amended, provides for certain deductions from household income.

Deductions serve to lower household net income. The standard deduction is available to all households. The excess shelter expense deduction is available to households with high shelter costs. There is a maximum amount for the excess shelter expense deductions, unless the household has an elderly or disabled member, in which case there is no maximum. The amounts of the standard and the excess shelter expense deductions are adjusted annually to take into account certain changes in the cost of living.

Pub. L. 100–77 made changes relating to the standard and excess shelter expense deductions. It changed the methodology for making annual adjustments in the standard deduction, changed the maximum amount of the excess shelter expense deduction, and changed the methodology for making annual adjustments in the maximum excess shelter expense deduction. In order to understand the rationale for the changes relating to the standard and excess shelter expense deductions, it is necessary to have a historical perspective relating to the method of adjusting these deductions.

When the Food Stamp Act of 1977 was enacted, adjustments in the level of the standard deduction were based on changes in the Consumer Price Index (CPI) for items other than food. Adjustments in the level of the excess shelter expense deduction were based on changes in the shelter, fuel, and utilities components of housing costs in the CPI. Both of these CPI measures (1. items other than food and 2. shelter, fuel, and utilities) incorporated the month-to-month changes in prices of five expenditures of owning a home, two of which, house prices and contracted mortgage interest costs, were based on the six percent of all families who actually purchased a home in the CPI base period. The prices used for houses and mortgage interest rates were "current" prices, which meant that those expenditure items overstated inflation after the 1977 Act was implemented because they were the most rapidly rising parts of the fixed market basket of goods and services upon which the CPI was based.

In order to correct the overstatement of inflation and base food stamp deduction adjustments on a methodology which related more closely to renters (the majority of food stamp households), Pub. L. 97–35, enacted August 13, 1981, made a change in the method of adjusting the standard and excess shelter expense deductions.

Under Pub. L. 97–35, the annual adjustment in the level of the standard deduction took into account changes in the Consumer Price Index for All Urban Consumers (CPI–U) for items other than (1) food, (2) homeownership (homeowners' costs), and (3) maintenance and repair component of shelter costs. The homeownership (homeowners' costs) and maintenance and repair components were also removed from the shelter component of the CPI–U when computing the annual adjustment in the excess shelter expense deduction, so that the excess shelter expense deduction was based on changes in the shelter (less homeownership (homeowners' costs) and maintenance and repair component of shelter costs), fuel, and utilities components of housing costs in the CPI–U.

It was originally thought that deleting the components of the CPI relating to homeownership from the market basket used to adjust the standard and excess shelter expense deductions would slow the upward trend in these deductions, result in smaller and more appropriate annual increases in the two deductions, and make them more reflective of the situation of renters. However, because of changed circumstances, Congress felt that this understated the deductions for food stamp households. (*Congressional Record*, April 9, 1987, S 4941). Therefore, Pub. L. 100–77 will base the standard deduction adjustment on changes in the CPI–U for items other than food. It will base the maximum excess shelter expense deduction adjustment on changes in the shelter, fuel, and utilities components of housing costs in the CPI–U. Although this appears to be the same procedure as was used before Pub. L. 97–35 was enacted, it is not because the Bureau of Labor Statistics (BLS), which publishes the CPI–U, has recently changed their calculation of homeowners' costs to make them more reflective of renters by including a rental equivalence component and an owners' rent component.

Accordingly, this action amends 7 CFR 273.9(d)(7) to provide that the standard deduction shall be adjusted on October 1, 1987, and each October 1 thereafter, to reflect changes in the CPI–U for items other than food. This action also amends 7 CFR 273.9(d)(8) to provide that the excess shelter expense deduction shall be adjusted October 1, 1988 and each October 1 thereafter, to reflect changes in the shelter, fuel, and utilities components of housing costs in the CPI–U.

Additionally, Pub. L. 100–77 increased the maximum value of the excess shelter expense deduction. Accordingly, effective October 1, 1987, for all new applicants and recertifications, the new shelter deductions will be $164 in the 48 States and DC, $285 in Alaska, $234 in Hawaii, $199 in Guam, and $121 in the Virgin Islands. These amounts will also be announced in a Notice published in the **Federal Register** when the October 1, 1987 adjustments in the allotments and standard deductions are announced. In accordance with the statute, the new deduction cap does not apply with respect to an allotment issued for a certification period beginning before October 1, 1987. Accordingly, the rule provides that the new shelter deduction limits shall be phased-in for households whose certification periods began before October 1, 1987. Such households shall receive the new deduction amounts when the household is recertified after October 1, 1987. Until they are phased-in, these households shall have their shelter deduction limit based on the procedure that was in effect under the Food Stamp Act prior to the enactment of Pub. L. 100–77. That statutory provision provides for a cost-of-living update to the shelter deduction limit to become effective on October 1, 1987. This update will occur. Thus, the phased-in households will have an adjusted shelter deduction limit applied to them on October 1, 1987 and then have the new limit under Pub. L. 100–77 applied when they are recertified.

Loss-of-Benefits Penalty—Section 273.18

Section 805 of Pub. L. 100–77 amends section 5(e) of the Food Stamp Act to impose a new loss-of-benefits penalty on those food stamp recipients who fraudulently fail to report income. This provision is intended to ensure that food stamp recipients who deliberately fail to report earnings are not given the advantage of a deduction that is intended to encourage work.

Under current regulations at 7 CFR 273.18, food stamp recipients who fail to report earnings must repay the benefits received in excess of what would have been received had earnings been properly reported. The amount to be repaid is the difference between what the household received in benefits and what it would have received if it had reported its earnings correctly. In calculating the amount of overissuance owed, State agencies must apply the 20 percent earned income deduction to the unreported earnings.

The new statutory provision prohibits the earned income deduction from being applied to unreported earnings when the amount of food stamp benefits paid improperly because of fraudulent failure to report is calculated for collection. The amendment specifically states that the provision only applies to that portion of income which the household fails to report, not the entire amount of earned income. By doing this, the household that benefited from the fraudulent act is penalized since the amount it has to repay in overissuance will be increased. For example, if a food stamp household reports a monthly income of $500 when it actually received $600, the 20 percent earned income deduction would not be applied to the $100 in unreported earnings when the State agency calculates the amount of overissued benefits.

Accordingly, this action amends 7 CFR 273.18(c)(2)(ii) to provide that when determining the amount of benefits a household should have received, for the purpose of calculating a claim against the household, the State agency shall not apply the 20 percent earned income deduction to that portion of earned income which the household intentionally failed to report. (The statutory provision refers to willful or fraudulent failure to report; the Department interprets willful, or intentional, failure to report to be synonymous with fraudulent failure to

VOL

1987
UMI

report.) However, when determining whether or not there is an error for quality control (QC) purposes, the earned income deduction should not be disregarded. This is because QC determines the accuracy in which State agencies have determined households eligible or ineligible for program participation. To disregard the earned income deduction for QC purposes would penalize the State agencies when the provision is only intended to penalize those households which intentionally violate the Program.

It is important to note that this provision only applies in cases where the recipient has been found, in accordance with the Act, to have intentionally failed to report earnings, thereby limiting its application to cases of proven rather than alleged fraud. The Department still encourages State agencies to process a claim against the suspect household as an inadvertent household error claim prior to the determination of intentional Program violation. The Department realizes that in cases where the household is found guilty, State agencies must refigure the amount of the claim. However, since there can sometimes be a significant lapse of time between the discovery of an overissuance and a finding of fraud the Department still believes that proceeding with the claim as an inadvertent household error claim is the best course of action.

Implementation—Section 272.1(g)

In accordance with Pub. L. 99–198 and Pub. L. 100–77, this action amends 7 CFR 272.1(g) to provide that the provisions of this action are effective, and must be implemented, as follows:

The provision which replaces the definition of "homeless food stamp household" with a definition of "homeless individual" is effective July 22, 1987. The definition is utilized for the expedited service provisions and the provisions governing disbursement of Program information to the homeless contained in this action. The definition is also used in conjunction with the current rules, promulgated to implement the Homeless Eligibility Clarification Act, governing the redemption of coupons by homeless food stamp households. The expedited service provisions and the provisions governing the disbursement of Program information to the homeless are effective at a significantly later date. The definition does not alter or change current provisions governing redemption of coupons by homeless individuals. Therefore, this action provides that State agencies immediately inform caseworkers of the new definition. No other implementation efforts are required of the State agencies.

The provision which defines "General assistance", the provision which excludes PA/GA vendor payments from consideration as income if provided for medical, child care, or energy assistance, and the provision which excludes PA/GA vendor payments from income as emergency or special assistance are effective retroactively to April 1, 1987. The provision governing emergency or special assistance vendor payments and the provision which defines "General assistance" reflect longstanding Departmental policy and do not require implementation efforts by State agencies. State agencies must implement the other exclusions immediately in order to come into compliance with the statute. In the event that there are affected households, such households shall be entitled to restored benefits, if appropriate, back to the date of the household's application or April 1, 1987, whichever occurs later. For QC purposes only, QC reviewers shall not identify variances resulting solely from the inclusion or exclusion from income of medical, child care or energy assistance PA/GA vendor payments in cases with review dates between April 1, 1987 and October 31, 1987.

The provision which grants an income exclusion for vendor payments made by State or local governments to welfare hotels and similar facilities is effective and shall be implemented for new applicant households for the period beginning October 20, 1987 and ending September 30, 1989. By law, this provision does not apply to allotments issued to any household for any month beginning before the effective date of the provision. Therefore, this action provides that State agencies convert their affected current caseload to this provision, if otherwise eligible, at household recertification, when the household requests a review of its case, or when the State agency otherwise becomes aware that a review needed, but not prior to October 20, 1987.

The provisions which allow State agencies to provide and obtain Federal reimbursement for Program informational activities aimed at the homeless are effective July 22, 1987.

The provision which allows separate household status to be granted to certain individuals living with their parent(s) or sibling(s) and the conforming provision which requires such households to be assigned a certification period that does not exceed six months is effective and must be implemented on October 1, 1987. New applicant households which apply for benefits on or after October 1, 1987 may be granted separate household status under this provision. Current participants which may be eligible for separate household status under this provision may be granted separate status, but not prior to October 1, 1987, if the household requests separate status and the State agency determines that the household meets the requirements of this provision.

In accordance with Pub. L. 100–77, the Department has the discretion to establish the effective date of the provision which extends the current expedited service procedures to two additional categories of households. By law, the effective date cannot be later than 160 days after enactment of Pub. L. 100–77. This action provides that this provision is effective and shall be implemented for applicant households on December 1, 1987.

The provision which changes the effective date for annual cost-of-living adjustments to the income eligibility limits from July 1 to October 1 each year is effective July 1, 1988. Thus, the income eligibility limits that were placed into effect on July 1, 1987 will remain in effect until October 1, 1988. Annual adjustments to the income eligibility limits will now be on the same schedule with the annual cost-of-living adjustments for the Thrifty Food Plan and deductions.

The provision which changes the methodology for making annual cost-of-living adjustments to the standard deduction is effective October 1, 1987. The provision which changes the methodology for making annual cost-of-living adjustments to the excess shelter expense deduction is effective October 1, 1988.

The provision which establishes new amounts for the maximum excess shelter expense deduction is effective October 1, 1987. State agencies shall apply the new deduction limit to all households which apply for benefits on or after October 1, 1987. However, in accordance with the statute, the new deduction limits are not to be applied to participating households whose certification period began prior to October 1, 1987. Rather, these households are to be phased-in to the new limits as they are recertified. Until they are phased-in, these households shall have the shelter deduction limit applied to them that was in effect under the Food Stamp Act prior to the enactment of Pub. L. 100–77. That statutory provision provides for a cost-of-living update to the shelter deduction limit to become effective on October 1, 1987. This update will occur. Thus, the phased-in households will have an

adjusted shelter deduction limit applied to them on October 1, 1987 and then have the new limits under Pub. L. 100–77 applied when they are recertified.

The statute requires that the provision which imposes an earned income deduction penalty when calculating fraud claims take effect September 5, 1987. It is important to note that the date an allotment is issued is not the determining factor as to the implementation of this provision. Rather, the determining factor is the month for which benefits are issued. The statute specifies that the provision not apply to any allotments issued for months beginning before the effective date. Therefore, this rule requires State agencies to apply the provision to all allotments reflecting overissuances resulting from the international failure to report earned income issued for the month immediately following the month in which the effective date of the provision falls. For most State agencies, those that issue on a calendar month basis, this means the provision is to be applied to the allotments issued for October 1987 and all allotments issued for subsequent months. Thus, as noted above, State agencies that issue on a calendar month basis must implement this provision for allotments issued for October, even if the issuance occurs in September. Likewise, issuance made in October for September or earlier months must not have the provision applied to them. State agencies that issue on other than a calendar month basis will need to determine which issuance month begins immediately after September 5, 1987 and apply the provision to issuances for that month. The same principles noted above for calendar month systems would apply to these systems.

This action further provides that State agencies must implement the provisions of Pub. L. 100–77 as outlined in this action on the specific dates required for each provision. If, for any reason, the State agency fails to implement the provisions on the date required, affected households, if appropriate, shall be entitled to restored benefits back to the date of application or the effective date of the provisions involved, whichever occurs later.

List of Subjects

7 CFR Part 271

Administrative practice and procedure, Food stamps, Grant programs-social programs.

7 CFR Part 272

Alaska, Civil rights, Food stamps, Grant programs-social programs, Reporting and recordkeeping requirements.

7 CFR Part 273

Administrative practice and procedure, Aliens, Claims, Food Stamps, Fraud, Grant programs-social programs, Penalties, Reporting and recordkeeping requirements, Social security, Students.

7 CFR Part 277

Food stamps, Government procurement, Grant programs-social programs, Investigations, Reporting and recordkeeping requirements.

Accordingly, Parts 271, 272, 273, and 277 are amended as follows:

1. The authority citation for Parts 271, 272, 273 and 277 continues to read as follows:

Authority: 7 U.S.C. 2011–2029.

PART 271—GENERAL INFORMATION AND DEFINITIONS

2. In § 271.2, *Definitions,* the definition of "General assistance" is revised, the definition of "Homeless food stamp household" is removed, and a new definition for "Homeless individual" is added.

The revision and addition read as follows:

§ 271.2 Definitions.

* * * * *

"General assistance (GA)" means cash or another form of assistance, excluding in-kind assistance, financed by State or local funds as part of a program which provides assistance to cover living expenses or other basic needs intended to promote the health or well-being of recipients.

* * * * *

"Homeless individual" means an individual who lacks a fixed and regular nighttime residence or an individual whose primary nighttime residence is:

(1) A supervised shelter designed to provide temporary accommodations (such as a welfare hotel or congregate shelter);

(2) A halfway house or similar institution that provides temporary residence for individuals intended to be institutionalized;

(3) A temporary accommodation in the residence of another individual; or

(4) A place not designed for, or ordinarily used, as a regular sleeping accommodation for human beings (a hallway, a bus station, a lobby or similar places).

* * * * *

PART 272—REQUIREMENTS FOR PARTICIPATING STATE AGENCIES

3. In § 272.1 a new paragraph (g)(93) is added in numberical order to read as follows:

§ 272.1 General terms and conditions.

* * * * *

(g) *Implementation.* * * *

(93) *Amendment No. 298.* The provisions of Amendment No. 298 are effective, and shall be implemented, as follows:

(i) The provision in § 271.2 of this amendment which defines "General assistance" and the provisions contained in § 273.9(b)(2)(i), § 273.9(c)(1)(ii)(A), (c)(1)(ii)(B), and (c)(1)(ii)(C), regarding exclusion of certain PA/GA vendor payments are effective retroactively to April 1, 1987. The provision in § 273.9(c)(1)(iv)(B), exclusion of emergency/special PA/GA vendor payments, is also effective retroactive to April 1, 1987, however, this provision reflects current policy and requires no implementation efforts by State agencies. State agencies shall immediately implement the other provisions listed above. Affected households shall be entitled to restored benefits back to the date of application or April 1, 1987, whichever occured later. For QC purposes only, QC reviewers shall not identify variances resulting solely from implementation or nonimplementation of these provisions in cases with review dates between April 1, 1987 and October 31, 1987.

(ii) The technical amendment to Part 277 is effective September 29, 1987, and does not require implementation efforts by State agencies. The remaining provisions of Amendment No. 298 are effective, and must be implemented, as follows:

(A) Section 271.2, definition of "Homeless individual," effective July 22, 1987. State agencies shall immediately inform caseworkers of the new definition. No other implementation efforts are required to the State agencies.

(B) Section 273.9(c)(1)(ii)(D), the income exclusion of certain PA/GA vendor payments, is effective and shall be implemented for new applicant households which apply for benefits during the period beginning October 20, 1987 and ending September 30, 1989. This provision does not apply to allotments issued to any household for any month beginning before the effective period of the provision. State agencies shall convert their affected current caseload to this provision, if otherwise eligible, at recertification.

when the household requests a review of its case, or when the State agency otherwise becomes aware that a review is needed but not prior to October 20, 1987.

(C) Section 272.5, the financial reimbursement for Program informational activities for the homeless, is effective July 22, 1987.

(D) Section 273.1(a)(2)(i)(C), § 273.1(a)(2)(i)(D), § 273.10(f)(2), the exception to certain household composition requirements, and the rule regarding recertification of households subject to the exception, are effective and must be implemented on October 1, 1987. Households which apply for benefits on or after October 1, 1987 may be granted separate household status under this provision. Current participants which may be eligible for separate household status under this provision, may be granted separate status, but not prior to October 1, 1987, if the household requests separate status and the State agency determines that the household meets the requirements of this provision.

(E) Section 273.2(i), the expansion of expedited service, is effective, and must be implemented, for affected households applying for Program benefits on or after December 1, 1987.

(F) Section 273.9(a)(3), regarding the date of making the annual adjustment to the income standards, is effective with the 1988 annual adjustment. The July 1, 1987 income limits will remain in effect until October 1, 1988.

(G) The first three sentences of § 273.9(d)(8)(i), the raising of the shelter deduction limit for the 48 States and DC., Alaska, Hawaii, Guam and Virgin Islands, are effective October 1, 1987. State agencies shall implement the higher deduction limits appearing in the first sentence of § 273.9(d)(8)(i) on October 1, 1987 only for households whose certification periods begin on or after October 1, 1987. State agencies shall implement the lower deduction limits appearing in the second sentence of § 273.9(d)(8)(i) on October 1, 1987 only for households whose certification periods begin before October 1, 1987. The State agency shall implement the higher deduction limits for households whose certification periods begin before October 1, 1987 beginning with the month in which such household is recertified after October 1, 1987.

(H) Section 273.9(d)(7)(i), the change in the standard deduction methodology, is effective October 1, 1987.

(I) The last sentence of § 273.9(d)(8)(i), the change in the excess shelter deduction methodology, is effective, October 1, 1988.

(J) Section 273.18(c)(2)(ii), the earned income deduction penalty, is effective on September 5, 1987. State agencies which issue on a calendar month basis, shall apply this provision to allotments issued for October 1987 and all allotments for subsequent months. State agencies which issue on other than a calendar month basis shall apply the provision to the issuance for the first issuance month beginning after September 5, 1987.

(iii) State agencies must implement the provisions as outlined in paragraph (g)(93)(ii) of this section on the specific dates required for each provision. If, for any reason, the State agency fails to implement the provisions on the required date, affected households, if appropriate, shall be entitled to restored benefits back to the date of application or the effective date of the provision involved, whichever occurred later.

4. In § 272.5: a. Paragraph (a) is amended by removing the words "to applicant and recipient households".

b. Introductory paragraph (b) is amended by adding before the period appearing at the end of the paragraph, the words "for applicants and recipients".

c. A new paragraph (c) is added. The addition reads as follows.

§ 272.5 Program informational activities.

* * * * *

(c) *Program information for the homeless.* State agencies, at their option, may carry out Program informational activities directed toward homeless individuals. When providing Program information such as this, only those efforts specifically directed toward homeless individuals, as defined in § 271.2, will be funded by FNS in accordance with Part 277. State agencies shall inform FNS in writing what they will do to ensure that Program information is directed only toward individuals who are actually homeless.

PART 273—CERTIFICATION OF ELIGIBLE HOUSEHOLDS

5. In § 273.1: a. Paragraph (a)(2)(i)(C) is amended by adding a new sentence to the end of paragraph (a)(2)(i)(C).

b. Paragraph (a)(2)(i)(D) is amended by adding a new sentence to the end of paragraph (a)(2)(i)(D).

The additions read as follows:

§ 273.1 Household concept.

(a) *Household definition.* * * *

(2) *Special definition.*

(i) * * *

(C) * * * If the natural, adopted or stepchild is a parent of minor children and he/she and the children are living with his/her parent(s), the parent of the minor children, together with such children, may be granted separate household status based on the provisions of paragraph (a)(1) of this section and subject to the provisions of paragraphs (a)(2)(i)(A) and (a)(2)(i)(B) of this section and the certification period as required by § 273.10(f)(2).

(D) * * * If a sibling is the parent of minor children and he/she and the children are living with his/her sibling, the sibling who is the parent of the minor children, together with such children, may be granted separate household status based on the provisions of paragraph (a)(1) of this section and subject to the provisions of paragraphs (a)(2)(i)(A) and (a)(2)(i)(B) of this section and the certification period as required by § 273.10(f)(2).

* * * * *

6. In § 273.2, paragraph (i)(1) is revised in its entirety to read as follows:

§ 273.2 Application processing.

* * * * *

(i) *Expedited service.*—(1) *Entitlement to expedited service.* The following households are entitled to expedited service:

(i) Households with less than $150 in monthly gross income, as computed in § 273.10 provided their liquid resources (i.e., cash on hand, checking or savings accounts, savings certificates, and lump sum payments as specified in § 273.9(c)(8)) do not exceed $100;

(ii) Migrant or seasonal farmworker households who are destitute as defined in § 273.10(e)(3) provided their liquid resources (i.e., cash on hand, checking or savings accounts, savings certificates, and lump sum payments as specified in § 273.9(c)(8)) do not exceed $100;

(iii) Eligible households in which all members are "homeless individuals" as defined in § 271.2; or

(iv) Eligible households whose combined monthly gross income and liquid resources are less than the household's monthly rent or mortgage, and utilities.

* * * * *

7. In § 273.9: a. Introductory paragraph (a)(3) is revised.

b. The first sentence of paragraph (b)(2)(i) is revised and a new sentence is added after the first sentence.

c. Paragraphs (c)(1)(ii), (c)(1)(iii) and (c)(1)(iv) are redesignated as paragraphs (c)(1)(iii), (c)(1)(iv) and (c)(1)(v), respectively and a new paragraph (c)(1)(ii) is added.

d. Newly redesignated paragraph (c)(1)(iv)(B) is revised in its entirey.

e. Paragraphs (d)(7)(i) and (d)(8)(i) are revised.

The revisions and addition read as follows:

§ 273.9 Income and deductions.

(a) *Income eligibility standards.*
* * *

(3) The income eligibility limits, as described in this paragraph, are revised each October 1 to reflect the annual adjustment to the Federal income poverty guidelines for the 48 States and the District of Columbia, for Alaska, and for Hawaii.
* * * * *

(b) *Definition of income.* * * *
(2) * * *

(i) Assistance payments from Federal or federally aided public assistance programs, such as supplemental security income (SSI) or aid to families with dependent children (AFDC); general assistance (GA) programs (as defined in § 271.2); or other assistance programs based on need. Such assistance is considered to be unearned income even if provided in the form of a vendor payment (provided to a third party on behalf of the household), unless the vendor payment is specifically exempt from consideration as countable income under the provisions of paragraph (c)(1) of this section. * * *
* * * * *

(c) *Income exclusions.* * * *
(1) * * *

(ii) A PA or GA payment which is not made directly to the household, but paid to a third party on behalf of the household to pay a household expense, shall be considered an excludable vendor payment and not counted as income to the household if such PA or GA payment is for:

(A) Medical assistance;

(B) Child care assistance;

(C) Energy assistance (as defined in paragraph (c)(11) of this section); or

(D) Housing assistance payments made to a third party on behalf of a household residing in temporary housing, if the temporary housing unit provided for the household as a result of such assistance lacks facilities for the preparation and cooking of hot meals or the refrigerated storage of food for home consumption, *provided* that such vendor payments shall be excluded under this provision if paid to the housing provider during the period beginning October 20, 1987 and ending September 30, 1989.
* * * * *

(iv) * * *

(B) All or part of a public assistance (PA) or general assistance (GA) grant or payment which is diverted to a third party or to a protective payee for purposes such as, but not limited to, managing a household's expenses, shall be considered income to the household and not excluded as a vendor payment, except as provided for in paragraphs (c)(1)(i) and (c)(1)(ii) of this section. Assistance financed by State or local funds which is provided over and above the normal PA or GA grant or payment, or is not normally provided as part of such grant or payment would be considered emergency or special assistance and excluded as income if provided to a third party on behalf of the household. For example, where a PA or GA program provides all households with school age children with a monthly "extra" childrens clothing allowance, paid directly to a clothing store, that allowance would not be excluded because it is part of the regular monthly assistance for all households in that category and is not really an "extra" payment. On the other hand, if a fire destroyed the household's clothing and it receives an "emergency" amount paid directly to a clothing store, such a payment could be excluded under this provision. Where the program is not composed of various standards, allowances, or components, but is simply designed to provide assistance on an as needed basis rather than provide routine, regular monthly benefits to a client, no exclusion would be granted under this provision. For example, if such a program provides a household with a food voucher to be presented to a store, the value of the voucher is not excluded as emergency or special assistance because it is not provided over and above the normal grant, *it is the normal grant.* If it is not clear that a certain type of PA or GA vendor payment is covered under this general exclusion policy, the State agency shall apply to the appropriate FNS Regional Office for a determination of whether PA or GA vendor payments that the State believes are provided for emergency or special circumstances should be excluded. The application for this exclusion determination must explain: the emergency and special nature of the vendor payment, the exact type of assistance it is intended to provide, who is eligible for the assistance, how the assistance is paid, and how the vendor payment fits into the overall PA or GA scheme. A copy of the rules, ordinances or statutes which creates and authorizes the program shall accompany the application request.
* * * * *

(d) *Income deductions.* * * *

(7) *Adjustment of standard deduction.*

(i) Effective October 1, 1987, and each October 1 thereafter, the standard deduction shall be adjusted to reflect change in the CPI–U for items other than food for the twelve months ending the preceding June 30.
* * * * *

(8) *Adjustment of shelter deduction.*

(i) Effective October 1, 1987, for households whose certification period begins on or after October 1, 1987, the maximum monthly excess shelter expense deduction limits shall be $164 for the 48 States and D.C., $265 for Alaska, $234 for Hawaii, $199 for Guam, and $121 for the Virgin Islands. Effective October 1, 1987, for households whose certification period began before October 1, 1987, the maximum monthly excess shelter deduction limits shall be $152 for the 48 States and D.C., $261 for Alaska, $217 for Hawaii, $185 for Guam, and $112 for the Virgin Islands. Households whose certification period began before October 1, 1987 shall receive the higher deduction limits stated in this paragraph beginning with the first month of the certification period for which such households are recertified after October 1, 1987. Effective October 1, 1988, and each October 1 thereafter, the maximum limit for excess shelter expense deductions shall be adjusted to reflect changes in the shelter, fuel, and utilities components of housing costs in the CPI–U for the twelve months ending the preceding June 30.
* * * * *

8. In § 273.10, paragraphs (f)(2) through (f)(7) are redesignated as paragraphs (f)(3) through (f)(8), respectively, and a new paragraph (f)(2) is added to read as follows:

§ 273.10 Determining household eligibility and benefit levels.
* * * * *

(f) *Certification periods.* * * *

(2) Households which are granted separate household status, in accordance with § 273.1(a)(2)(C) and (D), because the household consists of an individual and that individual's minor child(ren) living with the individual's parent or sibling and purchasing and preparing meals separate from the parent/sibling shall be assigned a certification period not to exceed six months.
* * * * *

9. In § 273.18, paragraph (c)(2)(ii) is amended by adding a new sentence to the end of the paragraph to read as follows:

§ 273.18 Claims against households.

BILLING CODE 3410-30-M

Federal Crop Insurance Corporation

7 CFR Part 401

[Amdt. No. 14; Doc. No. 4751S]

General Crop Insurance Regulations

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Interim rule.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) amends the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, by re-defining the insurance period for all insured crops to provide that insurance attaches on the later of when the crop is planted or when the application is properly completed, signed and delivered to the service office in addition to the other attachment references therein. The intended effect of this rule is to prevent the possibility of adverse selectivity resulting in an automatic replant payment. The authority for the promulgation of this rule is contained in the Federal Crop Insurance Act, as amended.

DATES: *Effective date:* September 29, 1987. Comments may be submitted until November 30, 1987.

ADDRESS: Written comments on this interim rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447-3325.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established by Departmental Regulation 1512-1. This action does not constitute a review as to the need, currency, clarity, and effectiveness of these regulations under those procedures. The sunset review date established for these regulations is April 1, 1992.

E. Ray Fosse, Manager, FCIC, (1) has determined that this action is not a major rule as defined by Executive Order 12291 because it will not result in: (a) An annual effect on the economy of $100 million or more; (b) major increases in costs or prices for consumers, individual industries, federal, State, or local governments, or a geographical region; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets; and (2) certifies that this action will not increase the federal paperwork burden for individuals, small businesses, and other persons.

This action is exempt from the provisions of the Regulatory Flexibility Act; therefore, no Regulatory Flexibility Analysis was prepared.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.450.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR Part 3015, Subpart V, published at 48 FR 29115, June 24, 1983.

This action is not expected to have any significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

FCIC herewith amends 7 CFR Part 401—General Crop Insurance Regulations, effective for the 1988 and succeeding crop years to provide that, in addition to the other insurance period references therein, insurance attaches on the later of when the crop is planted or when the application is signed.

Present provisions contained in section 7 of the general crop insurance policy published in the **Federal Register** on Thursday, July 30, 1987 at 52 FR 28443, provide only that insurance attaches on each unit, or part of a unit, when the insured crop is planted or on the calendar date for the beginning of the insurance period if specified in the crop endorsement.

FCIC has identified several states where insurable crops (primarily corn and grain sorghum) are planted as much as 6 weeks in advance of the sales closing date for the area for such crops. After damage occurs, a non-insured determining that the planted crop will not reach production, may buy crop insurance and collect an automatic replant payment. Such adverse selection is counter to the principles of an actuarially sound insurance program and provides an opportunity for fraudulently obtaining crop insurance coverage.

FCIC has determined that it is necessary to amend the insurance period provisions in the general crop insurance policy to prevent such occurrences.

This amendment has no effect on any other provision of the general crop insurance policy.

While this amendment is not considered an emergency rule, the far reaching effect of this provision allowing a producer to plant several weeks in advance of the sales closing date, then just prior to the closing date to purchase insurance virtually guaranteeing a replant payment payment, requires an immediate change in this provision in order to protect the integrity of the crop insurance program.

Therefore, FCIC has determined that it good cause is shown to make this rule effective upon publication in the **Federal Register** and to allow 60 days following publication for the public to submit written comments, data, and opinions on the rule.

This rule will be scheduled for review so that any amendment made necessary by public comment may be published as quickly as possible following the public comment period.

Written comments on this interim rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250. All written comments received in connection with this rule will be available for public inspection in the Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC during regular business hours Monday through Friday.

List of Subjects in 7 CFR Part 401

General crop insurance regulations.

Interim Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 et seq.), the Federal Crop Insurance Corporation herewith amends the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, as follows:

PART 401—GENERAL CROP INSURANCE REGULATIONS—REGULATIONS FOR THE 1988 AND SUBSEQUENT CROP YEARS

1. The authority citation for 7 CFR Part 401 continues to read as follows:

Authority: Secs. 506, 516, Pub. L. 75–430, 52 Stat. 73, 77, as amended (7 U.S.C. 1506, 1516).

2. 7 CFR Part 401 is amended by revising § 401.8(d)7 to read as follows:

* * * * *

§ 401.8 The application and policy.

* * * * *

(d) * * *

7. Insurance period.

Insurance attaches on each unit or part of a unit when the insured crop is planted or when the application is properly signed, completed, and delivered to your service office, whichever is later, or on the calendar date for the beginning of the insurance period if specified in the crop endorsement, and ends at the earliest of:

(a) Total destruction of the insured crop on the unit;

(b) Harvest of the unit;

(c) Final adjustment of a loss on a unit; or

(d) The calendar date for the end of the insurance period contained in the crop endorsement.

* * * * *

Done in Washington DC on September 2, 1987.

E. Ray Fosse,

Manager, Federal Crop Insurance Corporation.

BILLING CODE 3410–08–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 10

[Docket No. 87N–0261]

Administrative Practices and Procedures; Conforming Amendment

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing an amendment to its regulation specifying the date on which the administrative record of a regulation closes so that the record closes on the date of publication of the regulation rather than on the date of the Commissioner's decision on the regulation. This amendment conforms FDA's regulation to the review requirements under Executive Order 12291 and the Secretary's reservation of authority to approve certain FDA regulations (21 CFR 5.11).

EFFECTIVE DATE: September 29, 1987.

FOR FURTHER INFORMATION CONTACT: Robert L. Spencer, Division of Regulations Policy (HFC–220), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–3480.

SUPPLEMENTARY INFORMATION: Part 10 of FDA's administrative practices and procedures regulations, § 10.40(h) (21 CFR 10.40(h)), provides in part that "The record of the administrative proceeding closes on the date of the Commissioner's decision unless some other date [is] specified." Inadvertently, neither at the time the President issued Executive Order 12291 on review of regulations (46 FR 13193; February 19, 1981) nor at the time the Secretary, Department of Health and Human Services, issued § 5.11 (47 FR 16318; April 16, 1982) did FDA issue a conforming amendment to § 10.40(h) to take into account the need to close the administrative record on a regulation at the time of its publication, not at the time the Commissioner of Food and Drugs completed his review. Accordingly this document amends § 10.40(h) by changing the date on which the administrative record closes from "the date of the Commissioner's decision" to "the date of publication of the final regulation in the **Federal Register** unless some other date is specified."

Because this rule merely conforms FDA's administrative practices and procedures regulation to the review requirements of Executive Order 12291 and of 21 CFR 5.11 and is a rule on agency management, notice, public procedure, and delayed effective date are unnecessary under 5 U.S.C. 553 (a)(2), (b)(A), (b)(B), and (d)(3).

List of Subjects in 21 CFR Part 10

Administrative practice and procedure.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, Part 10 is amended as follows:

PART 10—ADMINISTRATIVE PRACTICES AND PROCEDURES

1. The authority citation for 21 CFR Part 10 continues to read as follows:

Authority: Sec. 201 et seq., Pub. L. 717, 52 Stat. 1040 as amended (21 U.S.C. 321 et seq.); sec. 1 et seq., Pub L. 410, 58 Stat. 682 as amended (42 U.S.C. 201 et seq.); sec. 4, Pub. L. 91–513, 84 Stat. 1241 (42 U.S.C. 257a); sec. 301 et seq., Pub. L. 91–513, 84 Stat. 1253 (21 U.S.C. 821 et seq.); sec. 409(b), Pub. L. 242, 81 Stat. 600 (21 U.S.C. 679(b)); sec. 24(b), Pub. L. 85–172, 82 Stat. 807 (21 U.S.C. 467f(b)); sec. 2 et seq., Pub. L. 91–597, 84 Stat. 1620 (21 U.S.C. 1031 et seq.); secs. 1 through 9, Pub. L. 625, 44 Stat. 1101–1103 as amended (21 U.S.C. 141–149); secs. 1 through 10, Chapter 358, 29 Stat. 604–607 as amended (21 U.S.C. 41–50); sec. 2 et seq., Pub. L. 783, 44 Stat. 1406 as amended (15 U.S.C. 401 et seq.); sec. 1 et seq., Pub. L. 89–755, 80 Stat. 1298 as amended (15 U.S.C. 1451 et seq.).

2. Section 10.40 is amended by revising paragraph (h) to read as follows:

§ 10.40 Promulgation of regulations for the efficient enforcement of the law.

* * * * *

(h) The record of the administrative proceeding closes on the date of publication of the final regulation in the **Federal Register** unless some other date is specified. Thereafter, any interested person may submit a petition for reconsideration under § 10.33 or a petition for stay of action under § 10.35. A person who wishes to rely upon information or views not included in the administrative record shall submit it to the Commissioner with a new petition to modify the final regulation.

* * * * *

Dated: September 22, 1987.

John M. Taylor,

Associate Commissioner for Regulatory Affairs.

[FR Doc. 87–22352 Filed 9–28–87; 8:45 am]

BILLING CODE 4160–01–M

21 CFR Part 558

New Animal Drugs for Use in Animal Feeds; Novobiocin

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect approval of a supplemental new animal drug application (NADA) filed by the Upjohn Co. The NADA provides for the manufacture of a Type B medicated feed containing 17.5 grams novobiocin per pound for making Type C medicated feeds for the treatment or control of certain infections in chickens, turkeys, ducks, and mink.

EFFECTIVE DATE: September 29, 1987.

FOR FURTHER INFORMATION CONTACT: Adriano R. Gabuten, Center for

Veterinary Medicine (HFV–135), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–4913.

SUPPLEMENTARY INFORMATION: The Upjohn Co., Kalamazoo, MI 49001, has filed a supplement to NADA 12–375, Albamix® Feed Medication (novobiocin) providing for a Type B medicated feed containing 17.5 grams novobiocin per pound. The Type B medicated feed is for making Type C medicated feed as follows: For chickens and turkeys for the treatment of staphylococcal synovitis, generalized staphylococcal infections, and as an aid in the treatment of breast blisters associated with staphylococcal infections susceptible to novobiocin; for turkeys (only) for the treatment of acute outbreaks of fowl cholera and as an aid in control of recurring outbreaks of fowl cholera caused by strains of *Pasteurella multocida* susceptible to novobiocin; for mink for the treatment of generalized infections, abscesses, or urinary infections caused by staphylococcal or other novobiocin sensitive organisms; and ducks for control of infectious serositis and fowl cholera caused by *Pasteurella anatipestifer* and *P. multocida* susceptible to novobiocin. The application is approved and 21 CFR 558.415(a) is amended to reflect the approval.

Approval of this supplement is an administrative action that did not require generation of new effectiveness or safety data. Therefore, a freedom of information summary (pursuant to 21 CFR 514.11(e)(2)(ii)) is not required.

The agency has determined under 21 CFR 25.24(d)(1)(iii) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

List of Subjects in 21 CFR Part 558

Animal drugs, Animal feeds.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, Part 558 is amended as follows:

PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS

1. The authority citation for 21 CFR Part 558 continues to read as follows:

Authority: Sec. 512, 82 Stat. 343–351 (21 U.S.C. 360b); 21 CFR 5.10 and 5.83.

2. Section 558.415 is amended by revising paragraph (a) to read as follows:

§ 558.415 Novobiocin.

(a) *Approvals.* Type A medicated articles: 25 grams of activity per pound to 000009 in § 510.600(c) of this chapter. Type B medicated feeds: 17.5 grams per pound to 000009 in § 510.600(c) of this chapter.

SUPPLEMENTARY INFORMATION:

List of Subjects in 32 CFR Part 372

Organization and function.

Accordingly, 32 CFR Part 372 is revised to read as follows:

PART 372—AMERICAN FORCES INFORMATION SERVICE (AFIS)

Sec.

372.1 Reissuance and purpose.
372.2 Applicability.
372.3 Definitions.
372.4 Mission.
372.5 Organization and management.
372.6 Responsibilities and functions.
372.7 Relationships.
372.8 Authority.
372.9 Administration.
Appendix A—Delegations of Authority.

Authority: 10 U.S.C. 191.

§ 372.1 Reissuance and purpose.

Under the authority vested in the Secretary of Defense by Title 10, United States Code, this part to update the mission, functions, authorities, and relationships of the American Forces Information Service (AFIS) and is the authority for the existence of the Department of Defense Internal Information Program. This part also reestablishes the American Forces Information Council (AFIC).

§ 372.2 Applicability.

This part applies to the Office of the Secretary of Defense (OSD), the Military Departments, the Organization of the Joint Chiefs of Staff (OJCS), the Unified and Specified Commands, the Defense Agencies, and the Department of Defense Field Activities (hereafter referred to collectively as "DoD Components").

§ 372.3 Definitions.

(a) *Acquisition.* The process through which equipment, programs, materials, products, and services are obtained from public and commercial sources.

(b) *Armed Forces Radio and Television Service (AFRTS).* A worldwide broadcast organization that comprises an AFRTS headquarters element within AFIS, the AFRTS centralized management elements within the Military Departments, AFRTS outlets and activities around the world, and the AFRTS Boradcast Center in Los Angeles, CA.

(c) *AFRTS outlet.* Any facility authorized by the Director, AFIS, in accordance with policy to disseminate radio or television programming. An outlet includes AFRTS radio and television stations and networks, relay sites, translators, Navy and Military Sealift Command ships using AFRTS program materials, mini-TV sites, and any other AFRTS broadcast facility.

(d) *AFRTS activity.* Any activity in support of AFRTS broadcast operations, i.e., centralized management elements, regional production centers, program duplicating facilities, etc. "Support" can be in many forms—administrative, logistical, equipment maintenance, etc.

(e) *AFRTS network.* Two or more AFRTS stations, authorized by the Director, AFIS, to disseminate programming through interconnecting broadcast-quality transmission circuits.

(f) *AFRTS mini-TV.* A self-contained videotape playback system used in remote or isolated areas not accessible to an AFRTS television signal.

(g) *AFRTS broadcast center.* A field activity of the AFIS located in Los Angeles, CA, that provides information and entertainment programming to AFRTS outlets.

(h) *AFRTS regional production center.* Regional production centers (RPC's) are radio and television spot production facilities located in the two major overseas theaters (Pacific and Europe) and managed by the Air Force Broadcasting Service (AFBS). RPC's produce internal information spot announcements appropriate to their respective theaters to supplement the DoD (AFIS) worldwide spot production effort. Subjects, concept treatments, and scripts are coordinated through the appropriate Unified Command and approved by AFIS prior to final production and release.

(i) *Audiovisual (AV).* A subset of visual information relating to produced motion media with sound.

(j) *Broadcast equipment.* Items of a durable nature used for recording, producing, mixing, reproducing, broadcasting, and all items commonly used in the broadcasting and television industry for the recording, processing, distribution, reproduction, and transmission of radio and TV signals.

(k) *Internal information.* All information that is intended to keep DoD military and civilian personnel and their family members well informed on matters concerning national defense, readiness, military benefits, American and military heritage, and issues affecting their own morale and well-being. This includes information disseminated through periodicals, other publications, radio, television, motion pictures, videotape, and related media.

(l) *Joint Visual Information Service (JVIS).* A visual information service operated and maintained by a DoD Component to support more than one DoD Component.

(m) *Military department broadcasting service.* Centralized management staff elements within the Departments of the Army, Navy, and Air Force, which are responsible for the day-to-day management and operational control of all AFRTS outlets and activities that have been assigned to the executive agency of their Department.

(n) *Print media.* Printed publications issued in support of the internal information program of the Department of Defense. This includes, but is not limited to, newspapers, periodicals, pamphlets, booklets, posters, magazines, newsletters, news summaries, and news bulletins.

(o) *Visual information (VI).* Use of one or more of the various visual media with or without intrinsic sound. VI includes still photography, motion picture photography, video recording (with or without sound), graphic arts, visual aids, models, displays, visual presentation services, and the support processes.

§ 372.4 Mission.

(a) The AFIS shall:

(1) Advise and act for the Assistant Secretary of Defense (Public Affairs) (ASD(PA)) in the:

(i) Management of DoD internal information programs.

(ii) Development of policies, guidelines, and standards for the management of DoD visual information (VI) activities and programs.

(iii) Development of policies, guidelines, and standards for the management of Armed Forces Radio and Television Service (AFRTS) outlets and activities.

(2) Provide joint-interest print, radio, film, and television materials for use in the internal information programs of the Military Departments and other DoD Components.

(b) The AFIC shall provide a forum for the exchange of information and advise on DoD internal information matters.

§ 372.5 Organization and management.

(a) The AFIS is established as a DoD Field Activity under the direction, authority, and control of the ASD(PA). It shall consist of a Director and such essential subordinate organizational elements as are established by the Director to accomplish the AFIS mission within resources assigned by the Secretary of Defense.

(b) The AFIC is established as a policy committee reporting to the ASD(PA). It shall consist of the following:

(1) Director, AFIS, who shall serve as Chairman.

(2) The Chief of Public Affairs of each of the Military Departments.

(3) A representative of the Chairman of the Joint Chiefs of Staff (CJCS).

(4) An Executive Secretary, who shall be designated by the Director, AFIS.

§ 372.6 Responsibilities and functions.

(a) The *Secretaries of the Military Departments* shall:

(1) Conduct internal information activities pertaining to their Department's programs, operations, and activities.

(2) Operate and maintain AFRTS outlets and activities in designated geographic areas. Continue to sustain broadcast operations, and provide maintenance and administrative support for these outlets and activities during contingencies when their operational control has been temporarily assumed by a Unified Commander in accordance with paragraphs (c)(1) and (c)(2) of this section.

(3) Centrally manage and control all AFRTS outlets and activities of their Department.

(4) Centrally manage and control all VI activities of their Department.

(5) Operate VI activities in support of assigned missions.

(b) The *Assistant Secretary of Defense (Public Affairs)* (ASD(PA)) shall:

(1) Develop broad policy guidelines and objectives for DoD internal information programs.

(2) Provide policy and operational direction to the Director, AFIS.

(c) The *Commanders of the Unified Commands* (CINCs) shall:

(1) Develop plans for and assume operational control of assigned AFRTS facilities within their respective geographic areas of responsibility during periods of military contingency, as required to ensure a coordinated internal information effort.

(2) Ensure that requirements for the provisions of AFRTS service are considered and integrated into all military contingency and deliberate wartime planning guidance within their respective geographic areas of responsibility.

(3) Expeditiously notify the Secretaries of the Military Departments, the CJCS, and the ASD(PA) of military contingency occurrences requiring the implementation of plans for assuming operational control of AFRTS outlets, and again upon the termination of the contingency situation. Return control of AFRTS outlets to the Military Departments immediately upon termination of the contingency situation.

(4) Provide advice with respect to host-country sensitivities concerning the nature and content of radio and television programs.

(5) Conduct internal information activities on joint matters within assigned areas of operation.

(d) The *Director, American Forces Information Service* (AFIS), shall:

(1) Organize, direct, and manage the AFIS and all assigned resources.

(2) Serve as Director of AFRTS.

(3) For print media internal information programs:

(i) Develop and oversee the implementation of policies and procedures pertaining to the management, content, and publication of periodicals, pamphlets, armed forces newspapers, and civilian enterprise publications, including the provisions of 32 CFR Part 248 and 32 CFR Part 297.

(ii) Serve as DoD point of contact (POC) in the United States for Unified Command newspaper editorial and business policy, business guidance and assistance, and other matters.

(iii) Serve as DoD POC with the Congressional Joint Committee on Printing and other congressional entities for matters pertaining to DoD periodicals, armed forces newspapers, and civilian enterprise publications.

(iv) Develop, publish, or procure appropriate internal information materials of a DoD-wide, joint-interest nature.

(4) For AFRTS radio and television internal information programs:

(i) Designate geographic areas of responsibility for the operation of Military Department AFRTS outlets and activities, and exercise program management control of AFRTS.

(ii) Develop and oversee the implementation of policies and procedures pertaining to the management and operation of radio and television outlets and activities, including the provisions of 32 CFR Part 372a.

(iii) Exercise fiscal and manpower resource control through the Planning, Programming, and Budgeting System (PPBS). Provide guidance on, review, and approve or revise proposed resource programs; formulate budget estimates; recommend resource allocations; and monitor the implementation of approved programs.

(iv) In conjunction with the CJCS, coordinate contingency and wartime requirements with the CINCs.

(v) Administer centralized management information and resource management systems, in accordance with DoD Directive 7750.5 [1] and DoD Directive 5000.11.[2]

(vi) Establish guidelines for and authorize the establishment of new stations, the disestablishment of existing stations, and the configuration of broadcast networks.

(vii) Develop and maintain a program for the standardization of broadcast equipment. Establish broadcast equipment technical specifications and performance standards, and certify equipment for use.

(viii) Establish manning standards for outlets and overhead staffs, and qualification standards for broadcast and technical support personnel. Review and concur or nonconcur in the selection of network commanders.

(ix) Negotiate for, acquire, and provide commercial program materials, including a free flow of general and military news, sports, and current events programs. Under normal circumstances, this function shall be carried out by the Commander, AFRTS Broadcast Center, Los Angeles, CA, under the authority, direction, and control of the Director, AFIS.

(x) Develop, produce, and procure spot announcements and public service announcements (PSA's) in support of the DoD internal information program.

(5) For VI activities and programs:

(i) Develop, promulgate, and monitor the implementation of policies, procedures, and programs, and establish management responsibilities for DoD VI activities and resources consistent with DoD Directive 5040.2.[3]

(ii) Operate the Federal Audiovisual Contract Management Office (FACMO) as Executive Agent for the Office of Federal Procurement Policy (OFPP), Office of Management and Budget (OMB).

(iii) Manage necessary information systems to support these requirements.

(iv) Develop common VI formats and standardization guidelines.

(6) Exercise management oversight of the Joint Visual Information Services (JVIS) consistent with DoD Directive 5040.3,[4], in addition to the responsibilities established in paragraph (d)(5) of this section, to:

(i) Review JVIS plans, programs, actions, and taskings to assure that JVIS programs and systems accommodate operational requirements.

(ii) Serve as program review authority for JVIS-related Program Objectives Memorandum (POM) and budget submissions.

(iii) Oversee contract quality control and assurance responsibility for audiovisual (AV) productions obtained under the Federal AV contract management system.

(7) Develop and provide DoD information training requirements, policy, and guidance, and provide training and management oversight and assistance on behalf of the ASD(PA) for the Defense Information School (DINFOS) established under DoD Directive 5160.48.[5]

(8) Provide assistance to other joint-service visual information training programs.

(9) Perform other related internal information functions that the ASD(PA) may assign.

(e) The *Members of the American Forces Information Council* shall meet periodically to:

(1) Consider questions of policy and advise the ASD(PA) with respect to internal information programs.

(2) Exchange information among the membership.

§ 372.7 Relationships.

(a) In the performance of assigned functions, the Director, AFIS, shall:

(1) Coordinate actions with other DoD Components having collateral or related functions in the field of assigned responsibilities.

(2) Maintain appropriate liaison with DoD Components and other Governmental and non-Government Agencies for the exchange of information and advice on programs in the field of assigned responsibilities.

(3) Make use of established facilities and services in the Department of Defense and other Government Agencies to avoid duplication and achieve maximum efficiency and economy.

(b) Heads of DoD Components shall coordinate with the Director, AFIS, on all matters related to the mission, responsibilities, and functions of AFIS.

§ 372.8 Authority.

The Director, AFIS, is authorized to:

(a) Obtain form DOD Components, consistent with the policies and criteria of DoD Directive 7750.5, information, advice, and assistance necessary to carry out AFIS programs and activities.

(b) Communicate directly with the Military Departments and other DoD Components on matters related to AFIS responsibilities, programs, and activities.

(c) Communicate with other government agencies, representatives of the legislative branch, and members of the public, as appropriate, in carrying out the functions assigned under this part.

(d) Communicate with representatives of foreign governments and commercial broadcast agencies regarding broadcast frequencies and the rights to broadcast for AFRTS outlets and activities.

(e) Exercise the administrative authorities contained in the Appendix of this part.

§ 372.9 Administration.

(a) The Director, AFIS, shall be selected by the ASD(PA).

(b) The AFIS shall be authorized such personnel, facilities, funds, and other administrative support as the Secretary of Defense considers necessary.

---

[1] Copies may be obtained, if needed, from the U.S. Naval Publications and Forms Center, Attn: Code 301, 5801 Tabor Avenue, Philadelphia, PA 19120.

[2] See footnote 1 to § 372.6(d)(4)(v).

[3] See footnote 1 to § 372.6(d)(4)(v).

[4] See footnote 1 to § 372.6(d)(4)(v).

[5] See footnote 1 to § 372.6(d)(4)(v).

(c) The Military Departments shall assign military personnel to AFIS in accordance with approved authorizations and estblished procedures for assignment to joint duty.

(d) Administrative support for AFIS shall be provided by DoD Components through interservice support agreements in accordance with DoD Directive 4000.19.[6]

Appendix A—Delegations of Authority

Pursuant to the authority vested in the Secretary of Defense, and subject to the direction, authority, and control of the Secretary of Defense, and in accordance with DoD policies, Directives, and Instructions, the Director, AFIS, or, in the absence of the Director, the person acting for the Director, is hereby delegated authority, as required in the administration and operation of AFIS, to:

1. Perform the following functions in accordance with the provisions of 5 U.S.C. 7532; Executive Orders 10450, 12333, and 12356; and DoD Directive 5200.2, "DoD Personnel Security Program," December 20, 1979, as appropriate:

a. Designate any position in AFIS as a sensitive position.

b. Authorize, in case of an emergency, the appointment of a person to a sensitive position in AFIS for a limited period for whom a full field investigation or other appropriate investigation, including the National Agency Check, has not been completed.

c. Authorize the suspension, but not terminate the services, of an employee in the interest of national security in positions within AFIS.

2. Authorize and approve overtime work for AFIS civilian employees, in accordance with the provisions of 5 U.S.C. Chapter 55, Subchapter V, and applicable Office of Personnel Management regulations.

3. Develop, establish, and maintain an active and continuing Records Management program, pursuant to section 506(b) of the Federal Records Act of 1950 (44 U.S.C. 3102) and DoD Directive 5015.2, "Records Management Program," September 17, 1980.

4. Authorize the publication of advertisements, notices, or proposals in public periodicals, as required for the effective administration of AFIS, consistent with 44 U.S.C. 3702.

5. Establish and maintain, for the functions assigned, an appropriate publication system for the promulgation of common supply and service regulations, instructions, reference documents, and changes thereto, pursuant to the policies and procedures prescribed in DoD Directive 5025.1, "Department of Defense Directives System," October 16, 1980.

6. Approve Joint Service Achievement Medals (JSAMs) for personnel assigned under the direct organizational authority of the Director, AFIS, as delegated by ASD(PA) under the provisions of Chapter 3, subparagraph D.5.c.(2), DoD 1348.33–M, "Manual of Military Decorations and Awards," August 1985.

[6] See footnote 1 to § 372.6(d)(4)(v).

Linda M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

32 CFR Part 381

[DoD Directive 5105.31]

Defense Nuclear Agency (DNA)

AGENCY: Office of the Secretary, DoD.

ACTION: Final rule.

SUMMARY: This part implements selected recommendations of the Defense Science Board Task Force on DNA management, delineates the relationship of DNA to the newly created position of the Under Secretary of Defense (Acquisition) and incorporates other guidance on DNA functions and responsibilities.

EFFECTIVE DATE: March 18, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. Ralph Furtner, Office of the Assistant Secretary of Defense (Comptroller), the Pentagon, Washington, DC 20301 telephone (202) 695–4281.

SUPPLEMENTARY INFORMATION:

List of Subjects in 32 CFR Part 381

Organization and function.

Accordingly, Title 32 is amended to add Part 381 as follows:

PART 381—DEFENSE NUCLEAR AGENCY (DNA)

Sec.

381.1 Reissuance and purpose.
381.2 Mission.
381.3 Organization and management.
381.4 Responsibilities and functions.
381.5 Relationships.
381.6 Authority.
381.7 Administration.

Appendix A—Delegations of Authority.

Authority: 10 U.S.C. Chapter 8.

§ 381.1 Reissuance and purpose.

Under the authority vested in the Secretary of Defense by Title 10, United States Code, this part is issued to update the responsibilities, functions, relationships, and authority of the Defense Nuclear Agency (DNA).

§ 381.2 Mission.

(a) DNA shall provide support to the Office of the Secretary of Defense (OSD), the Joint Chiefs of Staff (JCS), the Military Departments, the Unified and Specified Commands, the Defense Agencies (hereafter referred to collectively as "DOD Components"), and other Federal Agencies on matters concerning nuclear weapons, nuclear weapons system acquisitions, nuclear weapons effects on weapons systems and forces, and such other aspects of the DOD nuclear program as may be directed by the Secretary of Defense.

(b) During wartime and international crises, in accordance with national priorities and as directed by the Chairman, Joint Chiefs of Staff (CJCS), DNS shall redirect its resources to support the JCS and the Commanders of the Unified and Specified Commands in analyzing nuclear weapons planning and action options.

§ 381.3 Organization and management.

DNA is established as a separate agency of the Department of Defense. It shall consist of a military Director, a civilian Deputy Director, and such subordinate organizational elements, as are established by the Director within resources authorized by the Secretary of Defense. The Director, DNA, reports to both the Under Secretary of Defense for Acquisition (USD(A)) and the Chairman, Joint Chiefs of Staff (CJCS), as defined in subsequent sections of this part.

§ 381.4 Responsibilities and functions.

(a) The *Director, DNA,* shall: (1) Organize, direct, and manage the DNA and all assigned resources.

(2) Maintain the national nuclear weapon stockpile data bases during peace, crisis, and war. Maintain overall surveillance and provide guidance, coordination, advice, or assistance for all nuclear weapons in DoD custody including production, composition, allocation, deployment, movement, storage, maintenance, quality assurance and reliability assessment, report procedures, and retirement.

(3) Manage the DoD nuclear weapons effects test programs.

(4) Conduct research, through exploratory development and/or proof of principle, in coordination with the Military Services, other appropriate DoD Components, and other Federal Agencies to develop technologies and techniques to improve the security and survivability of nuclear weapons systems.

(5) Provide advice and assistance on matters concerning nuclear weapons, nuclear weapons systems, effects of nuclear weapons, the technologies to determine the vulnerability and survivability of military systems and installations in accordance with DoD

Instruction 4245.4[1] and related arms control matters to DoD Components and Government Agencies.

(6) Jointly manage the national nuclear test readiness program with the Department of Energy (DoE) and perform associated technical, operational, and safety planning. Maintain access to facilities necessary to resume above-ground testing.

(7) Act as the cental coordinating agency within the Department of Defense on nuclear weapon stockpile data base management, nuclear effects testing, and nuclear effects research within approved policies and programs, and pertinent DoD–DoE agreements.

(8) Provide technical assistance and support to the Secretary of Defense, the Military Departments, and the JCS in developing nuclear weapon system safety, security and use-control standards, requirements, and operating procedures. Provide a member to joint DoD/DoE nuclear weapon system studies and reviews. Coordinate on proposed nuclear weapons safety rules and changes.

(9) Provide emergency response support to the DoD Components and other Federal Agencies as follows:

(i) Develop policies and procedures to respond to a nuclear weapon accident. Conduct nuclear weapon accident command post and field exercises. Maintain an Accident Advisory Team to assist the on-scene commander and support the DoD nuclear weapons accident/incident response team.

(ii) Monitor and participate in planning and exercises relating to improvised nuclear device (IND) countermeasures.

(iii) Maintain and operate a Joint Nuclear Accident Coordinating Center (JNACC) in conjunction with the DoE.

(10) Maintain and provide nuclear weapons stockpile information to the DoD Components and other Government Agencies, as required.

(11) Conduct, for the JCS, nuclear weapons technical inspections of units having responsibilities for assembling, maintaining, or storing nuclear weapon systems, their associated components, and ancillary equipment.

(12) Provide nuclear weapon quality assurance program oversight for the Department of Defense.

(13) Provide logistics management support for nuclear weapons under DoD control, including:

(i) Integrated material management functions for all specially designed and quality controlled nuclear ordnance items, and for Military Department-designed and quality controlled nuclear ordnance items, where such management is mutually agreed upon between DNA and the appropriate Military Department, or as directed by the USD(A).

(ii) Manage that portion of the Federal Cataloging Program pertaining to nuclear ordnance items, including the maintenance of the central data bank and the publication of Federal Supply Catalogs and Handbooks for all nuclear ordnance items.

(iii) Control the standardization of nuclear ordnance items in coordination with the appropriate Military Department.

(iv) Manage a technical logistics data and information program.

(v) As Inventory Control Manager of stockpile support items, manage the DoD–DoE logistics supply interface.

(vi) Manage the DoD–DoE loan account for nuclear materials.

(14) Represent the Department of Defense in its relations with the DoE on all policy matters relating to the administration and operation of the Joint Nuclear Weapons Publication System. These policy matters shall be coordinated and approved by the Military Departments. Coordinate with DoE on Nuclear Weapon Accident Directives.

(15) In support of the Secretary of Defense and DoD Components, perform technical analyses, studies, research, and development on:

(i) Alternate arms control restraints and measures to limit nuclear tests facing the United States and the Soviet Union;

(ii) Technical and employment options for new nuclear weapons, including the relationship of advanced conventional munitions to these options;

(iii) The effects of nuclear weapons on communications, command, and control systems improvements that may be needed to ensure reliable operation of forces;

(iv) The effect of technology on nuclear force structure, operations, and political-military constraints;

(v) Technologies that would enhance the security, survivability, and effectiveness of nuclear systems at both the strategic and theater levels; and evaluation of tactics, doctrine, force postures, operations, and training in order to better direct the DNA nuclear related programs.

(vi) Techniques for assessing and evaluating alternate nuclear operations and tactics.

(16) Conduct joint programs involving, as appropriate, the Defense Advanced Research Projects Agency (DARPA), the Military Departments, Allied Commands, and other Defense Agencies in matters regarding DNA/developed technologies. This includes test, evaluation, and demonstration of appropriate technologies.

(17) In coordination with the DoE and the Military Departments, disseminate technological information of joint interest relating to nuclear technology, development, and weapons through laboratory liaison, technical reports, and nuclear weapons technical publications. Assist in technology transfer and implementation of successful research programs into the Services and Allied Commands.

(18) Perform technical analyses, studies, and research on non-nuclear matters of critical importance to the Department of Defense where DNA has unique capabilities developed as part of its nuclear responsibilities.

(19) Through the Armed Forces Radiobiology Research Institute (AFRRI), conduct research in the field of radiobiology and related matters essential to the operational and medical support of the Department of Defense and DoD Components.

(20) Operate the Joint Atomic Information Exchange Group (JAIEG) in accordance with policy guidance furnished jointly by the Assistant to the Secretary of Defense for Atomic Energy for the Department of Defense and the Director for Military Applications for the DoE.

(21) Perform such other functions as may be assigned by the Secretary of Defense.

(b) The *Under Secretary of Defense for Acquisition* shall exercise staff supervision over the research and developmental activities, programing and budgeting, and such other activities not herein elsewhere assigned.

(c) The *Chairman, Joint Chiefs of Staff*, shall:

(1) Exercise staff supervision over the military operational aspects of DNA activities.

(2) Review and provide military advice on the adequacy of DNA efforts in nuclear weapons testing and nuclear weapons effects research that are related directly to systems employed in joint operations.

(d) The *Military Departments and other DoD Components* shall:

(1) Provide assistance within their respective fields of responsibility to the Director, DNA, in carrying out his or her assigned responsibilities and functions;

(2) Provide information, as necessary, to DNA on all programs that include, or are related to, nuclear weapons effect

[1] Copies may be obtained, if needed, from the U.S. Naval Publications and Forms Center, Attn: Code 301, 5801 Tabor Avenue, Philadelphia, PA 19120.

research, nuclear weapons effects testing, or nuclear weapons accident response as well as the safety, security and survivability of nuclear weapon systems and forces.

(3) Keep the Director, DNA, informed as to the substance of major actions being coordinated with other DoD Components, the DoE and its laboratories, and other Government Agencies that relate to DNA functions; and

(4) Provide the Director, DNA, with requirements for nuclear weapons effects research and nuclear weapons effects testing, and information regarding long-term nuclear weapons development, and the security, safety and survivability of nuclear systems and forces.

§ 381.5 Relationships.

In performing assigned functions, the Director, DNA, shall:

(a) Report to the USD(A) for research and development activities, DNA programing and budgeting functions, and such other DNA functions as are otherwise herein assigned.

(b) Report to the CJCS for operational matters within JCS cognizance as well as requirements associated with the joint planning process.

(c) Coordinate actions, as appropriate, with other DoD Components and those Departments and Agencies of Government having related functions.

(d) Maintain liaison with other DoD Components and other Agencies of the Executive Branch for the exchange of information on programs and activities in the field of assigned responsibility.

(e) Use established facilities and services in the Department of Defense or other Government Agencies, whenever practicable, to achieve maximum efficiency and economy.

(f) Exploit data from nuclear tests performed by other countries to obtain information of utility in designing U.S. nuclear forces and assisting the Unified and Specified Commands in target planning.

(g) Ensure that DoD Components are kept fully informed of DNA activities.

§ 381.6 Authority.

The Director, DNA, is specifically delegated authority to:

(a) Have free and direct access to, and communication with, all elements of the Department of Defense and other Executive Departments and Agencies, as necessary, to carry out DNA functions and responsibilities.

(b) Obtain such reports, information, advice, and assistance from other DoD Components consistent with the policies and criteria of DoD Directive 7750.5 [2] as may be necessary for the peformance of assigned functions and reponsibilities.

(c) Communicate directly with appropriate personnel in the Military Departments and other DoD Components on matters related to DNA programs and activities.

(d) Establish facilities necessary to accomplish the DNA mission in the most efficient and economical manner.

(e) Exercise the administrative authorities contained in the Appendix of this part.

§ 381.7 Administration.

(a) The Director, DNA, shall be a commissioned officer of Lieutenant General or Vice Admiral rank appointed by the Secretary of Defense upon recommendation of the CJCS and USD(A). Normally, the position of Director will rotate among the Military Services.

(b) The Deputy Director, DNA, shall be a senior civilian employee of appropriate Senior Executive Service rank appointed by the Secretary of Defense upon the joint nomination of the CJCS and USD(A).

(c) DNA shall be authorized such personnel, facilities, funds, and other administrative support as the Secretary of Defense deems necessary.

(d) The Military Departments shall assign military personnel to DNA in accordance with approved Joint Manpower Program authorizations. Changes to these authorizations shall be coordinated with the appropriate Military Services. Procedures for such assignments shall be as agreed upon between the Director, DMA, and the individual Military Departments.

Appendix A—Delegation of Authority

Pursuant to the authority vested in the Secretary of Defense, and subject to the direction, authority, and control of the Secretary of Defense, and in accordance with DoD policies, Directives, and Instructions, the Director, DNA, or in the absence of the Director, the person acting for the Director, is hereby delegated authority as required in the administration and operation of DNA to:

1. Exercise the powers vested in the Secretary of Defense by 5 U.S.C. 301, 302(b), and 3101 pertaining to the employment, direction, and general administration of DNA civilian personnel.

2. Fix rates of pay for wage-rate employees exempted from the Classification Act of 1949 by 5 U.S.C. 5102 on the basis of rates established under the Coordinated Federal Wage System. In fixing such rates, the Director, DNA, shall follow the wage schedule established by the DoD Wage Fixing Authority.

3. Establish advisory committees and employ part-time advisors, as approved by the Secretary of Defense, for the performance of DNA functions pursuant to the provisions of 10 U.S.C. 173, 5 U.S.C. 3109(b), and the agreement between the Department of Defense and the Office of Personnel Management (OPM) on employment of experts and consultants, June 21, 1977.

4. Administer oaths of office incident to entrance into the Executive Branch of the Federal Government or any other oath required by law in connection with employment therein, in accordance with the provisions of 5 U.S.C. 2903, and designate in writing, as may be necessary, officers and employees of DNA to perform this function.

5. Establish a DNA Incentive Awards Board and pay cash awards to, and incur necessary expenses for the honorary recognition of, civilian employees of the Government whose suggestions, inventions, superior accomplishments, or other personal efforts, including special acts or services, benefit or affect DNA or its subordinate activities, in accordance with the provisions of 5 U.S.C. 4503 and applicable OPM regulations.

6. In accordance with the provisions of 5 U.S.C. 7532; Excutive Orders 10450, 12333, and 12356; and 32 CFR Part 156, "DoD Personnel Security Program," December 20, 1979; as appropriate:

a. Designate any position in DNA as a "sensitive" position.

b. Authorize, in case of an emergency, the appointment of a person to a sensitive position in the DNA for a limited period of time for whom a full field investigation or other appropriate investigation, including the National Agency Check (NAC), has not been completed.

c. Authorize the suspension but not terminate the services of a DNA employee in the interest of national security.

d. Initiate investigations, issue personnel security clearances and, if necessary, in the interest of national security, suspend, revoke, or deny a security clearance for personnel assigned, detailed to, or employed by DNA. Any action to deny or revoke a security clearance shall be taken in accordance with procedures prescribed in DoD 5200.2–R, "DoD Personnel Security Program," December 1979.

7. Act as agent for the collection and payment of employment taxes imposed by Chapter 21 of the Internal Revenue Code of 1954, as amended; and, as such agent, make all determinations and certifications required or provided for under Section 3122 of the Internal Revenue Code of 1954, as amended, and Section 205(p)(1) and (2) of the Social Security Act as amended (42 U.S.C. 405(p)(1) and (2)) with respect to DNA employees.

8. Authorize and approve overtime work for DNA civilian officers and employees in accordance with the provisions of 5 U.S.C. Chapter 55, Subchapter V, and applicable OPM regulations.

9. Authorize and approve:

a. Travel for DNA civilian officers and employees in accordance with Volume II, Joint Travel Regulations.

b. Temporary duty travel for military personnel assigned or detailed to DNA in

[2] See footnote 1 to § 381.4(a)(5).

accordance with Volume I, Joint Travel Regulations.

c. Invitational travel to persons serving without compensation whose consultative, advisory, or other highly specialized technical services are required in a capacity that is directly related to, or in connection with, DNA activities, pursuant to the provisions of 5 U.S.C. 5703.

10. Approve the expenditure of funds available for travel by military personnel assigned or detailed to DNA for expenses incident to attendance at meetings of technical, scientific, professional, or other similar organizations in such instances where the approval of the Secretary of Defense, or designee, is required by law (37 U.S.C. 412 and 5 U.S.C. 4110 and 4111). This authority cannot be redelegated.

11. Develop, establish, and maintain an active and continuing Records Management Program, pursuant to the provisions of 44 U.S.C. 3102 and DoD Directive 5015.2,[3] "Records Management Program," September 17, 1980.

12. Establish and use imprest funds for making small purchases of material and services, other than personal, for DNA, when it is determined more advantageous and consistent with the best interests of the Government, in accordance with the provisions of DoD Instruction 5100.71,[4] "Delegation of Authority and Regulations Relating to Cash held at Personal Risk Including Imprest Funds," March 5, 1973.

13. Authorize the publication of advertisements, notices, or proposals in newspapers, magazines, or other public periodicals as required for the effective administration and operation of DNA consistent with 44 U.S.C. 3702.

14. Establish and maintain appropriate property accounts for DNA, and appoint Boards of Survey, approve reports of survey, relieve personal liability, and drop accountability for DNA property contained in the authorized property accounts that has been lost, damaged, stolen, destroyed, or otherwise rendered unserviceable, in accordance with applicable laws and regulations.

15. Promulgate the necessary security regulations for the protection of property and places under the jurisdiction of the Director, DNA, pursuant to DoD Directives 5200.8,[5] "Security of Military Installations and Resources," July 29, 1980.

16. Establish and maintain, for the functions assigned, an appropriate publications system for the promulgation of common supply and service regulations, instructions, and reference documents, and change thereto, pursuant to the policies and procedures prescribed in DoD Directive 5025.1,[6] "Department of Defense Directives System," October 16, 1980.

17. Enter into support and service agreements with the Military Departments, other DoD Components, or other Government Agencies, as required for the effective performance of DNA functions and responsibilities.

18. Exercise the authority delegated to the Secretary of Defense by the Administrator of the General Services Administration (GSA) with respect to the disposal of surplus personal property.

19. Enter into and administer contracts, directly or through a Military Department, a DoD contract administration services component, or other Government Department or Agency, as appropriate, for supplies, equipment, and services required to accomplish the mission of DNA. To the extent that any law or Executive Order specifically limits the exercise of such authority to persons at the Secretarial level of a Military Department, such authority shall be exercised by the appropriate Under Secretary or Assistant Secretary of Defense.

20. Lease property under the control of DNA under terms that will promote the national defense or that will be in the public interest, pursuant to the provisions of 10 U.S.C. 2667.

The Director, DNA, may redelegate these authorities, as appropriate, and in writing, except as otherwise specifically indicated above or as otherwise provided by law or regulation.

These delegations of authority are effective immediately.

Linda M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

September 24, 1987.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 60

[AD-FRL-3251-2]

Standards of Performance for New Stationary Sources; Reference Method 16A Revisions; Addition of Method 16B for the Determination of Total Reduced Sulfur Emissions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Method 16A revisions and Method 16B were proposed in the **Federal Register** on December 8, 1986 (51 FR 44075). This action promulgates "Method 16A Revisions; Addition of Method 16B for the Determination of Total Reduced Sulfur Emissions from Stationary Sources," which are to be added to Appendix A of 40 CFR Part 60. The intended effect is to add an alternative procedure for certifying the recovery gas used in Method 16A and to add Method 16B as an alternative method to Method 16 for determining total reduced sulfur emissions from Kraft pulp mills.

Under section 307(b)(1) of the Clean Air Act, judicial review of the actions taken by this notice is available *only* by the filing of a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit within 60 days of today's publication of this rule. Under section 307(b)(2) of the Clean Air Act, the requirements that are the subject of today's notice may not be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

EFFECTIVE DATE: September 29, 1987.

ADDRESSES: *Docket.* Docket No. A-86-08, containing materials relevant to this rulemaking, is available for public inspection and copying between 8:00 a.m. and 4:00 p.m. Monday through Friday, at EPA's Central Docket Section, South Conference Center, Room 4, 401 M Street, SW., Washington, DC 20460. A reasonable fee may be charged for copying.

FOR FURTHER INFORMATION CONTACT: Foston Curtis or Roger Shigehara, Emission Measurement Branch, Emission Standards and Engineering Division (MD-19), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711, telephone (919) 541-2237.

SUPPLEMENTARY INFORMATION:

I. The Rulemaking

Method 16A requires the concentration of the recovery check gas to be verified by Method 11 or by gas chromatography calibrated against permeation devices. The revision will allow an additional alternative for verifying cylinder gas concentrations and will thus increase the flexibility in choice of testing procedures. Method 16B will offer an alternative test method to Method 16. The principle of operation is similar to Method 16, yet the method is simpler to operate and less expensive.

This rulemaking does not impose emission measurement requirements beyond those specified in the current regulations, nor does it change any emission standard. Rather, the rulemaking would simply add an alternative test method associated with emission measurement requirements that would apply irrespective of this rulemaking.

II. Public Participation

The opportunity to hold a public hearing on January 22, 1987, at 10:00 a.m., was presented in the proposal

notice, but no one desired to make an oral presentation. The public comment period was from December 8, 1986, to February 23, 1987.

III. Significant Comments and Changes to the Proposed Test Method

Two comment letters were received from the proposal of the revisions and test method. The comments and the Agency's responses are summarized here along with subsequent method changes.

In the Method 16A revisions, one commenter was concerned with the accuracy and precision of the new procedure's titration analysis. The procedure warns of difficulty in observing the titration endpoint and that the method is extremely sensitive to errors in titration. The commenter recommended that the procedure be validated by a multiple operator/interlaboratory study before it is promulgated.

Evaluating a method through multiple operator/interlaboratory studies is an excellent way to establish its accuracy and precision. However, other means of evaluation that are less expensive and less labor-intensive are also effective. The accuracy and precision of the new method have been demonstrated through analyzing multiple cylinder gases of know concentrations that were certified by National Bureau of Standards reference materials. In most cases, the method will be used to verify manufacturer tag concentrations, which will have been previously determined. With this limited application, the Agency does not think that the burden of a multiple operator/interlaboratory evaluation is necessary.

The difficulties associated with the method's titration are fully discussed in the method. The potential for error is minimized when the recommended precautions are observed.

Comments were received from the developer of the method requesting revisions to the proposed method to expand its analytical range. The EPA has accepted these changes, which were considered to be minor, because they expand the method's utility to include higher concentration gases that are used for instruments that require sample dilution before analysis. The sampling system has been modified to use a critical orifice in place of the dry gas meter for sample volume measurement. The sampling provisions of Section 7.1.4 (have been expanded to increase the range of selected sample volumes and to give instructions on preparing the critical orifice. Section 7.1.7 and 7.1.8.4 have been added to discuss the critical orifice calibrations, and Section 7.1.9.4 has been added as a revised sample volume calculation.

For Method 16B, the commenter felt the method was incomplete bacause it did not specify a gas chromatographic column type. The column type was thought to be critical in separating interferences which could coelute with sulfur dioxide, and that inappropriate columns could cause a negative bias in the measurement.

Several available columns are acceptable for this purpose, and the system performance check of Section 4.3 serves as a quality control check. Specifications have been included as an example of one of the acceptable column types.

IV. Administrative

The docket is an organzied and complete file of all the information considered by EPA in the development of this rulemaking. The docket is a dynamic file, since material is added throughout the rulemaking development. The docketing system is intended to allow members of the public and industries involved to identify readily and locate documents so that they can effectively participate in the rulemaking process. Along with the statement of basis and purpose of the proposed and promulgated test method and EPA responses to significant comments, the contents of the docket, except for interagency review materials, will serve as the record in case of judicial review (section 307(d)(7)(A).

Under Executive Order 12291, EPA is required to judge whether a regulation is a "major rule" and, therefore, subject to the requirements of a regulatory impact analysis. The Agency has determined that this regulation would result in none of the adverse economic effects set forth in Section 1 of the Order as grounds for finding a regulation to be a "major rule." The Agency has, therefore, concluded that this regulation is not a "major rule" under Executive Order 12291.

The Regulatory Flexibility Act of 1980 requires the identification of potentially adverse impacts of Federal regulations upon small business entities. The Act specifically requires the completion of a Regulatory Flexibility Analysis (RFA) in those instances where small business impacts are possible. Because this rulemaking imposes no adverse economic impacts, a RFA has not been conducted.

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that the promulgated rule will not have an impact on small entities because no additional costs will be incurred.

This rule does not contain any information collection requirements subject to OMB review under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 *et seq.* This rulemaking does not impose any additional emission measurement requirements on facilities affected by this rulemaking. Rather, this rulemaking adds alternative test procedures associated with emission measurement requirements that would apply irrespective of this rulemaking.

List of Subjects in 40 CFR Part 60

Air pollution control, Intergovernmental relations, Kraft pulp mills, Reporting and recordkeeping requirements, Incorporation by reference.

Date: September 18, 1987.

Lee M. Thomas,

Administrator.

40 CFR Part 60 is amended as follows:

PART 60—[AMENDED]

1. The authority for 40 CFR Part 60 continues to read as follows:

Authority: Secs. 101, 111, 114, 116, and 301 of the Clean Air Act, as amended (42 U.S.C. 7401, 7411, 7414, 7416, 7601).

2. By revising (d)(1) and (d)(3) of § 60.285 to read as follows:

§ 60.285 Test methods and procedures.

* * * * *

(d) * * *

(1) Method 16 or, at the discretion of the owner or operator, Method 16A or 16B for the concentration of TRS.

* * * * *

(3) When determining compliance with § 60.283(a)(4), use the results of Method 2, Method 16, 16A, or 16B, and the black liquor solids feed rate in the following equation to determine the TRS emission rate on an equivalent hydrogen sulfide (H_2S) basis.

$$E = (C_{TRS})(F)(Q_{sd})/BLS$$

where:

E = Mass of TRS emitted per unit of black liquor solids, g/kg (lb/ton).

C_{TRS} = Average combined concentration of TRS as determined by Method 16, 16A, or 16B during the test period, ppm.

F = 0.001417 g H_2S/m^3 ppm for metric units.
= 0.08844 lb H_2S/cf ppm for English units.

Q_{sd} = Dry volumetric stack gas flow rate corrected to standard conditions, dscm/hr (dscf/hr).

BLS = black liquor solids feed rate, kg/hr (ton/hr).

* * * * *

3. In Method 16A, of Appendix A, section 7 is redesignated as section 8 and revised and a new section 7 is added to read as follows:

Appendix A—Reference Methods

* * * * * * *

Method 16A—Determination of Total Reduced Sulfur Emissions From Stationary Sources (Impinger Technique)

* * * * * * *

7. Alternative Procedures

7.1 *Determination of H_2S Content in Cylinder Gases.* As an alternative to the procedures specified in section 3.1.4, the following procedure may be used to verify the concentration of the recovery check gas. The H_2S is collected from the calibration gas cylinder and is absorbed in zinc acetate solution to form zinc sulfide. The latter compound is then measured iodometrically. The method has been examined in the range of 5 to 1500 ppm. There are no known interferences to this method when used to analyze cylinder gases containing H_2S in nitrogen. Laboratory tests have shown a relative standard deviation of less than 3 percent. The method showed no bias when compared to a gas chromatographic method that used gravimetrically certified permeation tubes for calibration.

7.1.1 *Sampling Apparatus.* The sampling train is shown in Figure 16A–4 and consists of the following components:

BILLING CODE 6560-50-M

VOL 52 ISS 188 SE 29 1987 UMI

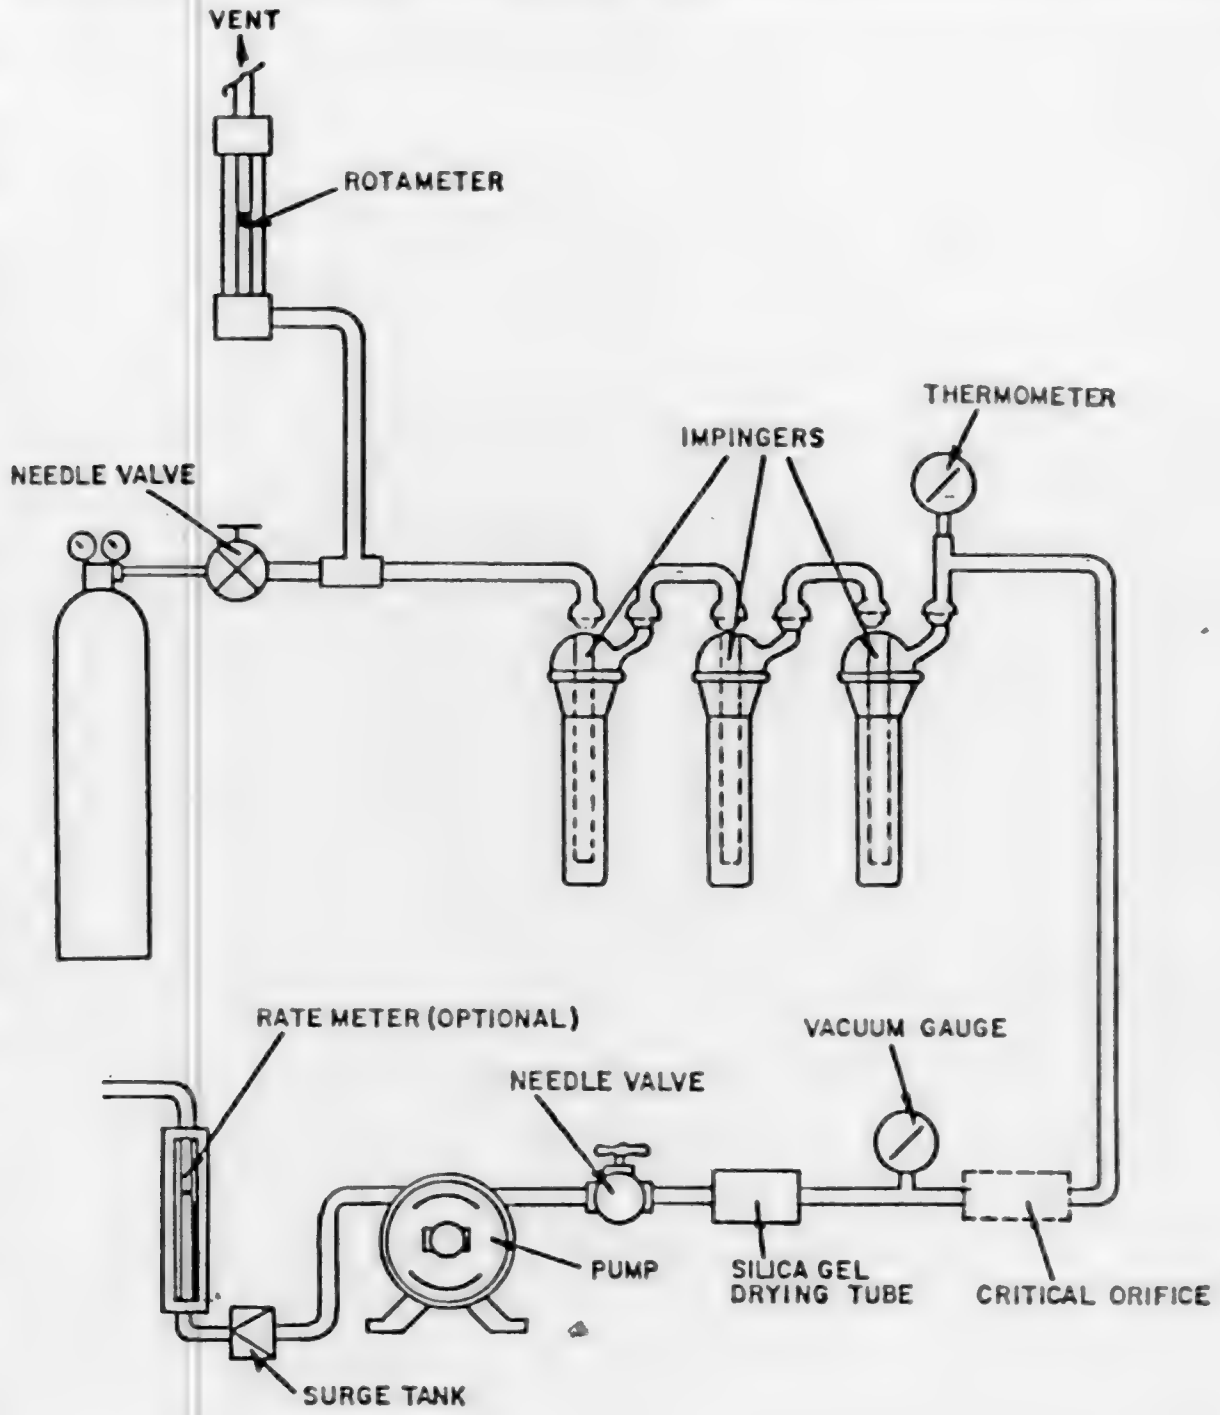

Figure 16A-4. Recovery check gas sampling train.

BILLING CODE 6560-50-C

7.1.1.1 *Sampling Line.* Teflon tubing (¼-in.) to connect the cylinder regulator to the sampling valve.

7.1.1.2 *Needle Valve.* Stainless steel or Teflon needle valve to control the flow rate of gases to the impingers.

7.1.1.3 *Impingers.* Three impingers of approximately 100-ml capacity, constructed to permit the addition of reagents through the gas inlet stem. The impingers shall be connected in series with leak-free glass or Teflon connectors. The impinger bottoms have a standard ²¹⁄₂₅ ground-glass fitting. The stems are from standard ¼-in. (0.64-cm) ball joint midget impingers, custom lengthened by about 1 in. When fitted together, the stem end should be approximately ½ in. (1.27-cm) from the bottom (Southern Scientific, Inc., Micanopy, Florida: Set Number S6962–048). The third in-line impinger acts as a drop-out bottle.

7.1.1.4 *Drying Tube,* Flowmeter, and Barometer. Same as in Method 11, Sections 5.1.5, 5.1.8, and 5.1.10.

7.1.1.5 *Cylinder Gas Regulator.* Stainless steel, to reduce the pressure of the gas stream entering the Teflon sampling line to a safe level.

7.1.1.6 *Soap Bubble Meter.* Calibrated for 100 and 500 ml, or two separate bubble meters.

7.1.1.7 *Critical Orifice.* For volume and rate measurements. The critical orifice may be fabricated according to Section 7.1.4.3 and must be calibrated as specified in Section 7.1.8.4.

7.1.1.8 *Graduated Cylinder.* 50-ml size.

7.1.1.9 *Volumetric Flask.* 1-liter size.

7.1.1.10 *Volumetric Pipette.* 15-ml size.

7.1.1.11 *Vacuum Gauge.* Minimum 20-in. Hg capacity.

7.1.1.12 *Stopwatch.*

7.1.2 *Sample Recovery and Analysis Apparatus.*

7.1.2.1 *Erlenmeyer Flasks.* 125- and 250-ml sizes.

7.1.2.2 *Pipettes.* 2-, 10-, 20-, and 100-ml volumetric.

7.1.2.3 *Burette.* 50-ml size.

7.1.2.4 *Volumetric Flask.* 1-liter size.

7.1.2.5 *Graduated Cylinder.* 50-ml size.

7.1.2.6 *Wash Bottle.*

7.1.2.7 *Stirring Plate and Bars.*

7.1.3 *Reagents.* Unless otherwise indicated, all reagents shall conform to the specifications established by the Committee on Analytical Reagents of the American Chemical Society, where such specifications are available. Otherwise, use the best available grade.

7.1.3.1 *Water.* Same as in Method 11, Section 6.1.3.

7.1.3.2 *Zinc Acetate Absorbing Solution.* Dissolve 20 g zinc acetate in water and dilute to 1 liter.

7.1.3.3 *Potassium Bi-iodate [$KH(IO_3)_2$ Solution, Standard 0.100 N.* Dissolve 3.249 g anhydrous $KH(IO_3)_2$ in water, and dilute to 1 liter.

7.1.3.4 *Sodium Thiosulfate ($Na_2S_2O_3$) Solution, Standard 0.1 N.* Same as in Method 11, Section 6.3.1. Standardize according to Section 7.1.8.2.

7.1.3.5 *$Na_2S_2O_3$ Solution, Standard 0.01 N.* Pipette 100.0 ml of 0.1 N $Na_2S_2O_3$ solution into a 1-liter volumetric flask, and dilute to the mark with water.

7.1.3.6 *Iodine Solution, 0.1 N.* Same as in Method 11, Section 6.2.2.

7.1.3.7 *Standard Iodine Solution, 0.01 N.* Same as in Method 11, Section 6.2.3. Standardize according to Section 7.1.8.3.

7.1.3.8 *Hydrochloric Acid (HCl) Solution, 10 Percent by Weight.* Add 230 ml concentrated HCl (specific gravity 1.19) to 770 ml water.

7.1.3.9 *Starch Indicator Solution.* To 5 g starch (potato, arrowroot, or soluble), add a little cold water, and grind in a mortar to a thin paste. Pour into 1 liter of boiling water, stir, and let settle overnight. Use the clear supernatant. Preserve with 1.25 g salicylic acid, 4 g zinc chloride, or a combination of 4 g sodium propionate and 2 g sodium azide per liter of starch solution. Some commercial starch substitutes are satisfactory.

7.1.4 *Sampling Procedure.*

7.1.4.1 *Selection of Gas Sample Volumes.* This procedure has been validated for estimating the volume of cylinder gas sample needed when the H_2S concentration is in the range of 5 to 1500 ppm. The sample volume ranges were selected in order to ensure a 35 to 60 percent consumption of the 20 ml of 0.01 N iodine (thus ensuring a 0.01 N $Na_2S_2O_3$ titer of approximately 7 to 12 ml). The sample volumes for various H_2S concentrations can be estimated by dividing the approximate ppm-liters desired for a given concentration range by the H_2S concentration stated by the manufacturer.

Approximate cylinder gas H_2S concentration (ppm)	Approximate ppm-liters desired
5 to <30	[illegible]
30 to <500	800
500 to 1500	1000

For example, for analyzing a cylinder gas containing approximately 10 ppm H_2S, the optimum sample volume is 65 liters (650 ppm-liters/10 ppm). For analyzing a cylinder gas containing approximately 1000 ppm H_2S, the optimum sample volume is 1 liter (1000 ppm-liters/1000 ppm).

7.1.4.2 *Critical Orifice Flow Rate Selection.* The following table shows the ranges of sample flow rates that are desirable in order to ensure capture of H_2S in the impinger solution. Slight deviations from these ranges will not have an impact on measured concentrations.

Cylinder gas H_2S concentration (ppm)	Critical orifice flow rate (ml/min)
5 to <50 ppm	1500 ± 500
50 to <250 ppm	500 ± 250
250 to <1000 ppm	200 ± 50
>1000 ppm	75 ± 25

7.1.4.3 *Critical Orifice Fabrication.* Critical orifice of desired flow rates may be fabricated by selecting an orifice tube of desired length and connecting ⅛-in. x ¼-in. (0.16-cm x 0.64-cm) reducing fittings to both ends. The inside diameters and lengths of orifice tubes needed to obtain specific flow rates are shown below.

Tube (in. OD)	Tube (in. ID)	Length (in.)	Flow rate (ml/min)	Alltech catalog No.[1]
1/16	0.007	1.2	85	301430
1/16	0.01	3.2	215	300530
1/16	0.01	1.2	350	300530
1/16	0.02	1.2	1400	300230

[1] Alltech Associates, 2051 Waukegon Road., Deerfield, Illinois 60015.

7.1.4.4 *Determination of Critical Orifice Approximate Flow Rate.* Connect the critical orifice to the sampling system as shown in Figure 16A–4 but without the H_2S cylinder. Connect a rotameter in the line to the first impinger. Turn on the pump, and adjust the valve to give a reading of about half atmospheric pressure. Observe the rotameter reading. Slowly increase the vacuum until a stable flow rate is reached, and record this as the critical vacuum. The measured flow rate indicates the expected critical flow rate of the orifice. If this flow rate is in the range shown in Section 7.1.4.2, proceed with the critical orifice calibration according to Section 7.1.8.4.

7.1.4.5 *Determination of Approximate Sampling Time.* Determine the approximate sampling time for a cylinder of known concentration. Use the optimum sample volume obtained in Section 7.1.4.1.

$$\text{Approximate sampling time (min)} = \frac{\text{Optimum volume} \times 1000}{\text{Critical orifice flow rate (ml/min)}}$$

7.1.4.6 *Sample Collection.* Connect the Teflon tubing, Teflon tee, and rotameter to the flow control needle valve as shown in Figure 16A–4. Vent the rotameter to an exhaust hood. Plug the open end of the tee. Five to 10 minutes prior to sampling, open the cylinder valve while keeping the flow control needle valve closed. Adjust the delivery pressure to 20 psi. Open the needle valve slowly until the rotameter shows a flow rate approximately 50 to 100 ml above the flow rate of the critical orifice being used in the system.

Place 50 ml of zinc acetate solution in two of the impingers, connect them and the empty third impinger (dropout bottle) and the rest of the equipment as shown in Figure 16A–4. Make sure the ground-glass fittings are tight. The impingers can be easily stabilized by using a small cardboard box in which three holes have been cut, to act as a holder. Connect the Teflon sample line to the first impinger. Cover the impingers with a dark cloth or piece of plastic to protect the absorbing solution from light during sampling.

Record the temperature and barometric pressure. Note the gas flow rate through the rotameter. Open the closed end of the tee. Connect the sampling tube to the tee, ensuring a tight connection. Start the sampling pump and stopwatch simultaneously. Note the decrease in flow rate through the excess flow rotameter. This decrease should equal the know flow rate of the critical orifice being used. Continue sampling for the period determined in Section 7.1.4.5.

When sampling is complete, turn off the pump and stopwatch. Disconnect the sampling line from the tee and plug it. Close the needle valve followed by the cylinder valve. Record the sampling time.

7.1.5 *Blank Analysis.* While the sample is being collected, run a blank as follows: To a 250-ml Erlenmeyer flask, add 100 ml of zinc acetate solution, 20.0 ml 0.01 N iodine solution, and 2 ml HCL solution. Titrate, while stirring, with 0.01 N $Na_2S_2O_3$ until the solution is light yellow. Add starch, and continue titrating until the blue color disappears. Analyze a blank with each sample, as the blank titer has been observed to change over the course of a day.

Note.—Iodine titration of zinc acetate solutions is difficult to perform because the solution turns slightly white in color near the end point, and the disappearance of the blue color is hard to recognize. In addition, a blue color may reappear in the solution about 30 to 45 seconds after the titration endpoint is reached. This should not be taken to mean the original endpoint was in error. It is recommended that persons conducting this test perform several titrations to be able to correctly identify the endpoint. The importance of this should be recognized because the results of this analytical procedure are extremely sensitive to errors in titration.

7.1.6 *Sample Analysis.* Sample treatment is similar to the blank treatment. Before detaching the stems from the bottoms of the impingers, add 20.0 ml of 0.01 N iodine solution *through the stems* of the impingers holding the zinc acetate solution, dividing it between the two (add about 15 ml to the first impinger and the rest to the second). Add 2 ml HCl solution through the stems, dividing it as with the iodine. Disconnect the sampling line, and store the impingers for 30 minutes. At the end of 30 minutes, rinse the impinger stems into the impinger bottoms. Titrate the impinger contents with 0.01 N $Na_2S_2O_3$. Do not transfer the contents of the impinger to a flask because this may result in a loss of iodine and cause a positive bias.

7.1.7 *Post-test Orifice Calibration.* Conduct a post-test critical orifice calibration run using the calibration procedures outlined in Section 7.1.8.4. If the Q_{std} obtained before and after the test differs by more than 5 percent, void the sample; if not, proceed to perform the calculations.

7.1.8 *Calibrations and Standardizations.*

7.1.8.1 *Rotameter and Barometer.* Same as in Method 11, Sections 8.2.3 and 8.2.4.

7.1.8.2 *$Na_2S_2O_3$ Solution, 0.1 N.* Standardize the 0.1 N $Na_2S_2O_3$ solution as follows: To 80 ml water, stirring constantly, add 1 ml concentrated H_2SO_4, 10.0 ml 0.100 N $KH(IO_3)_2$ and 1 g potassium iodide. Titrate immediately with 0.1 N $Na_2S_2O_3$ until the solution is light yellow. Add 3 ml starch solution, and titrate until the blue color just disappears. Repeat the titration until replicate analyses agree within 0.05 ml. Take the average volume of $Na_2S_2O_3$ consumed to calculate the normality to three decimal figures using Equation 16A–5.

7.1.8.3 *Iodine Solution, 0.01 N.* Standardize the 0.01 N iodine solution as follows: Pipet 20.0 ml of 0.01 N iodine solution into a 125-ml Erlenmeyer flask. Titrate with standard 0.01 N $Na_2S_2O_3$ solution until the solution is light yellow. Add 3 ml starch solution, and continue titrating until the blue color just disappears.

If the normality of the iodine tested is not 0.010, add a few ml of 0.1 N iodine solution if it is low, or a few ml of water if it is high, and standardize again. Repeat the titration until replicate values agree within 0.05 ml. Take the average volume to calculate the normality to three decimal figures using Equation 16A–6.

7.1.8.4 *Critical Orifice.* Calibrate the critical orifice using the sampling train shown in Figure 16A–4 but without the H_2S cylinder and vent rotameter. Connect the soap bubble meter to the Teflon line that is connected to the first impinger. Turn on the pump, and adjust the needle valve until the vaccum is higher than the critical vacuum determined in Section 7.1.4.4. Record the time required for gas flow to equal the soap bubble meter volume (use the 100-ml soap bubble meter for gas flow rates below 100 ml/min, otherwise use the 500-ml soap bubble meter). Make three runs, and record the data listed in Table 1. Use these data to calculate the volumetric flow rate of the orifice.

7.1.9 *Calculations.*

7.1.9.1 *Nomenclature.*

B_{wa} = Fraction of water vapor in ambient air during orifice calibration.

C_{H_2S} = H_2S concentration in cylinder gas ppm.

K = Conversion factor = 12025 ml/eq

$$= \frac{17.03\ g}{g\text{-}eq} \frac{24.05\ liters\ H_2S}{mole\ H_2S} \frac{1\ mole\ H_2S}{34.06\ g\ H_2S} \frac{10^3\ ml}{liter}$$

M_a = Molecular weight of ambient air saturated at impinger temperature, g/g-mole.
M_b = Molecular weight of sample gas (nitrogen) saturated at impinger temperature, g/g-mole. (For tests carried out in a laboratory where the impinger temperature is 25 °C, M_a = 28.5 g/g-mole and M_b = 27.7 g/g-mole.)
N_1 = Normality of standard iodine solution (0.01 N), g-eq/liter.
N_T = Normality of standard $Na_2S_2O_3$ solution (0.01 N), g-eq/liter.
P_{bar} = Barometric pressure, mm Hg.
P_{std} = Standard absolute pressure, 760 mm Hg.
Q_{std} = Volumetric flow rate through critical orifice, liters/min.

Date _____
Critical orifice ID _____
Soap bubble meter volume, V_{sb} _____ liters
Time, θ_{sb}
Run no. 1 _____ min _____ sec
Run no. 2 _____ min _____ sec
Run no. 3 _____ min _____ sec
Average _____ min _____ sec
Convert the seconds to fraction of minute:
Time
= _____ min + _____ Sec/60
= _____ min
Barometric pressure, P_{bar} = _____ mm Hg
Ambient temperature, t_{amb} = 273 + _____ °C
= _____ °K
Pump vacuum, = _____ mm Hg. (This should be approximately 0.4 times barometric pressure.)

$$V_{sb(std)} = \frac{(V_{sb})\ (T_{std})\ (P_{bar})\ (10^{-3})}{(T_{amb})\ (P_{std})}$$

$$= _____ \text{ liters}$$

$$Q_{std} = \frac{V_{sb(std)}}{\theta_{sb}}$$

$$= _____ \text{ liters/min}$$

Table 1. Critical orifice calibration data.

Q_{std}, average = Average standard flow rate through critical orifice, liters/min.
Q_{std}, before = Average standard flow rate through critical orifice determined before H_2S sampling (Section 7.1.4.4), liters/min.
Q_{std}, after = Average standard flow rate through critical orifice determined after H_2S sampling (Section 7.1.7), liters/min.
T_{amb} = Absolute ambient temperature, °K.
T_{std} = Standard absolute temperature, 293 °K.
θ_s = Sampling time, min.
θ_{sb} = Time for soap bubble meter flow rate measurement, min.
$V_{m(std)}$ = Sample gas volume measured by the critical orifice, corrected to standard conditions, liters.
V_{sb} = Volume of gas as measured by the soap bubble meter, ml.
$V_{sb(std)}$ = Volume of gas as measured by the soap bubble meter, corrected to standard conditions, liters.
V_1 = Volume of standard iodine solution (0.01 N) used, ml.
V_T = Volume of standard $Na_2S_2O_3$ solution (0.01 N) used, ml.
V_{TB} = Volume of standard $Na_2S_2O_3$ solution (0.01 N) used for the blank, ml.

7.1.9.2 Normality of Standard $Na_2S_2O_3$ Solution (0.1. N).

$$N_T = \frac{1}{\text{ml } Na_2S_2O_3 \text{ Consumed}} \qquad \text{Eq. 16A-5}$$

7.1.9.3 Normality of Standard Iodine Solution (0.01 N).

$$N_1 = \frac{N_T V_T}{V_1} \qquad \text{Eq. 16A-6}$$

7.1.9.4 Sample Gas Volume.

$$V_{m(std)} = (Q_{std})\ (\theta_s)\ (1-B_{ws})\ \frac{M_a}{M_b} \qquad \text{Eq. 16A-7}$$

7.1.9.5 Concentration of H_2S in the Gas Cylinder.

$$C_{H2S} = \frac{K\ N_T\ (V_{TB}-V_T)}{V_{m(std)}} \qquad \text{Eq. 16A-8}$$

Appendix A—Reference Methods

* * * * *

Method 16B—Determination of Total Reduced Sulfur Emissions From Stationary Sources

1. Applicability, Principle, Range and Sensitivity, Interferences, and Precision and Accuracy

1.1 *Applicability.* This method is applicable to the determination of total reduced sulfur (TRS) emissions from recovery furnaces, lime kilns, and smelt dissolving tanks at kraft pulp mills, and from other sources when specified in an applicable subpart of the regulations. The TRS compounds include hydrogen sulfide (H_2S), methyl mercaptan, dimethyl sulfide, and dimethyl disulfide.

The flue gas must contain at least 1 percent oxygen for complete oxidation of all TRS to sulfur dioxide (SO_2).

1.2 *Principle.* An integrated gas sample is extracted from the stack. The SO_2 is removed selectively from the sample using a citrate buffer solution. The TRS compounds are then thermally oxidized to SO_2 and analyzed as SO_2 by gas chromatography (GC) using flame photometric detection (FPD).

1.3 *Range Sensitivity.* Coupled with a GC utilizing a 1-ml sample size, the maximum limit of the FRD for SO_2 is approximately 10 ppm. This limit is expanded by dilution of the sample gas before analysis or by reducing the sample aliquot size. For sources with emission levels between 10 and 100 ppm, the measuring range can be best extended by reducing the sample size.

1.4 *Interferences.* The TRS compounds other than those regulated by the emission standards, if present, may be measured by this method. Therefore, carbonyl sulfide, which is partially oxidized to SO_2 and may be present in a lime kiln exit stack, would be a positive interferent.

Particulate matter from the lime kiln stack gas (primarily calcium carbonate) can cause a negative bias if it is allowed to enter the citrate scrubber; the particulate matter will cause the pH to rise and H_2S to be absorbed before oxidation. Proper use of the particulate filter, described in Section 2.1.3 of Method 16A, will eliminate this interference.

Carbon monoxide (CO) and carbon dioxide (CO_2) have substantial desensitizing effects on the FPD even after dilution. Acceptable systems must demonstrate that they have eliminated this interference by some procedure such as eluting these compounds before the SO_2. Compliance with this requirement can be demonstrated by submitting chromatograms of calibration gases with and without CO_2 in diluent gas. The CO_2 level should be approximately 10 percent for the case with CO_2 present. The two chromatograms should show agreement within the precision limits of Section 1.5.

1.5 *Precision and Accuracy.* The GC/FPD and dilution calibration precision and drift, and the system calibration accuracy are the same as in Method 16, Sections 4.1 to 4.3.

Field tests between this method and Method 16A showed an average difference of less than 4.0 percent. This difference was not determined to be significant.

2. Apparatus

2.1 *Sampling.* A sampling train is shown in Figure 16B–1. Modifications to the apparatus are accepted provided the system performance check is met.

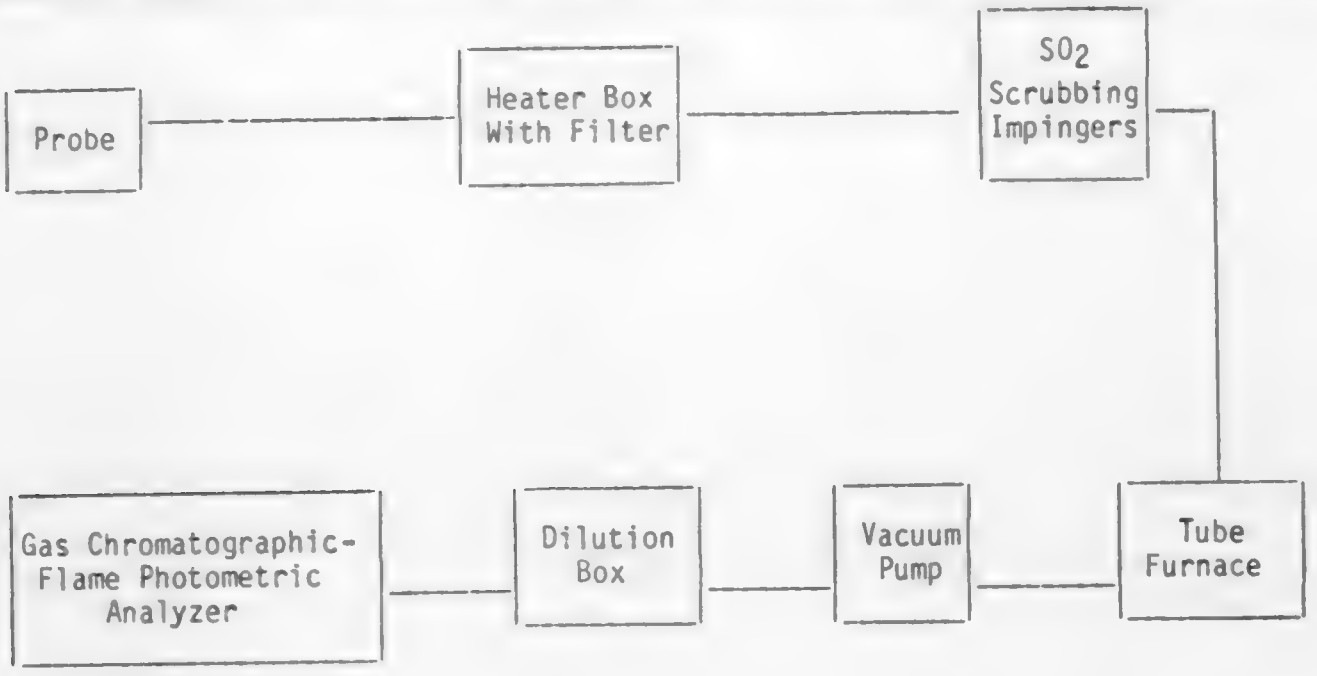

Figure 16B-1. Sampling train.

2.1.1 *Probe, Probe Brush, Particulate Filter, SO_2 Scrubber, Combustion Tube, and Furnace.* Same as in Method 16A, Sections 2.1.1 to 2.1.6.

2.1.2 *Sampling Pump.* Leakless Teflon-coated diaphragm type or equivalent.

2.2 *Analysis.*

2.2.1 *Dilution System (optional), Gas Chromatograph, Oven, Temperature Gauges, Flow System, Flame Photometric Detector, Electrometer, Power Supply, Recorder, Calibration System, Tube Chamber, Flow System, and Constant Temperature Bath.* Same as in Method 16, Sections 5.2, 5.4, and 5.5.

2.2.2 *Gas Chromatograph Columns.* Same as in Method 16, Section 12.1.4.1.1. Other columns with demonstrated ability to resolve SO_2 and be free from known interferences are acceptable alternatives.

3. Reagents

Same as in Method 16, Section 6, except the following:

3.1 *Calibration Gas.* SO_2 permeation tube gravimetrically calibrated and certified at some convenient operating temperature. These tubes consist of hermetically sealed FEP Teflon tubing in which a liquefied gaseous substance is enclosed. The enclosed gas permeates through the tubing wall at a constant rate. When the temperature is constant, calibration gases covering a wide range of known concentrations can be generated by varying and accurately measuring the flow rate of diluent gas passing over the tubes. In place of SO_2 permeation tubes, National Bureau of Standards traceable cylinder gases containing SO_2 in nitrogen may be used for calibration. The calibration gas is used to calibrate the GC/FPD system and the dilution system.

3.2 *Recovery Check Gas.* Hydrogen sulfide (100 ppm or less) in nitrogen, stored in aluminum cylinders. Verify the concentration by Method 11, the procedure discussed in Section 7.1 of Method 16A, or gas chromatography where the instrument is calibrated with an H_2S permeation tube as described below. For the wet-chemical methods, the standard deviation should not exceed 5 percent on at least three 20-minute runs.

Hydrogen sulfide recovery gas generated from a permeation device gravimetically calibrated and certified at some convenient operation temperature may be used. The permeation rate of the device must be such that at a dilution gas flow rate of 3 liters/min, an H_2S concentration in the range of the stack gas or within 20 percent of the standard can be generated.

3.3 *Combustion Gas.* Gas containing less than 50 ppb reduced sulfur compounds and less than 10 ppm total hydrocarbons. The gas may be generated from a clean-air system that purifies ambient air and consists of the following components: diaphragm pump, silica gel drying tube, activated charcoal tube, and flow rate measuring device. Gas from a compressed air cylinder is also acceptable.

4. Pretest Procedures

Same as in Method 16, Section 7.

5. Calibration

Same as in Method 16, Section 8, except SO_2 is used instead of H_2S.

6. Sampling and Analysis Procedure

6.1 *Sampling.* Before any source sampling is done, conduct a system performance check as detailed in Section 7.1 to validate the sampling train components and procedures. Although this test is optional, it would significantly reduce the possibility of rejecting tests as a result of failing the post-test performance check. At the completion of the pretest system performance check, insert the sampling probe into the test port making certain that no dilution air enters the stack through the port. Condition the entire

system with sample for a minimum of 15 minutes before beginning analysis. If the sample is diluted, determine the precise dilution factor as in Section 8.5 of Method 16.

6.2 *Analysis.* Pass aliquots of diluted sample through the SO_2 scrubber and oxidation furnace, and then inject into the GC/FPD analyzer for analysis. The rest of the analysis is the same as in Method 16, Sections 9.2.1 and 9.2.2.

7. Post-Test Procedures

7.1 *System Performance Check.* Same as in Method 16A, Section 4.3. Sufficient numbers of sample injections should be made so that the precision requirements of Section 4.1 of Method 16 are satisfied.

7.2 *Recalibration.* Same as in Method 16, Section 10.2.

7.3 *Determination of Calibration Drift.* Same as in Method 16, Section 10.3.

8. Calculations

8.1 *Nomenclature.*

C_{SO2} = Sulfur dioxide concentration, ppm.
C_{TRS} = Total reduced sulfur concentration as determined by Equation 16B-1, ppm.
d = Dilution factor, dimensionless.
N = Number of samples.

8.2 SO_2 *Concentration.* Determine the concentration of SO_2 (C_{SO2}) directly from the calibration curves. Alternatively, the concentration may be calculated using the equation for the least-squares line.

8.3 *TRS Concentration.*

$$C_{TRS} = (C_{SO2})\,(d) \quad \text{Eq. 16B-1}$$

8.4 *Average TRS Concentration.*

$$\text{Avg. } C_{TRS} = \frac{\sum_{i=1}^{n} C_{TRS}}{N} \quad \text{Eq. 16B-2}$$

9. Example System

Same as in Method 16, Section 12. Single column systems using the column in Section 12.1.4.1.1 of Method 16 or a 7-ft Carbosorb B HT 100 column have been found satisfactory in resolving SO_2 from CO_2.

10. Bibliography

1. Same as in Method 16, Sections 13.1 to 13.6.

2. National Council of the Paper Industry for Air and Stream Improvement, Inc. A Study of TRS Measurement Methods. Technical Bulletin No. 434. New York, New York. May 1984. 12 p.

BILLING CODE 6560-50-M

---

40 CFR Parts 60 and 61

[FRL-3269-2]

Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; Delegation of Additional Standards to Kentucky

AGENCY: Environmental Protection Agency (EPA).

ACTION: Delegation of authority.

SUMMARY: On March 23, 1987, the Kentucky Natural Resources and Environmental Protection Cabinet requested that EPA delegate to the Commonwealth of Kentucky the authority to implement and enforce two additional categories of Standards of Performance for New Stationary Sources (NSPS) and two additional categories of National Emission Standards for Hazardous Air Pollutants (NESHAP). These categories are listed below under "**SUPPLEMENTARY INFORMATION.**" Since EPA's review of pertinent Kentucky laws, rules, and regulations has shown them to be adequate to implement and enforce these federal standards, the Agency has delegated authority for them to Kentucky. Affected sources are now under the jurisdiction of the Commonwealth.

EFFECTIVE DATE: May 22, 1987.

ADDRESSES: Copies of the Commonwealth's request and EPA's letter of delegation are available for public inspection at the EPA Region IV office, Air Programs Branch, 345 Courtland Street NE., Atlanta, Georgia 30365. All reports required pursuant to the newly delegated standards (listed below) should be submitted to the Kentucky Natural Resources and Environmental Protection Cabinet, Division of Air Pollution Control, 18 Reilly Road, Frankfort Office Park, Frankfort, Kentucky 40601.

FOR FURTHER INFORMATION CONTACT: Pamela Adams of the EPA Region IV Air Programs Branch at the above address, telephone (404) 347-2864 or FTS 257-2864.

SUPPLEMENTARY INFORMATION: Sections 111 and 112 of the Clean Air Act authorize EPA to delegate authority to implement and enforce the Standards of Performance for New Stationary Sources (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP) to any state which has adequate implementation and enforcement procedures.

On April 12, 1977, EPA delegated to the Commonwealth of Kentucky the authority for implementation of the NSPS and NESHAP that had been promulgated by EPA as of March 18, 1977. Since that date, EPA has updated the State's delegation several times. On March 23, 1987, the Kentucky Natural Resources and Environmental Protection Cabinet requested a delegation for the following recently revised or promulgated NSPS and NESHAP:

40 CFR Part 60, Subpart G: New Nitric Acid Plants
40 CFR Part 60, Subpart I: New Hot Mix Asphalt Facilities
40 CFR Part 61, Subpart O: Inorganic Arsenic Emissions from Primary Copper Smelters
40 CFR Part 61, Subpart P: Inorganic Arsenic Emissions from Arsenic Trioxide and Metallic Arsenic Production Facilities.

After a thorough review of the request, I determined that such delegation was appropriate with the conditions set forth in the original delegation letter of April 12, 1977. Therefore, the Commonwealth's request was granted in a letter dated May 22, 1987. Kentucky sources subject to the NSPS and NESHAP listed above are now under the jurisdiction of the Commonwealth of Kentucky.

I certify, pursuant to 5 U.S.C. 605(b), that this delegation will not have a significant economic impact on a substantial number of small entities.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Authority: Sections 111 and 112 of the Clean Air Act (42 U.S.C. 7411 and 7412).

Date: September 15, 1987.

Lee A. DeHihns, III,

Acting Regional Administrator.

[FRL-3269-4]

Standards of Performance for New Stationary Sources; National Emission Standards for Hazardous Air Pollutants; Delegation of Additional Standards to Kentucky

AGENCY: Environmental Protection Agency (EPA).

ACTION: Delegation of authority.

SUMMARY: On December 29, 1986, the Kentucky Natural Resources and Environmental Protection Cabinet requested that EPA delegate to the Commonwealth of Kentucky the authority to implement and enforce six additional categories of Standards of Performance for New Stationary Sources (NSPS) and three additional categories of National Emission Standards for Hazardous Air Pollutants (NESHAP). These categories are listed below under "**SUPPLEMENTARY INFORMATION.**" A thorough review of pertinent Kentucky laws, rules, and regulations has shown them to be adequate to implement and enforce these federal standards. Therefore, the Agency has delegated authority for them to Kentucky, and affected sources are now under the jurisdiction of the Commonwealth of Kentucky.

EFFECTIVE DATE: March 23, 1987.

ADDRESSES: Copies of the Commonwealth's request and EPA's letter of delegation are available for public inspection at the EPA Region IV office, Air Programs Branch, 345 Courtland Street, NE., Atlanta, Georgia 30365.

All reports required pursuant to the newly delegated standards (listed below) should be submitted to the Kentucky Natural Resources and Environmental Protection Cabinet, Department of Environmental Protection, Frankfort Office Park, 18 Reilly Road, Frankfort, Kentucky 40601.

FOR FURTHER INFORMATION CONTACT: Pamela Adams of the EPA Region IV Air Programs Branch at the above address, telephone (404) 347-2864 or FTS 257-2864.

SUPPLEMENTARY INFORMATION: Sections 111 and 112 of the Clean Air Act authorize EPA to delegate authority to implement and enforce the Standards of Performance of New Stationary Sources (NSPS) and the National Emissions Standards for Hazardous Air Pollutants (NESHAP) to any state which has adequate implementation and enforcement procedures.

On April 12, 1977, EPA delegated to the Commonwealth of Kentucky the authority for implementation of NSPS and NESHAP that had been promulgated by EPA as of March 18, 1977. Since that date, EPA has updated the Commonwealth's delegation several times. On December 29, 1986, the Kentucky Natural Resources and Environmental Protection Cabinet requested a delegation for the following recently revised or promulgated NSPS and NESHAP:

40 CFR Part 60, Subpart N: Iron and Steel Plants (Basic Oxygen Process Furnaces)
40 CFR Part 60, Subpart Na: Secondary Emissions from Basic Oxygen Process Steelmaking Facilities for which construction is Commenced after January 20, 1983
40 CFR Part 60, Subpart AA: Steel Plants: Electric Arc Furnaces Constructed after 10/21/74, and on or before 8/17/83
40 CFR Part 60, Subpart AAa: Steel Plants: Electric Arc Furnaces and Argon-Oxygen Decarburization Vessels Constructed after 8/17/83
40 CFR Part 60, Subpart KKK: Equipment Leaks of VOC from Onshore Natural Gas Processing Plants
40 CFR Part 60, Subpart LLL: Onshore Natural Gas Processing: SO_2 Emissions
40 CFR Part 61, Subpart E: Mercury
40 CFR Part 61, Subpart M: Asbestos (Including Work Practices)
40 CFR Part 61, Subpart N: Inorganic Arsenic Emissions from Glass Manufacturing Plants

After a thorough review of the request, EPA determined that such delegation was appropriate with the conditions set forth in the original delegation letter of April 12, 1977. The Commonwealth's request was granted in a letter dated March 23, 1987. Kentucky sources subject to the NSPS and NESHAP listed above are now under the jurisdiction of the Commonwealth of Kentucky.

I certify, pursuant to 5 U.S.C. 605(b), that this delegation will not have a significant economic impact on a substantial number of small entities.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Authority: Sections 111 and 112 of the Clean Air Act (42 U.S.C. 7411 and 7412).

Date: September 15, 1987.

Lee A. DeHihns, III,

Acting Regional Administrator.

[FRL-3269-5]

Standards of Performance for New Stationary Sources; National Emisssions Standards for Hazardous Air Pollutants; Supplemental Delegation of Authority to South Carolina

AGENCY: Environmental Protection Agency (EPA).

ACTION: Delegation of authority.

SUMMARY: The State of South Carolina requested delegation of authority for the implementation and enforcement of additional categories of National Standards of Performance for New Stationary Sources (NSPS) and National Emission Standards for Hazardous Air Pollutants (NESHAP). EPA's review of South Carolina's laws, rules, and regulations showed them to be adequate for the implementation and enforcement of these federal standards, and the Agency made the delegation as requested.

EFFECTIVE DATE: These delegations of authority to South Carolina were effective July 23, 1987.

ADDRESSES: Copies of the requests for delegation of authority and EPA's letter of delegation are available for public inspection at EPA's Region IV Office, 345 Courtland Street NE., Atlanta, Georgia 30365.

All reports required pursuant to the newly delegated standards should not be submitted to the EPA Region IV Office, but should instead be submitted to the following address: Mr. Otto E. Pearson, Chief Bureau of Air Quality Control, South Carolina Department of Health and Environmental Control, 2600 Bull Street, Columbia, South Carolina 29201.

FOR FURTHER INFORMATION CONTACT: Beverly T. Hudson of the EPA Region IV Air Programs Branch, 345 Courtland Street, NE., Atlanta, Georgia 30365, telephone 404/347-2864 (FTS 257-2864).

SUPPLEMENTARY INFORMATION: Section 310, in conjunction with sections 110, 111(c)(1) and 112(d)(1) of the Clean Air Act, authorizes EPA to delegate authority to implement and enforce the standards set out in 40 CFR Part 60 (NSPS) and 40 CFR Part 61 (NEAHAP).

On October 26, 1976, EPA initially delegated the authority for implementation and enforcement of the NESHAP and NSPS programs to the State of South Carolina. On June 29, 1987, South Carolina requested a delegation of authority for implementation and enforcement of the

following recently promulgated or revised NSPE categories found in 40 CFR Part 60:

1. Industrial Boilers, Subpart D_b as promulgated November 26, 1986.
2. Petroleum Refineries, Subpart J, as revised June 1, 1987.
3. Lime Manufacturing Plants, Subpart HH, as revised February 17, 1987.
4. VOL Storage Vessels, Subpart K_b, as promulgated April 8, 1987.

The State also requested authority for the following NESHAP categories set forth in 40 CFR Part 61:

1. Vinyl Chloride, Subpart F, as revised September 30, 1986.
2. Equipment Leaks (Fugitive Emission Souces), Subpart V, as revised January 21, 1986.

Action

Since review of the pertinent South Carolina laws, rules, and regulations showed them to be adequate for the implementation and enforcement of the aforementioned categories of NSPS and NESHAP, I delegated to the State of South Carolina my authority for the source categories listed above on July 23, 1987.

The Office of Management and Budget has exempted this delegation from the requirements of section 3 of Executive Order 12291.

This notice is issued under the authority of sections 101, 110, 111, 112, and 301 of the Clean Air Act, as amended (42 U.S.C. 7401, 7410, 7411, 7412, and 7601).

Dated: September 21, 1987.

Joe R. Franzmathes,

Acting Regional Administrator.

40 CFR Part 81

[FRL-3269-1]

Designations of Areas for Air Quality Planning Process Attainment Status Designations; Wisconsin; Correction

AGENCY: U.S. Environmental Protection Agency (USEPA).

ACTION: Direct final rulemaking; notice of correction.

SUMMARY: This notice corrects a codification error published in a direct final rulemaking on the designation of areas for air quality planning purposes for Wisconsin.

The rulemaking being corrected was in a December 15, 1981, (46 FR 61126) notice, which redesignated a subcity portion of Milwaukee County for the pollutant Carbon Monoxide (CO).

FOR FURTHER INFORMATION CONTACT: Uylaine E. McMahan, (312) 886-6031.

Correction: In particular, on page 61127 of the December 15, 1981 **Federal Register**, in the third column, in the PART 81-Designation of Areas for Air Quality Planning Purposes [*sic*], the section number for "Milwaukee County" in the table "Wisconsin-CO" was incorrectly published as appearing at § 81.351. Instead, this section number should have been numbered as § 81.350. USEPA regrets any inconvenience this error has caused.

Correction of this codification error in no way affects the designation of Milwaukee, which remains as published in the table on page 61127.

Dated: September 15, 1987.

Valdas V. Adamkus,

Regional Administrator.

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

Wisconsin

Section 81.350 of Part 81 of Chapter 1, Title 40, Code of Federal Regulations is amended. In the table of "Wisconsin-CO," the entry for Milwaukee County should be revised to read as follows:

§ 81.350 Wisconsin.

WISCONSIN-CO

	Does not meet primary standards	Cannot be classified or better than national standards
Wisconsin Counties: * * * *		
Milwaukee:		
North 75th Street and West Beckett Street on the east, West Perkins Avenue on the South, North 77th Street on the west and West Hope Avenue and Manon Street on the north.	x	
The north boundary is West Wisconsin Avenue from 16th Street to 6th Street, the east boundary is 6th Street from Wisconsin Avenue to the Menomonee River, the south boundary is the Menomonee River, and the west boundary is 16th Street from the Menomonee River to West Wisconsin Avenue		x
The remainder of Milwaukee County		x

BILLING CODE 6560-50-M

DEPARTMENT OF DEFENSE

48 CFR Parts 204, 215, 230, and 253

Department of Defense Federal Acquisition Regulation Supplement; Defense Acquisition Circular (DAC) 86-5

AGENCY: Department of Defense (DoD).

ACTION: Final rule; correction.

SUMMARY: This document corrects a final rule with respect to DoD Profit Policy, published in the **Federal Register** on Monday, August 3, 1987 (52 FR 28705), and corrected in the **Federal Register** on Monday, August 17, 1987 (52 FR 30687). This document also designates final rules published at 52 FR 28705, August 3, 1987, and at 52 FR 30687, August 17, 1987, as Defense Acquisition Circular (DAC) 86-5.

EFFECTIVE DATE: August 1, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. Charles W. Lloyd, Executive Secretary, Defense Acquisition Regulatory Council, ODASD(P)/DARS, c/o OUSD(A) (M&RS), Room 3D139, The Pentagon, Washington, DC 20301-3062, telephone (202) 697-7266.

Charles W. Lloyd,

Executive Secretary, Defense Acquisition Regulatory Council.

Therefore, the DoD FAR supplement is amended as set forth below:

PART 204—ADMINISTRATIVE MATTERS

1. The final rule published on August 3, 1987 (52 FR 28705) is designated as Defense Acquisition Regulatory Circular (DAC) 86-5 without change.

PART 215—CONTRACTING BY NEGOTIATION

2. The final rules published on August 3, 1987 (52 FR 28705) and on August 17, 1987 (52 FR 30687) are designated as Defense Acquisition Regulatory Circular (DAC) 86-5 with the following changes:

215.902 [Corrected]

3. Section 215.902 is amended by substituting in the third sentence of paragraph (a)(1)(i) the reference "FAR 15.805-3" in lieu of the reference "215.805-3"; by substituting in the fourth sentence of paragraph (a)(1)(i) the reference "FAR 15.804-3(b)" in lieu of the reference "215.804-3(b)"; and by adding in paragraph (S-72) between the word "or" and the word "similar" the word "a".

VOL 52 ISS 188 SEP 29 1987 UMI

215.970–1 [Corrected]

4. Section 215.970–1 is amended by removing in the second line of the table following paragraph (b)(2)(i) under the heading "Contract type" the hyphen and the word "fee"; by removing in the second line of the table following paragraph (b)(2)(ii) under the heading "Contract type" the hyphen and the word "fee"; by adding in the table following paragraph (b)(2)(ii) a footnote "1" and the words "(percent)" after the heading "Normal value"; by removing from paragraph (b)(2)(iv) the hyphen and the word "fee"; by substituting in paragraph (b)(4)(ii) the reference "FAR 32.501–1" in lieu of the reference "232.501–1"; and by substituting in the second sentence of paragraph (c)(3)(i) the word "product" in lieu of the word "produce".

215.971–2 [Corrected]

5. Section 215.971–2 is amended by substituting in the first sentence the reference "FAR 31.205–10" in lieu of the reference "231.205–10".

215.972–1 [Corrected]

6. Section 215.972–1 is amended by substituting in paragraph (a) the word "objective" in lieu of the word "objectives"; and by substituting in the last sentence of paragraph (a)(1) the reference "215.970–1(a)(2)(ii)" in lieu of the reference "15.970–1(a)(2)(ii)".

215.973 [Corrected]

7. Section 215.973 is amended by substituting in the first sentence the reference "FAR 16.404–2" in lieu of the reference "216.404–2".

PART 230—COST ACCOUNTING STANDARDS

8. The final rule published on August 3, 1987 (52 FR 28705) is designated as Defense Acquisition Regulatory Circular (DAC) 86–5 without change.

PART 253—FORMS

9. The final rule published on August 3, 1987 (52 FR 28705) is designated as Defense Acquisition Circular (DAC) 86–5 without change.

BILLING CODE 3810–01–M

---

48 CFR Parts 204, 252, and 253

Department of Defense Federal Acquisition Regulation Supplement; Commercial and Government Entity (CAGE) Code Reporting

AGENCY: Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: The Defense Acquisition Regulatory Council has approved revisions to Subpart 204.6, and Parts 252 and 253 of the DoD FAR Supplement with respect to Commercial and Government Entity (CAGE) Code Reporting.

EFFECTIVE DATE: October 1, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. Charles W. Lloyd, Executive Secretary, DAR Council, (202) 697–7266.

SUPPLEMENTARY INFORMATION:

A. Background

The DoD FAR Supplement has been revised to provide uniform guidance concerning the completion of the DD Form 350, beginning October 1, 1987. Three data elements are being added to the contract reporting system without modification to the DD Form 350. The new data will be entered in Part E of the May 85 edition of the form in accordance with the instructions at 204.671–5(f). New Item E2, Extent Competed, must be provided with each DD Form 350 submitted. Items E3, Standard Industrial Classification (SIC) Code, and E4, Commercial and Government Entity (CAGE) Code, may be left blank in the first quarter of FY 88 if the information is not available within 3 working days after the date on which the dollars were actually obligated or deobligated by the contracting office. A related clause and a new DD Form 2051 are added.

(Note: DD Forms are not codified in the Code of Federal Regulations.)

B. Regulatory Flexibiity Act

The final rule does not constitute a significant revision within the meaning of FAR 1.501 and Pub. L. 98–577, and publication for public comment is not required. Therefore, the Regulatory Flexibility Act does not apply. However, comments from small entities concerning the affected parts will be considered in accordance with section 610 of the Act. Such comments must be submitted separately and cite DAR Case 87–610D in correspondence.

C. Paperwork Reduction Act

The rule does not contain information collection requirements which require the approval of OMB under 44 U.S.C. 3501 et seq.

List of Subjects in 48 CFR parts 204, 252, and 253

Government procurement.

Charles W. Lloyd,
Executive Secretary, Defense Acquisition Regulatory Council.

Therefore, 48 CFR Parts 204, 252, and 253 are amended as follows:

1. The authority citation for 48 CFR Parts 204, 252, and 253 continues to read as follows:

Authority: 5 U.S.C. 301, 10 U.S.C. 2202, DoD Directive 5000.35, and DoD FAR Supplement 201.301.

PART 204—ADMINISTRATIVE MATTERS

2. Section 204.670–2 is amended by adding in alphabetical sequence the following definition:

204.670–2 Definitions.

"Commercial and Government Entity (CAGE) Code" means:

(a) A code assigned by the Defense Logistics Services Center (DLSC) to identify a contractor or manufacturer; or

(b) A code assigned by a member of the North Atlantic Treaty Organization (NATO) and maintained by DLSC.

(c) One of the above codes used in subpart 204.6 to identify contractors.

3. Section 204.670–5 is added to read as follows:

204.670–5 CAGE Codes.

(a) When a CAGE code is required from the offeror, contracting officers shall insert the provision at 252.204–7007, to request the offeror to supply its CAGE code.

(b) The contracting officer shall assist the offeror in obtaining the required contractor identification code(s).

(c) Prospective offerors may not be denied a solicitation or bid set because the offeror does not have a contractor identification code.

(d) If a CAGE code is being requested, it is the responsibility of the contracting activity to request the assignment of the CAGE code by completing Section A of the DD Form 2051—Request for Assignment of a Commercial and Government Entity (CAGE) Code. (See 253.303–70–DD–2051.) The prospective contractor will complete Section B of the form. The completed form will be submitted by the contracting activity to DLSC–FBA for processing and code assignment after it has verified the data submitted by the contractor.

4. Section 204.671–5 is amended by revising paragraph (b)(5)(iii); by removing the introductory text in paragraph (f); and by adding paragraph (f)(2) to read as follows:

204.671–5 Instructions for Completion of DD Form 350.

* * * * *

(b) * * *

(5) * * *

(iii) *Item B5B.* Enter the state or country code from the appropriate Federal Information Processing Standards (FIPS) Publication. FIPS 55 is used for the identification of State and state equivalents in the United States, Puerto Rico, and US possessions and territories. FIPS 10–3 is used to identify foreign countries.

* * * * *

(f) *Part E, DD Form 350.*

* * * * *

(2) *Item E2, Extent Competed.* Enter the appropriate code.

(i) *Code A—Competed Action.* Enter this code when any of the following conditions apply:

(A) Competitive procedures were used to fulfill the requirement for full and open competition (FAR 6.1);

(B) Full and open competition was provided for after exclusion of sources, in order to establish/maintain alternative sources or to set aside a procurement for small business or labor surplus area concerns (FAR 6.2);

(C) Statutory authorities for other than full and open competition were used (FAR 6.3) and more than one offer was received:

(Note: Any procurement authorized or required by statute to be awarded to a specified source, e.g., 8(a) awards; brand name commercial products for authorized resale; or awards for utilities (except telecommunications) are excluded from Code A and should be reported in Code B.)

(D) Contract action resulted from a contract awarded prior to CICA that used two-step sealed bidding, other sealed bidding, or was negotiated competitively.

(ii) *Code B—Not available for competition.* Enter this code when any of the following conditions apply to the award:

(A) Awards for utilities (excluding telecommunications) where there is no opportunity for competition;

(B) Brand name commercial products for authorized resale;

(C) Procurements authorized or required by statute to be awarded to a designated source;

(D) 8(a) awards;

(E) Foreign Military Sales/ International Agreements;

(F) Other contract actions where the Deputy Assistant Secretary of Defense, Procurement (DASD(P)) has determined that there is no opportunity for competition.

(iii) *Code C—Follow-on to competed action.* Enter this code when the action pertains to an acquisition placed with a particular contractor to continue or augment a specific competed program where such placement was necessitated by prior acquisition decisions (204.671–5(d)(5)(ii)(C)).

(iv) *Code D—Not competed.* Enter this code when Codes A, B, or C do not apply.

(3) *Item E3, Standard Industrial Classification (SIC) Code.* This item identifies the SIC of the procurement (as opposed to the SIC of the Manufacturer or Dealer). Enter the SIC codes from the OMB Standard Industrial Classification Manual. If more than one code is applicable to the action, enter the one that best identifies the product or service representing the largest dollar volume of acquisition.

(4) *Item E4, Commercial and Government Entity (CAGE) Code.* Enter the 5-position code assigned by the Defense Logistics Services Center (DLSC) that identifies the Contractor's plant or establishment receiving the award. For 8(a) awards, report the CAGE code of the performing contractor, *not* the Small Business Administration.

(i) The CAGE code is available from one or more of the following sources:

(A) The offeror's response to the solicitation;

(B) The bi-monthly H–8 publication issued by DLSC–JBDA, Federal Center, 74 N. Washington, Battle Creek, MI 49017–3084, telephone numbers: AUTOVON 932–4725, FTS 522–4725, commercial (616) 961–4725.

(C) On-line access to the CAGE file through the Defense Integrated Data System (DIDS);

(D) On-line access to the Defense Logistics Agency CAGE file through the DLA Network; or

(E) Submission of a DD Form 2051 (Request for Assignment of a CAGE Code) or electronic equivalent to DLSC–FBA at the above address. Questions concerning obtaining computer tapes, electronic updates or code assignments should be directed to DLSC, Attn: DLSC–FBA, telephone numbers: AUTOVON 932–4358, FTS 522–4358, commercial (616) 961–4358.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

5. Section 252.204–7007 is added to read as follows:

252.204–7007 Commercial and Government Entity (CAGE) Code Reporting.

As prescribed at 204.670–5(a), insert the following provision:

Commercial and Government Entity (CAGE) Code Reporting (Oct 1987)

In the block with its name and address, the Offeror should supply the CAGE code applicable to that name and address. The CAGE code should be preceded by "CAGE:". If the Offeror does not have a CAGE code the Offeror may request the Contracting Officer to initiate a DD Form 2051. The Contraction Activity will complete Section A and the Offeror must complete Section B of the DD Form 2051. A CAGE code will be assigned when a completed DD Form 2051 is received by the Defense Logistics Services Center, Attn: DLSC–FBA, Federal Center, 74 N. Washington, Battle Creek, MI 49017–3084. No Offeror should delay the submission of its offer pending receipt of its CAGE code

(End of provision)

PART 253—FORMS

6. Section 253.204–70 is added to read as follows:

253.204–70 Contractor Identification (DD Form 2051).

DD Form 2051, Request for Assignment of a Commercial and Government entity (CAGE) Code, is prescribed for use in requesting CAGE codes. (See 204.670–5(d).)

7. The list of forms following section 253.204–70 is amended by adding between the listing "253.303–70–DD–2025 DD Form 2025: Packaging Change Recommendation/Approval" and the listing "253.303–70–DD–2139 DD Form 2139: Subcontract Report of Foreign Purchases" the listing "253.303–70–DD–2051 DD Form 2051: Request for Assignment of a Commercial and Government Entity (CAGE) Code".

48 CFR Parts 214, 215, 227, and 252

Department of Defense Federal Acquisition Regulation Supplement; Defense Acquisition Circular (DAC) 86–3

AGENCY: Department of Defense (DoD).

ACTION: Final rule; correction.

SUMMARY: This document corrects a final rule with respect to technical data, other data, computer software, and copyrights published in the **Federal Register** on Thursday, April 16, 1987 (52 FR 12387). This document also designates final rules published at 52 FR 12387, April 16, 1987, and at 52 FR 19871,

VOL 52 ISS 188 SE 29 1987 UMI

May 28, 1987, as Defense Acquisition Circular (DAC) 86–3.

EFFECTIVE DATE: May 18, 1987.

FOR FURTHER INFORMATION CONTACT: Mr. Charles W. Lloyd, Executive Secretary, Defense Acquisition Regulatory Council, ODASD(P)/DARS, c/o OUSD (A) (M&RS), Room 3D139, The Pentagon, Washington, DC 20301–3062, telephone (202) 697–7266.

Charles W. Lloyd,

Executive Secretary, Defense Acquisition Regulatory Council.

Therefore, the DoD FAR Supplement is amended as set forth below:

PART 214—SEALED BIDDING

1. The final rule published on May 28, 1987 (52 FR 19871) is designated as Defense Acquisition Circular (DAC) 86–3 without change.

PART 215—CONTRACTING BY NEGOTIATION

2. The final rule published on May 28, 1987 (52 FR 19871) is designated as Defense Acquisition Circular (DAC) 86–3 without change.

PART 227—PATENTS, DATA, AND COPYRIGHTS

3. The final rule published on April 16, 1987 (52 FR 12390) is designated as Defense Acquisition Circular (DAC) 86–3 with the following changes:

4. The table of contents for Subpart 227.4 is amended by revising the title of section 227.472–1 to read "Deferred Ordering and Deferred Delivery"; by adding the words "Policy for" at the beginning of the title of section 227.472–6; and by adding the words "Procedures for" at the beginning of the title of section 227.473–2.

227.471 [Corrected]

5. Section 227.471 is amended by adding in the parenthetical phrase in the last sentence of the definition entitled "Government purposes license rights" between the word "or" and the word "the" the word "in".

227.472–1 [Corrected]

6. Section 227.472–1 is amended by substituting in the introductory paragraph the word "competing" in lieu of the word "competitive"; by substituting in the last sentence of paragraph (a) the word "alternative" in lieu of the word "alternate"; and by substituting in the title of paragraph (b) the word "interests" in lieu of the word "interest".

227.472–2 [Corrected]

7. Section 227.472–2 is amended by substituting in the fourth sentence the word "item" for the word "items".

227.472–4 [Corrected]

8. Section 227.472–4 is amended by substituting in the title the word "prohibition" in lieu of the word "prohibitions".

227.472–5 [Corrected]

9. Section 227.472–5 is corrected to read "227.472–5".

227.473–1 [Corrected]

10. Section 227.473–1 is amended by substituting in the first sentence of paragraph (a) the word "processes" for the word "processed".

227.473–3 [Corrected]

11. Section 227.473–3 is amended by substituting in the first sentence of paragraph (a) the word "data" for the word "date".

227.473–4 [Corrected]

12. Section 227.473–4 is amended by adding in paragraph (a)(2) a comma after the word "circling" and by adding in the first sentence of paragraph (c) between the word "the" and the word "contract" the words "contractor on technical data delivered to the Government under a".

227.473–5 [Corrected]

13. Section 227.473–5 is corrected by substituting in the title of paragraph (a)(4)(i) the words "fails to respond" in lieu of the word "responds"; by substituting at the end of paragraph (a)(4)(i) the number "*(4)*" in lieu of the number "*(5)*"; by substituting at the beginning of the second sentence of paragraph (a)(4)(ii)(A) the word "The" in lieu of the word "This"; and by substituting in the penultimate sentence of paragraph (a)(4)(ii)(A) the word "subcontractor" in lieu of the word "subcontract".

227.474–1 [Corrected]

14. Section 227.474–1 is amended by substituting in the second sentence the word "used" in lieu of the word "use".

227.475–2 [Corrected]

15. Section 227.475–2 is amended by substituting in the fourth sentence of paragraph (b) the word "date" in lieu of the word "data".

227.475–6 [Corrected]

16. Section 227.475–6 is amended by substituting in the last sentence the reference "paragraph 227.482(a)(1)" in lieu of the references "paragraphs 227.403–3(a) and 227.481–2(a)"; and by substituting in the same sentence the reference "227.472" in lieu of the reference "227.403–2".

§ 227.475–8 [Corrected]

17. Section 227.475–8 is amended by substituting in the first paragraph the reference "252.227–7013" in lieu of the reference "52.227–7013".

§ 227.478–2 [Corrected]

18. Section 227.478–2 is amended by adding in the first sentence of paragraph (a)(ii) between the word "of" and the word "building" the word "a".

§ 227.478–3 [Corrected]

19. Section 227.478–3 is amended by adding in the first sentence after the word "copyrights" a comma; and by substituting in the first sentence the words "solicitations and contracts" in lieu of the words "solicitation and contracts".

§ 227.479 [Corrected]

20. Section 227.479 is amended by removing in the second sentence in paragraph (b) the comma after the word "recommended".

§ 227.480 [Corrected]

21. Section 227.480 is amended by substituting in the first sentence the word "owned" in lieu of the word "owner".

§ 227.481–1 [Corrected]

22. Section 227.481–1 is amended by adding at the end of paragraph (a)(3)(i) a semi-colon; by substituting at the end of the second sentence of paragraph (d) the words "infringement of copyright" in lieu of the words "infringement or copyright"; and by substituting in paragraph (f) the word "restrictions" in lieu of the word "restriction".

§ 227.482 [Corrected]

23. Section 227.482 is amended by adding in paragraph (a)(1)(iii) between the word "Rico," and the word "which" the word "in"; by substituting at the end of paragraph (a)(2) the reference "277.474–2" in lieu of the reference "227.474–4"; by substituting in paragraph (a)(3) the word "officer" in lieu of the word "office"; by substituting the designation of paragraph "(1)" in lieu of the designation "(1)"; by substituting in paragraph (n) the word "provision" in lieu of the word "provisions"; and by substituting in paragraph (s) the word "solicitations" in lieu of the word "solicitation".

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

§ 252.227-7013 [Corrected]

24. Section 252.227-7013 is amended by substituting in the introductory paragraph the word "at" in lieu of the word "as"; by adding at the end of paragraph (b)(1)(i) of the clause between the reference "227.477-1 (b)(2)" and the word "and " a semi-colon; by substituting in paragraph (f)(2) of the clause the words "sixty (60)" in lieu of the number "60"; by substituting in the introductory paragraph of Alternate I of the clause the reference "227.482(a)(2)" in lieu of the reference "227.474-4" and by substituting the introductory paragraph of Alternate II of the clause the reference "227.482(a)(3)" in lieu of the reference "227.475-8".

§ 252.227-7016 [Corrected]

25. Section 252.227-7016 is amended by substituting in the introductory paragraph the reference "227.482(b)" in lieu of the reference "227.412(d)".

§ 252.227-7017 [Corrected]

26. Section 252.227-7017 is amended by substituting in the last sentence of the clause between the word "royalties" and the word "charges" the word "or" in lieu of the word "of".

§ 252.227-7018 [Corrected]

27. Section 252.227-7018 is amended by substituting in the introductory paragraph the reference "227.482(d)" in lieu of the reference "227.473-4 (b)".

§ 252.227-7020 [Amended]

28. Section 252.227-7020 is amended by substituting in the third sentence of paragraph (b) of the clause the word "works" in lieu of the word "work".

§ 252.227-7021 [Corrected]

29. Section 252.227-7021 is amended by substituting in paragraph (c)(2) of the clause the word "same" in lieu of the word "some".

§ 252.227-7023 [Corrected]

30. Section 252.227-7023 is amended by adding in the introductory paragraph a comma after between the reference "227.482(i)" and the word "insert".

252.227-7024 [Corrected]

31. Section 252.227-7024 is amended by substituting in the introductory paragraph the reference "227-482(j)" in lieu of the reference "227.482(l)".

252.227-7025 [Corrected]

32. Section 252.227-7025 is amended by substituting in the introductory paragraph the reference "227.482(k)" in lieu of the reference "227.479"; by adding in the parenthetical phrase in the last sentence of paragraph (b)(ii) between the word "or" and the word "note" the word "a"; by substituting in the undesignated paragraph between paragraph (b)(2)(iv) and paragraph (b)(2)(iv)(A) the word "shall" in lieu of the word "must"; by adding in the third sentence of the undesignated paragraph between paragraph (b)(2)(iv)(B) and paragraph (b)(3) between the word "assumes" and the word "liability" the word "no"; by removing in paragraph (c)(1)(i) between the word "agreed" and the word "will" the word "with"; by substituting in the second sentence of paragraph (c)(1)(i) following the "Restricted Rights Legend" the word "restrictions" in lieu of the word "restriction"; by substituting in the third sentence of paragraph (c)(1)(i) the word "in" in lieu of the word "on"; by substituting in paragraph (c)(3)(i) the word "or delivered" in lieu of the words "to deliver"; by adding a comma after the words "restricted rights" in the fourth sentence of paragraph (e)(1) and changing the capital "T" to a lower-case "t" in the last sentence; by substituting in the last sentence of paragraph (f)(2) the words "sixty (60)" in lieu of the number "60"; by substituting in the title of paragraph (h) the word "on" in lieu of the word "of"; by substituting in the first sentence of paragraph (h) the words "it is the policy" in lieu of the words "is is the policy"; and by substituting in the first sentence of paragraph (i)(2) the word "higher-tier" in lieu of the word "high-tier".

252.227-7026 [Corrected]

33. Section 252.227-7026 is amended by substituting in the title words "data or" in lieu of the words "data of"; and by substituting in the reference in the introductory paragraph the letter "(l)" in lieu of the number "(1)".

252.227-7027 [Corrected]

34. Section 252.227-7027 is amended by substituting in the second sentence of the clause the word "data" in lieu of the word "date".

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. 74-14; Notice 47]

Occupant Crash Protection and Automatic Restraint Phase-In Reporting; Correction

AGENCY: National Highway Traffic Safety Administration DOT.

ACTION: Final rule; correction.

SUMMARY: This document corrects a citation contained in a final rule amending Standard No. 208, *Occupant Crash Protection.* This rule was intended to modify the head injury criteria set forth in sections S6.1.2 and S6.2.2 of Standard No. 208 by limiting the calculation of a maximum time interval of 36 milliseconds. However, as published on October 17, 1986 (51 FR 37028, at 37033), the rule amended section S6.2 of Standard No. 208. This notice corrects that error.

FOR FURTHER INFORMATION CONTACT: Stephen Kratzke, Office of Chief Counsel, National Highway Traffic Safety Administration, 400 Seventh Street SW., Washington, DC 20590 (202-366-2992).

Accordingly, the following correction is made to page 37033 of Volume 51 of the **Federal Register**, in this issue of October 17, 1986:

In the second column, the sixth amendment is corrected to read as follows and the designation "S6.2" in the regulatory text is removed in order to show that the text will appear identically in two places.

6. S6.1.2. and S6.2.2 are revised to read as follows:

Issued on September 24, 1987.

Diane K. Steed,

Administrator.

Proposed Rules

Federal Register
Vol. 52, No. 188
Tuesday, September 29, 1987

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

7 CFR Part 401

[Amdt. No. 13 Docket No. 4736S]

General Crop Insurance Regulations; Safflower Crop Endorsement

AGENCY: Federal Crop Insurance Corporation, USDA
ACTION: Proposed rule.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) proposes to amend the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, by adding a new section, 7 CFR 401.123, to be known as the Safflower Crop Endorsement. The intended effect of this rule is to provide the regulations and endorsement containing the provisions of crop insurance protection on safflowers in an endorsement to the general crop insurance policy which contains the standard terms and conditions common to most crops. The authority for the promulgation of this rule is contained in the Federal Crop Insurance Act, as amended.

DATE: Written comments, data, and opinions on this proposed rule must be submitted not later than October 29, 1987, to be sure of consideration.

ADDRESS: Written comments on this proposed rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447–3325.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established by Departmental Regulation 1512–1. This action constitutes a review as to the need, currency, clarity, and effectiveness of these regulations under those procedures. The sunset review date established for these regulations is August 1, 1992.

E. Ray Fosse, Manager, FCIC, (1) has determined that this action is not a major rule as defined by Executive Order 12291 because it will not result in: (a) An annual effect on the economy of $100 million or more; (b) major increases in costs or prices for consumers, individual industries, federal, State, or local governments, or a geographical region; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets; and (2) certifies that this action will not increase the federal paperwork burden for individuals, small businesses, and other persons.

This action is exempt from the provisions of the Regulatory Flexibility Act; therefore, no Regulatory Flexibility Analysis was prepared.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.450.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR Part 3015, Subpart, V, published at 48 FR 29115, June 24, 1983.

This action is not expected to have any significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

FCIC herewith proposes to add to the General Crop Insurance Regulations (7 CFR Part 401), a new section to be known as 7 CFR 401.123, the Safflower Crop Endorsement, effective for the 1988 and succeeding crop years, to provide the provisions for insuraing safflowers.

Upon publication of 7 CFR 401.123 as a final rule, the provisions for insuring safflowers contained therein will supersede those provisions for insuring safflowers contained in 7 CFR Part 452 the Safflower Crop Insurance Regulations, effective with the beginning of the 1988 crop year. The present policy contained in 7 CFR Part 452 will be terminated at the end of the 1987 crop year and later removed and reserved. FCIC will proposed to amend the title of 7 CFR Part 452 by separate document so that the provisions therein are effective only through the 1987 crop year.

Minor editorial changes have been made to improve compatibility with the new general crop insurance policy. These changes do not affect meaning or intent of the provisions. In adding the new Safflower Endorsement to 7 CFR Part 401 as outlined below, FCIC is proposing changes in section 5 of the endorsement as follows:

1. Add unit division guidelines and add a clause to specify that division of units may result in the insured paying additional premium for guideline unit division in accordance with actuarial studies which show an increased risk when units are divided. Add language to specify that nonirrigated corners of a center pivot irrigation system are part of the irrigated unit. The production from the total unit, both irrigated and nonirrigated, is combined to determine your yield for the purpose of determining the guarantee for the unit.

FCIC is soliciting public comment on this proposed rule for 30 days following publication in the **Federal Register.** Written comments received pursuant to this proposed rule will be available for public inspection in the Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250, during regular business hours, Monday through Friday.

List of Subjects in 7 CFR Part 401

General crop insurance regulations, Safflower crop endorsement.

Proposed Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 et seq.), the Federal Crop Insurance Corporation proposes to amend the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, as follows:

PART 401—[AMENDED]

1. The authority citation for 7 CFR Part 401 continues to read as follows:

Authority: Secs. 506, 516, Pub. L. 75–430, 52 Stat. 73, 77, as amended (7 U.S.C. 1506, 1516).

2. 7 CFR Part 401 is amended to add a new section to be known as 7 CFR 401.123 Safflower Seed Crop

Endorsement, effective for the 1988 and Succeeding Crop Years, to read as follows:

§ 401.123 Safflower seed crop endorsement.

The provisions of the Safflower Seed Crop Insurance Endorsement for the 1988 and subsequent crop years are as follows:

Federal Crop Insurance Corporation

Safflower Seed Crop Endorsement

1. Insured crop.

a. The crop insured will be safflower seed ("safflowers").

b. In addition to the safflowers not insurable in section 2 of the general crop insurance policy, we do not insure any safflowers on which safflowers, sunflowers, dry beans, soybeans, mustard, rapeseed, or lentils have been grown the preceding crop year.

2. Causes of loss.

The insurance provided is against unavoidable loss of production resulting from the following causes occurring within the insurance period:

a. Adverse weather conditions;
b. Fire;
c. Insect infestation;
d. Plant disease;
e. Wildlife;
f. Earthquake;
g. Volcanic eruption; or
h. If applicable, failure of the irrigation water supply due to an unavoidable cause occurring after the beginning of planting;

unless those causes are excepted, excluded, or limited by the actuarial table or subsection 9 of the general policy.

3. Annual Premium.

The annual premium is computed by multiplying the production guarantee times the price election, times the premium rate, times the insured acreage, times your share at the time of planting.

4. Insurance period.

The calendar date for the end of insurance period is October 31 of the calendar year in which the safflowers are normally harvested.

5. Unit division.

Safflower acreage that would otherwise be one unit, as defined in section 17 of the general crop insurance policy, may be divided into more than one unit if you agree to pay additional premium as provided for by the actuarial table and if for each proposed unit you maintain written verifiable records of planted acreage and harvested production for at least the previous crop year; and either

a. Acreage planted to insured Safflowers is located in separate legally identifiable sections or, in the absence of section descriptions the land is identified be separate ASCS Farm Serial Numbers, provided:

(1) The boundaries of the section or Farm Serial Number are clearly identified, and the insured acreage can be easily determined; and

(2) The safflowers are planted in such a manner that the planting pattern does not continue into the adjacent section or Farm Serial Number; or

b. Acreage planted to safflowers is located in a single section or ASCS Farm Serial Number and consists of acreage on which both an irrigated and nonirrigated practice are carried out, provided:

(1) Safflowers planted on irrigated acreage does not continue into nonirrigated acreage in the same rows or planting pattern (Nonirrigated corners of a center pivot irrigation system are part of the irrigated unit. The production from the total unit, both irrigated and nonirrigated, is combined to determine your yield for the purpose of determining the guarantee for the unit.); and

(2) Planting, fertilizing and harvesting are carried out in accordance with recognized good irrigated and nonirrigated farming practices for the area.

If you have a loss on any unit, production records for all harvested units must be provided. Production that is commingled between optional units will cause those units to be combined for the purpose of calculating an indemnity.

6. Notice of damage or loss.

The representative samples of unharvested safflowers as required in section 8 of the general crop insurance policy will be at least 10 feet wide and the entire length of the field.

7. Claim for indemnity.

a. The indemnity will be determined on each unit by:

(1) Multiplying the insured acreage by the production guarantee;

(2) Subtracting from that result the total production of safflowers to be counted;

(3) Multiplying the remainder by the price election; and

(4) Multiplying this result by your share.

b. The total production (in pounds) to be counted for a unit will include all harvested and appraised production.

(1) Mature safflower production which otherwise is not eligible for quality adjustment will be reduced .12 percent for each .1 percentage point of moisture in excess of 8.0 percent.

(2) Mature safflower production will be adjusted for quality when, due to insurable causes, such production has a test weight below 35 pounds per bushel or has seed damage in excess of 25 percent as determined by a grader licensed to grade safflowers by the Federal Grain Inspection Service.

(3) Mature safflower production which is eligible for quality adjustment, due to insurable causes, will be adjusted by:

(a) Dividing the value per pound of damaged safflowers by the average market price per pound for undamaged safflowers; and

(b) Multiplying the result by the number of pounds of such safflowers.

For the purpose of this insurance, the applicable price for damaged safflowers will be not less than 50 percent of the average market price for undamaged safflowers.

(4) Any harvested production from other volunteer plants growing in the safflowers will be counted as safflowers on a weight basis.

(5) Appraised production to be counted will include:

(a) Unharvested production on harvested acreage and potential production lost due to unisured causes;

(b) Not less than the guarantee for any acreage which is abandoned or put to another use without our prior written consent or damaged solely by an uninsured cause; and

(c) Any appraised production on unharvested acreage.

(6) Any appraisal we have made on insured acreage for which we have given written consent to be put to another use will be considered production unless such acreage is:

(a) Not put to another use before harvest of safflowers becomes general in the county and reappraised by us;

(b) Further damaged by an insured cause and reappraised by us; or

(c) Harvested.

8. Cancellation and termination date.

The cancellation and termination date for all states is April 15.

9. Contract changes.

The date by which contract changes will be available in your service office is December 31 preceding the cancellation date.

10. Meaning of terms.

a. "Harvest" means the completion of combining or threshing of safflowers on the unit.

b. "Value per pound of damaged safflowers" means the value of the damaged safflowers (test weight below 35 pounds per bushel or seed damage in excess of 25 percent) at the local market but not less than 50 percent of the average market price for undamaged safflowers.

Done in Washington, DC, on September 10, 1987.

E. Ray Fosse,

Manager, Federal Corp Insurance Corporation.

7 CFR Part 401

[Amdt. No. 14 Doc. No. 4766S]

General Crop Insurance Regulations; Sunflower Crop Endorsement

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Proposed rule.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) proposes to amend the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, by adding a new section, 7 CFR 401.124, to be known as the Sunflower Crop Endorsement. The intended effect of this rule is to provide the regulations and endorsement containing the provisions of crop insurance protection on sunflowers in an endorsement to the general crop insurance policy which contains the standard terms and

VOL
52
ISS
188
SE
29
1987
UMI

conditions common to most crops. The authority for the promulgation of this rule is contained in the Federal Crop Insurance Act, as amended.

DATE: Written comments, data, and opinions on this proposed rule must be submitted not later than October 29, 1987, to be sure of consideration.

ADDRESS: Written comments on this proposed rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447–3325.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established by Departmental Regulation 1512–1. This action constitutes a review as to the need, currency, clarity, and effectiveness of these regulations under those procedures. The sunset review date established for these regulations is August 1, 1992.

E. Ray Fosse, Manager, FCIC, (1) has determined that this action is not a major rule as defined by Executive Order 12291 because it will not result in: (a) An annual effect on the economy of $100 million or more: (b) major increases in costs or prices for consumers, individual industries, Federal, State, or local governments, or a geographical region; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets; and (2) certifies that this action will not increase the federal paperwork burden for individuals, small businesses, and other persons.

This action is exempt from the provisions of the Regulatory Flexibility Act; therefore, no Regulatory Flexibility Analysis was prepared.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.450.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR Part 3015, Subpart V, published at 48 FR 29115, June 24, 1983.

This action is not expected to have any significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact Statement is needed.

FCIC herewith proposes to add to the General Crop Insurance Regulations (7 CFR Part 401), a new section to be known as 7 CFR 401.124, the Sunflower Crop Endorsement, effective for the 1988 and succeeding crop years, to provide the provisions for insuring sunflowers.

Upon publication of 7 CFR 401.124 as a final rule, the provisions for insuring sunflowers contained therein will supersede those provisions for insuring sunflowers contained in 7 CFR Part 428 the Sunflower Crop Insurance Regulations, effective with the beginning of the 1988 crop year. The present policy contained in 7 CFR Part 428 will be terminated at the end of the 1987 crop year and later removed and reserved. FCIC will propose to amend the title of 7 CFR Part 428 by separate document so that the provisions therein are effective only through the 1987 crop year.

Minor editorial changes have been made to improve compatibility with the new general crop insurance policy. These changes do not affect meaning or intent of the provisions. In adding the new Sunflower Endorsement to 7 CFR Part 401 as outlined below, FCIC is proposing changes in section 5 as follows:

1. Add unit division guidelines and add a clause to specify that division of units may result in the insured paying additional premium for guideline unit division in accordance with actuarial studies which show an increased risk when units are divided. Add language to specify that nonirrigated corners of a center pivot irrigation system are part of the irrigated unit. The production from the total unit, both irrigated and nonirrigated, is combined to determine your yield for the purpose of determining the guarantee for the unit.

FCIC is soliciting public comment on this proposed rule for 30 days following publication in the **Federal Register**. Written comments received pursuant to this proposed rule will be available for public inspection in the Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250, during regular business hours, Monday through Friday.

List of Subjects in 7 CFR Part 401

General crop insurance regulations, Sunflower crop endorsement.

Proposed Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 et seq.), the Federal Crop Insurance Corporation proposes to amend the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1988 and succeeding crop years, as follows:

PART 401—[AMENDED]

1. The authority citation for 7 CFR Part 401 continues to read as follows:

Authority: Secs. 506, 516, Pub. L. 75–430, 52 Stat. 73, 77, as amended (7 U.S.C. 1506, 1516).

2. 7 CFR Part 401 is amended to add a new section to be known as 7 CFR 401.124 Sunflower Seed Crop Endorsement, effective for the 1988 and Succeeding Crop Years, to read as follows:

§ 401.124 Sunflower seed crop endorsement.

The provisions of the Sunflower Seed Crop Insurance Endorsement for the 1988 and subsequent crop years are as follows:

Federal Crop Insurance Corporation

Sunflower Seed Crop Endorsement

1. Insured crop.

a. The crop insured will be sunflower seed ("sunflowers").

b. Unless otherwise provided by the actuarial table, insurance will attach only on acreage initially planted in rows far enough apart to permit cultivation; but, if such insured acreage is destroyed and replanted by broadcasting, drilling, or in rows too close to permit cultivation, it will be considered insured acreage.

2. Causes of loss.

The insurance provided is against unavoidable loss of production resulting from the following causes occurring within the insurance period:

a. Adverse weather conditions;
b. Fire;
c. Insects;
d. Plant disease;
e. Wildlife;
f. Earthquake;
g. Volcanic eruption; or
h. If applicable, failure of the irrigation water supply due to an unavoidable cause occurring after the beginning of planting;

unless those causes are excepted, excluded, or limited by the actuarial table or section 9 of the general policy.

Annual premium.

a. The annual premium is computed by multiplying the production guarantee times the price election, times the premium rate, times the insured acreage, times your share at the time of planting.

b. If you are eligible for a premium reduction in excess of 5 percent based on your insuring experience through the 1984 crop year under the terms of the experience table contained in the sunflower policy in effect for the 1985 crop year, you will continue to receive the benefit of that reduction subject to the following conditions:

(1) No premium reduction will be retained after the 1990 crop year;

(2) The premium reduction will not increase because of favorable experience;

(3) The premium reduction will decrease because of unfavorable experience in accordance with the terms of the policy in effect for the 1985 crop year;

(4) Once the loss ratio exceeds .80, no further premium reduction will apply; and

(5) Participation must be continuous.

4. Insurance period.

The calendar date for the end of insurance period is November 30 of the calendar year in which the sunflowers are normally harvested.

5. Unit division.

Sunflower acreage that would otherwise be one unit, as defined in section 17 of the general crop insurance policy, may be divided into more than one unit if you agree to pay additional premium as provided for by the actuarial table and if for each proposed unit you maintain written verifiable records of planted acreage and harvested production for at least the previous crop year; and either

a. Acreage planted to insured Sunflowers is located in separate legally identifiable sections or, in the absence of section descriptions the land is identified be separate ASCS Farm Serial Numbers, provided:

(1) The boundaries of the section of Farm Serial Number are clearly identified, and the insured acreage can be easily determined; and

(2) The safflowers are planted in such a manner that the planting pattern does not continue into the adjacent section or Farm Serial Number; or

b. The acreage planted to sunflowers is located in a single section or Farm Serial Number and consists of acreage on which both an irrigated and nonirrigated practice are carried out, provided:

(1) Sunflowers planted on irrigated acreage does not continue into nonirrigated acreage in the same rows or planting pattern (Nonirrigated corners of a center pivot irrigation system are part of the irrigated unit. The production from the total unit, both irrigated and nonirrigated, is combined to determine your yield for the purpose of determining the guarantee for the unit.); and

(2) Planting, fertilizing and harvesting are carried out in accordance with recognized irrigated and nonirrigated farming practices for the area.

If you have a loss of any unit, production records for all harvested units must be provided. Production that is commingled between optional units will cause those units to be combined.

6. Notice of damage or loss.

The representative samples of unharvested sunflowers as required in section 8 of the general crop insurance policy will be at least 10 feet wide and the entire length of the field.

7. Claim for indemnity.

a. The indemnity will be determined on each unit by:

(1) Multiplying the insured acreage by the production guarantee;

(2) Subtracting therefrom the total production of sunflowers to be counted (see section 9e);

(3) Multiplying the remainder by the price election; and

(4) Multiplying this result by your share.

b. The total production (in pounds) to be counted for a unit will include all harvested and appraised production.

(1) Mature sunflower production (quantity) which otherwise is not eligible for quality adjustment will be reduced .12 percent for each .1 percentage point of moisture in excess of 10 percent; or

(2) Mature sunflower production which, due to insurable causes, has a test weight below 25 pounds per bushel for oil type sunflowers or below 22 pounds per bushel for non-oil type sunflowers will be adjusted by:

(a) Dividing the value per pound by the price per pound of No. 2 sunflowers; and

(b) Multiplying the result by the number of pounds of insured sunflowers.

The applicable price for No. 2 sunflowers will be the local market price on the earlier of the day the loss is adjusted or the day the sunflowers are sold.

(3) Any harvested production from other crops growing in the sunflowers will be counted as sunflowers on a weight basis.

(4) Appraised production to be counted will include:

(a) Potential production lost due to uninsured causes and failure to follow recognized good sunflower farming practices;

(b) Not less than the guarantee for any acreage which is abandoned or put to another use without our prior written consent or damaged solely by an uninsured cause; and

(c) Any unharvested production or harvested or unharvested acreage.

(5) Any appraisal we have made on insured acreage and given written consent for that acreage to be put to another use will be considered production unless such acreage is:

(a) Not put to another use before harvest of sunflowers becomes general in the county and reappraised by us;

(b) Further damaged by an insured cause and reappraised by us; or

(c) Harvested.

8. Cancellation and termination date.

The cancellation and termination date for all states is April 15.

9. Contract changes.

The date by which contract changes will be available in your service office will be December 31 preceding the cancellation date.

10. Meaning of terms.

a. "Harvest" means the completion of combining or threshing of sunflowers on the unit.

b. "Replanting" means performing the cultural practices necessary to replant insured acreage to sunflowers.

Done in Washington, DC, on September 10, 1987.

E. Ray Fosse,

Manager, Federal Crop Insurance Corporation.

BILLING CODE 3410-08-M

7 CFR Part 452

[Amdt. No. 1; Doc. No. 4746S]

Safflower Crop Insurance Regulations

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Proposed rule.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) proposes to amend the Safflower Crop Insurance Regulations (7 CFR Part 452), effective for the 1988 crop year. The intended effect of this proposed rule is to maintain the effectiveness of the present Safflower Crop Insurance Regulations only through the 1987 crop year. It is proposed in a separate document that the provisions currently contained in this Part will be issued as an endorsement to the newly issued 7 CFR Part 401, General Crop Insurance Regulations as § 401.123, Safflower Endorsement, effective for the 1988 and succeeding crop years. 7 CFR Part 401 is a standard set of regulations and a master policy for insuring most crops which substantially reduces: (1) The time involved in amendment revision; (2) the necessity of the present repetitious review process; and (3) the volume of paperwork processed by FCIC. The authority for the promulgation of this rule is the Federal Crop Insurance Act, as amended.

DATES: Written comments, data, and opinions on this proposed rule must be submitted not later than October 29, 1987, to be sure of consideration.

ADDRESSES: Written comments, data, and opinions on this proposed rule should be sent to Peter F. Cole, Office of the Manager, Federal Crop Insurance Corporation, Room 4090, South Building, U.S. Department of Agriculture, Washington, DC 20250. Written comments will be available for public inspection in the Office of the Manager, Room 4090 South Building, U.S. Department of Agriculture, Washington, DC during regular business hours, Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 447-3325.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures established by Departmental Regulation 1512-1. This action does not constitute a reivew as to the need, currency, clarity, and effectiveness of these regulations under those procedures. The sunset review date

VOL 52 ISS 188 SEP 29 1987 UMI

established for these regulations is November 1, 1991.

E. Ray Fosse, Manager, FCIC, (1) has determined that this action is not a major rule as defined by Executive Order 12291 because it will not result in: (a) An annual effect on the economy of $100 million or more; (b) major increases in costs or prices for consumers, individual industries, federal, State, or local government, or a geographical region; or (c) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets; and (2) certifies that this action will not increase the federal paperwork burden for individuals, small businesses, and other persons.

This action is exempt from the provisions of the Regulatory Flexibility Act; therefore, no Regulatory Flexibility Analysis was prepared.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.450.

This program is not subject to the provisions of Executive Order 12372 which requires intergovernmental consultation with State and local officials. See the Notice related to 7 CFR Part 3015, Subpart V, published at 48 FR 29115, June 24, 1983.

This action is not expected to have significant impact on the quality of the human environment, health, and safety. Therefore, neither an Environmental Assessment nor an Environmental Impact State is needed.

Background

FCIC has published over 40 policies to cover insurance on that many different crops. Many of the regulations and policies contain identical language, which, if changed requires that over 40 different policies be changed, both in the Code of Federal Regulations (CFR) and the printed policy language. This repetition of effort is both inefficient and expensive. FCIC, therefore, has published in 7 CFR Part 401, one set of regulations and one master policy to contain that language which is identical in most of the policies and regulations.

As revisions on individual policies are necessary, FCIC proposes to publish a "crop endorsement" which will contain the language of the policy unique to that crop, and any exceptions to the master policy language necessary for that crop. When an endorsement is published as a section to Part 401, effective for a subsequent crop year, the present policy contained in a separate part of Chapter IV will be terminated at the end of the crop year then in effect.

In order to clearly establish that 7 CFR Part 452 will be effective only through the end of the 1987 crop year, FCIC herein proposes to amend the subpart heading of these regulations to specify that such will be the case.

It is proposed that the new Safflower Endorsement will be published as an endorsement to 7 CFR Part 401 § 401.123, Safflower Endorsement), and become effective for the 1988 and succeeding crop years. Upon final publication, the provisions of the Safflower Crop Insurance Regulations, now contained in 7 CFR Part 452, would be superseded. Therefore, FCIC proposes to amend the subpart heading to provide that 7 CFR Part 452 be effective for the 1987 crop year.

List of Subjects in 7 CFR Part 452

Crop insurance, Safflower.

Proposed Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 et seq.), the Federal Crop Insurance Corporation proposes to amend the Subpart heading to the Safflower Crop Insurance Regulations (7 CFR Part 452), as follows:

PART 452—[Amended]

1. The Authority citation for 7 CFR Part 452 continues to read as follows:

Authority: Secs. 506, 516, Pub. L. 75–430, 52 Stat. 73, 77, as amended (7 U.S.C. 1506, 1516).

2. The Subpart heading in 7 CFR Part 452 is revised to read as follows:

Subpart—Regulations for the 1987 Crop Year.

Done in Washington, DC on September 2, 1987.

E. Ray Fosse,

Manager, Federal Crop Insurance Corporation.

BILLING CODE 3410–08–M

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Part 701

Federal Credit Union Field of Membership and Chartering Policy

AGENCY: National Credit Union Administration (NCUA).

ACTION: Request for comments.

SUMMARY: The NCUA Board is considering certain changes to its policies on chartering new Federal credit unions (FCU's) and amendments to the charters of existing Federal credit unions. The Board requests public comment on these changes. Specifically, the Board requests comment on whether it should establish a standard Federal credit union charter amendment to permit Federal credit unions to add occupational groups of 300 or less to their fields of membership without prior NCUA approval. The Board also seeks comment on whether the minimum number of potential members for a new charter should be increased and whether Investigation Report Forms for FCU charter applicants should be revised.

DATE: Comments must be received on or before November 27, 1987.

ADDRESS: Send comments to Becky Baker, Secretary, NCUA Board, National Credit Union Administration, 1776 G Street, NW., Washington, DC 20456.

FOR FURTHER INFORMATION CONTACT: H. Allen Carver, NCUA, Regional Director, Region IV, 230 S. Dearborn, Suite 3346, Chicago, Ill. 60604, telephone: (312) 886–9697 or Hattie Ulan, NCUA, Office of General Counsel, 1776 G Street, NW., Washington, DC 20456, telephone: (202) 357–1030.

SUPPLEMENTARY INFORMATION: NCUA's Interpretive Ruling and Policy Statement 84–1 (IRPS 84–1) (*see* 49 FR 46536, Nov. 27, 1984), entitled Membership in Federla Credit Unions, is the principal directive for NCUA chartering and field of membership policy. For the past year, the chartering staffs of NCUA's Regional offices have reviewed NCUA's chartering and field of membership policies. As a result of that review, the NCUA Board requests comments on the proposed changes described below. If, after reviewing the comments, the Board determines to adopt final changes, a new Interpretive Ruling and Policy Statement will be issued that either supplements IRPS 84–1 or incorporates and supersedes it.

Charter Amendments—Field of Membership Expansions—Occupational Groups

Section 109 of the FCU Act (12 U.S.C. 1759) states, in part, that FCU membership "shall be limited to groups having a common bond of occupation or association, or to groups within a well-defined neighborhood, community or rural district * * *." The NCUA Board has interpreted the first part of this provision to allow more than one occupational or associational group to be included in the same field of membership on the condition that each group has its own common bond (*see*

IRPS 84–1). This policy is known as the select group field of membership expansion policy. As noted in IRPS 84–1, the addition of any occupational or associational group must be approved by the appropriate NCUA Regional Director.

A significant number of credit unions have used the select group expansion policy to broaden their base of operations and extend credit union services to new members. It is estimated that 78 percent of all select group expansions have involved groups of under 300 potential members. These expansions have brought credit union service to thousands of new members.

The NCUA Board believes the procedures currently being followed can be simplified to further facilitate select group expansions. Comment is requested on whether the NCUA Board should adopt a general charter amendment to allow FCU's to expand their fields of membership to select occupational groups of less than 300 persons within the FCU's operational area (defined as within 25 miles of the FCU's main or any branch office) without the prior approval of the appropriate NCUA Regional Director. The amendment would be limited to occupational groups since these can readily be identified by FCU's and NCUA. An FCU would be required to apply to the Regional Director to adopt the general field of membership charter amendment. Approval of the amendment would be based on the overall financial and operational soundness of the FCU. An FCU would generally have to possess a CAMEL rating of 1 or 2 to qualify. Once NCUA approved the amendment for a particular FCU, the FCU could add select occupational groups of 300 or less to its field of membership without further action on the part of NCUA. Select groups would apply in writing to the FCU stating the name of the group, its location, number of employees, and a statement that credit union service is not available to the group. The FCU would maintain a permanent file for review by NCUA during examinations on all written requests from groups added to its field of membership pursuant to this amendment. NCUA would reserve the right to revoke or suspend the amendment for any FCU and would notify the FCU in writing of such revocation or suspension. Field of membership expansion requests for occupational groups exceeding 300 and for all associational groups would continue to be handled by submitting the request to the NCUA Regional Director for approval. (*All* field of membership expansion requests by FCU's without the standard charter amendment would continue to be handled by submitting the request to the NCUA Regional Director for approval.)

Chartering Standards—All FCU's—Minimum Membership

NCUA requires that organizers of an FCU show that a minimum number of potential members exists before an FCU can be chartered. These potential member requirements are found in NCUA's 1980 *Chartering and Organizing Manual for Federal Credit Unions* and are as follows: 200 employees for an occupational charter; 300 members for an associational charter, and 1000 residents for a community charter. Experience has shown that these minimums are unrealistically low in today's financial environment.

A minimum potential membership base is necessary if an FCU is to have a realistic chance of becoming a viable financial institution. The NCUA Board believes that, as a guideline, the minimum potential base should be 2,000 members for all three types of charters. This would not preclude new charters for groups that fall below the minimum, but it would require the organizers to substantiate that a smaller group has the ability to support and operate a successful credit union and provide needed and beneficial services to its members. In other words, the economic advisability of establishing the credit union would become a more critical factor for a group that does not meet the minimum guideline. The NCUA Board is therefore requesting comment on whether the minimum potential membership should be raised to 2,000 for all types of charters.

Investigation Report Forms

Currently, a separate Investigation Report Form exists for each type of FCU charter (NCUA Forms 4001, 4002, and 4003). The NCUA Board is considering replacement of the three forms with one form and revision to place greater emphasis on proof of economic feasibility. The revised form would require a survey of potential membership interest and pledges to participate in the proposed FCU. Further, the Board believes that a thorough business plan, as well as a formal investigation of the subscribers, prospective officials and key employees, should be required for every FCU charter applicant. The NCUA Board request comment on these proposed policy changes.

By the National Credit Union Administration Board on September 9, 1987.

Becky Baker,

Secretary of the Board.

[FR Doc. 87–22413 Filed 9–28–87; 8:45 am]

BILLING CODE 7535–01–M

DEPARTMENT OF THE TREASURY

Bureau of Alcohol, Tobacco and Firearms

27 CFR Part 6

[Notice No. 643]

Cost Adjustment Factor; "Tied House"

AGENCY: Bureau of Alcohol, Tobacco and Firearms (ATF), Department of the Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: Current regulations permit industry members to provide certain things of value to retailers, subject to fixed dollar limitations. Further, by regulation, these dollar limitations are adjusted *annually*, based on changes in the Bureau of Labor Statistics' consumer price index (CPI). Since the dollar limitation adjustments over the past several years have been minimal, and in order to prevent confusion within the industry as to what the specific dollar limitations are, ATF is proposing to amend the regulations by providing that the cost adjustment would be made when the one year change or the multiyear change in the CPI, from December to December, would require the previously published dollar limitation to be adjusted by at least ten percent.

DATE: Written comments must be received on or before October 29, 1987.

ADDRESS: Send written comments to: Chief, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, P.O. Box 385, Washington, DC 20044–0385, Attn: Notice No. 643.

FOR FURTHER INFORMATION CONTACT: James P. Ficaretta, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, Ariel Rios Federal Building, 1200 Pennsylvania Avenue, NW., Washington, DC 20226, (202–566–7626).

SUPPLEMENTARY INFORMATION:

Background

Section 5(b)(3) of the Federal Alcohol Administration Act (FAA Act), 27 U.S.C. 205(b)(3), prohibits industry members from "furnishing, giving, renting, lending, or selling to the retailer, any equipment, fixtures, signs, supplies, money, services, or other thing of value * * *",

VOL
52
ISS
188
SE
29
1987
UMI

assuming all other elements of the statute are present. This section goes on to state, however, that the Secretary of the Treasury may, by regulation, provide exceptions to these inducements.

The exceptions to section 5(b)(3) are found in 27 CFR Part 6, "Tied-House." Industry members may provide certain things of value to retailers, subject to the conditions and limitations prescribed in Subpart D of Part 6. In that regard, industry members who wish to furnish, give, rent, loan, or sell product displays (e.g., wine racks, bins, etc.) or retailer advertising specialties (e.g., trays, coasters, etc.) to retailers are subject to dollar limitations specified in §§ 6.83 and 6.85, respectively. Industry members making payments for advertisements in programs or brochures issued by retailer associations at a convention or trade show are also subject to dollar limitations, as prescribed in § 6.100.

On September 23, 1980, ATF published a final rule in the **Federal Register**, T.D. ATF–74 (45 FR 63242), providing for, among other things, a new § 6.82. This section authorized adjustments to the dollar limitations prescribed in §§ 6.83, 6.85, and 6.100. The adjustments would be made on an annual basis, and would be determined by a "cost adjustment factor" equal to the change in the Bureau of Labor Statistics' consumer price index. Adjusted dollar limitations are established each January using the consumer price index for the preceding December.

Currently, the dollar limitation for "Product Displays" (§ 6.83(c)) is $128.00 per brand. Similarly, the dollar limitation for "Retailer Advertising Specialties" (§ 6.85(b)) is $63.00 per brand, and the "Participation in Retail Association Activities" (§ 6.100(e)) is $128.00 per year. These adjusted dollar limitations were enumerated in the March 4, 1987 issue of the **Federal Register** (52 FR 6644).

The dollar limitation adjustments are published annually in the **Federal Register**, as a General Notice. Unfortunately, since the adjustments are published as a notice, and not as a final rule (Treasury decision), they do not appear in the annually updated revision of the Code of Federal Regulations (CFR). Thus, ATF believes that there may be confusion within the industry as to what the current dollar limitations are. The dollar limitations prescribed for §§ 6.83, 6.85, and 6.100 of the most recent edition of the CFR have not been changed since they were established back in September 1980. If the proposed amendments are adopted, ATF will then amend the applicable regulations, as necessary, to reflect the revised dollar limitations. Thus, the current dollar limitations will appear in the annually updated revision of the CFR.

In addition, over the past several years the annual change in the consumer price index has been minimal to where, most recently, it was only 1.1 percent higher in December 1986 than in December 1985.

With the above in mind, ATF is proposing to amend section 6.82, by providing that the cost adjustment would be made when the one year change or the multiyear change in the CPI, from December to December, would require the previously published dollar limitation to be adjusted by at least ten percent.

For example, the consumer price index for December 1986 was 331.1, 1.1 percent higher than in December of the preceding year. The dollar limitations in §§ 6.83, 6.85, and 6.100 were adjusted accordingly, to $128, $63, and $128, respectively. If adopted as proposed, a cost adjustment would be made when the consumer price index changed at least ten percent. Thus, when the CPI changed to 364.2 (ten percent above 331.1), or 298.0 (ten percent less than 331.1), the dollar limitations in §§ 6.83, 6.85, and 6.100 would be increased, or decreased, by ten percent.

In addition, the dollar limitation would be rounded to the nearest dollar. For example, if the dollar amount was calculated to be $140.80, it would then be rounded up to $141.

Further, if the one year change or multiyear change in the CPI exceeds ten percent, the dollar limitation would be adjusted accordingly. Thus, if the one year change or multiyear change in the CPI was 12%, the dollar limitation amounts prescribed in §§ 6.83, 6.85, and 6.100 would be adjusted by 12%.

Executive Order 12291

In compliance with Executive Order 12291, 46 FR 13193 (1981), ATF has determined that this proposal is not a major rule since it will not result in:

(a) An annual effect on the economy of $100 million or more;

(b) A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or

(c) Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Regulatory Flexibility Act

The provisions of the Regulatory Flexibility Act relating to an initial and final regulatory flexibility analysis (5 U.S.C. 603, 604) are not applicable to this proposal because the notice of proposed rulemaking, if promulgated as a final rule, will not have a significant economic impact on a substantial number of small entities. The proposal will not impose, or otherwise cause, a significant increase in reporting, recordkeeping, or other compliance burdens on a substantial number of small entities. The proposal is not expected to have significant secondary or incidental effects on a substantial number of small entities.

Accordingly, it is hereby certified under the provisions of section 3 of the Regulatory Flexibility Act (5 U.S.C. 605(b)), that this notice of proposed rulemaking, if promulgated as a final rule, will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

The provisions of the Paperwork Reduction Act of 1980, Pub. L. 96–511, 44 U.S.C. Chapter 35, and its implementing regulations, 5 CFR Part 1320, do not apply to this notice because no requirement to collect information is proposed.

Public Participation

ATF requests comments from all interested persons. Comments received on or before the closing date will be carefully considered. Comments received after that date will be given the same consideration if it is practical to do so, but assurance of consideration cannot be given except as to comments received on or before the closing date.

ATF will not recognize any material as confidential. Comments may be disclosed to the public. Any material which the commenter considers to be confidential or inappropriate for disclosure should not be included in the comment. The name of the person submitting the comment is not exempt from disclosure.

During the comment period, any person may request an opportunity to present oral testimony at a public hearing. However, the Director reserves the right, in light of all circumstances, to determine if a public hearing is necessary.

Disclosure

Copies of this notice and the written comments will be available for public inspection during normal business hours at: ATF Reading Room, Disclosure Branch, Room 4412, Ariel Rios Federal Building, 1200 Pennsylvania Avenue, NW, Washington, DC.

Drafting Information

The author of this document is James P. Ficaretta, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms.

List of Subjects in 27 CFR Part 6

Advertising, Alcohol and alcoholic beverages, Antitrust, Credit, and Trade practices.

Authority and Issuance

27 CFR Part 6—"TIED-HOUSE" is amended as follows:

PART 6—[AMENDED]

Paragraph 1. The authority citation for 27 CFR Part 6 continues to read as follows:

Authority: 27 U.S.C. 205.

Par. 2. Section 6.82 is amended by revising the second sentence in paragraph (a) to read as follows:

§ 6.82 Cost Adjustment factor.

(a) *General.* * * * The Director, Bureau of Alcohol, Tobacco and Firearms, shall establish the adjusted dollar limitation when the adjusted one year change or multiyear change (as determined by a series of cost adjustment factors) would require the previously published dollar limitation to be adjusted by at least ten percent.

* * * * * *

Signed: August 28, 1987.

Stephen E. Higgins,

Director.

Approved: September 16, 1987.

John P. Simpson,

Acting Assistant Secretary (Enforcement).

27 CFR Part 9

[Notice No. 644; Re: Notice No. 620]

Stags Leap District Viticultural Area; Public Hearing

AGENCY: Bureau of Alcohol, Tobacco and Firearms (ATF), Treasury.

ACTION: Notice of a public hearing on a proposed rule.

SUMMARY: This notice announces the time and place of a public hearing to be held by the Bureau of Alcohol, Tobacco and Firearms concerning the establishment of a viticultural area in Napa County, California, to be known as "Stags Leap District." In Notice No. 620 (52 FR 4350) published in the **Federal Register** on February 11, 1987, ATF detailed a proposal for the establishment of this viticultural area and requested comments. In consideration of the comments received, ATF has determined that the public interest would be best served by the holding of a public hearing on this matter. The purpose of the hearing is to gather additional information and to receive evidence with respect to the establishment of this viticultural area, the proposed boundaries, and other possible boundaries.

DATES: The hearing will be held on December 1 and 2, 1987, at 9:30 a.m. [an evening session may be held if necessary at 7:00 p.m.].

Persons desiring to make oral comments at the hearing should submit a letter notifying ATF of their intent to comment on or before November 6, 1987. Written comments must be received on or before December 15, 1987.

ADDRESS: The hearing will be held at the: Veterans Home of California (Lincoln Auditorium—Lee Lounge), Veterans Home Station, Yountville, CA 94599.

Letter notifications and written comments are to be submitted to: Chief, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, P.O. Box 385, Washington, DC 20044-0385, Attn: Notice No. 644.

FOR FURTHER INFORMATION CONTACT: Jim Ficaretta, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, Washington, DC 20226, (202-566-7626).

SUPPLEMENTARY INFORMATION:

Background

On February 11, 1987, ATF published a notice of proposed rulemaking, No. 620 (52 FR 4350), in the **Federal Register**. In the notice, a proposal was made for the establishment of a viticultural area in Napa County, California, to be known as "Stags Leap District."

As specified in the notice, the proposed viticultural area is located east of the city of Yountville, and approximately seven miles north of the city of Napa. It is bounded on the north by a group of adjacent hills that are located just below the Grant Body (Yountville Cross) Road. The western boundary is the Napa River, and the eastern boundary is the Stags Leap promontory and its adjacent hills.

In response to the notice of proposed rulemaking, ATF received two comments. One comment, submitted by Mr. Stanley Anderson, a winery and vineyard owner, included a request to extend the northern boundary some 500 yards, to the Yountville Cross Road. Mr. Anderson's comment included letters of support from several vineyard owners who are also located in the area just south of the Yountville Cross Road. With the exception of the northern boundary, Mr. Anderson supported the other boundaries as proposed in the notice.

Hearing

Based on the information presented in the comments, it is apparent that disagreement exists on a boundary for the viticultural area. In addition, ATF desires to obtain more information on the establishment of this viticultural area, the proposed boundaries, and other possible boundaries.

For these reasons, ATF has determined that a hearing is necessary and would serve the public interest. The purpose of the hearing is to obtain evidence for the record and to afford interested parties an opportunity to express their views. Evidence obtained and views expressed will be considered in the preparation of any final rule on this matter.

Participation

Any person desiring to participate in the hearing should notify ATF by submitting a letter specifying the name, address and daytime telephone number of the individual who will present oral comments. Any preference a person may have as to the time of day for presentation of comments should also be stated. The letter must be accompanied by an outline which briefly summarizes the topics the commenter will discuss and the information to be presented. Each topic to be discussed should be separately numbered and each numbered topic should specify the information to be presented. Assurance of having the opportunity to be heard is given only to those persons notifying ATF prior to the scheduling cutoff date of November 6, 1987.

Any person unable to attend the hearing or who prefers not to present oral comments may submit written comments before or after the hearing. ATF will accept written comments until December 15, 1987. In written comments, each topic to be discussed should be separately numbered and each numbered topic should specify the factual basis supporting the views, data, or arguments presented. All written comments received will be considered in the development of a decision on this matter.

VOL

1987
UMI

General Information on Hearing Procedures

The hearing will be conducted under the procedural rules contained in 27 CFR 71.41(a)(3) and will be open to the public, subject to the limitations of space. In the event attendance exceeds available seating space, persons scheduled to present oral comments will be given preference in respect to admission. Time limitations make it necessary to limit the length of oral presentations to ten (10) minutes. Commenters will not be permitted to trade their time to obtain a longer presentation period. However, the hearing officer may allow any person additional time after all other commenters have been heard. To the extent that time is available after presentation of oral comments by those who are scheduled to comment, others will be given an opportunity to be heard.

In order to insure that ATF will have the full benefit of their views even if time constraints limit an oral presentation, persons presenting oral comments are urged to supplement their oral statement with a more complete written statement. A written statement submitted to the hearing officer at the time of presentation of the oral statement will be considered part of the hearing record.

After making an oral presentation, a person should be prepared to answer questions from the hearing panel on not only the topics presented but also on matters relating to any written comments which he or she has submitted. Other persons will not be permitted to question a commenter. However, questions may be submitted, in writing, to the hearing officer who will evaluate their relevance. If the hearing officer determines that elicitation of further discussion would be beneficial, they may be presented to a commenter for a response.

Persons will be scheduled, if possible, according to the time preference mentioned in their letter notification to ATF. ATF will confirm by telephone the time a person is scheduled to present oral comments. A letter notification received by ATF prior to the cutoff date ensures that a person will be scheduled to comment. Letter notifications received after the cutoff date and up to one (1) working day preceding the hearing, will be honored to the extent practicable on a first-come-first-serve basis. Any scheduled commenter not present at the hearing when called will lose his or her place in the scheduled order, but will be recalled after all other scheduled commenters have been heard.

ATF will prepare an agenda listing the persons scheduled to comment and copies will be available at the hearing. In addition, copies of the petitions and all received written comments will be available at the hearing for public inspection.

Comments

Any person participating in the hearing or submitting written comments may present such data, views, or arguments as they desire. Comments that provide the factual basis supporting the views or suggestions presented will be particularly helpful in developing a reasoned regulatory decision on this matter. However, comments consisting of mere allegations or denials are counterproductive to the rulemaking process.

ATF specifically requests that commenters consider making comments on the following questions:

1. What are the historical and current boundaries (north, south, east, west) of the area known as "Stags Leap District?"

2. Why, and how, should the boundaries as proposed in Notice No. 620 be modified?

3. What geographical features, particularly in the north, support the boundaries as proposed in Notice No. 620; as suggested by Mr. Anderson, or any other boundaries?

4. Is there evidence that the name of the proposed viticultural area is locally or nationally known as including the area north to the Yountville Cross Road, or even beyond?

5. What do wineries outside of the proposed area consider to be the "Stags Leap District" grape growing area?

6. What name other than "Stags Leap District" has been applied to the area as proposed in Notice No. 620, or to the extended area to the Yountville Cross Road?

7. To what extent have wineries in the area proposed in Notice No. 620, as well as those in the area north to the Yountville Cross Road, identified themselves as being in "Stags Leap District?"

8. To what extent have grapes grown in the proposed area, or the extended area north of the boundaries proposed in Notice No. 620, been or not been marketed as "Stags Leap District" grapes?

27 CFR Part 9

[Notice No. 642]

Warren Hills Viticultural Area

AGENCY: Bureau of Alcohol, Tobacco and Firearms, Department of the Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Bureau of Alcohol, Tobacco and Firearms (ATF) is considering the establishment of a viticultural area in northwestern New Jersey, to be known as "Warren Hills." This proposal is the result of a petition submitted by a group of wineries and grape growers located in the proposed area. The establishment of viticultural areas and the subsequent use of viticultural area names in wine labeling and advertising will enable winemakers to label wines more precisely and will help consumers to better identify the wines they purchase.

Comment date: Written comments must be received by November 13, 1987.

ADDRESSES: Send written comments to: Chief, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, P.O. Box 385, Washington, DC 20044-0385 (Notice No. 642). Copies of the petition, the proposed regulations, the appropriate maps, and the written comments will be available for public inspection during normal business hours at: ATF Reading Room, Office of Public Affairs and Disclosure, Room 4412, Ariel Rios Federal Building, 1200 Pennsylvania Avenue NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Steve Simon, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms, 1200 Pennsylvania Avenue NW., Washington, DC 20226; (202) 566-7626.

SUPPLEMENTARY INFORMATION:

Background

ATF regulations in 27 CFR Part 4 provide for the establishment of definite

viticultural areas. The regulations also allow the name of an approved viticultural area to be used as an appellation of origin on wine labels and in wine advertisements.

Part 9 of 27 CFR provides for the listing of approved American viticultural areas, the names of which may be used as appellations of origin.

Section 4.25a(e)(1), Title 27 CFR, defines an American viticultural area as a delimited grape-growing region distinguishable by geographical features. Section 4.25a(e)(2) outlines the procedures for proposing an American viticultural area. Any interested person may petition ATF to establish a grape-growing region as a viticultural area. The petition should include—

(a) Evidence that the name of the proposed viticultural area is locally and/or nationally known as referring to the area specified in the petition;

(b) Historical or current evidence that the boundaries of the viticultural area are as specified in the petition;

(c) Evidence relating to the geographical features (climate, soil, elevation, physical features, etc.) which distinguish the viticultural features of the proposed area from surrounding areas;

(d) A description of the specific boundaries of the viticultural area, based on features which can be found on United States Geological Survey (U.S.G.S.) maps of the largest applicable scale; and

(e) A copy of the appropriate U.S.G.S. map(s) with the boundaries prominently marked.

Petition

ATF has received a petition, prepared by Mr. Rudolf Marchesi of Alba Vineyard and submitted on behalf of a group of wineries and grape growers from Warren County, New Jersey. The group consists of Alba Vineyard, Marble Mountain Vineyards, Four Sisters Winery, Tamuzza Vineyards, and Mr. Daniel Campanelli (an individual grower). The petition proposes establishment of a viticultural area to be known as "Warren Hills." The proposed area would be located entirely within Warren County. The area contains approximately 226 square miles, within which there are approximately 77 acres planted to winegrapes. Three wineries are operating within the area. The proposed area is located a little to the north of the approved "Central Delaware Valley" viticultural area.

Geography of the Area

Geographically, the proposed area consists of a series of narrow, parallel valleys, formed by tributaries of the Delaware River. The petitioner submitted evidence that the area is distinguished from surrounding areas by soil, topography, and climatic conditions.

According to the petitioner, the "Warren Hills" soils are less acidic than those of some surrounding areas, "due to the nature of the bedrock." He explained that "The vineyard soils of the Warren Hills region are formed from Dolomitic Limestone which has a high concentration of calcium and magnesium," but that the soils of surrounding areas "are formed from shale and other sources." The relative pH values of vineyard soils within and to the north of the area are contrasted as follows:

"Warren Hills" soils	Soils to the north
Hazen Loam 5.6–7.8	Bath soils 4.5–6.5.
Annandale Gravely Loam 5.1–6.5.	Nassau soils 4.5–5.5.
Washington Loam 5.6–6.3	Swartswood soils 3.6–5.5.

The higher pH values of the "Warren Hills" soils indicate less acidity. Those values show that "Warren Hills" vineyard soils range from moderately acidic to slightly alkaline. Soils to the north and to the south are more acidic. Typical vineyard soils in the Central Delaware Valley viticultural area (south of the "Warren Hills") have been described, in soil surveys published by the U.S. Department of Agriculture, as: "Natural reaction is strongly acid," and "Natural reaction ranges from medium acid to strongly acid."

The soils to the northeast of the proposed viticultural area are also distinguishable. The northeastern boundary of the area corresponds generally to the terminal morraine of a glacial advance known as the "Wisconsin." According to the petitioner, there was once a large glacier, which covered the land to the northeast of the proposed area but did not extend into the area itself. When the glacier receded, it left behind some glacial deposits, which became mixed with the native soil, rendering it less suitable for viticulture. By contrast, the "Warren Hills" soil generally does not contain such glacial deposits. Westward, across the Delaware River, limestone soils like those of the "Warren Hills" reappear. However, the petitioner has indicated that they are less prominent there, and further, that the topography of that region is significantly different, so that the Delaware River does form a proper boundary, despite the similarity of soils. The farmland across the Delaware River lies mostly in a single broad valley (the Lehigh Valley); whereas the "Warren Hills" area contains about five narrower valleys. Those valleys run southwest to northeast; consequently, in the "Warren Hills" there are numerous south-facing or southeast-facing slopesides, which make the best vineyard sites. More direct exposure to sunlight creates microclimates with warmer than average temperatures, especially in winter. Further, the valleys of the "Warren Hills" create a desirable air crainage situation, in which cool air drains downward, away from the hillside vineyards. This feature is important in the spring and fall, when there may be a danger of untimely frost.

Another way in which the topography of the proposed area affects its viticulture is by channeling the prevailing southwest winds. Since the area's valleys parallel the wind direction, they form channels through which the winds may travel with minimal obstruction. The winds cool the vines on hot summer afternoons and reduce relative humidity. These effects, together with the favorable air drainage already mentioned, "assist in the control of mold and mildew on the vines," according to the petitioner. Topography also forms a basis for the northwestern boundary of the "Warren Hills," for that boundary marks the beginning of a more mountainous area: Kittatinny Mountain, a member of the Pocono chain. Similarly, the southeastern border of the proposed area reflects a topographical distinction that marks the boundary of two geological regions of New Jersey: The "Upland Valley" region (in which the "Warren Hills" lie) and the "Piedmont" region. The Piedmont's rolling hills contrast with the straight, narrow valleys of the "Warren Hills." (This distinction was previously cited by ATF in the rulemaking for the "Central Delaware Valley" viticultural area.) The petitioner also contrasted his proposed area with surrounding areas on the basis of climate. In particular, he noted that the eastern boundary of the area lies where the growing season drops off to less than 150 days. Inside the proposed area, the growing season "averages 175 frost-free days, but is often longer on selected sites," says the petitioner. This difference is significant for viticulture, because it means that certain late-ripening varieties, such as vidal blanc, seyval blanc, and cabernet sauvignon, could not be grown in the area to the east. Some of the climatic features that affect viticulture during the growing season are directly caused by the area's unique topography. The combination of southward-facing vineyard slopes and the funneling effect of the long, narrow valleys on the prevailing winds result in

"warm days and cool nights," which benefit the grapes, according to the petitioner.

Name of the Area

The petitioner submitted evidence that the area is locally known by the name "Warren Hills." Evidence included a page from the local telephone directory, listing the "Warren Hills Family Health Center." The petitioner also stated that there is a "Warren Hills High School" and a "Warren Hills Junior High School" in the area.

The Warren Hills High School draws students from most parts of the proposed viticultural area, according to the petitioner. The northern part of Warren County, outside the proposed area, is served by a different high school, named the "North Warren Regional High School." The Warren Hills Junior High is near the Warren Hills High School, and the two schools draw students from approximately the same area, the petitioner said.

The name "Warren Hills" derives from Warren County and from the proposed area's topography. The county was named in the early nineteenth century after a Revolutionary War patriot from the area who died in the Battle of Bunker Hill.

Boundaries of the Area

The proposed area is bounded by the Delaware River, the Musconetcong River, the Warren County/Sussex County line, and Paulins Kill (a stream). The boundaries may be found on 13 U.S.G.S. maps of the 7.5 minute series; namely, the Riegelsville, Easton, Bangor, Bloomsbury, Belvidere, Portland, High Bridge, Washington, Blairstown, Hackettstown, Tranquility, Flatbrookville, and Newton West Quadrangles. The boundaries would be as described in the proposed § 9.121.

Regulatory Flexibility Act

The provisions of the Regulatory Flexibility Act relating to an initial and final regulatory flexibility analysis (5 U.S.C. 603, 604) are not applicable to this proposal, because the Notice of Proposed Rulemaking, if promulgated as a final rule, will not have a significant economic impact on a substantial number of small entities.

The proposal is not expected to have significant secondary or incidental effects on a substantial number of small entities. Further, the proposal will not impose, or otherwise cause, a significant increase in the reporting, recordkeeping, or other compliance burdens on a substantial number of small entities.

Accordingly, it is hereby certified under the provisions of section 3 of the Regulatory Flexibility Act (5 U.S.C. 605(b)) that this Notice of Proposed Rulemaking, if promulgated as a final rule, will not have a significant economic impact on a substantial number of small entities.

Executive Order 12291

In compliance with Executive Order 12291 of Feb. 17, 1981, the Bureau has determined that this proposal is not a major rule since it will not result in:

(a) An annual effect on the economy of $100 million or more;

(b) A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographical regions; or

(c) Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Paperwork Reduction Act

The provisions of the Paperwork Reduction Act of 1980, Pub. L. 96-511, 44 U.S.C. Chapter 35, and its implementing regulations, 5 CFR Part 1320, do not apply to this Notice, because no requirement to collect information is proposed.

Public Participation—Written Comments

ATF requests comments concerning this proposed viticultural area from all interested persons. Further, while this document proposes possible boundaries for the "Warren Hills" viticultural area, comments concerning other possible boundaries for this area will be given consideration.

Comments received on or before the closing date will be carefully considered. Comments received after that date will be given the same consideration if it is practical to do so, but assurance of consideration cannot be given except as to comments received on or before the closing date.

ATF will not recognize any material or comments as confidential. Comments may be disclosed to the public. Any material which the commenter considers to be confidential or inappropriate for disclosure to the public should not be included in the comment. The name of the person submitting a comment is not exempt from disclosure. Any person who desires an opportunity to comment orally at a public hearing on these proposed regulations should submit his or her request, in writing, to the Director within the 45-day comment period. The request should include reasons why the commenter feels that a public hearing is necessary. The Director, however, reserves the right to determine, in light of all the circumstances, whether a public hearing will be held.

Drafting Information

The principal author of this document is Steve Simon, FAA, Wine and Beer Branch, Bureau of Alcohol, Tobacco and Firearms.

List of Subjects in 27 CFR Part 9

Administrative practice and procedures, Consumer protection, Viticultural areas, Wine.

Issuance

Accordingly, the Director proposes the amendment of 27 CFR Part 9 as follows:

PART 9—AMERICAN VITICULTURAL AREAS

Paragraph 1. The authority citation for Part 9 continues to read as follows:

Authority: 27 U.S.C. 205.

Par. 2. The table of sections in 27 CFR Part 9, Subpart C, is revised to add the title of § 9.121, to read as follows:

* * * * *

Subpart C—Approved American Viticultural Areas

Sec.

* * * * *

§ 9.121 Warren Hills.

* * * * *

Par. 3. Subpart C of 27 CFR Part 9 is amended by adding § 9.121, which reads as follows:

§ 9.121 Warren Hills.

(a) *Name.* The name of the viticultural area described in this section is "Warren Hills."

(b) *Approved maps.* The appropriate maps for determining the boundaries of the Warren Hills viticultural area are thirteen U.S.G.S. maps of the 7.5 minute series. They are titled:

(1) Riegelsville Quadrangle, Pennsylvania—New Jersey, 1956 (photorevised 1968 and 1973).

(2) Bloomsbury Quadrangle, New Jersey, 1955 (photorevised 1970).

(3) High Bridge Quadrangle, New Jersey, 1954 (photorevised 1970).

(4) Washington Quadrangle, New Jersey, 1954 (photorevised 1971).

(5) Hackettstown Quadrangle, New Jersey, 1953 (photorevised 1971, photoinspected 1976).

(6) Tranquility Quadrangle, New Jersey, 1954 (photorevised 1971).

(7) Newton West Quadrangle, New Jersey, 1954 (photorevised 1971).

(8) Flatbrookville Quadrangle, New Jersey—Pennsylvania, 1954 (photorevised 1971).

(9) Blairstown Quadrangle, New Jersey—Warren Co., 1954 (photorevised 1971).

(10) Portland Quadrangle, Pennsylvania—New Jersey, 1955 (photorevised 1984).

(11) Belvidere Quadrangle, New Jersey—Pennsylvania, 1955 , (photorevised 1984).

(12) Bangor Quadrangle, Pennsylvania—New Jersey, 1956 (photorevised 1968 and 1973).

(13) Easton Quadrangle, New Jersey—Pennsylvania, 1956 (photorevised 1968 and 1973).

(c) *Boundary*—(1) *General.* The Warren Hills viticultural area is located in Warren County, New Jersey. The beginning point of the following boundary description is the junction of the Delaware River and the Musconetcong River, at the southern tip of Warren County (on the Riegelsville map).

(2) *Boundary Description.* (i) From the beginning point, the boundary goes northeastward along the Musconetcong River for about 32 miles (on the Riegelsville, Bloomsbury, High Bridge, Washington, Hackettstown, and Tranquility maps) to the point where it intersects the Warren County/Sussex County line;

(ii) Then northwestward along that county line for about 10 miles (on the Tranquility, Newton West, and Flatbrookville maps) to Paulins Kill;

(iii) Then generally southwestward along Paulins Kill (on the Flatbrookville, Blairstown and Portland maps) to the Delaware River;

(iv) Then generally south-southwestward along the Delaware River (on the Portland, Belvidere, Bangor, Easton, and Riegelsville maps) to the starting point.

Approved: September 17, 1987.

Stephen E. Higgins,

Director.

BILLING CODE 4810-31-M

DEPARTMENT OF THE INTERIOR

Minerals Management Service

30 CFR Part 251

Geological and Geophysical Explorations of the Outer Continental Shelf

AGENCY: Minerals Management Service, Interior.

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise the timeframes for protection of proprietary geological and geophysical data and information collected in the Outer Continential Shelf (OCS). This revision would provide additional assurance that the party that incurred the cost to produce the data and information would have a reasonable opportunity for exclusive use of them during subsequent lease sales in the general area. Two different approaches are presented for the text of the rule, and comments are solicited concerning which approach should form the basis for the final rule.

DATE: Comments must be received or postmarked no later than October 29, 1987.

ADDRESS: Comments should be mailed or hand-delivered to the Department of the Interior; Minerals Management Service; 12203 Sunrise Valley Drive; Mail Stop 646, Room 6A110; Reston, Virginia 22091; Attention: Gerald D. Rhodes.

FOR FURTHER INFORMATION CONTACT: Gerald D. Rhodes, telephone: (703) 648-7816.

SUPPLEMENTARY INFORMATION: Section 26(c) of the OCS Lands Act requires that—

> The Secretary shall prescribe regulations to (1) assure that the confidentiality of privileged or proprietary information received by the Secretary under this section will be maintained, and (2) set forth the time periods and conditions which shall be applicable to the release of such information * * *.

Current regulations of §251.14 provide a 10-year period of time during which G&G data and information collected under a permit are not available to the public without the consent of the permittee.

The MMS has issued two proposed rules which address this situation. One was published in the **Federal Register** on June 30, 1983 (48 FR 30147), and the second on February 20, 1986 (51 FR 6133).

Following the publication of these notices and analysis of the comments received in response to the notices, MMS determined that to develop the best possible rule in the area of protection of geophysical data and information collected under a permit, MMS should issue another proposed rule prior to issuing a final rule. This determination was in part due to the fact that MMS is considering two approaches as to how a final rule should be structured and believes that the public should be provided with an opportunity to comment on the approaches. To provide MMS with the opportunity to revise the rules governing the period of protection of prelease geophysical data and information without releasing such proprietary geophysical data and information in the interim, a temporary rule which suspended the release of prelease proprietary geophysical data and information for a period of 1 year was published in the **Federal Register** on June 22, 1987 (52 FR 23440).

The MMS is now addressing comments which have been received in response to the two previous **Federal Register** Notices to the extent that those comments pertain to the subject of this proposed rule.

The notice which was published on June 30, 1983, proposed to extend the period of protection for G&G data and information collected either on a lease or under a permit. Timely comments were received in response to this publication from 20 interested parties—16 oil production/exploration companies, 1 trade/technical association, 2 States, and 1 support/service contractor.

The majority of the commenters (15 out of 20) favored the proposed change. The primary reason given for favoring the change was that the company developing costly data and information should be entitled to exclusive use of the data and information for at least one lease sale. Fewer commenters (5 out of 20) opposed the proposed change. The primary reason given for opposing the change was that it restricted the free flow of G&G data and information which are needed by the public for the development of offshore oil production and by the States to determine the impact of such development.

In developing this proposed rule change, MMS has considered both the needs of the public and the States for these data and information and the need to provide certain minimum protection for the party incurring the cost of obtaining the data.

Many commenters raised specific points concerning the proposed change in the regulations. Each of these comments was considered and is discussed below.

Several commenters questioned the use of a planning area as the criteria used to determine when a lease issuance or offering would allow release of geophysical information. Some commenters felt that this was too broad an area for the information to be relevant while other commenters felt that a planning area was not well enough defined. One commenter questioned what would be done for a

VOL
52
ISS
188
SE
29
1987
UMI

leasing moratorium in a portion of the planning area. In place of a planning area, commenters suggested criteria of various distances from 50 miles to as small as 10 miles. In one of the proposed alternatives, MMS has used the planning area as a criterion since geophysical data and information, in many cases, apply to a large area. Also, this approach takes into consideration the fact that the protection being provided through the amendment is additional protection over and above the terms currently provided for in MMS regulations. In some cases when lease sales are delayed, MMS will have used acquired information to determine that an area is not likely to contain hydrocarbons, or potential lessees will have used available information as the basis for decisions not to express an interest in an area. When these areas are omitted from a lease sale, it is because of the available information and, thus, there is little need to provide further protection to information concerning these areas. In the other proposed alternative, a set time is used; location of lease offerings is not a factor.

Two commenters suggested that, to avoid confusion when a 50-mile arc cuts through a lease, MMS clearly state that if any portion of an issued lease is within the specified distance, then the data will be released. The MMS agrees with this suggestion, and the proposed rule includes the suggested addition in cases where a distance criterion is used.

One commenter questioned why continental offshore stratigraphic test (COST) well data which previously were available within a few years will now be withheld for 20 years. Another commenter questioned the change from the wording "whichever is lesser" to the wording "whichever is later." In each of these cases, there appears to be some confusion as to when the later date applied and when the earlier date applied. With COST wells, the release date is proposed to be extended only when a lease sale has not occurred in the area. Under present regulations when COST well data are released in a few years, it is because a lease has been issued within 50 geographic miles of the well. The MMS has proposed the use of the 20-year limit (in place of the current 10-year limit) for those cases where a lease is not issued within 50 geographic miles of the well. This would prevent unlimited protection of data. The phrase "whichever is later" refers to the later between the minimum protection provided and the first lease issuance in the area. In response to these comments, the wording of the proposals has been changed to clarify the relationship of the events with regard to release of data and information.

One commenter felt that "data and information" in sections 26 (a) and (c) of the OCS Lands Act (OCSLA) are not the same as "data and information" in section 18(h) of the OCSLA. The basic treatment of data and information is an established part of current rules and is not being proposed for change. This amendment only covers the term of protection. The basic question of what data should be protected is outside the scope of this rulemaking.

There were comments both in favor of and against the concept of applying the amended rule to all data in the possession of MMS not just data submitted after the amended rule is effective. The MMS feels it is necessary to apply the amended rule to all data whether they were submitted before or after the amended rule becomes effective. The MMS realizes that many companies collected data with the understanding that a lease sale would occur prior to the end of the minimum time period for protection from disclosure but then anticipated lease sales were delayed. The MMS feels that to be fair to these companies, the proposed rule is written to apply to all data in the possession of MMS.

One commenter suggested that 60 days after issuance of a lease be changed to 6 months after issuance of a lease to allow for challenges to a lease. Another commenter suggested that the time should be 60 days after the lease is not longer subject to challenge. The MMS disagrees with these suggested changes. A challenge to a lease will normally occur before the lease is issued and will delay the issuance of the lease. The MMS does not feel that any additional time is necessary beyond the 60 days after issuance. Accordingly, portions of the proposed rule which rely on lease offerings do not allow time beyond a lease sale.

One commenter suggested that further protection of data is needed and suggested that data and information not be released until all immediately adjacent, unleased acreage has been offered for lease and until it is reoffered in cases where a lease bid has been rejected. The MMS has proposed two approaches which provide what MMS considers to be balanced proposal for protection of data and information.

Several commenters questioned particular wording used in the regulation. The MMS has modified the wording, where approriate, in the new proposal to improve clarity.

On February 20, 1986, MMS published a notice of proposed rulemaking in the Federal Register (51 FR 6133). At that time, MMS proposed to extend the period of time that G&G data and information would be protected from disclosure in those areas which the Secretary of the Interior (Secretary) designates as unavailable for leasing. It was proposed to extend the period of time that data and information are protected from disclosure for a period of time equal to the period of time during which the Secretary determined that the area was unavailable for leasing.

Fifteen timely comments were received. Twelve were from oil companies, 2 were from geophysical companies, and 1 was from a geophysical trade association. All commenters favored the proposed amendment although many of the commenters suggested further changes.

The main comment received related to the need for protection regardless of why a sale did not occur. The MMS agrees, and one of the proposed alternatives follows the proposed rule published June 30, 1983. In addition, the approach includes a provision to further extend the 10-year period of protection in areas subject to congressionally imposed leasing moratoria when a lease sale does not occur for 20 years or when a lease sale occurs in the planning area although the area to which the geophysical information applies is subject to the moratoria. The specification of a congressionally imposed leasing moratoria addresses commenters who expressed the feeling that the phrase "the area designated by the Secretary," which was used in the February 1986 proposed rule, should be replaced by a more rigid defintion. The phrase "congressionally imposed moratoria" provides a more rigid definition and has been used in the first alternative rule. This is not a factor in the second alternative rule.

The rules proposed on June 30, 1983, and February 20, 1986, would have applied both to data and information obtained under a permit and to data and information obtained under a lease. This proposed rule applies to data and information obtained under a permit. The MMS published a notice of final rulemaking on April 22, 1987 (52 FR 13235), which amended postlease rules regarding the period of protection of geological data and information. Comments concerning the period of protection of postlease proprietary data and information were addressed at that time.

The MMS is not considering two approaches to amend rules governing the period of protection of prelease geophysical data and information.

Interested parties are invited to submit written comments indicating whether the regulations should be amended, and if so, which of the two alternative approaches should be followed in the final rule. Specific comments should address both alternative approaches since either alternative rule 1 or alternative rule 2 may form the basis for the final rule. The two alternative approaches are summarized below.

Alternative Rule 1

1. Geophysical information collected under a permit, which is currently protected for 10 years, will be protected beyond 10 years when a lease sale has not occurred in the planning area in which the information was generated. This protection would extend until a lease is offered in the planning area and would not exceed 20 years. A provision is being proposed to allow the Director to release the information anytime after 10 years if certain criteria are met. These criteria allow for cases where the release is necessary to create a unitized lease, when a significant determination of hydrocarbons or an environmental hazard is made and is announced in a manner to minimize the release of data and information (i.e., the expected existence of hydrocarbons or an environmental hazard would be announced but the underlying data and information would not be released), or when the releases of the data and information is needed for specific scientific or research purposes by the Government and would further the national interest without unduly damaging the competitive position of the permittee. Comments are specifically invited concerning this criteria and whether other criteria would be more appropriate.

2. The maximum term of protection for geological data and information obtained from a deep stratigraphic test or geophysical information submitted in support of a deep stratigraphic test would be increased from 10 to 20 years. Data and information would be protected for this maximum period of time when a lease has not been issued within 50 miles of the well site. If such a lease has been issued, the data and information are released 60 days after the lease sale under current rules and would continue to be released at that time under the proposed rules.

3. The period of protection of geophysical data obtained under a permit would be increased from 10 years to 20 years. A provision is being proposed to allow the Director to release the data anytime after 10 years if certain criteria are met. These criteria allow for cases where the release is necessary to create a unitized lease, when a significant determination of hydrocarbons or an environmental hazard is made and is announced in a manner to minimize the release of data and information (i.e., the expected existence of hydrocarbons or an environmental hazard would be announced but the underlying data and information would not be released), or when the release of the data and information is needed for specific scientific or research purposes by the Government and would further the national interest without unduly damaging the competitive position of the permittee. Comments are specifically invited concerning this criteria and whether other criteria would be more appropriate.

4. An additional change has been proposed to provide an extended period of protection for data and information that apply to a portion of the OCS subject to congressionally imposed leasing moratoria. In instances where a lease sale in a planning area triggers the release of data or information, the lease sale would not be considered to have occurred for the purpose of releasing data or information if such data or information were collected in a portion of the OCS which is under a moratorium at the time of the lease sale. Also, the 20-year maximum allowable protection provided during which the portion of the OCS, where the data or information are generated, is covered by a moratorium.

5. For the purpose of streamlining the rule and improving the clarity of the rule, all provisions governing protection of data and information related to deep stratigraphic tests would be put into a new paragraph (e).

Alternative Rule 2

1. Geophysical data and information which are protected for 10 years under current regulations would be protected for 20 years. A provision is being proposed to allow the Director to release the data and information anytime after 10 years if certain criteria are met. These criteria allow for cases where the release is necessary to create a unitized lease, when a significant determination of hydrocarbons or an environmental hazard is made and is announced in a manner to minimize the release of data and information (i.e., the expected existence of hydrocarbons or an environmental hazard would be announced but the underlying data and information would not be released), or when the release of the data and information is needed for specific scientific or research purposes by the Government and would further the national interest without unduly damaging the competitive position of the permittee. Comments are specifically invited concerning this criteria and whether other criteria would be more appropriate.

2. After 20 years, the data and information would be released unless the permittee requested a 5-year extension of the period of protection. If an extension is requested, the data and information would be released at the end of the 5-year extension. The permittee would be allowed to request an extension of the period of protection during the last year of the 20-year period of protection and at least 90 days prior to the end of the original 20-year period of protection.

3. The maximum period of protection for geological data and information obtained from a deep stratigraphic test or geophysical information submitted in support of a deep stratigraphic test would be increased from 10 to 20 years. Data and information would be protected for this maximum period of time when a lease has not been issued within 50 miles of the well site. If such a lease has been issued, the data and information are released 60 days after the lease sale under current rules and would continue to be released at that time under the new rules.

4. For the purpose of streamlining the rule and improving the clarity of the rule, all provisions governing protection of data and information related to deep stratigraphic tests would be moved into a new paragraph (e).

The Department of the Interior (DOI) has determined that this action does not constitute a major Federal action affecting the quality of the human environment; therefore, an environmental impact statement is not required.

The DOI has also determined that this document is not a major rule under Executive Order 12291 because the annual economic effect is less than $100 million.

The DOI also certifies that the rule will not have a significant effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 610 *et seq.*) as the entities that engage in offshore activities are not considered small due to the technical complexity and financial resources necessary to conduct offshore activities.

This rule does not contain information collection requirements which require approval by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

Dated: August 21, 1987.

David W. Crow,

Acting Director, Minerals Management Service.

PART 251—[AMENDED]

Alternative Rule 1

For the reasons set forth above, 30 CFR Part 251 is proposed to be amended as follows:

1. The authority citation for Part 251 continues to read as follows:

Authority: Outer Continental Shelf Lands Act, 43 U.S.C. 1331 et seq., as amended, 92 Stat. 629; National Environmental Policy Act of 1969, 42 U.S.C. 4332 et seq. (1970); Coastal Zone Management Act of 1972, as amened, 16 U.S.C. 1451 et seq.

2. Section 251.14–1 is amended to remove paragraph(c)(3).

3. Section 251.14–1 is amended by revising paragraphs (d) (1) and (2) and (e), removing paragraph (d)(3), and adding paragraph (f) to read as follows:

§ 251.14–1 Disclosure of information and data to the public.

* * * * *

(d) * * *

(1) The Director shall make geophysical data available to the public 20 years after the issuance of the permit under which the data were obtained. However, the Director may release the data and information anytime after 10 years if the Director determines that (i) the data and information are needed to unitize operations on 2 or more leases, to ensure proper plans of development for competitive reservoirs, or to ensure operational safety, and the data and information are shown only to persons with an interest in the issue, (ii) a significant environmental hazard or indication of hydrocarbons has been encountered in an unleased area where the existence of hydrocarbon deposit has not previously been confirmed and the determination is announced in a manner to minimize the amount of proprietary data and information released, or (iii) the geophysical data and information are necesssary for specific scientific or research purposes for the Government and the release of such data and information would further the national interest without unduly damaging the competitive position of the permittee. When indications of hydrocarbons are announced, the data and information upon which the announcement is based shall not be released.

(2) The Director shall make available to the public processed geophysical information, reprocessed geophysical information, and interpreted geophysical information at the later of the following times: 10 years after the date of submission to the Dirctor, or 60 calendar days after the issuance of the first OCS oil and gas lease from a sale subsequent to the date of submission such that the sale offers tracts in the planning area in which the information was generated provided that no geophysical information shall be held more than 20 years. However, the Director may release the data and information anytime after 10 years if the Director determines that (i) the data and information are needed to unitize operations on 2 or more leases, to ensure proper plans of development for competitive reservoirs, or to ensure operational safety, and the data and information are shown only to persons with an interest in the issue. (ii) a significant, environmental hazard or indication of hydrocarbons has been encountered in an unleased area where the existence of hydrocarbon deposits has not previously been confirmed and the determination is announced in a manner to minimize the amount of proprietary data and information released, or (iii) the geophysical data and information are necessary for specific scientific or research purposes for the Government and the release of such data and information would further the national interest without unduly damaging the competitive position of the permittee. When indications of hydrocarbons are announced, the data and information upon which the announcement is based shall not be released. A lease sale will not be considered to have occurred for the purpose of release of information under this paragraph if any of the areas to which the information applies was under congressionally imposed leasing moratoria at the time of the lease sale.

(e) The Director shall make available to the public all geophysical data and information obtained from drilling a deep stratigraphic test, geological data, geological information, processed geophysical information, reprocessed geophyical information, and interpreted geophysical information submitted in support of a application for a permit to drill a deep stratigraphic test, or which the permittee is required to obtain in order to conduct the drilling of a deep stratigraphic test, at the earliest of the following times: (i) 20 years after completion of the test, or (ii) for a lease sale held after the test well is completed, 60 calendar days after the Department of the Interior executes the first lease for a tract, any part of which is within 50 geophysical miles (92.6 kilometers) of the site of the completed tests.

(f) In areas presently or previously subject to congressionally imposed leasing moratoria, the 20-year limit to the period of protection specified in paragraphs (d)(1), (d)(2), and (e) of this section shall be extended to limit the maximum allowable protection to 20 years plus the length of time during which the area to which the submitted data or information apply was covered by a congressionally imposed leasing moratorium.

Alternative Rule 2

For the reasons set forth above, 30 CFR Part 251 is proposed to be amended as follows:

1. The authority citation for Part 251 continues to read as follows:

Authority: Outer Continental Shelf Lands Act, 43 U.S.C. 1331 et seq., as amended, 92 Stat. 629; National Environmental Policy Act of 1969, 42 U.S.C. 4332 et seq. (1970); Coastal Zone Management Act of 1972, as amended, 16 U.S.C. et seq.

2. Section 251.14–1 is amended by removing paragraph (c)(3).

3. Section 251.14–1 is amended by revising paragraphs (d) (1) and (2) and (e), and removing paragraph (d)(3) to read as follows:

§ 251.14–1 Disclosure of information and data to the public.

* * * * *

(d) * * *

(1) The Director shall make geophysical data, processed geophysical information, reprocessed geophysical information, and interpreted geophysical information available to the public 20 years after the issuance of the permit under which the data or information were obtained unless the permittee requests an extension of the period of protection in accordance with paragraph (d)(2) of this section. When an extension is granted in accordance with paragraph (d)(2) of this section, the Director shall make such geophysical data and information available to the public 25 years after the issuance of the permit under which the data or information

were obtained. However, the Director may release the data and information anytime after 10 years if the Director determines that (i) the data and information are needed to unitize operations on 2 or more leases, to ensure proper plans of development for competitive reservoirs, or to ensure operational safety, and the data and information are shown only to persons with an interest in the issue, (ii) a significant environmental hazard or indication of hydrocarbons has been encountered in an unleased area where the existence of hydrocarbon deposits has not previously been confirmed and the determination is announced in a manner to minimize the amount of proprietary data and information released, or (iii) the geophysical data and information are necessary for specific scientific or research purposes for the Government and the release of such data and information would further the national interest without unduly damaging the competitive position of the permittee. When indications of hydrocarbons are announced, the data and information upon which the announcement is based shall not be released.

(2) Upon the request of the permittee, the Director shall grant a 5-year extension of the period of protection of proprietary data and information provided that the request for extension is submitted at least 90 days and not more than 365 days prior to the expiration of the original 20-year period of protection.

(e) The Director shall make available to the public all geological data and information obtained from drilling a deep stratigraphic test, geological data, geological information, processed geophysical information, reprocessed geophysical information, and interpreted geophysical information submitted in support of an application for a permit to drill a deep stratigraphic test, or which the permittee is required to obtain in order to conduct the drilling of a deep stratigraphic test, at the earliest of the following times: (i) 20 years after completion of the test, or (ii) for a lease sale held after the test well is completed, 60 calendar days after the Department of the Interior executes the first lease for a tract, any part of which is within 50 geographic miles (92.6 kilometers) of the site of the completed test.

BILLING CODE 4310-MR-M

DEPARTMENT OF DEFENSE

Corps of Engineers, Department of the Army

33 CFR Part 334

Restricted Area, Anaheim Bay Harbor, CA

AGENCY: Army Corps of Engineers, DoD.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Corps of Engineers proposes to amend the regulations which established a danger zone in the Waters of Anaheim Bay Harbor, California, by redesignating the area as a restricted area and make other changes to simplify enforcement of the restricted area regulations. These proposed amendments will, if approved, eliminate the requirement for a separate decal marking and registration system and will establish a small craft channel in the Inner Harbor to prevent vessels from intruding in the restricted area.

DATE: Written comments must be submitted on or before October 29, 1987.

ADDRESS: HQDA, CECW-OR, Washington, DC 20314-1000.

FOR FURTHER INFORMATION CONTACT: Mr. Cliff Reader at (213) 894-0351 or Mr. Ralph Eppard at (202) 272-1783.

SUPPLEMENTARY INFORMATION: The public is invited to participate in this proposed rulemaking by submitting written views, data, or arguments. Each person submitting a comment should include his or her address, identify this notice and give the reasons for the comment. All comnents received before the expiration of the comment period will be considered before final action is taken on this proposal. No public hearing is planned, but one may be held if written requests are received and the Corps of Engineers determines that the opportunity to make oral presentations will aid the rulemaking process. The Naval Weapons Station has revised their internal security process to create a more navigable and more easily controlled waterway. Part of this effort has resulted in a properly marked small boat channel in the southern part of the Inner Harbor in Anaheim Bay. This did not exist in the past other than as a customary usage channel. The decal registration system required by current regulations has proven to be unwieldy and awkward to enforce. This amendment to the regulation codifies actual practice by requiring small craft transiting the Inner Harbor to remain within the limits of the marked channel, and eliminates the registration and decal requirement.

Economic Assessment and Certification

This proposed rule is issued with respect to a military function of the Defense Department and provisions of Executive Order 12291 do not apply. The Corps of Engineers certifies that if adopted, this proposal will have no significant economic impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 334

Navigation (water), Transportation, Danger zones.

In consideration of the foregoing, the Corps of Engineers proposes to amend Part 334 of Title 33 to read as follows:

PART 334—DANGER ZONES AND RESTRICTED AREA REGULATIONS

1. One authority citation for Part 334 continues to read as follows:

Authority: 40 Stat. 266; 33 (U.S.C. 1) and 40 Stat. 892; (33 U.S.C. 3).

2. Section 334.930 is revised to read as follows:

§ 334.930 Anaheim Bay Harbor, California; Naval Weapons Station, Seal Beach.

(a) *The restricted area.* The waters of Anaheim Bay Harbor between the east and west jetties at the United States Naval Weapons Station, Seal Beach, California, and the contiguous tidal channel and basin as far east as the Anaheim Bay Bridge.

(b) *The regulation.* (1) The authority of the Naval Weapons Station Commanding Officer in this area extends to restricting and disallowing the navigating or anchorage of craft during such times as the Commanding Officer determines that considerations of national security or safety warrant such action(s).

(2) All craft authorized transit of this area shall stay within the limits of the entrance channel in the Outer Harbor, and confine their movement to within the limits of the marked small craft channel at the southern portion of the Inner Harbor.

(3) Recreational craft, such as water skis, jet skis, rowboats, canoes, kayaks, wind surfers, sailboards, surfboards, etc., are specifically prohibited within the restricted area.

(4) Boats unable to throttle down or to maintain steerage way at 5 miles per hour speed shall proceed at the minimum speed consistent with seamanship in an area regularly subject to waterborne explosive handling operations. In case of doubt, boat operators of inbound boats will remain in the west end of the basin and outbound boats in the east end of the basin until informed by a representative

VOL
52
ISS
188
SE
29
1987
UMI

of the Naval Weapons Station or U.S Coast Guard of the completion of the waterborne explosive handling hazard.

(5) Smoking, open flames and barbecues in boats are prohibited during the transit of this area.

(6) Nothing in the regulations in this section shall be construed as relieving the owner or persons in command of any vessels or plant from the penalties of the law for obstructing navigation or for not complying with the navigation laws in regard to lights or signals or for otherwise violating law.

(7) All vessel operators shall heed and obey all posted signs and/or instructions issued by security personnel of the U.S. Naval Weapons Station.

(8) The regulations in this section shall be enforced by the Commanding Officer, U.S. Naval Weapons Station, Seal Beach, California, and such agencies as he/she may designate. For clarification or other information, the U.S. Naval Weapons Station Command Duty Officer should be contacted at (213) 594–7101.

Date: September 3, 1987.

Joseph T. Larremore,

Colonel, Corps of Engineers, Executive Director of Civil Works.

[FR Doc. 87–21289 Filed 9–28–87; 8:45 am]

BILLING CODE 3710–92–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 60

[AD–FRL–3238–3]

Amendments to Standards of Performance for New Stationary Sources; Notification and Recordkeeping

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA is proposing to revise the reporting requirements of several Subparts in order to be consistent with current EPA policy. Affected Subparts are Subpart A (General Provisions), Subpart D, and Subparts EE, MM, RR, SS, TT, WW and HHH (surface coating standards) of 40 CFR Part 60. Amending these Subparts will not change monitoring or recordkeeping requirements of the affected facilities. The intended effect of the amendments is to reduce the reporting burden and to provide EPA sufficient information to carry out effective monitoring and enforcement.

DATES: *Comments.* Comments must be received on or before October 26, 1987 (Contact Ann Eleanor at FTS 629–5578).

ADDRESSES: *Comments.* Comments should be submitted (in duplicate if possible) to: Central Docket Section (LE–131), Attention: Docket Number A–85–01, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Docket. Docket No. A–85–01, containing supporting information used in developing the proposed amendments, is available for public inspection and copying between 8:00 a.m. and 4:00 p.m., Monday through Friday, at EPA's Central Docket Section, South Conference Center, Room 4, Waterside Mall, 401 M Street SW., Washington, DC 20460. A reasonable fee may be charged for copying.

FOR FURTHER INFORMATION CONTACT: Mr. Doug Bell or Ms. Amanda Aldridge, Standards Development Branch, Emission Standards and Engineering Division, (MD–13), U.S. Environmental Protection Agency, Research Triangle Park, NC 27711, telephone number (919) 541–5568 or 5268.

SUPPLEMENTARY INFORMATION:

1. Background for Proposed Amendment

Rationale for Proposed Reporting Frequencies

In 1985, the Agency reviewed the information collection requirements and reporting frequencies of new source Performance standards (NSPS). As a result of that review, the policy under which the Agency determines reporting frequencies for NSPS was developed and published July 27, 1987, in the **Federal Register** as part of the preamble for proposed standards of performance for fluid catalytic unit regenerators (November 8, 1985 50 FR 46464).

For NSPS, the information collected is of three different types that are of different utilities to the enforcing agency. These types of information are monitored parameter data, excess emission data as measured by continuous monitoring systems (CMS) [1], and direct compliance information. Direct compliance information is most useful to an enforcement agency because the compliance status of the source is evident from the information itself, and no further testing is necessary for documentation. Because these data can be used so quickly, and because it is beneficial to an enforcement action to have the most current data available, sources will be required to report this information to EPA on a quarterly basis. However, if no exceedances of the standard have occurred during a particular quarter, only a statement to that effect (negative declaration) is needed. Further, these negative declarations may be made on a semiannual basis. This helps focus the resources both of the industry and of EPA on sources where remedial action is warranted.

For the other types of reported information (i.e., monitored parameter data and CMS excess emission data), EPA currently must take some other step (e.g., performance test, inspection, etc.) before proving a violation of an applicable emission limit. Under the new policy for NSPS, reporting frequencies of data other than direct compliance information are reviewed regulation by regulation and semiannual reporting is required in the absence of evidence as to why this is not sufficient. Factors that are reviewed include location and size of the source, number of sources, likelihood of excess emissions, potential for severe adverse air quality impacts, and other factors as appropriate. More frequent reporting of excess emission data from CMS may be required if in the future EPA determines that CMS excess emission data may also be used for direct enforcement.

In certain subparts (e.g., Subparts P, Q, and R), the CMS data are to be used to determine compliance during a performance test. However, except for the performance test, the CMS data are not intended to determine compliance with the standards. Therefore, except during performance tests, the CMS data are considered to be excess emission data rather than direct compliance information and should be reported semiannually.

Amendment to General Provisions

The EPA is proposing to amend the General Provisions (Subpart A) of 40 CFR Part 60. The General Provisions specify procedures and definitions that apply to all owners and operators of air pollution sources covered by NSPS. Currently, under 40 CFR 60.7(c), owners and operators of certain affected facilities required to install and operate CMS must submit a written report of excess emissions to the Administrator every calendar quarter. Sources that must comply with this provision are identified in the individual subparts (e.g., Subpart G—Nitric Acid Plants). This notice proposes that the frequency of submission of excess emission reports

[1] Emission data measured by CMS can be either excess emission data or direct compliance information depending on how the use of the CMS is defined in the applicable subpart. The applicable subpart must specify the CMS as the compliance method for the emission data measured by the CMS to be direct compliance information.

required by § 60.7(c) be reduced from quarterly to semi-annually. For certain other affected facilities (e.g., those subject to Subpart Db), continuous monitoring data are used directly for determination of compliance and are required to be submitted quarterly. Today's action does not affect this requirement.

This proposed revision to the General Provisions would implement the new reporting policy with regard to excess emission reports, which generally consist of continuous emission monitoring data. The EPA is proposing to change the reporting period for excess emission reports to semiannual in order to reduce the burden to industry of preparing and submitting excess emission reports and to reduce the volume of reports to be handled by regulatory agencies. It is the Agency's judgment that less frequent reporting will have no effect upon the utility of the data which may be obtained from such reports and that the effects upon enforcement of NSPS would be minimal. However, if the Administrator judges that more frequent reporting is needed from owners/operators of some affected facilities, he may so require, either by requests for particular sources or by regulation for classes or categories of sources.

The proposed revision would reduce to semiannual the excess emission reporting requirements for the following subparts and affected facilities: Subpart G—Nitric Acid Plants; Subpart H—Sulfuric Acid Plants; Subpart J—Petroleum Refineries (except SO_2 excess emission data); Subpart P—Primary Copper Smelters; Subpart Q—Primary Zinc Smelters; Subpart R—Primary Lead Smelters; Subpart Z—Ferroalloy Production Facilities; Subpart AA—Steel Plants: Electric Arc Furnaces Constructed After October 21, 1974, and on or before August 17, 1983; Subpart BB—Kraft Pulp Mills; Subpart CC—Glass Manufacturing Plants; Subpart GG—Stationary Gas Turbines; Subpart HH—Lime Manufacturing Plants; and Subpart NN—Phosphate Rock Plants.

Amendment to Subpart D

The EPA is also proposing to amend Subpart D—Standards of Performance for Fossil-Fuel-Fired Steam Generators for Which Construction is Commenced After August 17, 1971. The facilities affected by Subpart D are large sources of sulfur dioxide and nitrogen oxides emissions. Section 60.45(g) currently requires quarterly reporting of excess emissions. The previously discussed amendment to § 60.7(c) of the General Provisions would change the excess emission reporting to semiannual. However, since facilities affected by Subpart D are some of the largest individual sources of sulfur dioxide and nitrogen oxides, anything less than quarterly reporting could result in an unreasonably high level of emissions before corrective action could be taken. Also, quarterly reporting will involve only a minor burden on the source, since in almost all cases excess emission reports will be stored in a computer system and analyzed automatically. Therefore, the EPA has determined that quarterly excess emission reporting is appropriate for those sources affected by Subpart D. Consequently, the EPA is proposing to amend Subpart D, § 60.45(g) so that current requirements for quarterly excess emission reports remain the same.

It should be noted that on October 21, 1983, (40 FR 48960), EPA proposed a revision to Subpart D that would allow sulfur dioxide compliance testing by continuous emission monitoring, stack testing, or fuel sampling and analysis. If this proposal is promulgated, the compliance provisions and the contents of reports required for sulfur dioxide would change, but the frequency of reporting would remain quarterly. Also, the October 21, 1983, proposal will have no impact on opacity or nitrogen oxide requirements.

Amendment to Surface Coating Standards

In order to be consistent with the new reporting policy, the EPA also proposes to amend several standards of performance for surface coatings (i.e., Subparts EE, MM, RR, SS, TT, WW, HHH). These subparts currently require monthly compliance tests and monitoring of control device parameters, but the reporting requirements vary widely. Subparts EE, SS, and TT require reporting of initial performance tests only. Subparts RR, WW, and HHH require semiannual reporting of exceedances of the standard. Subpart MM requires monthly submission of reports when the standard is exceeded. The data resulting from the monthly compliance tests is direct compliance information which may be used by the enforcement agency as the sole evidence of a violation of the standard; therefore, it is important to have the most recent data available. As a result, sources should report these data quarterly if an exceedance of the standard has occurred and semiannually otherwise. Conversely, monitored parameter data cannot stand alone as justification for an enforcement action, so these reports should be submitted semiannually.

Therefore, the EPA is proposing to amend the surface coating standards to require quarterly reporting when the results of the monthly compliance tests show emissions exceeding the standard and to semiannually if no exceedances occur, and to require semiannual reporting of monitored parameter data.

II. Administrative Requirements

The docket is an organized and complete file of all the information submitted to or otherwise considered in the development of this proposed rulemaking. The principal purposes of the docket are: (1) To allow interested parties to identify and locate documents so that they can effectively participate in the rulemaking process; and (2) to serve as the record in case of judicial review (except as noted in section 307(d)(7)(A)).

III. Office of Management and Budget Reviews

A. Paperwork Reduction Act

The Paperwork Reduction Act of 1980 (Pub. L. 95–511) requires that the Office of Management and Budget (OMB) approve reporting and recordkeeping requirements that qualify as an "information collection request" (ICR). This proposed amendment increases the reporting requirements for Subparts EE, RR, SS, TT, WW, and HHH, and decreases the reporting required for Subparts G, H, J, P, Q, R, Z, AA, BB, CC, GG, HH, MM, and NN. The information collection requirements in this proposed rule have been submitted for approval to the OMB under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq. Comments on these requirements should be submitted to the Office of Information and Regulatory Affairs of OMB, marked "Attention: Desk Officer for EPA," as well as to EPA. The final rule will respond to any OMB or public comments on the information collection requirements.

B. Executive Order 12291 Review

Under Executive Order 12291, EPA must judge whether a regulation is "major" and, therefore, subject to the requirement of a Regulatory Impact Analysis. The Agency has determined that this amendment to the General Provisions and Subparts D, EE, MM, RR, SS, TT, WW, and HHH would result in none of the adverse economic effects set forth in section 1 of the order as grounds for finding a regulation to be a "major rule." The Agency has, therefore, concluded that these amendments are not a "major rule" under Executive Order 12291.

C. Regulatory Flexibility Act Compliance

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that the proposed amendment to 40 CFR Part 60 will not, if promulgated, have a significant economic impact on a substantial number of small entities. The amendment will only add new reporting requirements to Subparts EE, RR, SS, TT, WW, and HHH of Part 60. Consequently, it will not add significant costs to compliance with NSPS.

List of Subjects in 40 CFR Part 60

Air pollution control, Electric power plants, Intergovernmental relations, Reporting and recordkeeping requirements, Can surface coating, Fossil-fuel-fired steam generators, Synthetic fibers, Incorporation by reference.

Date: September 21, 1987.

Lee M Thomas,

Administrator.

It is proposed that 40 CFR Part 60 be amended as follows:

PART 60—[AMENDED]

1. The authority citation for Part 60 continues to read as follows:

Authority: Secs. 101, 111, 114, 301(a), Clean Air Act as amended (42 U.S.C. 7401, 7411, 7414, 7601(a)).

2. By revising paragraph (c) of § 60.7 of Subpart A—General Provisions to read as follows:

§ 60.7 Notification and recordkeeping.

* * * * *

(c) Each owner or operator required to install a continuous monitoring system shall submit a written report of excess emissions (as defined in applicable subparts) to the Administrator semiannually, except as otherwise provided by individual subparts. All semiannual reports shall be postmarked by the 30th day following the end of each calendar half and shall include the following information:

* * * * *

3. By revising paragraph (g) of § 60.45 of Subpart D—Standards of Performance for Fossil-Fuel Fired Steam Generators for Which Construction is Commenced After August 17, 1971 to read as follows:

§ 60.45 Emission and fuel monitoring.

* * * * *

(9) Excess emission reports shall be submitted to the Administrator for every calendar quarter. All quarterly reports shall be postmarked by the 30th day following the end of each calendar quarter. Each excess emission report shall include the information required in § 60.7(c). Periods of excess emissions that shall be reported are defined as follows:

* * * * *

4. In Subpart EE—Standards of Performance for Surface Coating of Metal Furniture, § 60.315: 1. Paragraph (b) is revised. 2. Paragraph (c) is redesignated as paragraph (d) and revised. 3. New paragraph (c) is added.

§ 60.315 Reporting and recordkeeping requirements.

* * * * *

(b) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit a written report to the Administrator every calendar quarter of each instance in which the volume-weighted average of the total mass of VOC's emitted to the atmosphere per volume of applied coating solids (N) is greater than the limit specified under § 60.312. If no such instances have occurred during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

(c) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit as specified in § 60.7(c):

(1) Where compliance with § 60.312 is achieved through the use of thermal incineration, each 3-hour period when metal furniture is being coated during which the average temperature of the device was more than 28 °C below the average temperature of the device during the most recent performance test at which destruction efficiency was determined as specified under § 60.313.

(2) Where compliance with § 60.312 is achieved through the use of catalytic incineration, each 3-hour period when metal furniture is being coated during which the average temperature of the device immediately before the catalyst bed is more than 28 °C below the average temperature of the device immediately before the catalyst bed during the most recent performance test at which destruction efficiency was determined as specified under § 60.313. Additionally, when metal furniture is being coated, all 3-hour periods during which the average temperature difference across the catalyst bed is less than 80 percent of the average temperature difference across the catalyst bed during the most recent performance test at which destruction efficiency was determined as specified under § 60.313 will be recorded.

(3) For thermal and catalytic incinerators, if no such periods as described in paragraphs (c)(1) and (c)(2) of this section occur, the owner or operator shall submit a negative report.

(d) Each owner or operator subject to the provisions of the subpart shall maintain at the source, for a period of at least 2 years, records of all data and calculations used to determine VOC emissions from each affected facility. Where compliance is achieved through the use of thermal incineration, each owner or operator shall maintain at the source, daily records of the incinerator combustion chamber temperature. If catalytic incineration is used, the owner or operator shall maintain at the source daily records of the gas temperature, both upstream and downstream of the incinerator catalyst bed. Where compliance is achieved through the use of a solvent recovery system, the owner or operator shall maintain at the source daily records of the amount of solvent recovered by the system for each affected facility.

5. In Subpart MM—Standards of Performance for Automobile and Light-Duty Truck Surface Coating Operations, § 60.395: 1. Paragraph (b) is revised. 2. Paragraph (c) is revised.

§ 60.395 Reporting and recordkeeping requirements.

* * * * *

(b) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit a written report to the Administrator every calendar quarter of each instance in which the volume-weighted average of the total mass of VOC's emitted to the atmosphere per volume of applied coating solids (N) is greater than the limit specified under § 60.392. If no such instances have occurred during a particular quarter, a report stating this shall be submitted to the Administrator semiannually. Where compliance is achieved through the use of a capture system and control device, the volume weighted average after the control device should be reported.

(c) Where compliance with § 60.392 is achieved through the use of incineration, the owner or operator shall continuously record the incinerator combustion temperature during coating operations for thermal incineration or the gas temperature upstream and downstream of the incinerator catalyst bed during coating operations for catalytic incineration. The owner or operator shall submit a written report as specified in § 60.7(c) and as defined below.

* * * * *

6. In Subpart RR—Standards of Performance for Pressure Sensitive Tape

and Label Surface Coating Operations, § 60.447: 1. Paragraph (b) is revised. 2. Paragraph (c) is redesignated as paragraph (d) and revised. 3. New paragraph (c) is added.

§ 60.447 Reporting requirements.

* * * * *

(b) Following the initial performance test, the owner or operator of each affected facility shall submit quarterly reports to the Administrator of exceedances of the VOC emission limits specified in § 60.442. If no such exceedances occur during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

(c) The owner or operator of each affected facility shall also submit reports as specified in § 60.7(c) when the incinerator temperature drops as defined under § 60.443(e). If no such periods occur, the owner or operator shall submit a negative report.

(d) The requirements of this subsection remain in force until and unless EPA, in delegating enforcement authority to a State under section 111(c) of the Act, approves reporting requirements or an alternative means of compliance surveillance adopted by such States. In that event, affected sources within the State will be relieved of the obligation to comply with this subsection, provided that they comply with the requirements established by the State.

(Approved by the Office of Management and Budget under control number 2060–0004)

7. In Subpart SS—Standards of Performance for Industrial Surface Coating: Large Appliances, § 60.455: 1. Paragraph (b) is revised. 2. Paragraph (c) is redesignated as paragraph (d) and revised. 3. New paragraph (c) is added.

§ 60.455 Reporting and recordkeeping requirements.

* * * * *

(b) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit a written report to the Administrator every calendar quarter of each instance in which the volume-weighted average of the total mass of VOC's emitted to the atmosphere per volume of applied coating solids (N) is greater than the limit specified under § 60.452. If no such instances have occurred during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

(c) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit as specified in § 60.7(c).

(1) Where compliance with § 60.452 is achieved through use of thermal incineration, each 3-hour period of coating operation during which the average temperature of the device was more than 28 °C below the average temperature of the device during the most recent performance test at which destruction efficiency was determined as specified under § 60.453.

(2) Where compliance with § 60.452 is achieved through use of catalytic incineration, each 3-hour period of coating operation during which the average temperature recorded immediately before the catalyst bed is more than 28 °C below the average temperature at the same location during the most recent performance test at which destruction efficiency was determined as specified under § 60.453. Additionally, all 3-hour periods of coating operation during which the average temperature difference across the catalyst bed is less than 80 percent of the average temperature difference across the catalyst bed during the most recent performance test at which destruction efficiency was determined as specified under § 60.453 will be recorded.

(3) For thermal and catalytic incinerators, if no such periods as described in paragraphs (c)(1) and (c)(2) of this section occur, the owner or operator shall submit a negative report.

(d) Each owner or operator subject to the provisions of this subpart shall maintain at the source, for a period of at least 2 years, records of all data and calculations used to determine VOC emissions from each affected facility. Where compliance is achieved through the use of thermal incineration, each owner or operator shall maintain at the source daily records of the gas temperature, both upstream and downstream of the incinerator catalyst bed. Where compliance is achieved through the use of a solvent recovery system, the owner or operator shall maintain at the source daily records of the amount of solvent recovered by the system for each affected facility.

8. In Subpart TT—Standards of Performance for Metal Coil Surface Coating, § 60.465: 1. Paragraph (c) is redesignated as paragraph (e) and revised. 2. New paragraphs (c) and (d) are added.

§ 60.465 Reporting and recordkeeping requirements.

(c) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit a written report to the Administrator every calendar quarter of each instance in which the volume-weighted average of the total mass of VOC's emitted to the atmosphere per volume of applied coating solids (N) is greater than the limit specified under § 60.462. If no such instances have occurred during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

(d) The owner or operator of each affected facility shall also submit reports as specified in § 60.7(c) when the incinerator temperature drops as defined under § 60.464(c). If no such periods occur, the owner or operator shall submit a negative report.

(e) Each owner or operator subject to the provisions of this subpart shall maintain at the source, for a period of at least 2 years, records of all data and calculations used to determine monthly VOC emissions from each affected facility and to determine the monthly emission limit where applicable. Where compliance is achieved through the use of thermal incineration, each owner or operator shall maintain, at the source, daily records of the incinerator combustion temperature. If catalytic incineration is used, the owner or operator shall maintain at the source daily records of the gas temperature, both upstream and downstream of the incinerator catalyst bed.

9. In Subpart WW—Standards of Performance for the Beverage Can Surface Coating Industry, § 60.495: 1. Paragraph (b) is revised. 2. Paragraphs (c) and (d) are redesignated as (d) and (e) and revised. 3. New paragraph (c) is added.

§ 60.495 Reporting and recordkeeping requirements.

* * * * *

(b) Following the initial performance test, each owner or operator shall identify, record, and submit quarterly reports to the Administrator of each instance in which the volume-weighted average of the total mass of VOC per volume of coating solids, after the control device, if capture devices and control systems are used, is greater than the limit specified under § 60.492. If no such instances occur during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

(c) Following the initial performance test, the owner or operator of an affected facility shall identify, record, and submit as specified in § 60.7(c):

(1) Where compliance with § 60.492 is achieved through the use of thermal incineration, each 3-hour period when cans are processed, during which the average temperature of the device was

more than 28 °C below the average temperature of the device during the most recent performance test at which destruction efficiency was determined as specified under § 60.493.

(2) Where compliance with § 60.492 is achieved through the use of catalytic incineration, each 3-hour period when cans are being processed, during which the average temperature of the device immediately before the catalyst bed is more than 20 °C below the average temperature of the device immediately before the catalyst bed during the most recent performance test at which destruction efficiency was determined as specified under § 60.493 and all 3-hour periods, when cans are being processed, during which the average temperature difference across the catalyst bed is less than 80 percent of the average temperature difference across the catalyst bed during the most recent performance test at which destruction efficiency was determined as specified under § 60.494.

(3) For thermal and catalytic incinerators, if no such periods as described in paragraphs (c)(1) and (c)(2) of this section occur, the owner or operator shall submit a negative report.

(d) Each owner or operator subject to the provisions of this subpart shall maintain at the source, for a period of at least 2 years, records of all data and calculations used to determine VOC emissions from each affected facility in the initial and monthly performance tests. Where compliance is achieved through the use of thermal incineration, each owner or operator shall maintain at the source daily records of the incinerator combustion chamber temperature. If catalytic incineration is used, the owner or operator shall maintain at the source daily records of the gas temperature, both upstream and downstream of the incinerator catalyst bed. Where compliance is achieved through the use of a solvent recovery system, the owner or operator shall maintain at the source daily records of the amount of solvent recovered by the system for each affected facility.

(e) The requirements of this section remain in force until and unless EPA, in delegating enforcement authority to a State under section 111(c) of the Act, approves reporting requirements or an alternative means of compliance surveillance adopted by such State. In that event, affected facilities within the State will be relieved of the obligation to comply with this subsection, provided that they comply with the requirements established by the State.

(Approved by the Office of Management and Budget under control number 2060-0001)

* * * * *

10. In Subpart HHH—Standards of Performance for Synthetic Fiber Production Facilities, § 60.604: 1. The section heading is revised. 2. Paragraph (a)(2) is revised.

§ 60.604 Reporting and recordkeeping requirements.

(a) * * *

(2) The results of subsequent performance tests that indicate that VOC emissions exceed the standards in § 60.602. These reports shall be submitted quarterly at 3-month intervals after the initial performance test. If no exceedances occur during a particular quarter, a report stating this shall be submitted to the Administrator semiannually.

40 CFR Part 271

[FRL-3267-2]

Final Authorization of State Hazardous Waste Management Program; Indiana

AGENCY: Environmental Protection Agency.

ACTION: Notice of proposed rulemaking and public comment period.

SUMMARY: Indiana has submitted a revision to its authorized Hazardous Waste Management Program under the Resource Conservation and Recovery Act (RCRA), as amended.

The United States Environmental Protection Agency (EPA) has reviewed Indiana's revision and has made a decision, subject to public review and comment, that Indiana's Hazardous Waste Management program revision satisfies all of the requirements necessary to qualify for final authorization. Thus, EPA intends to approve Indiana's Hazardous Waste Management program revision. Indiana's application for program revision is available for public review and comment.

DATES: Authorization for Indiana's program revision shall become effective November 30, 1987 unless EPA publishes a prior Federal Register action withdrawing this action. Comments on Indiana's program revision must be received by the close of business on October 29, 1987.

ADDRESSES: Copies of Indiana's program revision are available during the business hours of 8:30 a.m. to 4:30 p.m., at the following addresses for inspection and copying:

Indiana Department of Environmental Management, Office of Solid and Hazardous Waste Management, Hazardous Waste Management Branch, 105 South Meridian Street, Indianapolis, Indiana 46206. Contact: Mr. Michael Dalton, (317) 232-8884.

U.S. EPA, Region V, Waste Management Division, Solid Waste Branch, Program Management Section, 230 South Dearborn Street, 5HS-JCK-13, Chicago, Illinois 60604. Contact: Mr. George Woods, (312) 886-6134.

U.S. EPA Headquarters, Library, PM 211A, 401 M Street, SW., Washington, DC 20460, (202) 382-5926.

Written comments should be sent to: U.S. EPA, Region V, Waste Management Division, Solid Waste Branch, Program Management Section, 230 South Dearborn Street, 5HS-JCK-13, P.O. Box A3587, Chicago, Illinois 60604. Attention: Mr. George Woods, (312) 886-6134.

FOR FURTHER INFORMATION CONTACT: Mr. George Woods, U.S. EPA, Region V, Waste Management Division, Solid Waste Branch, Program Management Section, 230 South Dearborn Street, 5HS-JCK-13, Chicago, Illinois 60604, (312) 886-6134.

SUPPLEMENTARY INFORMATION:

A. Background

States with final authorization under section 3006(b) of the Resource Conservation and Recovery Act ("RCRA" or "the Act"), 42 U.S.C. 6929(b), have a continuing obligation to maintain a hazardous waste management program that is equivalent to, consistent with, and no less stringent than the Federal Hazardous Waste Management program. In addition, as an interim measure, the Hazardous and Solid Waste Amendments of 1984 (Pub. L. 98-616, November 8, 1984, hereinafter "HSWA") allows States to revise their programs to become substantially equivalent instead of equivalent to RCRA requirements promulgated under HSWA authority. States exercising the latter option receive "interim authorization" for the HSWA requirements under section 3006(g) of RCRA, 42 U.S.C. 6926(g), and later apply for final authorization for the HSWA requirements.

In accordance with 40 CFR 271.21 (a) and (e), revisions to State hazardous waste management programs are necessary when Federal or State statutory or regulatory authority is modified or upon certain other changes to EPA's regulations in 40 CFR Parts 260-268, 124 and 270.

B. Indiana

Indiana initially received final authorization on January 31, 1986. On June 29, 1987, Indiana submitted a program revision application for additional program approval. Today, Indiana is seeking approval of its program revision in accordance with 40 CFR 271.21(e).

EPA has reviewed Indiana's revision application and has made a decision, subject to public review and comment, that Indiana's Hazardous Waste Management program revision does reflect the State's equivalency with the Federal program. Consequently, EPA intends to grant Indiana authorization for this program modification. The public may submit written comments on EPA's proposed approval on this revision, up until October 29, 1987. Copies of Indiana's program revision are available for inspection and copying at the locations indicated in the "**ADDRESSES**" section of this notice.

Approval of Indiana's program revision shall become effective 60 days after the date of publication in the **Federal Register** (FR) unless an adverse comment pertaining to the State's revisions, discussed in this notice, is received. If comments pertaining to the revision application or this decision are received, EPA will publish either: (1) A withdrawal of the immediate final decision, or (2) a notice containing a response to comments which either affirms that the immediate final decision takes effect or reverses the decision.

Indiana has revised their program to obtain final authorization for the following provisions:

Non-HSWA Cluster I

11–13–84—Exclusion of Household Waste (49 FR 44980)
11–21–84—Interim Status Standards Applicability (49 FR 46095)
12–04–84—Corrections to Test Methods Manual (49 FR 47391)
12–20–84—Satellite Accumulation (49 FR 49571)
01–04–85—Redefinition of Solid Waste (50 FR 614)
04–23–85—Interim Status Standards for Landfill Cover Design Standards (50 FR 16044)

Non-HSWA Cluster II

08–20–85—Correction to Redefinition of Solid Waste (50 FR 33541)
05–28–86—Clarification of Spent Pickle Liquor Listing (51 FR 19320)

Any RCRA hazardous waste permits, or portions of permits, issued by EPA under the provisions for which the State is applying for authorization, prior to the effective date of authorization, shall be administered by EPA. EPA will suspend issuance of any further permits under the provision for which the State is authorized on the effective date of authorization. EPA had previously suspended issuance of permits for other provisions on January 31, 1986, the effective date of Indiana's authorization for the RCRA program. Indiana is not authorized nor seeking to be authorized to operate the Federal program on Indian Lands. This authority shall remain with EPA.

C. Effect of HSWA on Indiana's Authorization

Prior to the Hazardous and Solid Waste Amendments amending RCRA, a State with Final Authorization would have administered its hazardous waste program entirely in lieu of EPA. The Federal requirements no longer applied in the authorized State, and EPA could not issue permits for any facilities the State was authorized to permit. When new, more stringent Federal requirements were promulgated or enacted, the State was obligated to enact equivalent authority within specified time frames. New Federal requirements did not take effect in an authorized State until the State adopted the requirements as State law.

In contrast, under the amended section 3006(g) of RCRA, 42 U.S.C. 6926(g), new requirements and prohibitions imposed by the HSWA take effect in authorized States at the same time as they can take effect in non-authorized States. EPA is directed to carry out those requirements and prohibitions in authorized States, including the issuance of full or partial permits, until the State is granted authorization to do so. While States must still adopt HSWA-related provisions as State law to retain final authorization, the HSWA applies in authorized States in the interim.

As a result of the HSWA, there will be a dual State/Federal regulatory program in Indiana if today's RCRA authorization is granted. To the extent the authorized State program is unaffected by the HSWA, the State program will operate in lieu of the Federal program. To the extent HSWA-related requirements are in effect, EPA will administer and enforce these portions of the HSWA in Indiana until the State receives authorization to do so. Among other things, this will entail the issuance of Federal RCRA permits for those areas in which the State is not yet authorized.

Once the State is authorized to implement a HSWA requirement or prohibition, the State program in that area will operate in lieu of the Federal provision. Until that time the State may assist EPA's implementation of the HSWA under a Cooperative Agreement.

In addition to the eight non-HSWA provisions for which Indiana is seeking authorization at this time, the State's program revision as published in the May 1, 1987, issue of the *Indiana Register* (10 IR 1563), and which became effective on April 15, 1987, encompasses all of the Special HSWA Cluster I provisions promulgated through March 31, 1986. However, in as much as the authorization deadline for these HSWA provisions is July 1, 1989, and because of State resource considerations, Indiana elected not to seek authorization for any of the Special HSWA Cluster I provisions now. The State has indicated that it intends incrementally to pursue authorization for the HSWA provisions, all well in advance of the 1989 deadline.

Today's proposed rulemaking does not include authorization of Indiana's program for any requirement implementing the HSWA. Any State requirement that is more stringent than a Federal HSWA provision will also remain in effect; thus, regulated handlers must comply with any more stringent State requirements.

EPA has published a **Federal Register** notice that explains in detail the HSWA and its effect on authorized States. That notice was published at 50 FR 28702–28755, July 15, 1987.

Compliance With Executive Order 12291

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Certification Under the Regulatory Flexibility Act

Pursuant to the provisions of 4 U.S.C. 605(b), I hereby certify that this authorization will not have a significant economic impact on a substantial number of small entities. This authorization is for modifications to the State's existing authorized program and is not designed to increase the regulated population. It does not impose any new burdens on small entities.

Vol. 52, No. 188
Tuesday, September 29, 1987

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

[Doc. No. 4662S]

Crop Insurance Availability; Hawaiian Insurance

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Notice of availability of insurance in the State of Hawaii.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) herewith gives notice to private insurance companies of the availability of Federal crop insurance in the State of Hawaii under the provisions an Agency Sales and Service Contract with FCIC, and to those private insurance companies selling crop insurance policies in the State of Hawaii, of the availability of reinsurance for such policies of insurance under a Reinsurance Agreement with FCIC.

The provisions of the standards for approval for reinsured companies are contained in 7 CFR Part 400, Subpart L—General Administrative Regulations—Standards for Approval; Standard Reinsurance Agreement were published in the **Federal Register** on Monday, May 11, 1987 (52 FR 17540), as a final rule setting forth the financial and operational standards for approval to be met by private entities under a Reinsurance Agreement with the Federal Crop Insurance Corporation, effective for the 1988 contract year (beginning on July 1, 1987).

The provisions setting forth the standards for financial requirements for private entities under an Agency Sales and Service Contract are contained in 7 CFR Part 400, Subpart C, published by FCIC as a final rule on Friday, September 19, 1986.

This notice is intended to advise all interested parties of the availability of Federal crop insurance, and the availability of reinsurance to all qualifying private entities selling crop insurance in the State of Hawaii.

FOR FURTHER INFORMATION CONTACT: Further information with respect to this notice, and on applying for either an Agency Sales and Service Contract or a Reinsurance Agreement for the 1988 contract year, may be obtained from David W. Gabriel, Assistant Manager for Program Administration, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC 20250, telephone (202) 475–4407.

Done in Washington, DC, on September 17, 1987.

E. Ray Fosse,

Manager, Federal Crop Insurance Corporation.

BILLING CODE 3410–08–M

Forest Service

Intent To Prepare Environmental Impact Statement; Fremont National Forest, OR

The Department of Agriculture, Forest Service will prepare an environmental impact statement for a proposal to mine approximately 120 million tons of combined gold ore and waste rock from an open-pit gold mine. The ore will be processed using sodium cyanide heap leaching techniques. The Quartz Mountain Project is located in the Bly Ranger District of the Fremont National Forest near the summit of Quartz Mountain Pass.

The National Environmental Policy Act requires an early and open process for determining the scope of issues to be addressed and for identifying the significant issues related to a proposed action. Federal, State, local agencies, and other individuals or organizations who may be interested in or affected by the proposed action will be invited to participate in the process (scoping). Input gathered during scoping will be used in preparation of the draft environmental impact statement (DEIS). The scoping process will include:

1. Identifying the potential issues.
2. Identifying issues to be analyzed in depth.
3. Eliminating insignificant issues or those which have been covered by a relevant previous environmental analysis.
4. Exploring alternatives
5. Identifying potential environmental effects of the proposed action and alternatives.
6. Determining potential cooperating agencies and task assignments.

The environmental impact statement will be prepared in accordance with existing approved land and resource management plans. A range of alternatives will be examined to deal with the significant issues developed during the scoping process. One alternative will include the no action alternative. Other alternatives will consider different locations for the project facilities, different project sizes, and different rates and methods of mining and processing the ore.

Public meetings are scheduled for mid-October in Lakeview, Bly, and Klamath Falls, Oregon. Notice of meeting dates and locations will be published in local newspapers and posted in public buildings.

The analysis is expected to take about 7 months. The DEIS is expected to be available for public comment and review by spring of 1988. The final environmental impact statement should be completed by summer of 1988.

Orville Grossarth, Fremont National Forest, Forest Supervisor, is the responsible official.

Written comments and suggestions concerning the analysis, questions about the proposed action and environmental impact statement, or information about public meeting dates and places should be directed to, Sherman Radtke, Minerals Staff Officer, Fremont National Forest, 524 North G Street, Lakeview, Oregon 97630 by November 20th, 1987.

Date: September 21, 1987.

Orville D. Grossarth,

Forest Supervisor.

BILLING CODE 3410–11–M

Packers and Stockyards Administration

Posted Stockyards; Cullman Feeder Pig Association et al.

Pursuant to the authority delegated under the Packers and Stockyards Act, 1921, as amended (7 U.S.C. 181 et seq.), it was ascertained that the livestock markets named below were stockyards within the definition of that term

contained in section 302 of the Act, as amended (7 U.S.C. 202), and notice was given to the owners and to the public by posting notices at the stockyards as required by said section 302, on respective dates specified below.

Facility No., name, and location of stockyard	Date of posting
AL-171—Cullman Feeder Pig Assoc., Hanceville, AL	June 22, 1987
AR-163—Ward Livestock Auction, Ward, AR	July 28, 1987
IA-259—The Auction Farm, Sheldon, IA	July 21, 1987
KY-173—Gateway Livestock Auction, Inc., Mt. Sterling, KY	May 6, 1987
MS-162—Glenwild Livestock Auction, Grenada, MS	May 8, 1987
MO-263—Lyle Stockyards, Savannah, MO	May 11, 1987
MO-264—MFA Livestock Association, Inc., Centerville, MO	May 26, 1987
MO-265—Hwy 47 Auction, St. Clair, MO	June 1, 1987

Done at Washington, DC, this 23rd day of September, 1987.

Harold W. Davis,

Director, Livestock Marketing Division.

[FR Doc. 87-22420 Filed 9-28-87; 8:45am]

BILLING CODE 3410-KD-M

Proposed Posting of Stockyards; Hwy 20 Horse Auction, et al.

The Packers and Stockyards Administration, United States Department of Agriculture, has information that the livestock markets named below are stockyards as defined in section 302 of the Packers and Stockyards Act, 1921, as amended (7 U.S.C. 202), and should be made subject to the provisions of the Act.

GA-195—Hwy 20 Horse Auction, Canton, Georgia
GA-196—Sunny Farm Stables, Cumming, Georgia
GA-197—Southeastern Livestock Co., Quitman, Georgia
NC-158—Stegall's Livestock and Auction Barn, Concord, North Carolina
TN-184—Beech River Feeder Pig Sale, Inc., Parsons, Tennessee
TX-334—Ellis County Livestock, Inc., Waxahachie, Texas
VA-157—Springlake Livestock Market, Inc., Moneta, Virginia
VA-158—Farmers Livestock Market, Inc., of Tazewell, Virginia, Tazewell, Virginia

Notice is hereby given that pursuant to authority under the Packers and Stockyards Act, 1921, as amended (7 U.S.C. 181 et seq.), it is proposed to designate the stockyards named above as posted stockyards subject to the provisions of the Act as provided in section 302 thereof.

Any person who wishes to submit written data, views, or arguments concerning the proposed designation, may do so by filing them with the Director, Livestock Marketing Division, Packers and Stockyards Administration, United States Department of Agriculture, Washington, DC 20250, by October 14, 1987.

All written submissions made pursuant to this notice shall be made available for public inspection in the office of the Director of the Livestock Marketing Division during normal business hours.

Done at Washington, DC, this 23rd day of September, 1987.

Harold W. Davis,

Director, Livestock Marketing Division.

[FR Doc. 87-22421 Filed 9-28-87; 8:45 am]

BILLING CODE 3410-KD-M

Deposting of Stockyards; McCreary Sales Co. et al.

It has been ascertained, and notice is hereby given, that the livestock markets named herein, originally posted on the respective dates specified below as being subject to the Packers and Stockyards Act, 1921, as amended (7 U.S.C. 181 et seq.), no longer come within the definition of a stockyard under said Act and are, therefore, no longer subject to the provisions of the Act.

Facility No., name, and location of stockyard	Date of posting

TX-174—Georgetown Commission Company, Georgetown, TX	Mar 27, 1959
VT-106—Vergennes Livestock Commission Sales, Vergennes, VT	Nov 19, 1959
VA-113—Galax Livestock Market, Inc., Galax, VA	Feb 16, 1968
VA-114—Farmers Livestock Market, Gate City, VA	Feb 16, 1968
VA-136—Staunton Livestock Market, Inc., Staunton, VA	Apr 8, 1959
VA-140—Farmers Livestock Market, Inc., Tazewell, VA	Mar 2, 1959
VA-143—Woodstock Livestock Market, Inc., Woodstock, VA	June 10, 1959
VA-152—Farmers Livestock Market, Inc., Rose Hill, VA	Nov 30, 1978

Notice or other public procedure has not preceded promulgation of the foregoing rule. There is no legal justification for not promptly depositing a stockyard which is no longer within the definition of that term contained in the Act.

The foregoing is in the nature of a change relieving a restriction and may be made effective in less than 30 days after publication in the **Federal Register**. This notice shall become effective upon publication in the **Federal Register**.

(42 Stat. 159, as amended and supplemented; 7 U.S.C. 181 *et seq.*).

Done at Washington, DC, this 23rd day of September, 1987.

[FR Doc. 87-22422 Filed 9-28-87; 8:45 am]

BILLING CODE 3210-KD-M

Rural Electrification Administration

Finding of No Significant Impact; Dairyland Power Cooperative

AGENCY: Rural Electrification Administration, USDA.

ACTION: Finding of No Significant Impact.

SUMMARY: Notice is hereby given that the Rural Electrification Administration (REA), pursuant to the National Environmental Policy Act of 1969, as amended, the Council on Environmental Quality Regulations (7 CFR Part 1794), has made a Finding of No Significant Impact (FONSI) with respect to the construction of a new administration building in the City of La Crosse, Wisconsin. The new building site is located in part of the SW–¼, NW–¼ of Section 16, and part of the SE–¼, NE–¼ of Section 17, all in T15N, R7W. The property is approximately 3.4 hectares (8.5 acres), located in La Crosse County, Wisconsin, and will be built by Dairyland Power Cooperative (DPC) of La Crosse, Wisconsin.

FOR FURTHER INFORMATION CONTACT: REA's Environmental Assessment (EA) and FONSI and DPC's Borrower's Environmental Report (BER) may be reviewed at the office of the Director, Northwest Area—Electric, Room 0230, South Agriculture Building, Rural Electrification Administration, Washington, DC 20250, telephone number (202) 382–1400; or at the office of Dairyland Power Cooperative, James W. Taylor, Manager, 2615 East Avenue, South, La Crosse, Wisconsin 54602–0817, telephone number (608) 787–1258, during regular business hours. Copies of the BER, EA, and FONSI can be obtained from either of the contacts listed above. All comments or questions should be directed to the REA contact.

SUPPLEMENTARY INFORMATION: REA, in conjuntion with a request for construction approval from DPC, has reviewed the BER submitted by DPC and has determined that it represents an accurate assessment of the environmental impacts of the proposed project. The project consists of constructing a new administation building which will provide for DPC's entire administrative needs including the new System Operations Center (SOC) in La Crosse County, Wisconsin. REA determined that the proposed project will have no effect on floodplains, wetlands, important farmland, prime rangelands or forest lands, threatened or endangered species or critical habitat, or any property listed or eligible for listing in the *National Register of Historic Places*. No other matters of potential environmental concern were identified by REA.

Alternatives examined for the proposed project included no action, upgrading existing facilities, constructing a separate new building to accommodate only the new SOC, constructing a new building to accommodate all operations within one building, and alternative sites for construction. REA determined that the proposed construction of a new administration building in the City of La Crosse, Wisconsin, is an environmentally acceptable alternative. The proposed project will maintain the reliability of DPC's existing system and provide for DPC's entire administrative needs including the new SOC. Based upon the BER, REA prepared an EA concerning the proposed project and its impacts. REA has independently evaluated the proposed project, and has concluded that project approval would not constitute a major Federal action significantly affecting the quality of the human environment. Therefore, the preparation of an Environmental Impact Statement is not necessary

In accordance with REA Environmental Policies and Procedures (7 CFR Part 1794), DPC advertised and requested comments on the environmental aspect of the proposed project in the La Crosse Tribune, a public daily newspaper of general circulation. There were no comments.

This program is listed in the Catalog of Federal Domestic Assistance under No. 10.850-Rural Electrification Loans and Loan Guarantees. For the reasons set forth in the final rule related notice to 7 CFR Part 3015 Subpart V in 50 FR 47034, November 14, 1985, this program is excluded from the scope of Executive Order 12372 which requires intergovernmental consultation with state and local officials.

Date: September 17, 1987.

Jack Van Mark,

Acting Administrator.

Endangered Species; Proposed Modification of Permit; Southwest Fisheries Center

Notice is hereby given that the Southwest Fisheries Center, P.O. Box 271, La Jolla, CA 92038 has requested a modification of Permit No. 413 issued on April 20, 1983 (48 FR 17638), under the Endangered Species Act of 1973 (16 U.S.C. 1531 through 1543), and the National Marine Fisheries Service regulations governing endangered fish and wildlife permits (50 CFR Parts 217 through 222).

Permit No. 413 authorized, among other things, the collection of three male Hawaiian monk seals for captive experimental studies including feeding, disease treatments, and testing of marking techniques. The Holder requests authorization to include research that would involve behaviorally conditioning the seals so that basal metabolic rates can be determined.

Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of this proposed modification should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, Washington, DC 20235, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular request would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this notice are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above modification are available for review by interested persons in the following offices:

Office of Protected Resources and Habitat Programs, National Marine Fisheries Service, 1825 Connecticut Avenue, NW., Room 805, Washington, DC; and

Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, California 90731–7415.

Date: September 22, 1987.

Nancy Foster,

Director, Office of Protected Resources and Habitat Programs, National Marine Fisheries Service.

DEPARTMENT OF ENERGY

Floodplain Statement of Findings for the Industrial Wastewater Pretreatment Facility at the DOE Kansas City Plant, Operated by the Allied Corporation, Bendix Kansas City Division

AGENCY: Department of Energy.

ACTION: Statement of findings.

SUMMARY: This document serves to give public notice of the alternative selected by DOE on the proposed Industrial Wastewater Pretreatment Facility. Information contained in this Statement of Findings is presented in support of the decision to construct the Pretreatment Facility at the DOE Kansas City Plant as originally proposed. The related Floodplain Involvement Notification was published in the **Federal Register**, Vol. 52, No. 83. Page 15747, dated April 30, 1987.

DATES: Comments must be filed on or before October 14, 1987.

ADDRESS: Address any comments or requests to the Albuquerque Operations Office, Department of Energy/EHD, P.O. Box 5400, Albuquerque, New Mexico, 87115. All requests should refer to the project by title.

FOR FURTHER INFORMATION CONTACT: Earl W. Bean, Area Manager, Kansas City Area Office, Department of Energy, P.O. Box 202, Kansas City, Missouri 64141.

I. Project Description

The Kansas City Plant resides on a very compact highly developed site within the completed portion of the flood protection system. This project proposes to construct a 37,000 square-foot steel frame building to house industrial wastewater pretreatment equipment. The building will be located in an area east of Building 16 and north of Building 22, part of which is now occupied by a salvaged materials storage lot. In addition to all pretreatment process equipment and tankage, the building will house sludge handling and storage equipment; chemical storage and feed equipment; an office/control room; a laboratory; and restrooms. Site specific information can be obtained through the Kansas City Plant Environmental Assessment (DOE/EA–0002).

The Plant will treat industrial wastewater from the DOE manufacturing facility that presently flows into the south lagoon and then to the City sanitary sewer. Three wastestreams contribute to lagoon influent: (1) Acid wastewater; (2) caustic wastewater; and (3) industrial wastewaters, as defined by 40 CFR Part 433; plus, other wastewaters from manufacturing and support operations. The pretreatment facility will also treat concentrated solutions from metal finishing processes that are presently hauled off-site for disposal by a subcontractor. The pretreatment facility will treat or remove cyanide; ammonia; metals (including hexavalent chromium and chelated metals); acids; caustics; and organic pollutants.

II. Alternatives

Reasonable alternatives to the action as proposed include the following: (1) No action, and (2) location of the pretreatment facility closer to the Main Plant. Alternative (1) was rejected because the applicable pretreatment standards would be exceeded periodically resulting in noncompliance with these regulations. Alternative (2) was ultimately rejected because sufficient land area is not available near the main facility. The Plant occupies 136 acres, only three percent of which is readily available for future development. With relocation, the pretreatment facility would still be situated in the floodplain as the entire federal complex is located within the 500-year floodplain.

III. Mitigation

Construction of the proposed Industrial Wastewater Pretreatment Plant will have no measurable impact on the basic characteristics of the Blue River floodplain. All construction activities will be within the existing flood protection zone where protection from flooding is provided by a levee constructed by the U.S. Corps of Engineers in 1972. The flood protection system restricts the floodway of the Blue River and Indian Creek from flowing through the Federal Complex. Engineering controls will also be used to reduce damage in the unlikely event that flooding should occur. The tops of containment walls and the floors will be set above the current level of flood protection, which according to the U.S. Army Corps of Engineers is presently providing protection for the 70-year flood. This action will lessen the chance of inundating equipment and stored chemicals. In addition, efforts to further minimize the release of industrial waste to the environment during flooding conditions will include halting the flow of wastewater to the pretreatment facility, that is, stopping factory operations and storing sludge above the current flood protection level. Because of the essentially "fully developed" characteristic of the federal complex, it is not believed necessary to evalaute effects on flora and fauna in the area.

IV. Determination

Benefits derived from the proposed project, as described in section (I), have been determined to outweigh the potential environmental impacts. As a result of the review of alternatives and evaluation of the environmental impacts, the DOE has determined that there is no practical alternative to the proposed action and that the proposed action has been designed to minimize harm to and within the floodplain. All actions will be in conformity with all applicable State and local ordinances.

The location map for this site is available from Randy F. Reddick, Albuquerque Operations Office, DOE-EHD, P.O. Box 5400, Albuquerque, New Mexico 87115, (505) 846–4340.

Date: August 3, 1987.

Troy E. Wade II,

Acting Assistant Secretary for Defense Programs, Department of Energy.

BILLING CODE 6450–01–M

Floodplain Statement of Findings for Pedestrian Safety Roadway Relocation at the DOE Kansas City Plant, Operated by the Allied Corporation, Bendix Kansas City Division

AGENCY: Department of Energy.

ACTION: Statement of findings.

SUMMARY: This document serves to give public notice of the alternative selected by DOE on the proposed Pedestrian Safety Roadway Relocation project. Information contained in this Statement of Findings is presented in support of the decision to proceed with the roadway relocation as originally proposed. The related Floodplain Involvement Notification was published in the **Federal Register**, Vol. 52, No. 83, Pages 15748–15749, dated April 30, 1987.

DATES: Comments must be filed on or before October 14, 1987.

ADDRESS: Address comments or requests to the Albuquerque Operations Office, Department of Energy, P.O. Box 5400, Albuquerque, New Mexico, 87115. All comments should refer to the project by title.

FOR FURTHER INFORMATION CONTACT: Earl W. Bean, Area Manager, Kansas City Area Office, Department of Energy, P.O. Box 202, Kansas City, Missouri 64141.

I. Project Description

The Kansas City Plant resides on a very compact highly developed site

within the completed portion of the flood protection system. The project will consist of the relocation of part of the existing 95th Street as it runs from Michigan Avenue to the new bridge over the Blue River east of the IRS facility. Pedestrian safety will be increased by minimizing the amount of parking south of the thoroughfare and constructing a pedestrian tunnel under the relocated roadway. This will also provide an expanded security control area directly in front of the main offices of the DOE facility. The increased security will be achieved by creating a fenced outer security buffer zone between the existing perimeter fence and the public roadway.

From the 1940's to 1984, the area south of 95th Street and east of the railroad tracks was a landfill used for the deposition of plant wastes. The proposed roadway relocation is located directly over a portion of the former landfill which is situated on the Federal Complex area. General plant refuse, trash, rubble, and metal shavings were routinely buried. Historical accounts of isolated incidents of disposal of liquids and plating waste have been reported. The landfill is now referred to as the IRS Landfill because of its proximity to the Internal Revenue Service center. The nature of waste in the area has been generally characterized, and data obtained from monitoring wells in the vicinity suggest that the area is a minor source of groundwater contamination

Six borings were drilled in June 1985, from which a total of 26 split-spoon samples were retrieved. Samples were collected from both the fill and the subjacent alluvium. A total of 22 samples were analyzed for metals. Eight of these samples with high metal concentrations were also subjected to a leach test, applying the EP Toxicity Method to six metals: Cadmium, chromium, copper, lead, nickel, and zinc. A total of nine samples were analyzed for volatile and semivolatile Priority Pollutants. Organic vapors were also monitored during drilling and sampling. An unidentified gas, believed to be methane, was noted in a number of borings.

The results of the leach test demonstrate that none of the samples were hazardous with respect to lead, cadmium, and chromium. Copper, nickel, and zinc are not EP Toxicity metals, so regulatory standards for leachability do not exist. The data indicate, however, that these three metals are not leachable. The site characterization study confirms historical reports of a general refuse landfill without concentrated sources of hazardous waste.

II. Alternatives

Alternative sites for the proposed roadway were considered, but all potential sites are within the same floodplain. Since the roadway will not adversely affect the floodplain, there is no advantage to a "no action" alternative. Flood induced damages to the roadway will be minimal, with some temporary rerouting of city traffic during the period of high water, and consist only of repairs to signal and tunnel lighting.

III. Mitigation

Part of the relocated roadway will cross an area that has been identified as an abandoned landfill. Analysis of landfill contents by drilling has not revealed any significant hazards. However, to limit surface percolation and to prevent migration of potential pollutants, an impervious seal will be placed under the roadway where it crosses the IRS landfill. This seal will extend beyond the edge of any roadway section a distance sufficient to allow placement of additional seal material to cover a larger area at a later date without jeopardizing the waterproof characteristics of the original seal. The seal will be impervious to methane gas which may be present in small quantities in the landfill. Various methods to be reviewed for sealing the landfill are available; representative samples are given in U.S. Department of Commerce Manuals, PB82–239054, dated March 1982, and AD/AL40–655, dated February 1984.

IV. Determination

Benefits derived from the proposed project, as described in section (I), have been determined to outweigh the potential environmental impacts. As a result of the review of alternatives and evaluation of the environmental impacts, the DOE has determined that there is no practicable alternative to the proposed action and that the proposed action has been designed to minimize harm to and within the floodplain. All actions will be in conformity with all applicable State and local ordinances.

Date: August 3, 1987.

Troy E. Wade II,

Acting Assistant Secretary for Defense Programs, Department of Energy.

BILLING CODE 6450-01-C

Federal Energy Regulatory Commission

[Project Nos. 7175–009 et al.]

Hydroelectric Applications Filed; Resource Management Co. et al.

Take notice that the following hydroelectric applications have been filed with the Federal Energy Regulatory Commission and are available for public inspection:

a. Type of Application: Surrender of License.

b. Project No.: 7175–009.

c. Date Filed: August 11, 1987.

d. Licensee: Resource Management Company.

e. Name of Project: Woodruff Narrows.

f. Location: Occupies, in part, 5.0 acres of U.S. lands administered by the Bureau of Land Management located on Bear River, in Uinta County, Wyoming.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: McNeill Watkins II, Bishop, Cook, Purcell & Reynolds, 1200 Seventeenth Street, NW., Washington, DC 20036, (202) 857–9885.

i. FERC Contact: Thomas Dean, (202) 376–9275.

j. Comment Date: October 26, 1987.

k. Description of Project: Project works consisting of: (1) A 620-foot-long, 65-foot-high earthen dam owned by the State of Utah; (2) a 2,312-acre reservoir; (3) a 500-foot-long open channel; (4) a 3,600-foot-long penstock; (5) a powerhouse containing two generating units with a total capacity of 2,500 kW; (6) a 400-foot-long outlet channel; (7) a 1,600-foot-long portion of the Francis-Lee Canal; (8) a 6-mile-long transmission line; and (9) appurtenant facilities.

The license states that it has been unable to secure a purchaser for energy to be generated at the project at a price that will justify investment in the project. The licensee also states that the project cannot be financed at the current rates offered by prospective purchasers.

1. Purpose of Project: The licensee intended to sell the power generated from the proposed facility.

m. Anyone desiring to be heard about this action should submit comments, a protest, or a motion to intervene with the Federal Energy Regulatory Commission in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 385.210, 385.211, 385.214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application. Any of the above named documents must be filed by providing an original and 14 copies to: Kenneth F. Plumb, Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, DC 20426.

2 a. Type of Application: Preliminary Permit.

b. Project No.: 10450–000.

c. Date Filed: August 5, 1987.

d. Applicant: Grand Valley Energy Resources, Inc.

e. Name of Project: Big Drop Canal.

f. Location: On the Main Line Grand Valley Canal in Mesa County, Colorado.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)—825(r).

h. Applicant Contact: Mr. Thomas A. Patterson, Grand Valley Energy Resources, Inc., 662 26 Road, Grand Junction, CO 81506.

i. FERC Contact: Hector Mr. Perez, (202) 376–1669.

j. Comment Date: November 16, 1987.

k. Description of Project: The proposed run-of-river project would consist of: (1) A new weir with trashracks about 200 feet downstream from Road 26; (2) two parallel 250-foot-long, 5.5-foot-diameter pipelines; (3) a new powerhouse with a total installed capacity of 750 kW; (4) a 400-foot-long, 13–kV transmission line; and (5) other appurtenances. Applicant estimates an average annual generation of 3,427,200 kWh to be sold to the Public Service Company of Colorado.

1. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

3. a. Type of Application: Major License.

b. Project No.: 6329–001.

c. Date Filed: November 15, 1984.

d. Applicant: Intermountain Power Corporation.

e. Name of Project: Oxbow Bend Hydroelectric.

f. Location: On the South Fork Payette River in Boise County, Idaho, within the Boise National Forest, sections 31 and 32, T9N, R7E, Bosie Meridian.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)—825(r).

h. Applicant Contact: Marc A. Auth, Intermountain Power Corporation, 8669 Kiowa Street, Boise, Idaho 83709, (208) 376–7330.

i. FERC Contract: James Hunter, (202) 376–9814.

j. Comment Date: November 16, 1987.

k. Description of Project: The proposed project would consist of: (l) A 30-foot-long, 10-foot-high diversion dam with crest elevation 3,655 feet; (2) a 100-foot-long, 10-foot-wide streamside intake structure; (3) an 850-foot-long, 12-foot-diameter steel liner within an existing tunnel; (4) a 100-foot-long, 12-foot-diameter buried penstock; (5) a 56-foot-long, 30-foot-wide concrete and steel powerhouse at elevation 3,625 feet containing two generating units, rated at 300 kW and 2,850 kW; (6) a 750-foot-long, 12.5–kV transmission line; and (7) upgrading 12,000 feet of existing road for use as an access road. A concrete chute will be installed opposite the intake to safely pass recreational craft. The estimated project cost in 1985 dollars is $4,400,000.

This application has been accepted for filing as of May 13, 1982, the submittal date of the Applicant's originally accepted exemption application pursuant to Snowbird, Ltd. et al., 28 FERC ¶ 61,062, issued July 18, 1984.

1. Purpose of Project: Project output would be sold to Idaho Power Company.

m. This notice also consists of the following standard paragraphs: B. C. and D1.

n. Refiling of motions to intervene in this docket is not necessary. This notice supplements the notice issued Janaury 24, 1985, in the light of additional information that has been filed by the Applicant on 4–15–85, 6–3–85, 3–24–86, 10–8–86, and 4–7–87.

4. a. Type of Application: New Minor License.

b. Project No: 1235–000.

c. Date Filed: October 3, 1986.

d. Applicant: City of Radford, Virginia.

e. Name of Project: Municipal Hydroelectric Plant.

f. Location: On Little River near Radford, Montgomery and Pulaski Counties, Virginia.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)—825(r).

h. Applicant Contact: R.P. Asbury, Jr., 619 Second St., Radford, VA 24141, (703) 731–3603.

i. FERC Contact: Michael Dees, (202) 376–9830.

j. Comment Date: November 19, 1987.

k. Description of Project: The project as currently licensed consists of: (1) A concrete dam 293 feet long and 58 feet high; (2) a 350-acre reservoir with a gross storage capacity of 1,600-acre-feet as an elevation of 1,760 feet m.s.l.; (3) a 96-inch steel-lined concrete penstock; (4) a powerhouse containing one 1,000-kW hydropower unit; (5) a concrete trailrace; (6) a 69–kV transmission line 2.7 miles long; and (7) appurtenant facilities. There are no plans for future hydropower units or modifications to the existing facilities.

l. Purpose of Project: Project energy is supplied to the City of Radford municipal electric system.

m. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D1.

5 a. Type of Application: Transfer of License.

b. Project No: 2905–008.

c. Date Filed: July 21, 1987.

d. Applicant: Vermont Public Supply Authority and the Village of Enosburg Falls Municipal Water and Light Department.

e. Name of Project: Enosburg Falls Project.

f. Location: On the Missisquoi River in Franklin County, Vermont.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Ms. Frances E. Francis, Spiegel & McDiarmid, 1350 New York Ave., Washington D.C. 20005, (202) 879–400.

i. FERC Contact: Robert Bell, (202) 376–5706.

j. Comment Date: October 28, 1987.

k. Description of Transfer: On July 12, 1983, a license was to the Vermont Public Power Supply Authority (licensee), to construct, operate, and maintain the Enosburg Falls Project 2905. The licensee was granted an amendment to this license on March 17, 1987. The licensee intends to transfer the license to the Village of Enosburg Falls Municipal Water and Light Department (transferee) which will purchase, build and operate the project. Both the licensee and transferee are municipalities.

1. This notice also consists of the following standard paragraphs: B and C.

6 a. Type of Application: Major License (Over 5 MW).

b. Project No.: 9999–000.

c. Date Filed: May 27, 1986.

d. Applicant: City of St. Marys, West Virginia.

e. Name of Project: Willow Island Hydroelectric Development.

f. Location: On the Ohio River near Willow Island, Pleasants County, West Virginia, and Washington County, Ohio.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Contact Person: Mr. James B. Price, West Virginia Hydro Corporation, 120 Calumet Court, Aiken, SC 29801, (803) 642–2749.

i. Comment Date: October 26, 1987.

j. Competing Application: Project No. 6902–003, Date Filed: October 8, 1985.

k. Description of Project: The proposed project would utilize the U.S. Army Corps of Engineers' Willow Island Dam and reservoir and would consist of: (1) A proposed intake waterway 140 feet wide, 22 feet deep, and approximately 300 feet long; (2) a proposed powerhouse, 140 feet by 274 feet, housing two 20,000-kW hydropower units; (3) a proposed tailrace 140 feet wide; (4) a proposed 138-kV transmission line approximately 5,000 feet long; and (5) appurtenant facilities. The applicant estimates that the average annual energy generation would be 181 GWh. The applicant proposes to sell the energy to a power company or other energy user.

1. This notice also consists of the following standard paragraphs: A4, B, C.

7 a. Type of Application: Exemption from Licensing.

b. Project No: 10007–001.

c. Date Filed: February 11, 1987.

d. Applicant: John P. MacMunn.

e. Name of Project: Bunny Run Project.

f. Location: an unnamed Stream which flow into the west Branch of the Pleasant River in the Androscoggin River Basin in the Township of Mason, Oxford County, Maine.

g. Filed Pursuant to: Section 408 of the Energy Security Act of 1980, 16 U.S.C. 2705 and 2708 as amended.

h. Applicant Contact: Mr. John P. MacMunn, P.O. Box 92, West Bethel, ME 04286, (207) 836–3375.

i. FERC Contact; Robert Bell, (202) 376–5706.

j. Comment Date: October 30, 1987.

k. Description of Project: The proposed project would consist of: (1) An existing 6-foot-long, 6-foot-high concrete and stone dam; (2) an impoundment having a surface area of 320 acres, with negligible storage, and normal water surface elevation of 1,133 feet m.s.l.; (3) a proposed intake structure; (4) a proposed 2,200-foot-long, 8-inch-diameter PVC penstock; (5) a proposed powerhouse containing one generating unit having an installed capacity of 10kW; (6) a proposed tailrace; and (7) appurtenant facilities. The applicant estimates the average annual generation would be 100,000 kWh.

1. Purpose of Project: The applicant proposes used the power generated domestically and all excess would be sold to Central Maine Power Company.

m. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D3A.

8 a. Type of Application: Minor License.

b. Project No.: 9794–001.

c. Date Filed: January 16, 1987.

d. Applicant: City of Kings Mountain, North Carolina.

e. Name of Project: John Henry Moss.

f. Location: Buffalo Creek, Cleveland County, North Carolina.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: John Henry Moss, Mayor, City of Kings Mountain, Post Office Box 429, Kings Mountain, NC 28086, (704) 734–0333.

i. FERC Contact: Dean Wright, (202) 376–9820.

j. Comment Date: November 27, 1987.

k. Description of Project: The proposed project would consist of (1) an existing earthfill dam 840 feet long and 99 feet high; (2) an existing reservoir of 1350 acres surface area and 38000 acre-feet volume at a normal maximum surface elevation of 736 feet msl; (3) proposed 12-inch-high flashboards; (4) a proposed reinforced concrete intake structure 40 feet high and 15 feet square; (5) an existing 54-inch-diameter steel penstock 370 feet long; (6) a proposed concrete powerhouse 40 feet long and 20 feet wide housing two proposed turbine-generators with a combined capacity of 1100 kW; (7) a proposed 2.3 kV transmission line 900 feet long; and (8) appurtenant facilities. The net hydraulic head would be 81 feet. The estimated annual energy production is 3.7 GWh. Project power would be used by the applicant. The existing facilities are owned by the applicant.

l. This notice also consists of the following standard paragraphs: A3, A9, B, C, and D1.

9 a. Type of Application: Preliminary Permit.

b. Project No.: 10435–000.

c. Date Filed: June 24, 1987.

d. Applicant: EDC Foundation of Chicago.

e. Name of Project: Pumped Storage.

f. Location: Tunnel and Reservoir Plan (TARP) System and Chicago Sanitary and Ship Canal, Chicago, Illinois.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Mr. Joseph H. Abel, Executive Director, EDC Foundation of Chicago, 1503 Merchandise Mart, Chicago, IL 60654, (312) 744–9547.

i. FERC Contact: Dean Wright, (202) 376–9821.

j. Comment Date: November 27, 1987.

k. Description of Project: The proposed project would operate as pumped storage and would consist of: (1) The existing Tunnel and Reservoir Plan (TARP) system, a series of existing and proposed deep tunnels; (2) the existing Chicago Sanitary and Ship Canal serving as a surface reservoir of 892 acres and 291 million gallon storage capacity, operating with a maximum drawdown of 12 inches; (3) three proposed 72-inch diameter penstocks, to be installed in existing Metropolitan Sanitary District of Greater Chicago (MSDGC) dropshafts; (4) three proposed

concrete intake structures; (5) a proposed subsurface powerhouse vault enclosing three proposed turbine-pump-generators of 10 MW capacity each; (6) a proposed 13.8 kV transmission line 1500 feet long, and (7) appurtenant facilities. The hydraulic head is 265 feet. Annual generation (not including pumping energy) is estimated to be 87.6 GWh. Project power would be sold to Commonwealth Edison Company. The existing facilities are owned by MSDGC. Applicant estimates the cost of studies to be performed under the permit to be $215.000.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

10 a. Type of Application: Preliminary Permit.

b. Project No.: 10455–000.

c. Date Filed: August 10, 1987.

d. Applicant: JDJ Energy Company.

e. Name of Project: River Mountain Pumped Storage.

f. Location: Arkansas River (Lake Dardanelle) in Logan County, Arkansas.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Doyle W. Jones, P.E., 902 Highway 270 North, Suite 102, Malvern, AR 72104, (501) 337–4904.

i. FERC Contact: Dean Wright, (202) 376–9820.

j. Comment Date: November 27, 1987.

k. Description of Project: The proposed project would use the existing Lake Dardanelle, a part of the McClellan-Kerr Arkansas River Navigation System owned and operated by the U.S. Army Corps of Engineers, Little Rock District, P.O. Box 867, Little Rock, AR 72203, as a lower reservoir, and would consist of (1) a proposed rockfill embankment 60 feet high and 20 feet wide forming a circular impoundment approximately 2700 feet in diameter; (2) a proposed reservoir of 117 acres surface area and 5400 acre-feet volume at a normal maximum surface elevation of 990 feet NGVD; (3) a proposed reinforced concrete intake structure 95 feet high, 75 feet wide, and 80 feet long; (4) two proposed 16.8-foot-diameter steel penstocks 7200 feet long; (5) a proposed reinforced concrete powerhouse 150 feet high, 180 feet long, and 90 feet wide housing two proposed reversible turbine-pump-generators of 200 MW capacity each; (6) a proposed 500 kV transmission line 8000 feet long; and (7) appurtenant facilities. The estimated annual energy production (based on an annual energy input of 1139 GWh) is 876 GWh. Project power would be sold. Applicant estimates that the cost of the work to be performed under the preliminary permit would be $70,000.

l. This notice also consists of the following standard paragraphs: A5, A7, A9, A10, B, C, and D2.

Standard Paragraphs

A3. Development Application—Any qualified development applicant desiring to file a competing application must submit to the Commission, on or before the specified comment date for the particular application, a competing development application, or a notice of intent to file such an application. Submission of a timely notice of intent allows an interested person to file the competing development application no later than 120 days after the specified comment date for the particular application. Applications for preliminary permit will not be accepted in response to this notice.

A4. Development Application—Public notice of the filing of the initial development application, which has already been given, established the due date for filing competing applications or notices of intent. In accordance with the Commmission's regulations, any competing development applications, must be filed in response to and in compliance with public notice of the initial development application. No competing applications or notices of intent may be filed in response to this notice.

A5. Preliminary Permit—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (see 18 CFR 4.36 (1985)). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application.

A competing preliminary permit application must conform with 18 CFR 4.30(b) (1) and (9) and 4.36.

A7. Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on before the specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application.

A competing license application must conform with 18 CFR 4.30(b) (1) and (9) and 4.36.

A8. Preliminary Permit—Public notice of the filing of the initial preliminary permit application, which has already been given, established the due date for filing competing preliminary permit and development applications or notices of intent. Any competing preliminary permit or development application, or notice of intent to file a competing preliminary permit or development application, must be filed in response to and in compliance with the public notice of the initial preliminary permit application. No competing applications may be filed in response to this notice.

A competing license application must conform with 18 CFR 4.30(b) (10 and (9) and 4.36.

A9. Notice of Intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, include an unequivocal statement of intent to submit, if such an application may be filed, either (1) a preliminary permit application or (2) a development application (specify which type of application), and be served on the applicant(s) named in this public notice.

A10. Proposed Scope of Studies Under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

B. *Comments, Protests, or Motions to Intervene*—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of the Rules of Practice and Procedure, 18 CFR 385.210, 385.211, 385.214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

C. *Filing and Service of Responsive Documents*—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION",

"COMPETING APPLICATION", "PROTEST" or "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing is in response. Any of the above named documents must be filed by providing the original and the number of copies required by the Commission's regulations to: Kenneth F. Plumb, Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426. An additional copy must be sent to: Mr. William C. Wakefield II, Acting Director, Division of Project Management, Federal Energy Regulatory Commission, Room 203–RB, at the above address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

D1. *Agency Comments*—States, agencies established pursuant to federal law that have the authority to prepare a comprehensive plan for improving, developing, and conserving a waterway affected by the project, federal and state agencies exercising administration over fish and wildlife, flood control, navigation, irrigation, recreation, cultural and other relevant resources of the state in which the project is located, and affected Indian tribes are requested to provide comments and recommendations for terms and conditions pursuant to the Federal Power Act as amended by the Electric Consumers Protection Act of 1986, the fish and Wildlife Coordination Act, the Endangered Species Act, the National Historic Preservation Act, the Historical and Archeological Preservation Act, the National Environmental Policy Act, Pub. L. No. 88–29, and other applicable statutes. Recommended terms and conditions must be based on supporting technical data filed with the Commission along with the recommendations, in order to comply with the requirement in section 313(b) of the Federal Power Act, 16 U.S.C. 825*1* (b), that Commission findings as to facts must be supported by substantial evidence.

All other federal, state, and local agencies that receive this notice through direct mailing from the Commission are requested to provide comments pursuant to the statutes listed above. No other formal request will be made. Responses should be confined to substantive issues relevant to the issuance of a license. A copy of the application may be obtained directly from the applicant. If an agency does not respond to the Commission within the time set for filing, it will be presumed to have no comments. One copy of an agency's response must also be set to the Applicant's representatives.

D2. *Agency Comments*—Federal, State, and local agencies are invited to file comments on the described application. (A copy of the application may be obtained by agencies directly from the Applicant.) If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

D3a. *Agency Comments*—The U.S. Fish and Wildlife Service, the National Marine Fisheries Service, and the State Fish and Game agency(ies) are requested, for the purposes set forth in section 408 of the Energy Security Act of 1980, to file within 60 days from the date of issuance of this notice appropriate terms and conditions to protect any fish and wildlife resources or to otherwise carry out the provisions of the Fish and Wildlife Coordination Act. General comments concerning the project and its resources are requested; however, specific terms and conditions to be included as a condition of exemption must be clearly identified in the agency letter. If an agency does not file terms and conditions within this time period, that agency will be presumed to have none. Other Federal, State, and local agencies are requested to provide any comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exemption. If an agency does not file comments within 60 days from the date of issuance of this notice, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

D3b. *Agency Comments*—The U.S. Fish and Wildlife Service, the National Marine Fisheries Service, and the State Fish and Game agency (ies) are requested, for the purposes set forth in section 30 of the Federal Power Act, to file within 45 days from the date of issuance of this notice appropriate terms and conditions to protect any fish and wildlife resources or otherwise carry out the provisions of the Fish and Wildlife Coordination Act. General comments concerning the project and its resources are requested; however, specific terms and conditions to be included as a condition of exemption must be clearly identified in the agency letter. If an agency does not file terms and conditions within this time period, that agency will be presumed to have none. Other Federal, State, and local agencies are requested to provide comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exemption. If an agency does not file comments within 45 days from the date of issuance of this notice, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: September 24, 1987.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87–22397 Filed 9–28–87; 8:45 am]

BILLING CODE 6717–01–M

[Docket No. CP79–467–014]

Petition To Amend; ANR Pipeline Co.

September 21, 1987.

Take notice that on September 9, 1987, ANR Pipeline Company, (ANR), 500 Renaissance Center, Detroit, Michigan 48243, filed in Docket No. CP79–467–014 a petition to amend the order issued on June 10, 1981, as amended, pursuant to section 7(c) of the Natural Gas Act so as to: (1) Extend the authorization for transportation services provided by ANR for Texas Eastern Transmission Corporation (Texas Eastern) and Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee) through October 31, 2000, and (2) authorize a further modification in the transportation service being provided by ANR for Texas Eastern, all as more fully set forth in the petition to amend which is on file with the Commission and open to public inspection.

ANR states that both Texas Eastern and Tennessee purchase Canadian natural gas supplies from ProGas Limited which are imported into the United States at a point on the international boundary near Emerson, Manitoba. ANR further states that from the point of importation, the gas supplies are transported by Great Lakes Gas Transmission Company (Great Lakes) and subsequently redelivered to ANR at a point of interconnection between ANR and Great Lakes near Farwell, Michigan.

ANR indicates that by order dated November 28, 1986, in Docket No. CP79–467–009, ANR was authorized, among other things, to provide downstream transportation for up to 75,000 Mcf of

natural gas per day for Texas Eastern through a period expiring October 31, 1987. By a previous Commission Order issued July 18, 1985, in Docket Nos. CP79–467–003 and CP79–467–005, ANR states it was further authorized to provide downstream transportation for up to a like quantity for Tennessee, also through October 31, 1987. At the time of issuance of each of the aforementioned orders, the termination date of October 31, 1987, was consistent with the then existing import and/or export authorizations, it is stated.

ANR states that by opinion and order issued June 10, 1986, by the Economic Regulatory Administration (ERA) in Docket No. 86–06–NG, Tennessee received authorization to import ProGas' gas volumes through October 31, 2000. It is further stated that Texas Eastern has applied to the ERA for import authorization through an identical term. Such application is presently awaiting resolution by the ERA in Docket No. 87–37–NG, it is indicated.

ANR indicates that it currently provides transportation services to Tennessee under Rate Schedule X–121 of ANR's F.E.R.C. Gas Tariff, Original Volume No. 2. Similarly, ANR states it provides transportation services to Texas Eastern under its Rate Schedule X–120. It is asserted that the primary term of the transportation arrangements between ANR and Tennessee, and ANR and Texas Eastern would expire no later than October 31, 2000. Accordingly, for purposes of consistency with the contracts and with the ERA authorization received by Tennessee and that requested by Texas Eastern, ANR requests that the certificate be amended to now authorize the continuation of the transportation services for Texas Eastern and Tennessee through October 31, 2000.

ANR states that currently, Rate Schedule X–120, which covers service for Texas Eastern provides that the contract demand shall not be less than 56,250 Mcf per day for the eighth contract year (November 1, 1987 to November 1, 1988), 37,500 Mcf per day for the ninth contract year (November 1, 1988 to November 1, 1989), 18,750 Mcf per day for the tenth contract year (November 1, 1989 to November 1, 1990), and zero for the eleventh contract year (November 1, 1990 to November 1, 1991). ANR further states that the foregoing arrangements were approved by the Commission on November 28, 1986, in Docket No. CP79–467–009. ANR indicates that ProGas and Texas Eastern entered into a new sales agreement dated November 1, 1986, which superseded the previous sales agreement. ANR further indicates that ANR and Texas Eastern have modified the existing transportation agreement to conform to the new sales agreement. Specifically, it is stated that the parties have agreed that the contract demand shall be 75,000 Mcf per day for the remaining term of the contract. ANR states that Texas Eastern, however, has reserved the right to reduce the contract demand on 23 months prior notice in conformance with the "Daily Contract Quantity" set forth in the aforementioned superseding sales agreement. To obviate the need of further modification to the certificate, ANR requests authorization to reflect any reduction in contract demand with an appropriate tariff filing made prior to the first day of the contract year wherein a reduced quantity is to be made effective.

Any person desiring to be heard or to make any protest with reference to said amendment should on or before October 13, 1987, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules. All persons who have heretofore filed need not file again.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87–22404 Filed 9–28–87; 8:45 am]

BILLING CODE 6717–01–M

[Docket Nos. RP87–111–001 and RP85–169–026]

Proposed Changes in FERC Gas Tariff; Consolidated Gas Transmission Corp.

September 23, 1987

Take notice that Consolidated Gas Transmission Corporation (Consolidated) on September 18, 1987, filed the following revised tariff sheets to Original Volume No. 1 of its FERC Gas Tariff:

Substitute Fourteenth Revised Sheet No. 31
Substitute Alternate Fourteenth Revised Sheet No. 31
Alternate Fifteenth Revised Sheet No. 31
Revised Second Revised Sheet No. 33
Third Revised Sheet No. 33
Alternate Second Revised Sheet Nos. 121 and 128
First Revised Sheet No. 130
Alternate Third Revised Sheet No. 136
Alternate First Revised Sheet No. 137.

The proposed effective dates are September 1 and October 1, 1987. These tariff sheets are being filed (1) to supplement the filing of August 31, 1987, in Docket No. RP87–111–000, which was made in compliance with the Commission's Annual Charge Adjustment Rules promulgated in Order No. 472 issued May 29, 1987, in Docket No. RM87–3–000, and (2) to reduce sales and transportation rates to reflect changes in the federal income tax rate consistent with the requirements of Article XII of the pending Stipulation and Agreement in Consolidated's Docket No. RP85–169, filed February 10, 1986.

Additionally, Consolidated is withdrawing "Second Revised Sheet No. 33" filed on August 31, 1987, in Docket No. RP87–111–000 in order to correct a numbering error.

Copies of the filing were served upon Consolidated's jurisdictional customers as well as interested States commissions.

Any person desiring to be heard or to protest said filing should file a protest or motion to intervene with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All motions or protests should be filed on or before September 30, 1987. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87–22399 Filed 9–28–87; 8:45 am]

BILLING CODE 6717–01–M

[Docket No. CI87–906–000]

Application for Permanent Abandonment; Estate of Roy Furr

September 23, 1987.

Take notice that on September 16, 1987, the Estate of Roy Furr (Furr), 1306 Broadway, Lubbock, Texas 79401, filed

an application requesting permanent abandonment of a sale of gas to Panhandle Eastern Pipe Line Company (Panhandle) from the O'Loughlin No. 1–17 well, Section 17, Block 2, SA&MG Survey, Bernstein (Upper Morrow) Field, Hansford County, Texas.

Furr states that Panhandle has no market for the subject gas. By letter dated August 18, 1987, Panhandle agreed to release the gas after abandonment authorization is granted. By letter dated August 17, 1987, Phillips 66 Natural Gas Company made a contract offer, valid for 60 days, for purchase of the subject gas, provided that prior abandonment authority is obtained, and provided that Furr obtains a release from the prior dedication to Panhandle. Deliverability is approximately 760 Mcf/d. The gas is NGPA section 104 flowing gas.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 8, 1987, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party in a proceeding must file a petition to intervene in accordance with the Commission's rules.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Furr to appear or to be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87—22402 Filed 9–28–87; 8:45 am]

BILLING CODE 6717-01-M

[Docket Nos. TA88–1–47–000 and RP87–143–000]

Proposed Purchased Gas Adjustment Rate Change; MIGC, Inc.

September 23, 1987.

Take notice that on September 17, 1987, MIGC, Inc. tendered for filing copies of First Revised Sheet Nos. 31B through 31D, Forty-Fourth Revised Sheet No. 32, Alternate Forty-Fourth Revised Sheet No. 32, Forty-Fifth Revised Sheet No. 32, Twelfth Revised Sheet No. 32A, First Revised Sheet No. 38, Alternate First Revised Sheet No. 38, Third Substitute Original Sheet Nos. 39 through 52, and Alternate Third Substitute Original Sheet Nos. 39 through 52 to its FERC Gas Tariff, Original Volume No. 1, in accordance with the Commission's Rules and Regulations under the Natural Gas Act.

MIGC's Forth-Fourth Revised Sheet No. 32, First Revised Sheet No. 38 and Third Substitute Original Sheet Nos. 39 through 52 provide for an Annual Charge Adjustment Clause ("ACA Clause"), and an Annual Charge Adjustment Rate increase of $.0018 per MMBtu ($.0021 per Mcf), to permit MIGC to collect its Omnibus Budget Reconciliation Act charges by means of the ACA Clause alternative, in accordance with FERC Order Nos. 472, *et seq.* MIGC is proposing that the ACA Clause and the Annual Charge Adjustment Rate be made effective October 1, 1987, on less than 30 days' notice. In the event, however, that waiver of the thirty (30) day notice requirement is not granted as hereby requested, MIGC has included Alternate Forty-Fourth Revised Sheet No. 32, Alternate First Revised Sheet No. 38 and Alternate Third Substitute Original Sheet Nos. 39 through 52, all to become effective November 1, 1987.

MICG's Alternate Forty-Fourth Revised Sheet No. 32 and Forty-FIfth Revised Sheet No. 32 provide for a Purchased Gas Adjustment rate decrease of 88.67 cents per MMBtu, effective November 1, 1987, in order (1) to provide for a current gas cost adjustment to permit MIGC to reflect the lower cost of gas purchases which it is currently incurring (Table II); (2) to provide for an adjustment to MIGC's Unrecovered Purchsed Gas Cost Account as of July 31, 1986 and July 31, 1987 (Table III), and (3) to recover carrying charges as permitted under FERC Order No. 47 (Table IV) as set forth in MIGC's First Revised Sheet No. 31A.

MIGTC's First Revised Sheet Nos. 31B through 31D and Twelfth Revised Sheet No. 32A reflect the removal of incremental pricing language from MIGC's tariff.

Any person desiring to be heard or to protest said filing should file a motion to intervent or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.214 and 385.211). All such motions or protests should be filed on or before September 30, 1987. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervent. Copies of this filing are on file with the Commission and are available for the public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87–22405 Filed 9–28–87; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP87–142–000]

Proposed Changes in FERC Gas Tariff; Mississippi River Transmission Corp.

September 23, 1987.

Take notice that on September 17, 1987, Mississippi River Transmission Corporation (Mississippi) tendered for filing the following tariff sheets to be a part of its FERC Gas Tariff, Second Revised Volume No. 1.

Original Sheet No. 4D
Third Revised Sheet No. 61
Original Sheet No. 61A

Mississippi states that the above referenced tariff sheets were submitted in accordance with Commission Order No. 472, issued May 29, 1987. The proposed changes provide Mississippi with the mechanism to recover from its jurisdictional sales and transportation customers the charges assessed it by the Commission by means of a surcharge of $.0021 per Mcf. Mississippi further states that at this time it elects to use the Annual Charge Adjustment (ACA) method of recovering those charges assessed.

Mississippi states that Eighth Revised Sheet No. 72 was submitted to reflect current contract and expiration dates.

Mississippi requests that these proposed tariff sheets become effective on October 1, 1987. Mississippi also states that copies of its filing have been served upon its customers and applicable state commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with §§ 385.211 and 385.214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before September 30, 1987. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the

Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87-22400 Filed 9-28-87; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. CP87-196-004]

Proposed Changes in FERC Gas Tariff; Transcontinental Gas Pipe Line Corp.

September 23, 1987.

Take notice that Transcontinental Gas Pipe Line Corporation (Transco) on September 17, 1987 tendered for filing certain original tariff sheets to its FERC Gas Tariff Second Revised Volume No. 1. The proposed effective date is September 1, 1987.

Transco states that on August 18, 1987 the Commission issued a certificate of public convenience and necessity which *inter alia,* authorized Transco to provide a new storage service to six distribution company customers under a proposed Rate Schedule SS-1 for a term of 20 years. Transco further states that the Commission's Order also authorized Transco to construct and operate certain pipeline facilities in the states of New Jersey and Pennsylvania.

Transco states that the purpose of the instant filing is to reflect the revisions to the initial proposed SS-1 rates, in accordance with the rate conditions contained in Ordering Paragraphs (L) and (Q) of the Commission's August 18 Order. In that connection, Transco states that Ordering Paragraph (L) required that Transco's firm initial SS-1 incremental transportation rates be redesigned on the basis of a Modified Fixed Variable (MFV) rate design with separate D-1 and D-2 components. Transco states that it is also required to submit workpapers detailing the derivation of the MFV rates, in addition to a breakdown of its operation and maintenance expenses into fixed and variable costs. Further, Transco states that Ordering Paragraph (Q) of the Commission's Order required that Transco revise the initial SS-1 rates to reflect the requirement contained in that ordering paragraph that Consolidated Gas Supply Corporation (Con Gas) charge its fully allocated maximum Rate Schedule TF rate for its firm transportation portion of the SS-1 service in lieu of the lower incremental rate proposal contained in the Con Gas application.

Transco states that copies of the filing are being mailed to each of its customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before September 30, 1987. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 87-22401 Filed 9-28-87; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. RP82-55-029]

Tariff Filing; Transcontinental Gas Pipe Line Corp.

September 23, 1987.

Take notice that on September 18, 1987, Transcontinental Gas Pipe Line Corporation ("Transco") tendered for filing the revised tariff sheets identified in Appendix A to this Notice. The proposed effective dates of the revised tariff sheets are April 1, 1987 and May 1, 1987.

The purpose of the filing was to revise Transco's sales and transportation rates to reflect the cost allocation and rate design methodology approved for the Transco system by the Commission in Opinion Nos. 260 and 260-A issued in this docket on December 30, 1986 and August 19, 1987, respectively. Transco states that the rates are based on the cost of service and billing determinants contained in Transco's compliance filing of April 1, 1987 in Docket No. RP87-7-007 which was accepted to become effective on said date by the Commission's Order issued May 20, 1987. *Transcontinental Gas Pipe Line Corporation,* 39 FERC ¶ 61,189 (1987).

Transco further states that the tariff rates contained in the revised tariff sheets proposed to be effective April 1, 1987 and May 1, 1987 are based on (i) the cost of gas and fuel components (including where applicable the unit rates attributable to demand charges paid to Sulpetro Limited) which were effective for the relevant periods pursuant to Tranco's filing of May 29, 1987 which was approved by the Commission Order issued July 16, 1987 in Docket Nos. TA85-1-29-012 *et al., Transcontinental Gas Pipe Line Corporation,* 40 FERC, ¶ 61, ——— (1987) and (ii) the non-gas cost component of the sales rates derived in accordance with Opinion Nos. 260 and 260-A. The tariff sheets proposed to be effective May 1, 1987 are intended to supercede the tariff sheets proposed to be effective April 1, 1987 in order to take account of the different PGA surcharge adjustments applicable for such periods.

Upon Commission approval of the revised tariff sheets, Transo states that it will make appropriate billing adjustments, including interest, to effectuate the revised rate levels to be effective April 1, 1987 and May 1, 1987.

Transco states that copies of the filing have been served upon its customers, State Commissions, and other interested parties.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR, § 385.211 and 385.214). All such motions or protests should be filed on or before September 30, 1987. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Management Advisory Group to the Construction Grant Programs; Open Meeting

Under Pub. L. 19–463, notice is hereby given that a meeting of the Management Advisory Group to the Construction Grant Program (MAG) will be held at the Loews L'Enfant Hotel, 480 L'Enfant Plaza SW., Washington, DC 20024, beginning at 9:00 a.m., on October 15 and ending at about 1:00 p.m. on October 16, 1987.

The agenda will include a review and discussion of the implementation of provisions of the Water Quality Act of 1987, including the State Revolving Loan Program. The status of privatization of sewage treatment facilities will also be reviewed. The agenda will also include briefings and discussions on other topics of current or future interest to MAG. Any members of the public wishing to make comments are invited to submit them in writing to the Executive Secretary at the meeting.

The meeting will be open to the public. Additional information on the meeting may be obtained from Ms. Vicki Gillispie at the Environmental Protection Agency, WH–547, 401 M Street SW., Washington, DC 20460, telephone number: (202) 382–5859.

FIFRA Scientific Advisory Panel; Open Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: There will be a 2-day meeting of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Scientific Advisory Panel (SAP) Subpanel to review a set of scientific issues being considered by the Agency in connection with a briefing paper on the Agency's proposed response to a petition from the Center for Science in the Public Interest (CSPI), other environmental advocacy organizations, State government agencies, and public health organizations.

DATE: Thursday and Friday, October 15–16, 1987, from 9:00 a.m. to 4:30 p.m. on Thursday, and 8:30 a.m. to 2:00 p.m. on Friday.

ADDRESS: The meeting will be held at: U.S. Environmental Protection Agency, Room 1112, Crystal Mall, Building No. 2, 1921 Jefferson Davis Highway, Arlington, VA.

FOR FURTHER INFORMATION CONTACT: By Mail: Stephen L. Johnson, Executive Secretary, FIFRA Scientific Advisory Panel, Office of Pesticide Programs (TS–769C), 401 M Street SW., Washington, DC 20460, Office location and phone number: Rm. 1121, Crystal Mall, Building No. 2, Arlington, VA, (703–557–7695).

SUPPLEMENTARY INFORMATION: The agenda for the meeting is:

Review of the scientific issues being considered by the Agency on a briefing paper on the Proposed Response to the CSPI Petition to adopt new guidelines and require more extensive neurotoxicity testing under FIFRA.

In a petition filed on February 12, 1987, CSPI and a group of States, public interest groups, and professional societies are seeking to have EPA, under FIFRA, "issue testing methods necessary to fully assess the neurotoxic and neurobehavioral effects of pesticide active and inert ingredients and require that registrants undertake such tsts for priority chemicals detailed herein." The petitioners propose specifically that EPA adopt 7 neurotoxicity guidelines developed by the Office of Toxic Substances and require their use for most chemical categories subject to FIFRA, including inert ingredients. They assert that current data are inadequate for risk assessment of acute or chronic hazards, that the scope of potential hazards is broad, i.e., including sensory, motor, intellectual, and affective effects, and that current guidelines will neither adequately identify nor characterize these effects. The briefing paper is intended to provide sufficient overview to the issues raised in the petition for technical review by a Subpanel of the Scientific Advisory Panl of the Agency's proposed response. This briefing paper summarizes the petition, summarizes the opinions of numerous professional groups convened to discuss neurotoxicity and neurobehavioral testing, describes current testing requirements and assessments procedures in the Office of Pesticide Programs, analyzes why traditional methods may be inadequate, and proposes a series of changes.

The Agency has convened a Subpanel of the SAP to review the scientific issues on the proposed OPP response. The Subpanel will be chaired by Dr. James Swenberg, a member of the SAP. The members of the Panel are Dr. Debra Cory-Slechta, University of Rochester; Dr. John O'Donoghue, Eastman Kodak; Dr. Donald McMillan, University of Arkansas; Dr. Rudy Richardson, School of Public Health, University of Michigan; and Dr. Hugh Tilson, National Institute of Environmental Sciences.

Copies of documents relating to the item listed above, may be obtained by contacting:

Information Services Branch, Program Management and Support Division (TS–757C), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street SW., Washington, DC 20460, Office location and telephone number: Rm. 240, Crystal Mall No. 2, Arlington, VA, 703–557–2805.

Any member of the public wishing to submit written comments should contact Stephen L. Johnson at the address or phone listed above to be sure that the meeting is still scheduled and to confirm the Panel's agenda. Interested persons are permitted to file such statements before the meeting. To the extent that time permits and upon advance notice to the Executive Secretary, interested persons may be permitted by the chairman of the Scientific Advisory Panel to present oral statements at the meeting. There is no limit on written comments for consideration by the Panel, but oral statements before the Panel are limited to approximately 5 minutes. Since oral statements will be permitted only as time permits, the Agency urges the public to submit written comments in lieu of oral presentations. Information submitted as a comment in response to this notice may be claimed confidential by marking

any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR Part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public docket. Information not marked confidential will be included in the public docket without prior notice. The public docket will be available for public inspection in Rm. 236 at the address given, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. All statements will be made part of the record and will be taken into consideration by the Panel. Persons wishing to make oral/written statements should notify the Executive Secretary and submit 10 copies of written comments and oral written testimony no later than October 8, 1987, in order to ensure appropriate consideration by the panel.

Dated: September 24, 1987.

John A. Moore,

Assistant Administrator for Pesticides and Toxic Substances.

Superfund Program: Covenants Not To Sue

AGENCY: Environmental Protection Agency.

ACTION: Request for public comment; extension of comment period.

SUMMARY: The Agency is today extending the 60-day public comment period on the interim guidance governing the issuance of covenants not to sue under section 122(f) of SARA by 30 days. The interim guidance was published on July 27, 1987, at 52 FR 28038. In accordance with this extension, comments are due by October 30, 1987.

DATE: Comments must be provided on or before October 30, 1987.

ADDRESS: Comments should be addressed to Jon Fleuchaus, U.S. Environmental Protection Agency, Office of Enforcement and Compliance Monitoring, Waste Enforcement Division, LE-134S, 401 M Street SW., Washington, DC 20460, (202) 382-3077.

FOR FURTHER INFORMATION CONTACT: Jon Fleuchaus, U.S. Environmental Protection Agency, Office of Enforcement and Compliance Monitoring, Waste Enforcement Divison, LE-134S, 401 M Street SW., Washington, DC 20460, (202) 382-3077.

Date: September 23, 1987.

Steven L. Leifer,

Acting Associate Enforcement, Counsel for Waste.

Test Market Exemption Applications

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA may upon application exempt any person from the premanufacturing notification requirements of section 5(a) or (b) of the Toxic Substances Control Act (TSCA) to permit the person to manufacture or process a chemical for test marketing purposes under section 5(h)(1) of TSCA. Requirements for test marketing exemption (TME) applications, which must either be approved or denied within 45 days of receipt, are discussed in EPA's final rule published in the **Federal Register** of May 13, 1983 (48 FR 21722). This notice, issued under section 5(h)(6) of TSCA, announces receipt of four applications for exemption, provides a summary, and requests comments on the appropriateness of granting this exemption.

DATE: Written comments by: October 14, 1987.

ADDRESS: Written comments, identified by the document control number "[OPTS-59250[" and the specific TME number should be sent to: Document Processing Center (TS-790), Office of Toxic Substances, Environmental Protection Agency, Rm. L-100, 401 M Street SW., Washington, DC 20460, (202) 554-1305.

FOR FURTHER INFORMATION CONTACT: Stephanie Roan, Premanufacture Notice Management Branch, Chemical Control Division (TS-794), Office of Toxic Substances, Environmental Protection Agency, Rm. E-611, 401 M Street SW., Washington, DC 20460, (202) 382-3725.

SUPPLEMENTARY INFORMATION: The following notice contains information extracted from the non-confidential version of the TME application received by EPA. The complete non-confidential application is available in the Public Reading Room NE-G004 at the above address between 8:00 a.m. and 4:00 p.m., Monday through Friday, excluding legal holidays.

National Pollutant Discharge Elimination System; Final Modification of General Permits for Oil and Gas Operations on the Outer Continental Shelf and in State Waters of Alaska, Bering Sea and Beaufort Sea

AGENCY: Environmental Protection Agency.

ACTION: Notice of final modification of NPDES general permits.

SUMMARY: The Regional Administrator, Region 10, (the Region) is modifying the National Pollutant Discharge Elimination System (NPDES) general permits for the Bering and Beaufort seas, which appeared in the **Federal Register** on June 7, 1984 (49 FR 23734). The Bering Sea general permit (AKG283000) authorizes discharges from offshore

VOL

1987
UMI

operations in all areas offered for lease by the U.S. Department of the Interior's Minerals Management Service (MMS) during Federal Lease Sales 70 (St. George Basin) and 83 (Navarin Basin). The Beaufort Sea general permit (AKG284000) authorizes discharges from offshore facilities in areas offered for lease by: (1) MMS during Federal Lease Sales 71 and 87, (2) the State of Alaska in State Lease Sales 36, 39, 43, and 43A, and (3) MMS or the State of Alaska in Federal/State Lease Sale BF and contiguous inshore State lease sales, except for the area generally known as the Stefansson Sound Boulder Patch. Some of the lease blocks offered but not leased under the above lease sales may be reoffered in 1988 in Lease Sale 97. In this case, EPA will grant coverage under the Beaufort Sea II general permit. The permits do not authorize discharges into any wetlands adjacent to the territorial waters of the State of Alaska or from facilities defined as "coastal" or "onshore" (see 40 CFR Part 435 Subparts C and D).

The Agency is modifying the general permits for the Bering and Beaufort seas in response to the court decision in *American Petroleum Institute, et al.*, v. *EPA, et al.*, 787 F.2d 965 (5th Cir. 1986). The court vacated the condition in both permits prohibiting the discharge of drilling muds containing diesel oil and remanded this condition to the Agency for further proceedings consistent with the opinion. The court vacated the condition because the court determined that EPA had failed to comply with the Agency's regulations in designating diesel oil as an indicator pollutant and in regulating diesel oil as a "toxic" pollutant. EPA believes that today's notice reestablishing the prohibition on the discharge of muds and cuttings contaminated with diesel oil fully complies with the applicable regulations and the court's decision.

Only this condition of the permits has been reopened and modified, in accordance with 40 CFR 124.5(c)(2). All other conditions of the existing permits shall remain in effect. However, in response to a comment, the Region has included definitions of mineral oil and diesel oil. A new administrative record has been developed to support the proposed modification.

The notice of the final general permits (49 FR 23734, June 7, 1984) set forth the principal facts and the significant factual, legal, and policy questions considered in the development of the terms and conditions of the original permits. Region 10 published a notice of proposed modification and detailed fact sheet on August 19, 1986 (51 FR 29600). The basis for the final modification is given in the fact sheet for the proposed modification (51 FR 29600) and in supplementary information published below.

DATES: This modification to the Bering and Beaufort seas permits shall become effective October 29, 1987, thirty days after publication in the **Federal Register**. These permits shall expire at midnight on May 30, 1989.

ADDRESS: The administrative record for the final modification to the permits is available for public review at EPA, Region 10 at the following address: Environmental Protection Agency, Region 10, Attn: Ocean Programs Section (WD–137), 1200 Sixth Avenue, Seattle, Washington 98101.

FOR FURTHER INFORMATION CONTACT: Janis Hastings may be contacted at (206) 442–8504 or Anne Dailey may be reached at (206) 442–2110. Both may also be contacted at the above address. Copies of the final modification, response to comments, and today's final notice may be obtained by writing to the above address or by calling Kris Flint at (206) 442–8155.

I. Introduction

The Regional Administrator of Region 10 is today issuing a final modification to the NPDES general permits for the Bering and Beaufort seas. The permits are being modified in response to the court decision in *American Petroleum Institute, et al.*, v. *EPA, et al.*, 787 F.2d 965 (5th Cir. 1986). The court vacated the condition in both permits prohibiting the discharge of drilling muds and cuttings contaminated with diesel oil. The condition was remanded to the Agency for additional proceedings consistent with the opinion. EPA has also investigated whether mineral oil is an acceptable substitute for diesel oil. EPA believes that today's notice to reestablish the prohibition on the discharge of muds and cuttings contaminated with diesel oil fully complies with the applicable regulations and the court's decision.

On August 19, 1986 (51 FR 29600), the Agency published a notice of the proposed modification to the Bering and Beaufort seas permits, which is being issued in final form today. The public comment period closed on September 19, 1986. Comments and supporting documents on the proposed modification were received from 10 parties. EPA Region 10 requested and received additional information from the American Petroleum Institute (API) as a follow-up to their comments. All of the material submitted during the public comment period and in API's responses to the Region's request is included in the administrative record and was considered in determining the conditions for today's final modification. No public hearing was held since no request to hold a hearing was received.

Region 10 published a detailed document containing supplementary information and a fact sheet for the proposed modification (51 FR 29600). Part I of the fact sheet (Statutory Basis for Permit Conditions) is being included by reference without change as part of the final modification (51 FR 29601–29602). Part II (Prohibition on the Discharge of Diesel Oil) is also included by reference with further detail in several subsections (51 FR 29602–29607). The material in the above mentioned sections of the proposed notice should be consulted in reviewing the applicability and scope of the final modification. (Note that section numbers in the fact sheet differ from those within this document.)

A detailed listing of and response to public comments received on the proposed modification is included in the document entitled "Response to Comments Received on the Proposed Modification to the Bering and Beaufort seas General Permits." The comments and responses have not been printed in today's notice due to their number and length. The document and the original comment letters have been included in the administrative record for the permit modification. The document is being sent to all commenters and is also available upon request from EPA Region 10 at the address listed above.

II. Statutory Basis for Permit Conditions

Sections 301(b), 304, 401, 402, and 403 of the Clean Water Act provide the basis for the permit conditions contained in the permit. The final modified permit condition is a technology-based effluent limitation. Part I of the Draft Notice of Proposed Modification, which further describes the statutory basis for permit conditions, is herein included by reference (51 FR 29601–29602).

III. Prohibition of the Discharge of Diesel Oil

A. Summary of Basis for Modification

The general permits for the Bering and Beaufort seas were challenged by the American Petroleum Institute (API), Atlantic Richfield Company, Conoco Inc., Exxon Corporation, and Mobil Oil Corporation. In a decision dated April 18, 1986, six out of seven challenged conditions were upheld. *API, et al.,* v. *EPA, et al.,* 787 F.2d 965 (5th Cir. 1986). The seventh condition, a prohibition on the discharge of drilling muds containing diesel oil, was vacated and remanded to the Agency for further proceedings consistent with the opinion. The condition was vacated because the court determined that EPA had failed to comply with the Agency's regulations in designating diesel as an indicator pollutant and in regulating diesel as a "toxic pollutant." The court recommended that EPA also analyze the "operational, safety and cost concerns, as well as the actual evaluation of the toxicity of the diesel oil when used solely in the infrequent applications of a 'pill.' "

The fact sheet for the draft permit fully explains EPA's findings with respect to designating diesel oil as an indicator of toxic pollutants. Additional details are presented in the response to comments. EPA also investigated the suitability of mineral oil as a substitute for diesel oil and has concluded that mineral oils perform effectively in applications in which diesel oil has been commonly used in the past. Hence, the permit modification reestablishes the ban on the discharge of diesel-contaminated muds and has been developed to respond to the issues raised by the court. Further information regarding the basis for this modification is presented within the fact sheet (51 FR 29602–29603) and is herein included by reference.

B. Proposed Effluent Limitation on Diesel Oil

The permit modification issued today prohibits the discharge of muds which have been contaminated by diesel oil (i.e., those drilling muds which have contained diesel oil) or drill cuttings associated with these muds. This prohibition was incorporated in the original permits. Part II.B. (Proposed Effluent Limitation on Diesel Oil) of the fact sheet (51 FR 29603) is herein included by reference.

C. Diesel Oil as an Indicator of Toxic Pollutants

While the limitation on diesel oil controls the toxic as well as conventional pollutants, the Agency's primary concern is control of the toxic pollutants. The pollutant diesel oil is being used as a indicator of the listed toxic pollutants which are controlled through compliance with the effluent limitation (i.e., no discharge). The Region's decision to take this approach is in full compliance with the applicable permitting regulations in 40 CFR 125.3(h)(1). The technology-basis for this limitation is product substitution of less toxic mineral oil for diesel oil. Part II.C. of the fact sheet provides an explanation of why diesel oil is an indicator of toxic pollutants and is herein included by reference (51 FR 29603–29604).

D. Mineral Oil as a Substitute for Diesel Oil

The prohibition of the discharge of diesel oil is a technology-based BAT limitation based on product substitution. As explained in detail in the notice of the proposed modification and associated documents (51 FR 29604–29606), low toxicity mineral oils are available as product substitutes for diesel. In the notice for proposed modification (Part II.D), Region 10 presented information pertaining to (1) the availability and successful formulation and use of chemical additives, (2) the commercial availability of mineral oil spotting fluids, and (3) the demonstrated performance of mineral oil spotting fluids as documented by published case histories and performance statistics. This information is included herein by reference.

API and others have contended that survey data on the relative success rates of diesel oil and mineral oil pills refute the finding that mineral oil is an acceptable substitute for diesel oil. The 1983–1984 API survey of hydrocarbon use (Burgbacher 1985) was described in the proposed modification (51 FR 29605–29606). In analyzing the results, EPA observed the relative performance of the oils cannot be assessed without information on the comparability of drilling situations. In addition to the base oil, numerous other factors could impact the success of a pill. For example, Love (1983) determined that the chances of freeing stuck pipe in 113 cases and the potential success of freeing the pipe were related to specific conditions at each well. Success decreased with increasing angle of the well, mud weight, amount of open hole, API fluid loss of the mud, and bottom-hole-assembly length. The chances of success dropped off substantially when a numerical index calculated from the above factors exceeded a certain level. In addition to the above factors, pill additive packages (e.g., surfactants, emulsifiers, etc.), rheological properties of the mud, time until spotting, site-specific geological characteristics, and operator experience could affect the outcome of a spotting operation. Critical information on whether these factors were comparable for the wells treated using the two kinds of oil is not included in the API survey. Hence, the relative difficulty of freeing the stuck pipe and fishing cannot be directly compared between the two groups of wells in the API survey. EPA noted that the API survey is inconclusive regarding the relative effectiveness of diesel and mineral oil in freeing stuck pipe. EPA invited any recent or supplementary data on this issue.

API provided comments based on the results and also noted that another industry survey was being conducted during late 1986. To ensure that EPA could fully evaluate the surveys mentioned in API's comments, Region 10 requested that API provide additional information on the design, questions, methods, and forms used in the survey. In response, API submitted copies of forms completed by participants in the 1983–1984 API survey, and an example of the 1983–1986 OOC survey form (Sawyer 1987).

Region 10 has carefully reviewed the comments and all the available data regarding the surveys. This data included information requested from API by EPA regarding the 1983–1984 API survey of pill use (Sawyer 1987) and the 1983–1986 Offshore Operators Committee (OOC) survey (Ayers et al. 1987). Results of the EPA/API Diesel Pill Monitoring Program (U.S. EPA and API 1987) have also become available. A detailed review of this information is contained in the Region's Response to Comments document.

The OOC survey of diesel and mineral oil pill usage was conducted in late 1986 and early 1987 at API's request in response to the Region's "observations and criticisms" of the API survey. The OOC requested more detailed information from operators in the Gulf

BEST COPY AVAILABLE

of Mexico for a longer period of time (1983 through 1986). Sixteen written responses from 12 oil companies were received. Some companies have more than one operating division, which are represented separately in the survey. OOC's final report lists each respondent separately and the Region has evaluated each respondent, or "operator," individually.

Diesel and mineral oil pill success rates of 52.7 percent and 32.7 percent, respectively, were reported for the OOC survey (Ayers et al. 1987). For multiple-pill sticking incidents, only the first pills at the same depth were included in the statistical calculations, and were recorded as failures since the first attempt was a failure. Multiple sticking incidents at different depths on the same well were analyzed as separate incidents. For the 2287 wells included in the survey, 506 pills were applied, producing an average sticking frequency of 22.1 percent. For both mineral oil and diesel oil, the success rates were greater for straight holes than deviated holes. The OOC survey also indicates that as the time until spotting decreased, the success rates increased. This is particularly true for diesel pills, and apparently less critical for mineral oil applications. When the time until spotting increases from "less than 5 hours" to "more than 10 hours", the success rates drop 19.3 percent (from 60.8 to 41.5 percent) for diesel pills and decrease 3.9 percent (from 34.9 to 31.0 percent) for mineral oil pills (Ayers et al. 1987).

EPA requested copies of the survey forms submitted by participants in the OOC survey. Using these raw data sheets, EPA tabulated a summary inventory by respondent, since such a summary table was not included in the OOC report (Ayers et al. 1987). The tabulation demonstrates that the success rates for mineral oil pills vary considerably among operators. The five respondents with mineral oil pill usage rates greater than 90 percent experienced an average success rate of 37 percent (ranging from 26 to 58 percent) with mineral oil pills. In contrast, the five respondents which reported using mineral oil for 15 percent or less of their stuck pipe incidents were on average successful with less than 16 percent of their mineral oil pills. Some of the operators in the OOC survey achieved extremely high mineral oil pill success rates, which were comparable to the highest diesel pill success rates. The three most successful operators had success rates of 58, 60, and 75 percent. The three operators with the highest diesel pill success rates were calculated at 60, 60, and 64 percent. While the number of wells varies among the cases and there are fewer cases for mineral oil, the data are the best available on overall success rates for individual operators.

In spite of industry's claim that diesel pills are more effective than mineral oil pills, the OOC survey did show that mineral oil was used by operators in 41 percent of the stuck pipe incidents. Of the 506 incidents in the OOC survey, 298 (59 percent) were treated with a diesel pill, while 208 (41 percent) were treated with a mineral oil pill. For some survey participants, mineral oil was the material of choice. Three respondents out of 16 used mineral oil pills exclusively. It can be concluded that during this period, mineral oil was in common use by operators in the Gulf of Mexico. According to Region 10's records, operators have historically relied on mineral oil pills for exploratory wells in Alaska.

Results to date from EPA/API Diesel Pill Monitoring Program (U.S. EPA and API 1987) shed doubt on the industry's position that mineral oil is not an acceptable substitute for diesel oil in pill applications. The success rate of diesel pills in the DPMP (35.9 percent) as of April 21, 1987 was comparable to that reported for mineral oil pills in the OOC survey (32.7 percent). It is not clear why the diesel pill success rate in the DPMP was lower than that reported in the OOC survey (52.7 percent), since there were no apparent factors that might account for this difference. Both tallies contain data collected in the Gulf of Mexico and include only the first pill of multiple-pill sticking events at a single depth.

EPA acknowledges that the OOC survey is more comprehensive than the earlier API surveys; however, any retrospective analysis is limited by the completeness and accuracy of available records and by the technique for picking representative samples. For this analysis, data had not been collected in such a way that all the parameters expected to affect the success of freeing stuck pipe were measured (see above discussion and Love 1983). Such information is probably difficult to obtain from existing records, and a prospective study would be needed to address these parameters and to ensure that complete information is collected on all wells selected for analysis. In the OOC survey it is unclear why various operators did or did not participate in the survey. Even though OOC studied a large sample of wells, it is difficult to confirm that the sampling methods are valid and that the results accurately represent the relative performance of the two oils. These considerations lead EPA to determine that only tentative conclusions can be drawn from the surveys.

The success rate with diesel pills was also highly variable over the course of compiling the OOC survey results. The success rates for diesel oil changed significantly in the time between the interim report of the OOC survey presented in a letter dated 11/26/86 from W.G. Frick, API, to Region 10 and the final OOC survey report (Ayers et al. 1987). In the interim report diesel oil and mineral oil have success rates of 47.7 percent and 32.3 percent, respectively. The final report indicates a 52.7 percent success rate for diesel oil and 32.7 percent for mineral oil. To arrive at these final values, the diesel pill episodes included after the interim report had a success rate of 69.5 percent (41 successes out of 59 attempts). This diesel pill success rate is unusual because it is much higher than any other reported, even for any individual company in the OOC survey. This example highlights the variability in the success rates depending on which groups of wells are analyzed.

In summary, EPA has carefully considered the survey data and believes that final conclusions regarding the relative performance of mineral oil pills under best operating conditions cannot be drawn solely from these surveys. The results are best evaluated in the context of all other data available to the Region on the relative performance of mineral oil pills. Such data support the Region's conclusion that mineral oil-based fluids have a demonstrated product development and performance as substitutes for diesel oil-based fluids. This determination is based on the following: (1) availability, successful formulation and use of chemical additives that are compatible with mineral oils, (2) commercial availability of mineral oil spotting fluids, (3) the demonstrated performance of mineral oil spotting fluids documented by published case histories, and (4) performance statistics from the 1983–1984 API surveys, the 1983–1986 OOC survey, and the Diesel Pill Monitoring Program. For additional details see Part II.D. of the fact sheet (51 FR 29604–29606) and the Response to Comments document.

E. Cost Considerations

EPA has evaluated the cost of the diesel oil prohibition based on product substitution as a treatment technology. Operators are not prevented from using diesel oil and barging the contaminated

mud for land disposal to meet the permit terms. The costs associated with this alternative have not been evaluated since barging is not the technology basis for the effluent limitation. Based upon a detailed evaluation of cost considerations presented in Part II.E. of the fact sheet (51 FR 29606), EPA concluded that the cost associated with the prohibition on the discharge of diesel oil is clearly economically achievable for Alaskan offshore operations. This cost estimate included the mineral oil itself, its storage and transport, and pill additives.

API commented that if EPA maintains that mineral oil is a product substitute for diesel, then the "cost of that technology must include the added costs attributable to its lack of equivalence (e.g., the added cost of redrilling/sidetracking and the cost of barging and disposing of muds that have contained diesel)."

As explained in Part II.E. of the fact sheet (51 FR 29606) and noted above, since product substitution rather than barging is the technology basis for the effluent limitation, EPA did not evaluate the costs of barging diesel-contaminated mud systems. EPA did determine that the increased cost due to the barging of mineral oil pills, if they were removed from the mud system after use, would be 0.05 percent or less of the total drilling cost.

In estimating the cost of redrilling or sidetracking, API noted that of an average 16 exploratory wells drilled annually on the Alaskan OCS, 5 sticking events per year would be expected. To arrive at this estimate, API extrapolated the data from the "Gulf of Mexico survey" (API 1983–1984 survey) to the Alaskan OCS. Based upon this extrapolation, API also stated that 1 of the 5 wells stuck annually would be "needlessly lost" (i.e., would require redrilling or sidetracking) if only mineral oil pills were used. This estimate was based on the API survey's 48 percent success rate for diesel pills (i.e., 2 to 3 wells) and 33 percent success rate for mineral oil pills (i.e., 1 to 2 wells). (The differential suggests that one well would be redrilled/sidetracked as a result of the diesel ban.) API estimated that sidetracking or redrilling the one well lost due to the diesel ban would cost the industry an additional $10 million annually (minimum drilling cost of one well on the Alaskan OCS as stated in the API comment letter) beyond costs outlined in the proposed permit modification.

EPA believes that the assumptions and extrapolations used by API are not appropriate for the Alaskan OCS and cause an unrealistically high estimate of costs associated with the diesel prohibition. First, API assumed that 5 of the 16 wells drilled annually on the Alaskan OCS would have sticking events and that one would require sidetracking or redrilling if only mineral oil pills were used. The 31 percent (5 out of 16) rate of sticking assumed by API is unrealistically high. The 1983–1986 OOC survey and the API survey report sticking rates of 22 percent and 29 percent, respectively. (The "sticking rate" in both the API and OOC surveys is defined as the number of ills applied divided by the number of wells included in the survey. Hence, a frequency of sticking of 22 percent does not mean that 22 percent of all wells had a sticking event; due to multiple sticking events on individual wells, the percentage of wells involved in sticking events is expected to be somewhat less.) Further, both the OOC and API surveys include data from the Gulf of Mexico, not the Alaskan OCS.

In contrast, EPA Region 10 records indicate that the sticking rate for offshore Alaskan wells is approximately 1 in 10 (10 percent), where sticking is indicated by application of a spotting fluid. EPA records indicate that out of over 40 exploratory wells drilled on the Alaskan OCS from 1984 through early 1987, only 5 wells have had sticking events which necessitated an application of spotting fluid. This is in contrast to the 5 wells *annually* with sticking events assumed by API. The reason for this difference may be attributable to the fact that only exploratory drilling is included in the Alaskan calculation. The Gulf of Mexico survey data includes developmental drilling, which usually involves a greater percentage of high angle wells. High-angle wells are generally at greater risk for sticking.

In addition, EPA questions API's conclusions regarding the success differential between mineral oil and diesel oil pills. As noted above, EPA questions the reliability of the data from the recent Offshore Operators Committee (OOC) survey of spotting fluid use on the Gulf of Mexico for drawing such conclusions. The OOC results also show that the success rates for mineral oil pills vary considerably. Some of the participants achieved high success rates, which were comparable to the highest diesel pill success rates. Nonetheless, results from the EPA/API Diesel Pill Monitoring Program indicate that the success rate of diesel applications (35.9 percent) was considerably lower than those reported for diesel oil in the OOC survey and comparable to the overall success rate reported for mineral oil pills in the OOC survey (32.7 percent). There is no apparent reason for the different success rates as indicated in Part II.D. above.

The combination of (1) fewer sticking events reported on the Alaskan OCS than estimated by API and (2) the potential for achieving high success rates with mineral oil pills, indicates that the number of wells requiring redrilling or sidetracking due to the diesel prohibition is likely significantly less than the 1 in 16 wells suggested by API.

Even using API's differential success rate of 15 percent between diesel oil and mineral oil (48 percent minus 33 percent) and using the observed sticking rate for the Alaskan OCS of 1 well in 10, then costs of sidetracking or redrilling would be 0.5 percent or less of annual drilling costs. (On the average, 1.6 wells experience sticking per year, 0.24 would require sidetracking or redrilling at a cost of $10 million per well, and the base cost per well is $30 million.) Furthermore, the costs incurred during redrilling or sidetracking a well could be less than API's estimate if only a portion of the well required redrilling. Also, as noted by API, if an operator expected to use diesel oil and barge the contaminated muds, the increased cost for that well would be even lower, approximately $200,000 to $400,000. EPA does not however agree that the additional costs quoted by API would need to be incurred as a result of the diesel prohibition.

In conclusion, EPA has evaluated the cost associated with the diesel prohibition and has determined that it clearly is economically achievable for Alaskan offshore operations.

F. Alternative to Diesel Oil Prohibition: Removal of Diesel Pill and Oil Limitation

One alternative to the diesel oil prohibition would be to allow the discharge of drilling muds in which a diesel pill had been used, provided that the pill is removed and the residual drilling mud meets specified limitations on oil content and/or toxicity. Such an approach depends on accomplishing effective pill removal such that the drilling mud can meet all other effluent limitations. The oil content and/or toxicity limitation would be set at a level which not only reflects BAT control of toxic pollutants in diesel oil but also provides adequate safeguards for the marine environment. The effectiveness of pill recovery in removing diesel oil from drilling muds is being addressed by the EPA/API Diesel Pill Monitoring Program (DPMP). While industry commenters requested

VOL

1987
UMI

extension of this program to Alaska, the Region expects the study to be concluded shortly. Also, the Region believes that extending the program to Alaska is unnecessary for the purpose of determining the effectiveness of pill removal in reducing the diesel oil content and toxicity of the discharged mud.

Results from the first 9 months of the DPMP show that pill removal is not very effective in controlling diesel oil content and toxicity of the discharged drilling mud. Results presented in the Fourthly Quarterly Report (4/23/87) include complete analyses of 34 pill episodes (U.S. EPA and API 1987). Both the pill and a buffer (50 barrels of mud both before and after the pill) were removed from the mud system for only 24 of these 34 episodes. Chemical analyses for these 24 cases show that after pill and buffer removal an average of 10,369 mg/kg (or ppm) of diesel oil remains in the mud. This level of diesel oil is toxic to marine organisms; in seawater, diesel oil is acutely toxic to various organisms at concentrations as low as 0.1 to 1000 ppm. Bioassays of mud samples taken after pill removal show LC_{50} values ranging from 0.01 to 5.50 percent of the suspended particulate phase (SPP) and have an average LC_{50} of 1.01 percent SPP. In only 1 of the pill episodes were the samples after pill and buffer removal less toxic than the toxicity limitation (i.e., above the minimum LC_{50} limitation of 3 percent SPP). In summary, both chemical analyses and bioassays indicate that pill removal techniques are inadequate in reducing either the diesel oil content or the toxicity of the mud system after addition of a diesel pill.

DPMP results to date indicate that the toxicity of drilling muds increases with their diesel oil content, but that pill recovery techniques currently in use are not capable of removing up to 30 percent of the diesel oil added as a pill.

Based on results available, the Region has concluded that the recovery techniques being implemented in the DPMP to date are not successful in recovering the diesel and reducing mud toxicity to an acceptable level. Hence, the Region has determined that the prohibition on the discharge of drilling fluids and cuttings contaminated with diesel oil is appropriate for the BAT level of control. Should new information from the study result in conclusions contrary to those drawn from the preliminary results, the Region will consider such new information in future permit decisions.

G. Environmental Considerations

The prohibition on the discharge of diesel oil is a technology-based BAT limitation designed to control the discharge of toxic pollutants present in diesel oil. An environmental assessment under section 403(c) was therefore not the basis for the limitation. EPA has, however, considered the general environmental effects of diesel oil-contaminated muds in developing the proposed diesel oil prohibition. Part II.G. of the proposed modification (51 FR 29607) further explains environmental considerations and is herein included by reference.

IV.—Other Legal Requirements

A. Oil Spill Requirements

Section 311 of the Act prohibits the discharge of oil and hazardous materials in harmful quantities. Routine discharges specifically controlled by the permits are excluded from the provisions of section 311. However, these permit modifications do not preclude the institution of legal action or relieve permittees from any responsibilities, liabilities, or penalties for other, unauthorized discharges of oil and hazardous materials which are covered by section 311 of the Act.

B. Endangered Species Act

Based on information in the Final Ocean Discharge Criteria Evaluations and in the Final Environmental Impact Statements prepared for the lease sales covered by the general permits. EPA has concluded that this permit modification will have no adverse effect on the continued existence of any endangered or threatened species or on its critical habitat. EPA requested comments from the U.S. Fish and Wildlife Service and the National Marine Fisheries Service. Both agencies concurred with EPA's determination.

C. Coastal Zone Management Act

The proposed modifications and consistency determinations were submitted to the State of Alaska for state interagency review at the time of public notice. The State of Alaska has concurred that the activities allowed by this permit are consistent with local and State Coastal Management Plans.

D. Marine Protection, Research and Sanctuaries Act

No marine sanctuaries as designated by this Act exist in the vicinity of the permit areas.

E. State Water Quality Standards and State Certification

The State of Alaska has certified pursuant to section 401 that the discharges authorized in state waters by this permit comply with state water quality standards and regulations.

F. Executive Order 12291

The Office of Management and Budget has exempted this action from the review requirements of Executive Order 12291 pursuant to section 8(b) of that order.

G. Paperwork Reduction Act

EPA has reviewed the requirements imposed on regulated facilities in these draft modifications under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq. Most of the information collection requirements have already been approved by the Office of Management and Budget (OMB) in submissions made for the NPDES permit program under the provisions of the Clean Water Act.

H. Regulatory Flexibility Act

After review of the facts presented in the notice of intent printed above, I hereby certify, pursuant to the provisions of 5 U.S.C. 605(b), that these permit modifications will not have a significant impact on a substantial number of small entities. This certification is based on the fact that the regulated parties have greater than 500 employees and are not classified as small businesses under the Small Business Administration regulations established at 49 FR 5024 et seq. (Feburary 9, 1984). These facilities are classified as Major Group 13—Oil and Gas Extraction SIC 1311 Crude Petroleum and Natural Gas.

U.S. Environmental Protection Agency and American Petroleum Institute. 1987. Diesel Pill Monitoring Program, Report Number Four. Prepared for the Fourth Meeting of the Diesel Pill Monitoring Program Oversight Committee, April 23, 1987.

NPDES General Permit Numbers AKG283000 (Bering Sea) and AKG284000 (Beaufort Sea)

For the reasons set forth above, EPA is modifying NPDES Permit No. AKG283000 (Bering Sea) and Permit No. AKG284000 (Beaufort Sea) published June 7, 1984 (49 FR 23734) by incorporating the following provisions:

II.A.1. *General Requirements*

a.

* * * * *

Effluent characteristic	Discharge limitation	Monitoring requirements		Reported value(s)
		Frequency	Method	
. . . . .	. . . . .	. . .	. . .	. . .
Diesel oil content of drilling muds	No discharge of diesel oil			

* * * * *

b. *Prohibition on the discharge of oil-based muds or diesel oil and associated cuttings.* The discharge of oil-based drilling muds (containing oil as the continuous phase with water as the dispersed phase) is prohibited. The discharge of water-based drilling muds which have contained diesel oil or of cuttings associated with any muds which have contained diesel oil is also prohibited. Compliance with the limitation on diesel oil shall be demonstrated by analysis of drilling mud collected from the end-of-well mud system. In all cases, the determination of the presence or absence of diesel oil shall be based on a comparison of the GC spectra of the sample and of diesel oil in storage at the facility (see Part II.A.1.a., above).

* * * * *

III.D. *Definitions*

* * * * *

31. "Diesel oil" means the class of distillate fuel oil typically used in conventional oil-based drilling fluids which contains a number of toxic pollutants. For the purposes of this permit, "diesel oil" refers to the fuel oil present at the facility.

32. "Mineral oil" means a class of low volatility petroleum product, generally of lower aromatic hydrocarbon content and lower toxicity than diesel oil.

BILLING CODE 6560-50-M

FEDERAL MARITIME COMMISSION

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10325. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 202-010636-024.

Title: U.S. Atlantic-North Europe Conference.

Parties:

Atlantic Container Line, B.V.
Dart-ML Limited
Hapag-Lloyd AG
Sea-Land Service, Inc.
Gulf Container Line (GCL), B.V.
Trans Freight Lines
Compagnie Generale Maritime (CGM)
Nedlloyd Lijnen, B.V.

Synopsis: The proposed amendment would provide for allowances to shippers performing direct overland transportation from a party's discharge port in lieu of the party providing overland transportation from the discharge port to the bill of lading port in connection with alternate port service between designated European Continental port pair combinations.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

Dated: September 24, 1987.

BILLING CODE 6730-01-M

[Docket No. 87-18]

Filing of Petition for Declaratory Order; Matson Navigation Co., Inc.; Transportation of Cargoes Between Ports and Points Outside Hawaii and Islands Within the State of Hawaii

Notice is given that a petition for declaratory order has been filed by Matson Navigation Company, Inc. ("Matson") requesting that the Federal Maritime Commission resolve a controversy between Matson and Young Brothers, Limited ("Young Bros."), an intrastate barge carrier operating in Hawaii. The controversy concerns Federal Maritime Commission jurisdiction over certain ocean cargo movements between ports and points outside the State of Hawaii and islands within the State of Hawaii. Matson seeks a declaration by the Federal Maritime Commission that Matson's interisland carriage of cargoes having origin points in the mainland United States or foreign countries and moving through warehouse or distribution centers on Oahu is interstate commerce subject to the exclusive regulatory jurisdiction of the Federal Maritime Commission.

The petition was served on Young Bros. and its counsel, and the Public Utilities Commission of the State of Hawaii and those parties may file a reply to the petition with the Secretary, Federal Maritime Commission, Washington, DC 20573-0001 on or before November 13, 1987. An original and fifteen copies of such replies shall be submitted and a copy thereof served on David F. Anderson, Esq., Matson Navigation Company, Inc., Post Office Box 7452, San Francisco, California 94120, and C. Jonathan Benner, Esq., Benner, Burnett & Coleman, 1401 New York Avenue, NW., Washington, DC 20005. Replies shall contain the complete factual and legal presentation of the replying party as to the desired resolution of the petition.

Interested persons may inspect and obtain a copy of the petition at the Washington Office of the Federal Maritime Commission, 1100 L Street, NW., Room 11101. Participation by persons other than those named above will be permitted only upon grant of a petition to intervene by the Commission pursuant to Rule 72 (46 CFR 502.72). Petitions for leave to intervene shall be submitted on or before the reply date and shall be accompanied by intervenor's complete reply including its

FEDERAL RESERVE SYSTEM

Formations of; Acquisitions by; and Mergers of Bank Holding Companies; First National Cincinnati Corp., et al.

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than October 15, 1987.

A. **Federal Reserve Bank of Cleveland** (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. *First National Cincinnati Corporation,* Cincinnati, Ohio; to acquire 100 percent of the voting shares of The First National Bank, Sidney, Ohio.

B. **Federal Reserve Bank of Atlanta** (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *Merchants Bancshares, Inc.,* Bay St. Louis, Mississippi; to become a bank holding company by acquiring 80 percent of the voting shares of Merchants Bank & Trust Company, Bay St. Louis, Mississippi.

C. **Federal Reserve Bank of Chicago** (David S. Epstein, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. *CNB Bancorp, Inc.,* Danville, Illinois; to acquire 96.2 percent of the voting shares of Lake Shore National Bank, Danville, Illinois. Comments on this application must be received by October 13, 1987.

D. **Federal Reserve Bank of St. Louis** (Randall C. Sumner, Vice President) 411 Locust Street, St. Louis, Missouri 63166:

1. *FNB Financial Corp.,* Scottsville, Kentucky; to become a bank holding company by acquiring 100 percent of the voting shares of Farmers National Bank, Scottsville, Kentucky.

2. *Security Bancshares, Inc.,* Charleston, Missouri; to become a bank holding company by acquiring 100 percent of the voting shares of First Security State Bank, Charleston, Missouri, and 96.5 percent of The National Bank of Caruthersville, Caruthersville, Missouri.

3. *Trenton Bancshares, Inc.,* Trenton, Tennessee; to become a bank holding company by acquiring 100 percent of the voting shares of Bank of Commerce, Trenton, Tennessee.

E. **Federal Reserve Bank of Minneapolis** (James M. Lyon, Vice President) 250 Marquette Avenue, Minneapolis, Minnesota 55480:

1. *Linton Bancshares, Inc.,* Bismarck, North Dakota; to become a bank holding company by acquiring at least 95 percent of the voting shares of The First National Bank, Linton, North Dakota.

F. **Federal Reserve Bank of Kansas City** (Thomas M. Hoenig, Vice President) 925 Grand Avenue, Kansas City, Missouri 64198:

1. *Tulsa National Bancshares, Inc.,* Tulsa, Oklahoma; to become a bank holding company by acquiring 100 percent of the voting shares of Tulsa National Bank, Tulsa, Oklahoma. Comments on this application must be received by October 13, 1987.

G. **Federal Reserve Bank of San Francisco** (Harry W. Green, Vice President) 101 Market Street, San Francisco, California 94105:

1. *ENB Holding Company,* Escondido, California; to acquire 100 percent of the voting shares of San Marcos National Bank, San Marcos, California.

Board of Governors of the Federal Reserve System, September 22, 1987.

James McAfee,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control

Prevention Centers Grant Review Committee; Establishment

ACTION: Notice of reestablishment, Prevention Centers Grant Review Committee.

Pursuant to Federal Advisory Committee Act, 5 U.S.C. Appendix 2, the Centers for Disease Control announces the reestablishment of the following Federal advisory committee by the Secretary of Heath and Human Services:

Designation: Prevention Centers Grant Review Committee.

Purpose: This Committee will provide advice and guidance to the Secretary, the Assistant Secretary for Health, and the Director, Centers for Disease Control, regarding the scientific merit of grant applications received from schools of public health, schools of medicine, and schools of osteopathy relating to the establishment, maintenance, and operation of centers for research and demonstration with respect to health promotion and disease prevention.

Authority for this committee will expire July 25, 1988, unless the Secretary of Health and Human Services, with the concurrent of the Committee Management Secretariat, General Services Administration, formally determines that continuance is in the public interest.

Dated. September 23, 1987.

Elvin Hilyer,

Associate Director for Policy Coordination Centers for Disease Control.

[FR Doc. 87-22354 Filed 9-28-87; 8:45 am]

BILLING CODE 4160-70-M

Injury Research Grant Review Committee; Meeting

ACTION: Notice of meeting.

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App. 2), the Centers for Disease Control (CDC) announces the following committee meeting.

Name: Injury Research Grant Review Committee.

Time and Date: 9 am–4:30 pm—October 26, 1987; 8 am–3pm—October 27, 1987.

Place: Colony Square Hotel, Peachtree and 14th Street, Brookwood Room, Atlanta, Georgia 30361.

Status: Open.

Purpose: This Committee is charged with advising the Secretary, Department of Health and Human Services, the Assistant Secretary for Health, and the Director, CDC, regarding the scientific merit and technical feasibility of grant applications relating to the support of Injury Control Research and Demonstration Projects and Injury Prevention Research Centers.

Matters To Be Discussed: This meeting will review the Injury Prevention Research Centers and Research and Demonstration Grants Program's past funding decisions and review the program's progress to date. Following the review of funding decisions and progress to date, future funding needs will be identified. The Committee will conclude the meeting with prioritized recommendations for future funding. Agenda items are subject to change as priorities dictate.

CONTACT PERSON FOR MORE INFORMATION: James Monroe, Injury Epidemiology and Control, Center for Environmental Health and Injury Control, CDC, 1600 Clifton Road, NE., Atlanta, Georgia, 30333, telephones—FTS: 236–4690; Commercial: 404/454–4690.

Dated: September 23, 1987.

Elvin Hilyer,

Associate Director for Policy Coordination. Centers for Disease Control.

BILLING CODE 4160-18-M

Health Resources and Services Administration

Maternal and Child Health Research Grants Review Committee; Advisory Council Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), announcement is made of the following National Advisory body scheduled to meet during the month of November 1987:

Name: Maternal and Child Health Research Grants Review Committee.

Date and Time: November 16–18, 1987, 9:00 a.m.

Place: Maryland Room, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

Open on November 16, 1987, 9:00 a.m.–10:00 a.m.—Closed for remainder of meeting.

Purpose: To review research grant applications in the program area of maternal and child health administered by the Bureau of Health Care Delivery and Assistance.

Agenda: The open portion of the meeting will cover opening remarks by the Director, Division of Maternal and Child Health, who will report on program issues, Congressional activities and other topics of interest to the field of maternal and child health. The meeting will be closed to the public on November 16, at 10:00 a.m. for the remainder of the meeting for the review of grant applications. The closing is in accordance with the provisions set forth in section 552(c)(6), Title 5 U.S.C. Code, and the Determination by the Administrator, Health Resources and Services Administration, pursuant to Pub. L. 92–463.

Anyone requiring information regarding the subject Council should

VOL 52 ISS 188 SE 29 1987 UMI

contact Gontran Lamberty, Dr.Ph.H., Executive Secretary, Maternal and Child Health Research Grants Review Committee, Room 6–17, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone (301)443–2190.

Agenda Items are subject to change as priorities dictate.

Date: September 24, 1987.

Public Health Service

Health Resources and Services Administration; Title V of the Social Security Act and Field Engineering and Facility Management Services; Delegation of Authority

Notice is hereby given that in furtherance of the delegations of authority of September 1, 1982, and September 1, 1984, by the Assistant Secretary for Health to the Administrator, Health Resources and Services Administration (HRSA), the Administrator, HRSA, has delegated to the Director, Bureau of Maternal and Child Health and Resources Development, with authority to redelegate, the following authorities:

(1) All of the authorities under Title V of the Social Security Act pertaining to the Maternal and Child Health Services Block Grant, excluding the authorities to promulgate regulations, to submit reports to the Congress, to take final action to withhold funds from States, and to act under the nondiscrimination provisions of the Act.

(2) All of the authorities for field engineering and facilities management services as indicated below:

(a) All administrative authorities relating to engineering, facilities planning and construction, and direct Federal special-purpose construction activities.

(b) Authority to approve the expenditure of funds within specified limits set by the Director, Office of Management, as certified to the Assistant Secretary for Health as available for design, construction, and related services pertinent to projects administered by the Public Health Service.

(c) Authority to request from the Administrator, General Services Administration, a modification or waiver as stated in section 6 of Pub. L. 90–480, on a case-by-case basis, of such standards issued for design, construction, and alteration of buildings, as defined in Pub. L. 90–480, as may be necessary to ensure that the physically handicapped have access to, and use of buildings as defined in Pub. L. 90–480.

These delegations superseded the following delegations:

(1) The May 5, 1982, delegation by the Acting Administrator, Health Services Administration, to the Director, Bureau of Community Health Services, vested in the Director, Bureau of Health Care Delivery and Assistance, via the Reorganization Order of September 1, 1982, as it pertains to Title V of the Social Security Act.

(2) The September 20, 1984, delegation by the Administrator, Health Resources and Services Administration, to the Associate Administrator for Operations and Management.

All previous redelegations of these authorities to other HRSA officials and to PHS Regional Office officials continue in effect in them or their successors provided they are consistent with these delegations.

These delegations became effective on October 1, 1987.

Date: September 21, 1987

David N. Sundwall,

Administrator, Health Resources and Services Administration.

BILLING CODE 4160–15–M

Health Resources and Services Administration; Health Care for the Homeless, Section 340 of the Public Health Service Act; Delegation of Authority

Notice is hereby given that the following delegations have been made regarding Health Care for the Homeless under section 340 of the Public Health Service Act (42 U.S.C. 256), as amended.

1. Delegation from the Administrator, Health Resources and Services Administration, to the PHS Regional Health Administration, Regions I–X, with authority to redelegate, of the following authorities under section 340 of the Public Health Service Act (42 U.S.C. 256) for exercise within their respective regions for projects that are not multi-regional or national in scope:

(a) To award grants to public and nonprofit private entities to meet the initial costs of establishing and operating health care programs for the homeless;

(b) To enter into grants and contracts with public and private entities for the provision of technical assistance related to providing health care for the homeless.

2. Delegation from the Administrator, Health Resources and Services Administration, to the Director, Bureau of Health Care Delivery and Assistance, with authority to redelegate, of all the authorities under section 340 of the Public Health Service Act except those authorities specifically delegated to the Regional Health Administrator, excluding the authorities to issue regulations and submit reports to Congress.

Previous delegations and redelegations made to officials within the Public Health Service of authorities under section 340 of the Public Health Service Act may continue in effect provided they are consistent with this delegation.

The above delegation was effective on Septembe 2, 1987.

Date: September 2, 1987.

David N. Sundwall,

Administrator, Health Resources and Services Administration.

BILLING CODE 4160–15–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Administration

[Docket No. N–87–1740]

Submission of Proposed Information Collecting to OMB

AGENCY: Office of Administration, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirements described below have been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposals.

ADDRESS: Interested persons are invited to submit comments regarding these proposals. Comments should refer to the proposal by name and should be sent to: John Allison, OMB Desk Officer, Officer of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, telephone (202) 755–6050. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposals described below for the collection of information to OMB for review, as

required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the description of the need for the information and its proposed use; (4) the agency form number, if applicable; (5) what members of the public will be affected by the proposal; (6) how frequently information submissions will be required; (7) an estimate of the total number of hours needed to prepare the information submission; (8) whether the proposal is new, an extension, reinstatement, or revision of an information collection requirement; and (9) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Copies of the proposed forms and other available documents submitted to OMB may be obtained from David S. Cristy, Reports Management Officer for the Department. His address and telephone number are listed above. Comments regarding the proposal should be sent to the OMB Desk Officer at the address listed above.

The proposed information collection requirements are described as follows:

Notice of Submission of Proposed Information Collection to OMB

Proposal: Monthly Report of Excess Income.
Office: Housing.
Description of the Need for the Information and Its Proposed Use: Section 236 insured and uninsured project owners are required by the Housing and Urban Development Act of 1968 to pay HUD the total rental charges collected in excess of the basic rents for all approved occupied units. Project owners and management agents use the form to compute any required payment due HUD.
Form Number: HUD–93104 and 93104A.
Respondents: Businesses or Other For-Profit, Federal Agencies or Employers, and Non-Profit Institutions.
Frequency of Response: Monthly.
Estimated Burden Hours: 27,138.
Status: Extension.
Contact: James J. Tahash, HUD, (202) 426–9344, or John Allison, OMB, (202) 395–6880.

Proposal: Collection of Multifamily Assisted Housing Addresses and Site Identification Codes.
Office: Policy Development and Research.
Description of the Need for the Information and Its Proposed Use: Under Title VI of the Civil Rights Act of 1964, Title VIII of the Civil Rights Act of 1968, and Executive Order 11063, the Department is responsible for determining that HUD-assisted and public housing programs are operated in a nondiscriminatory manner. After a one-time collection effort, these data will be used to generate information descriptive of HUD's multifamily housing programs, and to more effectively monitor HUD's program and target compliance reviews.
Form Number: HUD–951.
Respondents: Businesses or Other For-Profit and Non-Profit Institutions.
Frequency of Response: Single-Time.
Estimated Burden Hours: 20,790.
Status: New.
Contact: John B. Carson, Jr., HUD, (202) 755–5574, or John Allison, OMB, (202) 395–6880.

Proposal: Certificate of Family Participation—Existing Housing.
Office: Housing.
Description of the Need for the Information and Its Proposed Use: Under the Section 8 Existing Housing Program, HUD enters into an Annual Contributions Contract with Public Housing Agencies to assist very low-income families who enter into leases directy with private owners of existing rental housing. The form authorizes the family to look for an eligible rental unit and specifies the appropriate unit size necessary to meet the family's needs.
Form Number: HUD–52578 and 52578S.
Respondents: State or Local Governments.
Frequency of Response: On Occasion.
Estimated Burden Hours: 20,000.
Status: Reinstatement.
Contact: Myra E. Newbill, HUD, (202) 755–6887, or John Allison, OMB, (202) 395–6880.

Proposal: Procurement Policies and Procedures Handbook (2210.3, REV 3).
Office: Administration.
Description of the Need for the Information and Its Proposed Use: The Federal Acquisition Regulation (FAR), Title 48 of the Code of Federal Regulations, sets forth the uniform policies and procedures applicable to Federal agencies in the procurement of personal property and non-personal services. This handbook implements the policies established and provides guidance and procedures to be used in the procurement process by HUD.
Form Number: HUD–441, 441.1, 442, 443, 661, 661.1, 662, 663, and 770.
Respondents: Individuals or Households, State or Local Governments, Businesses or Other For-Profit, Non-Profit Institutions, and Small Businesses or Organizations.
Frequency of Respondents: On Occasion, Monthly, and Quarterly.
Estimated Burden Hours: 148,302.
Status: Extension.
Contact: Gladys G. Gines, HUD, (202) 755–5294, or John Allison, OMB, (202) 395–6880.

Authority: Sec. 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Sec. 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: September 22, 1987.

John T. Murphy,
Director, Information Policy and Management Division.

BILLING CODE 4210–01–M

Office of the Assistant Secretary for Housing-Federal Housing Commissioner

[Docket No. N–87–1741; FR 2412]

Mortgage and Insurance Programs; Debenture Recall

AGENCY: Office of Assistant Secretary for Housing-Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: This notice announces a debenture recall of certain General Insurance fund debentures, in accordance with authority provided in the National Housing Act.

FOR FURTHER INFORMATION CONTACT: Richard Keyser, Chief, Financial Procedures and Review Branch, Office of Financial Management, Room 9138, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410, telephone (202) 755–1591. (This is not a toll-free number).

SUPPLEMENTARY INFORMATION: Pursuant to section 207(j) of the National Housing Act, 12 U.S.C. 1713(j), and in accordance with HUD regulations at 24 CFR 207.259(e)(3), the Federal Housing Commissioner, with approval of the Secretary of the Treasury, announces the call of all General Insurance Fund debentures (MM series) with coupon rates of 8¼ percent of higher, outstanding as of September 30, 1987. The date of the call is January 1, 1988. To insure timely payment, debentures should be presented to the Federal Reserve Bank of Kanasas City by December 1, 1987.

The debentures will be redeemed at par plus accrued interest. Interest will cease to accrue on the debentures as of

the call date. Final interest on any called debenture will be paid with the principal at redemption. During the period from the date of this notice to the call date, debentures that are subject to the call may not be used by a mortgagee for a special redemption purchase in payment of a mortgage insurance premium.

No transfer or denominational exchanges of debenturess covered by the foregoing call will be made on the books maintained by the Treasury Department on or after October 1, 1987. This does not affect the right of the holder of a debenture to sell or assign the debenture on or after October 1, 1987, and provision will be made for the payment of final interest due on January 1, 1988, with the principal thereof, to the actual owner, as shown by the assignments thereon.

Instructions for the presentation and surrender of debentures for redemption will be provided by the Department of the Treasury.

Date: September 24, 1987.

Thomas T. Demery,

Assistant Secretary for Housing-Federal Housing Commissioner.

Bureau of Reclamation

Public Hearings on the Planning Report Draft Environmental Statement; San Jacinto Project, TX

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of Public Hearings on the Planning Report/Draft Environmental Statement, San Jacinto Project, Texas.

SUMMARY: Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, the Department of the Interior, Bureau of Reclamation, has prepared a Planning Report/Draft Environmental Statement for the San Jacinto Project, Texas. This document (DES 87-25, dated September 1, 1987) was made available to the public on September 8, 1987.

The purpose of these hearings is (1) to receive views and comments from interested organizations and individuals relating to the environmental impacts of the project and (2) to provide the public with information on the effect this project will have on wetlands (Executive Order 11990) and on floodplains (Executive Order 11988). The hearings will give the public an opportunity to participate in the decisionmaking process.

DATES: Public Hearings will be held at 7 p.m. on October 29, 1987, and at 3 p.m. on October 31, 1987, at the Conroe High School cafeteria, 320 West Davis (Highway 105 West), Conroe, Texas.

FOR FURTHER INFORMATION CONTACT: Nicolas Palacios, Planning Study Manager, Bureau of Reclamation, 714 South Tyler, Suite 201, Amarillo, Texas 79101, Telephone (806) 378-5474.

Dated: September 24, 1987.

National Park Service

Martin Luther King, Jr., National Historic Site and Preservation District Advisory Commission; Meeting

AGENCY: National Park Service, Martin Luther King, Jr., National Historic Site.

ACTION: Notice of advisory commission meeting.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Commission Act that a meeting of the Martin Luther King, Jr., National Historic Site Advisory Commission will be held at 10:30 a.m. at the following location and date.

DATE: October 14, 1987.

ADDRESS: The Martin Luther King, Jr., Center for Non-Violent Social Change, Inc., Freedom Hall, Room 261, 449 Auburn Avenue, NE., Atlanta, Georgia 30312.

FOR FURTHER INFORMATION CONTACT: Mr. Randolph Scott, Superintendent, Martin Luther King, Jr., National Historic Site, 522 Auburn Avenue, NE., Atlanta, Georgia 30312, Telephone (404) 331-4979.

SUPPLEMENTARY INFORMATION: The purpose of the Martin Luther King, Jr., National Historic Site Advisory Commission is to consult and advise with the Secretary of the Interior or his designee on matters of planning and administration of the Martin Luther King, Jr., National Historic Site.

The matters to be discussed at this meeting will include the status of park development and interpretive activities.

The meeting will be open to the public. However, facilities and space for accommodating members of the public are limited. Any member of the public may file with the Commission a written statement concerning the matters to be discussed. Written statements may also be submitted to the Superintendent at the address above. Minutes of the meeting will be available at Park Headquarters for public inspection

approximately 4 weeks after the meeting.

Date: September 18, 1987.

National Park System Advisory Board; Meeting

Notice is hereby given in accordance with the Federal Advisory Committee Act (86 Stat. 770, 5 U.S.C. App. 1, as amended by the Act of September 13, 1976, 90 Stat. 1247), that a meeting of the National Park System Advisory Board will be held in Death Valley National Monument, California, November 9–13, 1987.

The general business session will start at 8:00 am, Wednesday morning, November 11; and conclude during the late afternoon on Thursday, November 12. It will be held in the Oasis Room of the Furnace Creek Inn, P.O. Box 1, Death Valley, California 92328 (telephone 619–786–2345). The Advisory Board will consider potential National Historic Landmark nominations plus a variety of matters relating to the National Park System. The meeting will follow an orientation tour and briefings on issues at Death Valley National Monument.

The business meetings will be open to the public. Space and facilities to accommodate members of the public are limited and persons will be accommodated on first-come, first-served basis. Anyone may file with the Advisory Board a written statement concerning this meeting. Persons wishing further information concerning this meeting may contact Mr. David L. Jervis, National Park Service, Department of the Interior, P.O. Box 37127, Washington, DC 20013–7127 (telephone 202–343–7456).

Draft summary minutes of the meeting will be available for public inspection about 8 weeks after the meeting in Room 1218 Interior Building, 18th and C Streets, NW., Washington, DC.

Denis P. Galvin,

Acting Director, National Park Service.

INTERSTATE COMMERCE COMMISSION

[Section 5a Application No. 51 [1] (Amdt. No. 2)]

Agreement; Indiana Motor Rate and Tariff Bureau, Inc.

AGENCY: Interstate Commerce Commission.

ACTION: Notice of decision and request for comment.

SUMMARY: Indiana Motor Rate and Tariff Bureau, Inc. (Indiana) has filed, pursuant to section 14(e) of the Motor Carrier Act of 1980 (MCA), an application for approval of its ratemaking agreement under 49 U.S.C. 10706(b). Since some modifications are required before the agreement receives final approval, and because new and complex questions are involved in determining whether the agreement is consistent with the MCA, the Commission solicits public comment on its interpretation and application of specific rate bureau provisions. Copies of Indiana's proposed amended agreement are available for public inspection and copying at the Office of the Secretary, Interstate Commerce Commission, Washington, DC 20423, and from Indian's representatives: Louis I. Webster, Indiana Motor Rate and Tariff Bureau, Inc., 2165 South High School Road, Indianapolis, IN 46241.

Additional information is in the Commission's decision. Copies may be obtained from Office of the Secretary,

[1] Section 5 was recodified as section 10706.

Room 2215, Interstate Commerce Commission, Washington, DC 20423, or call (202) 275–7428 (assistance for the hearing impaired is available through TDD services (202) 275–1721) or by pickup from TSI in Room 2229 at Commission headquarters.

DATES: Comments from interested persons are due October 29, 1987. Replies are due 15 days thereafter.

ADDRESS: An original and 10 copies, if possible, of comments referring to Section 5a Application No. 51 should be sent to: Office of the Secretary, Case Control Branch, Interstate Commerce Commission, Washington, DC 20423.

FOR FURTHER INFORMATION CONTACT:

Richard Hartley, (202) 275–7786
or
Andrew L. Lyon, (202) 275–7691, (TDD for hearing impaired: (202) 275–1721).

SUPPLEMENTARY INFORMATION: We have provisionally approved Indiana's agreement as consistent with 49 U.S.C. 10706(b) and *Motor Carrier Rate Bureaus—Implementation of Pub. L. 96–296,* 364 I.C.C. 464 (1980) and 364 I.C.C. 921 (1981) (*Rate Bureau*), subject to certain conditions and modifications in the following subject areas: Identification and description of member carriers; right of independent action; rate bureau protests; open meetings; proxy voting; quorum standard; final disposition of cases; and single-line rates. We have also offered comments and imposed requirements concerning the agreement generally. Indiana has been directed to file a revised agreement conforming to the imposed conditions within 120 days of service of the decision.

In light of the complexity of interpretation involved in determining whether the agreement is consistent with the MCA and the *Rate Bureau* case, *supra,* we request applicant and other interested parties to comment on our interpretation of the controlling authority and administrative criteria, and their application to Indiana's agreement.

A copy of any comments filed with the Commission must also be served on Indiana, which will have 15 days from the expiration of the comment period to reply. These comments will be considered in conjunction with our review of the modification that Indiana must submit to the Commission as a condition to final approval of its agreement.

This action will not significantly affect either the quality of the human environment or the conservation of energy resources.

Authority: 49 U.S.C. 10321 and 10706 and 5 U.S.C. 553.

Decided: September 22, 1987.

By the Commission, Chairman Gradison, Vice Chairman Lamboley, Commissioners Sterrett, Andre, and Simmons. Commissioner Andre concurred with a separate expression

Noreta R. McGee,
Secretary.

BILLING CODE 7035–01–M

[Ex Parte No. 290 (Sub-No. 5) (87–4)]

Quarterly Rail Cost Adjustment Factor; Approval and Decision

AGENCY: Interstate Commerce Commission.

ACTION: Notice of approval of rail cost adjustment factor and decision.

SUMMARY: The Commission has decided to approve the fourth quarter 1987 cost index filed by the Association of American Railroads (AAR) under the procedures of Ex Parte No. 290 (Sub-No. 2), *Railroad Cost Recovery Procedures.* We have modified the fourth quarter 1987 RCAF filed by AAR to adjust for a .001 downward change in its adjustment for forecast error. Application of the index, as adjusted for second quarter 1987 forecast error, provides for a fourth quarter 1987 RCAF of 1.093. Since there is a bank of credits sufficient to offset any increase in maximum RCAF rate levels, maximum adjusted base rates may not exceed the current ceiling of 1.057. No rate actions are ordered.

EFFECTIVE DATE: October 1, 1987.

FOR FURTHER INFORMATION CONTACT:

William T. Bono, (202) 275–7354
or
Robert C. Hasek, (202) 275–0938
(TDD for hearing impaired: (202) 275–1721).

SUPPLEMENTARY INFORMATION: By decision served January 2, 1985 (50 FR 87, January 2, 1985) we outlined the procedures for the calculation of the all inclusive index of railroad input prices and the methodology for the computation of the RCAF. These procedures replaced an interim methodology which was formerly used. AAR is required to calculate the forecasted index on a quarterly basis and submit it on the fifth day of the last month of each calendar quarter.

We have reviewed AAR's calculations of the index for the fourthquarter of 1987 and find that these calculations comply with the rules. We have recalculated the linked index for the second quarter 1987 actual from 130.1, as submitted by AAR, to 130.0. This reduces the forecast error adjustment to .006 resulting in an RCAF of 1.093.

In our decision served December 27, 1985, we restated a lump sum payment to certain members of the United Transportation Union by amortizing it over the life of the present union contract with interest calculated using the three-month Treasury Bill rate. We instructed AAR to continue this calculation by amortizing the principal balance over the remaining quarters using a three-month Treasury Bill interest rate available seven days prior to the submission date of the quarterly index. The weights in the fourth quarter submission have been updated to the 1986 level. We have verified AAR's lump sum calculations and find that they comply with our instructions.

The index weights are updated annually to reflect the changing mix of the various index components. AAR has recalculated the index weight to 1986 levels and has used them for the first time in its calculation of the fourth quarter 1987 RCAF. We have reviewed AAR's calculations and find that they have been made in accordance with our rules. We do note an increase in the depreciation component from 8.7 percent using 1985 weights to 12.3 percent using 1986 weights. Much of this increase was caused by an extraordinarily high amount of asset writedowns taken during 1986.

We find the RCAF for the fourth quarter of 1987 to be 1.093. This figure was calculated by adjusting the preliminary fourth quarter 1987 RCAF for the fourth quarter 1987 forecast error. Since there is a bank of credits sufficient to offset any increase in maximum

RCAF rate levels, adjusted base rates may not exceed the current ceiling of 1.057. No rate actions are ordered.

The indices and RCAF derived from AAR's fourth quarter 1987 calculations are shown in Table A of the appendix to this decision. The adjustment for second quarter 1987 forecast error is also shown in Table A. Table B shows the second quarter 1987 index and RCAF calculated on both an actual basis and a forecasted basis for comparative purposes. Table C shows our calculation of the bank of credits (including the application of an opportunity cost adjustment) used to offset increases in the RCAF.

Since the published fourth quarter 1987 RCAF of 1.093 is higher than the current maximum RCAF rate level of 1.057, the bank of credits will again be reduced. We expect further reductions in the bank to occur. We will continue to calculate the size of the bank of credits and include that information in each quarterly decision as long as there are any remaining credits.

In a decision served August 27, 1987, we established a new proceeding for the handling of quarterly RCAF matters only. This is the first RCAF decision to be served under Ex Parte No. 290 (Sub-No. 5), *Quarterly Rail Cost Adjustment Factor* which continues the quarterly RCAF portion of Ex Parte No. 290 (Sub-No. 2), *Rail Cost Recovery Procedures.*

Finally, we note that certain shipper parties have filed petitions for release of data which underlies the RCAF and AAR has replied to those petitions.

Comments on release of index data were requested in a decision served August 13, 1987. Those comments are due September 30 and replies on October 15. We expect to issue a decision on release of index data after our analysis of comments and replies.

This decision will not significantly affect the quality of the human environment or the conservation of energy resources. This proceeding will not have a significant adverse impact on a substantial number of small entities because these procedures simplify a formerly complex and burdensome rate increase procedure.

Authority: 49 U.S.C. 10321, 10707a, 5 U.S.C. 553.

Decided: September 23, 1987.

By the Commission, Chairman Gradison, Vice Chairman Lamboley, Commissioners Sterrett, Andre, and Simmons. Vice Chairman Lamboley concurred with the result.

Noreta R. McGee,

Secretary.

TABLE A.—EX PARTE NO. 290 (SUB-NO. 5) (87-4)

[All Inclusive Index of Railroad Input Costs]

Line No.	Index component	1985 weights [1] (percent)	1986 weights [2] (percent)	Third quarter 1987 forecast	Fourth quarter 1987 forecast
1.	Labor	48.6	46.7	164.2	164.9
2.	Fuel	9.7	5.9	60.2	67.6
3.	Materials and Supplies	7.6	6.9	98.6	99.7
4.	Equipment Rents	9.0	9.2	140.2	141.4
5.	Depreciation	8.7	12.3	115.4	115.5
6.	Other Items [3]	16.4	19.0	123.4	124.5
7.	Weighted Average	100.0	100.0	136.0	138.7
8.	Linked Index [4]			130.4	131.4
9.	Preliminary Rail Cost Adjustment Factor [5] (10/1/82=100) 120.9			1.079	1.087
10.	Adjustment for Forecast Error [6]			.008	.006
11.	RCAF (Line 9 plus Line 10)			1.087	1.093

[1] Weights for 1985 were used to calculate the third quarter 1987 RCAF.
[2] Weights for 1986 were used to calculate the fourth quarter 1987 RCAF.
[3] Other items are a combination of Purchased Services, Casualties and Insurance, General and Administrative, Other Taxes and Loss and Industrial Commodities Less Fuel and Related Products and Power.
[4] Linking is necessitated by a change to 1986 weights beginning with the fourth quarter 1987. The following formula was used for the fourth quarter 1987 index:

$$\frac{\text{4th Quarter 1987 Index (1986 Weights)}}{\text{3rd Quarter 1987 Index (1986 Weights)}} \times \text{3rd Quarter 1987 Index (Linked Index)} = \text{Linked Index (1980 Weights to 1986 Weights)}$$

$$\text{or: } \frac{138.7}{137.6} \times 130.4 = 131.4$$

[5] The denominater was rebased to an October 1, 1982 level in accordance with the requirements of the Staggers Rail Act of 1980.
[6] Second quarter 1987 forecast error adjustment is calculated as follows:

1. Second quarter 1987 RCAF calculated using forecasted data	1.069
2. Second quarter 1987 RCAF calculated using actual data	1.075

3. Difference (Line 2 minus Line 1). Since the actual second quarter 1987 RCAF was higher than the forecast the difference will be added to the fourth quarter 1987 preliminary RCAF ..... .006

TABLE B.—EX PARTE NO. 290 (SUB-NO. 5) (87-4)

[Comparison of Second Quarter 1987 Index Calculated on Both a Forecasted and an Actual Basis]

Line No.	Index component	1985 weights (percent)	Second quarter 1987 forecast	Second quarter 1987 actual
1	Labor	48.6	163.7	163.7
2	Fuel	9.7	51.6	59.6
3	Materials and Supplies	7.6	98.2	98.2
4	Equipment Rents	9.0	139.6	140.2
5	Depreciation	8.7	116.5	115.7
6	Other Items	16.4	122.3	123.2
7	Weighted Average	100.0	134.8	135.7
8	Linked Index		129.2	130.0
9	Rail Cost Adjustment Factor		1.069	[1] 1.075

[1] For comparative purposes only, an RCAF for the second quarter 1987 has been calculated using actual data. The published RCAF for the second quarter 1987 was computed using forecasted data.

TABLE C.—EX PARTE NO. 290 (SUB-NO. 5) (87-4)

[Calculation of RCAF Credits and Application of Opportunity Cost Adjustment]

1. Bank of RCAF credits 6-30-87	.086
2. Maximum RCAF rate level, third quarter 1987	1.057
3. Published RCAF third quarter 1987	1.087
4. Reduction ( ) or addition to bank of credits for second quarter 1987 (Line 2 minus Line 3)	(.030)
5. Bank of RCAF credits 9-30-87 (Line 1 plus Line 4)	056
6. Third quarter allowance for opportunity cost (Three-month Treasury Bill rate for sale of 8-24-87 (6.12 percent) divided by 4)	1.53%
7. Bank of RCAF credits 9-30-87 adjusted for opportunity cost (Line 5 × (1.0 + Line 6))	.057

BILLING CODE 7035-01-M

[Finance Docket No. 31114]

Trackage Rights; CSX Transportation, Inc.; Grand Trunk Western Railroad Co.; Exemption

Grand Trunk Western Railroad Company (GTW) has agreed to grant overhead trackage rights to CSX Transportation, Inc. (CSXT), beginning at point of switch of Track No. 93-1 at milepost 40.60 and ending at point of switch of Track No. 4 at milepost 40.96, and including the first 440 feet of Track No. 4, a total distance of approximately 0.44 miles, in Mershon, Saginaw, MI. The trackage rights became effective on September 16, 1987.

This Notice is filed under 49 CFR 1180.2(d)(7). Petitions to revoke the exemption under 49 U.S.C. 10505(d) may be filed at any time. The filing of a petition to revoke will not stay the transaction.

As a condition to use of this exemption, any employees affected by the trackage rights will be protected pursuant to *Norfolk and Western Ry. Co.—Trackage Rights—BN*, 354 I.C.C. 605 (1978), as modified by *Mendocino Coast Ry., Inc.—Lease and Operate*, 360 I.C.C. 653 (1980).

Dated: September 18, 1987.

By the Commission, Jane F. Mackall, Director, Office of Proceedings.

Noreta R. McGee,

Secretary.

[FR Doc. 87-22387 Filed 9-28-87; 8:45 am]
BILLING CODE 7035-01-M

[Docket No. AB-18 (Sub-106X)]

Abandonment Exemption; CSX Transportation, Inc.; Tuscarawas County, OH

CSX Transportation, Inc.,[1] has filed a notice of exemption under 49 CFR Part 1152 Subpart F—*Exempt Abandonments*, to abandon its 1.57-mile line of railroad between mileposts 29.45 and 31.02 at Dover in Tuscarawas County, OH.

[1] The Chesapeake and Ohio Railway Company was merged into CSX Transportation, Inc., on September 1, 1987

Applicant has certified that: (1) No local traffic has moved over the line for at least 2 years and that the line does not handle overhead traffic; and (2) no formal complaint filed by a user of rail service on the line (or by a State or local governmental entity acting on behalf of such user) regarding cessation of service over the line either is pending with the Commission or any U.S. District Court or has been decided in favor of the complainant within the 2-year period. The appropriate State agency has been notified in writing at least 10 days prior to the filing of this notice.

Applicant has filed an environmental report which shows that no significant environmental or energy impacts are likely to result from this abandonment.

As a condition to use of this exemption, any employee affected by the abandonment shall be protected pursuant to *Oregon Short Line R. Co.-Abandonment-Goshen*, 360 I.C.C. 91 (1979).

The exemption will be effective October 29, 1987 (unless stayed pending reconsideration). Petitions to stay must be filed by October 9, 1987, and petitions for reconsideration, including environmental, energy, and public use concerns, must be filed by October 19, 1987 with: Office of the Secretary, Case Control Branch, Interstate Commerce Commission, Washington, DC 20423.

A copy of any petition filed with the Commission should be sent to applicant's representative: Charles M. Rosenberger, CSX Transportation, Inc., 500 Water Street, Jacksonville, FL 32202.

If the notice of exemption contains false or misleading information, use of the exemption is void *ab initio*.

A notice to the parties will be issued if use of the exemption is conditioned upon environmental or public use conditions.

Decided: September 15, 1987.

By the Commission, Jane F. Mackall, Director, Office of Proceedings.

Noreta R. McGee,

Secretary.

BILLING CODE 7035-01-M

[Docket No. AB-39 (Sub-No. 9X)]

Abandonment Exemption; St. Louis Southwestern Railway Co. in Wyandotte County, KS, and Jackson County, MO

AGENCY: Interstate Commerce Commission.

ACTION: Notice of exemption.

SUMMARY: The Commission exempts from prior approval under 49 U.S.C. 10903, *et seq.*, the abandonment by St. Louis Southwestern Railway Company of 1.017 miles of track in Wyandotte County, KS, and Jackson County, MO, subject to conditions for labor protection and historic preservation.

DATES: This exemption is effective on October 2, 1987. Petitions for reconsideration must be filed by October 19, 1987.

ADDRESSES: Send pleadings referring to Docket No. AB-39 (Sub-No. 9X) to:

(1) Office of the Secretary, Case Control Branch, Interstate Commerce Commission, Washington, DC 20423

(2) Petitioner's representative: Gary A. Laakso, Southern Pacific Bldg., One Market Plaza, San Francisco, CA 94105

FOR FURTHER INFORMATION CONTACT: Joseph H. Dettmar, (202) 275-7245. (TDD for hearing impaired: (202) 275-1721).

SUPPLEMENTARY INFORMATION: Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to T.S. InfoSystems, Inc., Room 2229, Interstate Commerce Commission Building, Washington, DC 20423, or call (202) 289-4357 (assistance for the hearing impaired is available through TDD services (202) 275-1721) or by pickup in Room 2229 at Commission headquarters.

Decided: September 22, 1987.

By the Commission, Chairman Gradison, Vice Chairman Lamboley, Commissioners Sterrett, Andre, and Simmons.

Noreta R. McGee,

Secretary.

BILLING CODE 7035-01-M

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 86-25]

Revocation of Registration; Robert Vidor, M.D.

On March 24, 1986, the Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration (DEA), issued an Order to Show Cause to Robert Vidor, M.D. (Respondent) of 659 Kearny Avenue, Kearny, New Jersey 07032 and 15 W. 12th Street, New York, New York 10011 proposing to revoke his DEA Certificates of Registration AV4675003 and AV2808422 and to deny any pending applications for registration as a practitioner under 21 U.S.C. 823(f). The Order to Show Cause alleged that the continued registration of Respondent is inconsistent with the public interest as that term is used in 21 U.S.C. 823(f) and 824(a)(4).

On May 9, 1986, Respondent requested a hearing on the issues raised by the Order to Show Cause and the matter was docketed before Administrative Law Judge Francis L. Young. Following prehearing proceedings, a hearing was held in Newark, New Jersey, on October 7, 8 and 9, 1986. On May 11, 1987, Judge Young issued his Opinion and Recommended Ruling, Findings of Facts, Conclusions of Law and Decision. Pursuant to 21 CFR 1316.66, Respondent filed exceptions to the Administrative Law Judge's Recommended Ruling and the Government filed a response to such exceptions. On July 24, 1987, Judge Young transmitted the record in these proceedings, including Respondent's exceptions and the Government's response thereto, to the Administrator. The Administrator has considered the record in its entirety and, pursuant to 21 CFR 1316.67, hereby issues his final order in this matter based upon findings of fact and conclusions of law as hereinafter set forth.

The Administrative Law Judge found that Respondent has been a practicing psychiatrist in the Kearny, New Jersey, area for the past twenty-three years. Beginning in 1981, the Kearny Police Department received an ongoing series of complaints from confidential informants, concerned citizens, family members of Respondent's patients and anonymous callers regarding Respondent's controlled substance prescribing practices. These complaints were to the effect that Respondent was prescribing controlled substances for individuals without any examination or consultation and that these individuals were then either abusing drugs themselves or selling them on the street.

As a result of the complaints, the Kearny Police Department requested that the Hudson County Prosecutor's Office initiate an undercover investigation into Respondent's controlled substance prescribing practices. In response to this request, on three separate occasions in 1983, an investigator with the Hudson County Prosecutor's Office, went to Respondent's office, in an undercover capacity, to attempt to purchase prescriptions for controlled substances from Respondent without a showing of legitimate medical need for the drugs.

During each of the three visits, Respondent wrote the investigator a prescription for 100 Xanax tablets, a Schedule IV controlled substance. Respondent never took a complete medical history from the investigator on any occasion before prescribing controlled substances for him. The investigator clearly indicated to Respondent that his "wife" was both using and selling some of the drugs Respondent was prescribing for him, not for his wife. The Administrative Law Judge concluded, however, that in light of all that transpired between the investigator and Respondent, these circumstances do not in themselves establish that the prescriptions written for the investigator could not have been intended by Respondent for a legitimate medical purpose.

On three separate occasions in 1983, another investigator with the Hudson County Prosecutor's Office, went to Respondent's office, in an undercover capacity, to attempt to purchase prescriptions for controlled substances from Respondent without a showing of legitimate medical need for the drugs. During his first visit on June 8, 1983, the investigator told Respondent that he was currently going to a methadone clinic, that he was buying drugs on the street and that he used cocaine. Respondent proceeded to write the investigator two prescriptions, one for 15 dosage units of Dalmane, a Schedule IV controlled substance, and one for 60 dosage units of Valium 10 mg., also a Schedule IV controlled substance. Before prescribing these drugs, Respondent did not take a complete medical history from the investigator; he did not perform any psychiatric counseling; and he did not ask the investigator to sign a release of records form so he could obtain information regarding the investigator's supposed treatment at the methadone clinic.

During this visit, Respondent cautioned the investigator not to sell

anything that he prescribed for him. The investigator had not said anything about selling the drugs prior to Respondent's making this statement. The investigator then stated that he could sell the drugs in Newark, to which Respondent replied: "Newark is another thing * * *. I don't know about that, okay?" Before the investigator left Respondent's office, Respondent stated that he had to write something on the investigator's medical chart to justify the issuance of the prescriptions. Specifically, Respondent stated: "I have to write that you're quite nervous, okay * * *. You have anxiety, tense, nervous, okay? * * * Sometimes you can't sleep." The investigator responded: "you can write down anything you want." Respondent replied: "No, you mustn't disagree."

The investigator returned to Respondent's office on June 27, 1983. Respondent wrote the investigator one prescription for 100 dosage units of Valium 10 mg. and 20 dosage units of Dalmane. Respondent did not offer the investigator any sort of psychiatric counseling.

On September 12, 1983, the investigator returned to Respondent's office. During this visit, the investigator told Respondent that he was taking some of the drugs that Respondent prescribed for him and selling some. Respondent warned the investigator to be careful because the "Feds are everywhere." Respondent proceeded to write the investigator a prescription for 60 dosage units of Valium 10 mg. and 24 dosage units of Elavil, a non-controlled substance. Once again, Respondent stated that he had to write something on the investigator's medical chart to justify the issuance of the prescription. He suggested that: "[Y]ou sometimes feel like down, like depressed * * * [L]ike you broke up with your girlfriend." Respondent did not provide the investigator with any psychiatric counseling before prescribing the drugs for him. The Administrative Law Judge concluded that the controlled substances prescribed for the investigator on this occasion, and on June 8 and 27, 1983, were not prescribed for a legitimate medical purpose.

The Administrative Law Judge found that some of Respondent's patients were clients at area methadone treatment clinics. The exchange of information between a treating doctor and the methadone clinic regarding an individual is necessary to ensure that medications are not improperly combined.

The director of a local methadone treatment facility attempted to contact Respondent on several occasions to attempt to implement certain procedures for the coordination of treatment when a client of the clinic is also Respondent's patient. Respondent showed no interest in effecting such medically necessary coordination. In one instance in 1980, Respondent became aware that a patient of his was also a client at the methadone clinic, yet Respondent failed to contact the clinic regarding the patient's treatment and he did not ask the patient to sign a release of records form until April 1986, after the initiation of proceedings to revoke his DEA Certificate of Registration. Generally, Respondent did not begin to contact local methadone clinics to attempt to obtain information regarding his patients who were also clients at the clinics until the spring of 1986, after the initiation of these proceedings.

The Administrative Law Judge further found that as of early 1986, Respondent had been writing prescriptions for controlled substances, on a regular basis for four years for a patient who is a drug addict. The individual was then reselling the drugs or trading them on the street for other drugs. The individual's sister contacted Respondent on several occasions to attempt to discuss his prescribing of controlled substances for her sister. The sister specifically told Respondent that her sister was selling the drugs Respondent prescribed for her. Respondent threatened the sister by telling her to "butt out" or she'd be in trouble. Respondent further stated, "[i]f I didn't give her drugs, she'd buy more dangerous ones on the street."

The Administrative Law Judge recommended that Respondent's DEA Certificates of Registration be revoked. Although he concluded that not all of the Government's allegations of wrongdoing by Respondent were supported by the evidence in the record, he found that a number of them were, and that those were sufficient to persuade him that Respondent ought not to be permitted to handle controlled substances.

The Administrator adopts the findings of fact, conclusions of law and decision of the Administrative Law Judge in their entirety. The Administrator also considered Respondent's exceptions to Judge Young's opinion and recommended ruling. However, nothing in Respondent's exceptions persuades the Administrator to conclude that the continued registration of Respondent is consistent with the public interest. Respondent prescribed controlled substances for an individual even after being told that the individual was a drug addict and was selling some of the drugs Respondent prescribed for him. In addition, Respondent freely prescribed controlled substances to methadone clinic clients without coordinating treatment with the clinic. The Administrator concludes that the evidence clearly establishes that the continued registration of Respondent is inconsistent with the public interest pursuant to 21 U.S.C. 823(f) and 824(a)(4).

Accordingly, the Administrator of the Drug Enforcement Administration, pursuant to the authority vested in him by 21 U.S.C. 823 and 824 and 28 CFR 0.100(b), hereby orders that DEA Certificates of Registration AV4675003 and AV2808422, previously issued to Robert Vidor, M.D., be, and they hereby are, revoked. The Administrator further orders that any pending applications for the renewal of such registrations be, and they hereby are, denied. This order is effective October 29, 1987.

John C. Lawn,

Administrator.

Date: September 23, 1987.

[FR Doc. 87-22348 Filed 9-28-87; 8:45 am]

BILLING CODE 4410-09-M

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

Wyoming State Standards; Approval

1. Background. Part 1953 of Title 29, Code of Federal Regulations, prescribes procedures under section 18 of the Occupational Safety and Health Act of 1970 (hereinafter called the Act) by which the Regional Administrator for Occupational Safety and Health (hereinafter called the Regional Administrator) under delegation of authority from the Assistant Secretary of Labor for Occupational Safety and Health (hereinafter called the Assistant Secretary) (29 CFR 1953.4) will review and approve standards promulgated pursuant to a State Plan which has been approved in accordance with section 18(c) of the Act and 29 CFR Part 1902. On May 3, 1974, notice was published in the **Federal Register** (39 FR 15394) of the approval of the Wyoming Plan and adoption of Subpart BB to Part 1952 containing the decision.

The Plan provides for the adoption of Federal Standards as State Standards by:

1. Advisory Committee coordination.
2. Publication in newspapers of general/major circulation with a 45-day waiting period for public comment and hearings.
3. Adoption by the Wyoming Health and Safety Commission.

4. Review and approval by the Governor.

5. Filing with Secretary of State and designation of an effective date.

OSHA regulations (29 CFR 1953.22 and 1953.23) require that States respond to the adoption of new or revised permanent Federal standards by State promulgation of comparable standards within six months of OSHA publication in the **Federal Register**, and within 30 days for emergency temporary standards. Although adopted State standards or revisions to standards must be submitted for OSHA's review and approval under procedures set forth in Part 1953, they are enforceable by the state prior to federal review and approval. By letter dated June 10, 1987, from Donald D. Owsley, Administrator, Wyoming Occupational Health and Safety Division, to Byron R. Chadwick, OSHA Regional Administrator, the State submitted rules and regulations in response to Federal OSHA's Construction Standards (29 CFR 1926.55: Gases, Vapors, Fumes, Dusts, and Mists, 51 FR 22756, June 20, 1986; 29 CFR 1926.58: Asbestos, Tremolite, Anthophyllite, and Actinolite, 51 FR 22756, June 20, 1986; 29 CFR 1926.152: Flammable and Combustible Liquids and 29 CFR 1926.351: Arc Welding and Cutting and 29 CFR 1926.803: Compressed Air and 29 CFR 1926.400: Electrical, 51 FR 25318, July 11, 1986).

The above adoptions of Federal standards have been incorporated in the State Plan, and are contained in the Wyoming Occupational Health and Safety Rules and Regulations for General Industry, as required by Wyoming Statute 1977, Section 27–11–105(a)(viii).

State standards for 29 CFR 1926.55: Gases, Vapors, Fumes, Dusts, and Mists; 29 CFR 1926.58: Asbestos, Tremolite, Anthophyllite and Actinolite; 29 CFR 1926.152: Flammable and Combustible Liquids; 29 CFR 1926.351: Arc Welding and Cutting; 29 CFR 1926.803: Compressed Air; and 29 CFR 1926.400: Electrical were adopted by the Health and Safety Commission of Wyoming on November 14, 1986 (effective December 19, 1986, for §§ 1926.55 and 1926.58; March 10, 1987 for §§ 1926.152, 1926.351, 1926.803 and 1926.400), pursuant to Wyoming statute 1977, section 27–11–105. These State standards are substantially identical to the Federal standard actions, except for the following minor differences: (a) Paragraph numbering; and (b) minor wordage appropriate to the Wyoming statutes.

2. *Decision.* Having reviewed the State submissions in comparison with Federal standards, it has been determined that the State standards are substantially identical to the Federal standards, and are accordingly approved.

3. *Location of Supplement for Inspection and Copying.* A copy of the standards supplements, along with the approved plan, may be inspected and copied during normal business hours at the following locations: Office of the Regional Administrator, Room 1576, Federal Office Building, 1961 Stout Street, Denver, Colorado 80294; the Occupational Health and Safety Department, 604 East 25th Street, Cheyenne, Wyoming 82002; and the Office of State Programs, Room N-3700, 200 Constitution Avenue, NW., Washington, DC 20210.

4. *Public Participation.* Under 29 CFR 1953.2(c), the Assistant Secretary may prescribe alternative procedures to expedite the review process or for any other good cause which may be consistent with applicable laws. The Assistant Secretary finds that good cause exists for not publishing the supplements to the Wyoming State Plan as a proposed change and making the Regional Administrator's approval effective upon publication for the following reason:

The standards were adopted in accordance with the procedural requirements of State law which included public comment and further public participation would be repetitious. This decision is effective September 29, 1987.

(Sec. 18, Pub. L. 91–596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Denver, Colorado, this 7th Day of August, 1987.

Harry C. Borchelt,

Acting Regional Administrator.

[FR Doc. 87–22329 Filed 9–28–87; 8:45 am]

BILLING CODE 4510–26–M

NUCLEAR REGULATORY COMMISSION

Docket No. 030–13435, License No. 53–17854–01, EA 87–186

Order Suspending License (Effective Immediately); Finlay Testing Laboratories, Inc.

I

Finlay Testing Laboratories, Inc., (the licensee) Testing and Inspection Services 99–940 Iwaena Street, Aiea, Hawaii 96701, is the holder of Byproduct Material License No. 53–17854–01 issued by the Nuclear Regulatory Commission (NRC/Commission) on March 1, 1978 pursuant to 10 CFR Part 34. The license is due to expire on August 31, 1988. The license authorizes the licensee to possess and use licensed materials (cobalt-60, iridium-192, and cesium-137 sources of up to 30, 100, and 0.14 curies per source, respectively) in industrial radiography and survey instrument calibration. The license specifies that sources shall be used by, or under the supervision of, Gordon Finlay or individuals who have completed the training program described in letters dated February 28, 1983 and August 2, 1983.

II

In response to allegations received by the NRC Region V office, an investigation was initiated on August 31, 1987. The allegations included:

1. Exposure devices being placed by the licensee in luggage and loaded on commerical passenger aircraft for flights to and from the islands of Oahu and Hawaii, and on military cargo/passenger aircraft to Johnston Island.

2. Failure to use shipping papers or labels for those transfers.

During the investigation at the licensee's office in Aiea, island of Oahu, NRC personnel inquired about activities conducted under the NRC license. The licensee's Radiation Safety Officer initially denied that work had been performed on the island of Hawaii. When confronted with evidence of that work, however, he admitted that the work had been done. Radiographers employed by the licensee also stated during discussions with NRC personnel that radiographic work had been performed on the island of Hawaii during 1987 and that licensed material had been transported on passenger-carrying aircraft in violation of Federal regulations.

The licensee's representatives were unable to produce required documentation that showed that work had been performed on the island of Hawaii or that the licensed material had been transported from the island of Oahu to the island of Hawaii in accordance with Federal regulations. The investigation disclosed substantial evidence that, in fact, the material had been transported in luggage via commerical passenger aircraft in violation of Federal regulations which prohibit the transportation of radioactive material on passenger aircraft. 10 CFR 71.5 and 49 CFR 173.448(f).

The NRC investigation also confirmed that on August 18, 1987 the licensee shipped a radiogpraphic device by military passenger/cargo plane to Johnston Island also in violation of Federal regulations. 10 CFR 71.5 and 49

VOL
52
ISS

SE
29
1987
UMI

CFR 173.448(f). In both instances, labeling and documentation requirements were not met.

The Federal regulations for shippping redioactive material have been established, in part, to protect the public, including passengers in aircraft, from the potentially serious dangers of radioactive material. For the safety of handlers and passengers, regulations dictate packaging, labeling, and documentation requirements for shipping radioactive material and limit the types of flights on which the material may be carried.

While the investigation is continuing, the information developed to date indicates that the violations appear to be deliberate, which raises a question whether the licensee is able or willing to comply with the Commission's requirements to protect the public health and safety. Therefore, the NRC no longer has reasonable assurance that licensed activities will be conducted without undue risk to the public health and safety. I have determined pursuant to 10 CFR 2.201(c) and 1.202(f) that the public health and safety require that the license be suspended pending the results of the investigation, that the suspension be immediately effective, and that no prior notice is required.

IV

Accordingly, in view of the foregoing and pursuant to sections 81, 161b, 161c, 161i, 161o, 182 and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR Parts 30 and 34, *It Is Hereby Ordered, Effective Immediately, That:*

A. Activities under License No. 53–17854–01 are suspended.

B. The licensee shall place all byproduct material in its possession in locked storage and notify the Region V office of compliance.

The Regional Administrator, Region V, may, in writing, relax or rescind any of the above provisions on demonstration of good cause by the licensee.

V

Pursuant to 10 CFR 2.202(b), the licensee may show cause why License No. 53–17854–01 should not be suspended by filing a written answer under oath or affirmation within 20 days of the date of issuance of this Order, setting forth the matters of fact and law on which the licensee relies. The licensee may answer this Order, as provided in 10 CFR 2.202(d), by consenting to the provisions specified in section IV above. Upon consent of the licensee to the provisions set forth in section IV of this Order, or on failure of the licensee to file an answer within the specified time, the provisions specified in section IV above shall be final without further Order.

VI

Pursuant to 10 CFR 2.202(b), the licensee or any other person adversely affected by this Order may request a hearing within 20 days of this Order. An answer to this Order and any request for a hearing shall be submitted to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Copies shall also be sent to the Assistant General Counsel for Enforcement, at the same address , and to the Regional Administrator, U.S. Nuclear Regulatory Commission, Region V, 1450 Maria Lane, Suite 210, Walnut Creek, California 94596. If a person other than the licensee requests a hearing, that person shall set forth with particularity the manner in which the petitioner's interest is adversely affected by this Order and should address the criteria set forth in 10 CFR 2.714(d). An answer to this Order or a request for hearing shall not stay the immediate effectiveness of this order.

If a hearing is requested by the licensee or a person whose interest is adversely affected, the Commission shall issue an Order designating the time and place of any hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this order should be sustained.

For The Nuclear Regulatory Commission.

James M. Taylor,

Deputy Executive Director for Regional Operations.

Dated at Bethesda, Maryland, this 21st day of September 1987.

[FR Doc. 87–22407 Filed 9–28–87; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 30–05900 et al., License Nos. 35–00502–02 et al., EA 87–35]

Order Modifying Licenses; Halliburton Co., (Halliburton Services Division)

I

Halliburton Company (the Licensee) Post Office Drawer 1431, Duncan, Oklahoma 73536, is the holder of several byproduct material licenses. License No. 35–00502–02 authorizes the Licensee to possess and use byproduct material for the purpose of performing tracer studies in oil and gas wells. Amendment No. 25 to the license was issued December 18, 1986. The license expires on March 31, 1991. License No. 35–00502–03 authorizes the Licensee to possess and use byproduct material for the purposes of research and development and the manufacture of tracer materials and gauging equipment used in oil field operations. Amendment No. 55 to the license was issued July 7, 1987. The license expires on March 31, 1991. License No. 42–01068–07 authorizes the Licensee to possess and use byproduct material for the purpose of performing tracer studies and well logging in oil and gas wells. Amendment No. 42 to the license was issued August 31, 1986. The license expires on August 31, 1989.

II

On December 8–12, 1986, the NRC conducted a special inspection to review the circumstances surrounding alleged activities being performed under License Nos. 35–00502–03 and 35–00502–05. Several apparent violations were identified during the inspection. One of the violations was of particular concern because it involved activities being performed without NRC authorization. Specifically, Halliburton Industrial Services, Inc. was authorized under License No. 35–00502–05 to perform salvage and decontamination activities of spent fuel racks at its facility in Duncan, Oklahoma. On April 11, 1985, while disposal activities were taking place, Halliburton Industrial Services, Inc. was dissolved as a separate corporation. On that same day, Halliburton Company took possession of the facility. When the salvage and decontamination activities proved economically unfeasible, the spent fuel racks were cut into small pieces by Halliburton Company without NRC authorization and disposed of at an authorized disposal site. Because Halliburton Company was not an authorized recipient of the byproduct material, such possession violated NRC requirements. Further, contrary to NRC requirements, Halliburton Company continued to conduct decontamination activities at the Duncan, Oklahoma site from April 11, 1985 to December 19, 1985. At no time prior to the inspection did Halliburton Industrial Services, Inc. or Halliburton Company notify the NRC of these occurrences.

These circumstances, when viewed together with the other violations, demonstrated that Halliburton Company management failed to exercise adequate oversight and control of its radiation safety program. The NRC communicated its concerns to the Licensee during an enforcement conference held on January 26, 1987. Pursuant to NRC request, the Licensee committed, by letter dated April 16, 1987, not to conduct activities

which had been authorized under License No. 35–00502–05. Further, in a Confirmatory Action Letter dated May 1, 1987, the NRC documented the Licensee's commitment to request an amendment to License No. 35–00502–03 which would authorize the decontamination activities previously authorized under License No. 35–00502–05.

Another enforcement conference was held on May 27, 1987 to discuss with the Licensee the need to develop a comprehensive audit program. The NRC determined that an audit program was necessary because of the multiple licenses held the Licensee and because the violations identified during the inspection indicated the need for greater management involvement in the radiation safety program. Consequently, on June 9, 1987, Halliburton Company submitted a letter describing its proposed audit program. The NRC documented the Licensee's commitment in a Confirmatory Action Letter dated July 1, 1987.

III

After consideration of the facts, the NRC has concluded that there was a significant breakdown in management oversight and control of operations involving licensed material and has determined that an improved program of internal auditing and corporate management notification is needed. Further, the NRC has determined that the Licensee's completed and proposed corrective actions do not extend far enough to ensure thorough management involvement in the day-to-day operations of its licensed activities. Therefore, an Order describing in greater detail the requirements of the corporate audit program is necessary.

IV

In view of the foregoing and pursuant to sections 81, 161b, 161i, and 161o of the Atomic Energy Act of 1954, as amended (Act), and the Commission's regulations 10 CFR 2.204, and Parts 30 and 39, it is hereby ordered that:

A. The Licensee shall submit within 30 days of the date of this Order a description of a corporate audit program for NRC review and approval. NRC approval will constitute incorporation of the corporate audit program into the following licenses: (1) No. 35–00502–02, (2) No. 35–00502–03, and (3) No. 42–01068–07. As a minimum, the audit program shall consist of the elements described below.

1. Comprehensive audits of the handling, use, storage and disposition of licensed materials shall be conducted at intervals not to exceed 3 months by either the Radiation Safety Officer (RSO) or Assistant Radiation Safety Officer (ARSO) for their licenses for which they are responsible. Audits shall be conducted at each active field station or service center. (Active sites are those at which radioactive material has been possessed, used, or stored within the previous 6 months.) Any deficiencies noted by the audit shall be promptly corrected. The audits shall be documented in a report within 30 days of each audit and the report shall be submitted to the Manager of the Government Regulations Department, Halliburton Services. A determination shall be made whether the deficiency was an isolated event or one that indicates a potential systematic failure in which case all field stations and service centers shall be notified.

2. Additional unannounced audits shall be performed if prior corrective actions are not implemented or if the corrective actions were not effective.

3. As a minimum, a review of the audit findings shall be conducted for each licensed activity by the Manager of Government Regulations Department, Halliburton Services, at intervals not to exceed six months and the review shall be documented in a report. In addition, the Manager of Government Regulations Department, or an NRC-approved alternate, shall conduct periodic audits at selected active field stations or service centers.

B. Within 30 days of the audit review required by Item A.3 above, copies of the completed audit report shall be provided to the President, Halliburton Services, for his review.

C. The President, Halliburton Services, shall be the responsible Licensee representative to ensure that all corrective actions are properly implemented and incorporated into the licensee's program.

D. Records of the reviews and audits identified above shall be maintained for inspection by the Commission for a period of 3 years.

The Regional Administrator, Region IV, or his designee may relax or rescind any of the above provisions for good cause.

The Licensee or any other person adversely affected by this Order may within 30 days of the date of this Order request a hearing. A request for a hearing shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555. A copy of the hearing request shall also be sent to the Assistant General Counsel for Enforcement, Office of General Counsel. U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to the Regional Administrator, Region IV, 611 Ryan Plaza, Suite 1000, Arlington, Texas 76011. If a person other than the Licensee requests a hearing, that person shall set forth with particularity the manner in which the petitioner's interst is adversely affected by this Order and should address the criteria set forth in 10 CFR 2.714(d).

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the Licensee fails to request a hearing within 30 days of the date of this Order, the provisions of this order shall be effective without further proceedings.

In the event the Licensee or any other person requests a hearing as provided above, the issue to be considered at such hearing shall be whether this Order should be sustained.

For the Nuclear Regulatory Commission

James M. Taylor,

Deputy Executive Director for Regional Operations.

Dated at Bethesda, Maryland, this 23rd day of September, 1987.

PRESIDENTIAL COMMISSION ON THE HUMAN IMMUNODEFICIENCY VIRUS EPIDEMIC

Meeting

Notice is hereby given, pursuant to Pub. L. 92–463, that the Presidential Commission on the Human Immunodeficiency Virus Epidemic will hold a meeting on Thursday, October 15, 1987, and on Friday, October 16, 1987.

In accordance with the provisions of the Government in the Sunshine Act, 5 U.S.C. 552(c) (2) and (6), the meeting will

VOL

be closed to the public on October 15th. This meeting will be devoted to discussing internal personnel rules and practices and information the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

The meeting on Friday, October 16th will be open to the public and will be held from 9:00 a.m. to 1:00 p.m. in the Loy-Henderson Conference Room, Department of State, 2201 C Street, NW., Washington, DC 20520. The purpose of the meeting on the 16th is to discuss (1) the Preliminary Report and organizational approach toward meeting the charges of the Presidential mandate; (2) future meetings and other business items submitted by the commissioners.

Records shall be kept of all commission proceedings and shall be available for public inspection at 655—15th Street NW., Suite 901, Washington, DC 20005.

William J. Walsh, III,

Executive Secretary, Presidential Commission on the Human Immunodeficiency Virus Epidemic.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-24935; File No. SR-CBOE-87-40]

Self-Regulatory Organizations; Chicago Board Options Exchange, Inc.

Pursuant to section 19(b) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b), notice is hereby given that on August 31, 1987, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commissions publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Text of the Proposed Rule Change

The CBOE proposes a new rule 8.14, which limits the affiliations of a designated primary market-maker (DPM).[1] The rule provides that no person or organization affiliated with a DPM may purchase or sell an option in a DPM's appointment except to reduce or liquidate positions with appropriate identification and floor official approval. The rule provides an exemption from this limitation in guidelines which follow the rule. These guidelines for exemption provide for what is commonly referred to as a "Chinese Wall."

The "Chinese Wall" guidelines call for (i) separate organization of the DPM and the affiliated firm, including separate books and records, separate financial compliance, no common control over the DPM's conduct, and only such general managerial oversight as not to conflict with or compromise the DPM's market maker responsibilities; and (ii) procedures to prevent the use of material non-public corporate or market information to influence the DPM's conduct and to avoid the misuse of DPM market information to influence the affiliated firm's conduct.

The firm seeking exemption is to submit to the Exchange a written statement setting forth: (i) Manner of complying with the foregoing guidelines, (ii) the firm individuals responsible for maintenance and surveillance of the procedures, (iii) that the DPM may not give special information to a broker affiliated with the firm; (iv) that the firm must disclose its affiliation with a DPM if it popularizes a security in which the DPM is registered as such; (v) that the firm will file information and reports required by the Exchange; (vi) that appropriate remedial actions will be taken for a breach of procedure; (vii) the procedures to ensure a separation of firm proprietary clearing activity to assure the "Chinese Wall" is not compromised; and (viii) that no individual associated with the firm may trade as market maker in a security on which the DPM has an appointment.

The firm compliance officer is to be notified if the DPM receives information which the guidelines prohibit, and what action should be taken, including giving up the appointment, or temporarily providing a replacement DPM. The compliance officer is to keep a written record of each such incident, and provide such records to the Exchange for review. No exemption is effective until granted by the Exchange in writing.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below and is set forth in sections (A), (B), and (C) below.

(A) Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

The proposed rule change provides for "Chinese Walls" so that member organizations with an integrated business will be able to be associated with designated primary market-makers ("DPM"), with the assurance that there are adequate controls to assure that the DPM will not have access to material non-public corporate or market information which the firm may possess, and to prevent the misuse by a firm of its DPM's non-public market information.

The guidelines provide procedures to be used in temporary DPM appointments where a DPM becomes "contaminated" following a breach of the "Chinese Walls." The guidelines also specify that a firm's procedures should insure that information regarding securities positions trading activity and margin financing arrangements between the affiliated upstairs firm and the DPM should be available solely to senior management in the firm exercising general managerial oversight of the DPM. Once in place, these procedures will substantially lessen the need for the prohibitions contained in the rules discussed above to the extent they apply to upstairs firms affiliated with DPM's. The restrictions would remain in effect as to the DPM itself.

The Exchange believes that the proposed rule change is consistent with the provisions of the Securities Exchange Act of 1934 ("Exchange Act") and, in particular, section 6(b)(5) thereof, in that the proposal will enhance enforcement of Exchange rules and the Exchange Act. The rule change will also facilitate the entry of large diversified retail broker-dealers into becoming DPM's on the Exchange floor and in so doing will enhance depth and liquidity in the options market.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that this proposed rule change will impose any burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Comments were neither solicited nor received.

[1] The CBOE DPM program recently was approved in Securities Exchange Act Release No. 24934 (September 22, 1987).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submission should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submission should refer to the file number in the caption above and should be submitted by October 20, 1987.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Dated: September 22, 1987.

Shirley E. Hollis,

Assistant Secretary.

[FR Doc. 87-22417 Filed 9-28-87; 8:45 am]

BILLING CODE 8010-01-M

[Release No. 34-24936; File No. SR-CBOE 87-19]

Self-Regulatory Organizations; Chicago Board Options Exchange, Inc.

On May 7, 1987, the Chicago Board Options Exchange, Inc. ("CBOE") submitted to the Securities and Exchange Commission ("Commission"), pursuant to section 19(b)(1) under the Securities Exchange Act of 1934 ("Act")[1] and Rule 10b-b thereunder,[2] a proposed rule change to make permanent the Exchange's new Standard & Poor's 500 stock index option contract ("NSX"), the exercise settlement value of which is based on an index value derived from opening, rather than closing prices on the last business day prior to its expiration.

The proposed rule change was noticed in Securities Exchange Act Release No. 24751 (June 10, 1987). No comments were received on the proposed rule change. In Securities Exchange Act Release No. 24755 (July 28, 1987), the Commission granted partial approval to the proposed rule change.

The Exchange seeks permanent approval of the new NSX option contract, which is the same as the current Standard and Poor's 500 option contract ("SPX"), except that NSX's exercise settlement value would be based on opening prices of each stock comprising the index on the last business day prior to expiration Saturday. This value would be different from the current index value at any point in time, because the opening prices of the constituent stocks will be established at different times. NSX has expiration months of March, June, September and December, the same expiration months as the Standard and Poor's 500 futures contract.

The Exchange takes this action because the Chicago Mercantile Exchange ("CME") has moved the Standard and Poor's futures contract's settlement value to opening prices on the delivery date. The CBOE continues to believe that heightened volatility at expiration of index options and futures can better be addressed by improving procedures for information dissemination at the close of trading than by changing the terms of contracts to provide for exercise settlement based on opening prices. However, in light of the action of the CME, the CBOE believes it should promptly provide investors in SPX an alternative contract value on the same basis as the Standard and Poor's 500 future. Introduction of NSX will provide investors with offsetting Standard and Poor's 500 futures and SPX positions with a means of alleviating risk resulting from disparate valuation methods.

While a change to outstanding contracts would appear more straightforward than introduction of new contracts with changed terms, that alternative is not available. The Options Clearing Corporation ("OCC"), out of justifiable concern for potential liability, had declined to alter the terms of outstanding contracts.[3]

The CBOE recognizes that the existence of two Standard and Poor's 500 option contracts in the same expiration month with different methods of valuation may give rise to confusion. However, the CBOE believes that the potential for confusion should not be an obstacle to introduction of NSX. SPX is used primarily by institutional investors, who have indicated a need to have the option settle as the future does.

The Commission has determined to grant continuing partial approval to the proposed rule change by approving the NSX contract through the December 18, 1987 expiration. The Commission currently is evaluating the results of the disparate expirations of June 19 and September 18, 1987, and has determined to complete its review of the June and September settlements before approving the CBOE proposal on a permanent basis. Based on the results of that review, the Commission will examine whether to continue disparate expriation settlements, or whether index settlement based on opening prices may be appropriate for all options products. Accordingly, the Commission believes it is appropriate to approve the CBOE proposal on a temporary basis through the December expiration.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of section 6,[4] and the rules and regulations thereunder.

It is therefore ordered, pursuant to section 19(b)(2) of the Act,[5] that the proposed rule change is approved.

For the Commission, by the Division of Market Regulation pursuant to delegated authority.

Dated: September 22, 1987.

Shirley E. Hollis,

Assistant Secretary.

[Rel. No. IC-16000; 812-6761]

Applications; Rightime Fund, Inc., et al.

September 23, 1987.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 ("1940 Act").

Applicants: The Rightime Fund, Inc.; The Rightime Fund Series, The Rightime Government Securities Fund Series and the Rightime Fund Blue Chip Fund Series of The Rightime Fund, Inc.; all future investment company series of The Rightime Fund, Inc.; and all future investment companies for which Rightime Econometrics, Inc., or subsidiaries or affiliates thereof serve as investment adviser (collectively "Funds"), and Rightime Econometrics, Inc. (the "Adviser").

Relevant 1940 Act Sections: Exemption requested under section 6(c) for an order permitting a joint transaction under section 17(d) of the Act and Rule 17d-1 thereunder.

Summary of Application: The Funds seek an order to permit them to deposit uninvested daily cash balances into a single joint account and to participate in a proposed joint trading account.

Filing Date: The application was filed on June 18, 1987.

Hearing or Notification of Hearing: If no hearing is ordered, the application will be granted. Any interested person may request a hearing on this application, or ask to be notified if a hearing is ordered. Any requests must be received by the SEC by 5:30 p.m., on October 16, 1987. Request a hearing in writing, giving the nature of your interest, the reason for the request, and the issues you contest. Serve the Applicant(s) with the request, either personally or by mail, and also send it to the Secretary of the SEC, along with proof of service by affidavit or, for lawyers, by certificate. Request notification of the date of a hearing by writing to the Secretary of the SEC.

ADDRESSES: Secretary, SEC, 450 5th Street NW., Washington, DC 20549. Applicants, The Benson East Office Plaza, Jenkintown, Pennsylvania 19046.

FOR FURTHER INFORMATION CONTACT: Joyce M. Pickholz, Staff Attorney, (202) 272-3046, or Curtis R. Hilliard, Special Counsel, (202) 272-3030 (Division of Investment Management).

SUPPLEMENTARY INFORMATION: Following is a summary of the application; the complete application is available for a fee from either the SEC's Public Reference Branch in person or the SEC's commercial copier who can be contacted at (800) 231-3282 (in Maryland (301) 258-4300).

Applicants' Representations

1. The existing Funds are investment companies registered under the 1940 Act and are series of The Rightime Fund, Inc. Rightime Econometrics, Inc. serves as investment adviser to each of the Funds.

2. Purchase orders for shares of each of the Funds are received at the office of the Funds' distributor and transfer agent, Lincoln Investment Planning, Inc., and all purchase checks are deposited in The Rightime Fund, Inc.'s purchase account at First Pennsylvania Bank, N.A., on the day of receipt. The amount of monies deposited are not allocated to a particular Fund until after the Fund's net asset value per share is computed at the close of business on the day of receipt. Accordingly, such monies are not available for investment by a Fund in portfolio securities or repurchase agreements on that day and remain in the purchase account until wired to each Fund's custodian bank on the following day. During the twelve months ended May 31, 1987, the average daily amount in the combined purchase account was approximately $483,333.24.

3. In addition, each of the Funds has, or may be expected to have, uninvested cash balances in its custodian bank from time to time which would not be invested in portfolio securities by the portfolio manager at the end of each trading day. In the normal course, if the amount of such assets of each Fund is separately of sufficient size, the Adviser attempts to invest the assets of such Fund in federal securities, overnight repurchase agreements with a bank or major brokerage house, or other similar short-term investment contracts, in order to earn additional income for that Fund. A Fund with residual assets which are not of adequate size to permit such an investment is unable to invest its residual assets in a similar manner.

4. The Funds believe that they can reduce expenses, earn additional income on their cash balances, and eliminate certain inefficiencies by pooling their cash balances held in the purchase and custodian accounts and investing these cash balances in one or more large repurchase agreements.

5. Applicants propose to establish a joint trading account ("Account"). Each Fund will automatically transfer its uninvested cash remaining after the conclusion of its daily trading activity into such custodial or sub-custodial Account. The Account will not be distinguishable from any other accounts maintained by a Fund with its custodian bank or a designated sub-custodian bank except that monies from a Fund will be deposited on a commingled basis. The Account will not have any separate existence which will have indicia of a separate legal entity. The sole function of the Account will be to provide a convenient way of aggregating individual transactions which would otherwise require daily management by each Fund of its uninvested cash balances.

6. Cash in the Account will be invested in repurchase agreements collateralized by obligations issued or guaranteed as to principal and interest by the government of the United States or by any of its agencies or instrumentalities, and satisfying the uniform standards set by the Funds for such investments. Any repurchase agreement will have, with rare exceptions, an overnight or over-the-weekend duration, and in no event will it have a duration of more than seven days.

7. All investments held by the Account will be valued on an amortized cost basis. Each Fund will use the average maturity of the Account for the purpose of computing the Fund's average portfolio maturity with respect to the portion of its assets held in such Account on that day.

8. In order to assure that a Fund can only use its balance of the Account, Funds will not be allowed to create a negative balance in the Account for any reason. A Fund's decision to invest in the Account wil be solely at the Fund's option. A Fund will not be obligated to invest in the Account nor to maintain any minimum balance. A Fund may withdraw all, or a portion, of its investment in the Account at any time. In addition, a Fund will retain the sole rights of ownership of any of its assets, including any interest payable on such assets invested in the Account. Each Fund's investment in the Account will be documented daily on the books of the Funds as well as on the books of the Fund's custodian.

9. Each Fund will participate in the income earned or accrued in the Account on each day on the basis of the Fund's percentage of the total amount in the Account on any day represented by its shares of the Account.

10. The Adviser will administer the investment of the cash balance in and operation of the joint account as part of its duties under its existing or any future

investment management contract with each Fund and would not collect any additional fee for the management of the joint account. The Adviser will continue to collect its fees based upon the total net assets of each separate Fund as provided in each respective investment management agreement.

11. The Account will be administered within the fidelity bond coverage required by section 17(g) of the 1940 Act and Rule 17g–1 thereunder. The Board of Directors of the existing Fund and of future funds participating in the Account will evaluate the Account arrangements annually, and will continue the Account only if they determine that there is a reasonable likelihood that the Account will benefit the Funds and their shareholders.

Applicants Legal Conclusions

1. Each Fund will participate in the Account on the same basis as every other Fund and in conformity with each Fund's fundamental investment objectives and restrictions. Participation in the Account will not result in any conflicts of interests between any of the Funds or between a Fund and the Adviser. Future series of the Rightime Fund, Inc. and future investment companies for which Rightime Econometrics, Inc., or its subsidiaries or affiliates serve as investment advisers, will be required to participate in the Account on the same terms and conditions as the existing Funds.

2. Applicants believe that the Funds will earn a higher return by participating in the Account rather than by maintaining individual accounts because it is possible to negotiate a rate of return on a large repurchase agreement which is greater than the rate of return which can be negotiated for smaller repurchase agreements. Also, the Funds will collectively save approximately $18,750.00 in yearly transaction fees at present asset levels.

Applicants' Conditions

Applicants agree to operate the Account in accordance with the representations set forth in paragraphs 4 through 10 above and agree that such representations may be made express conditions of the requested order.

For the Commission, by the Division of Investment Management, under delegated authority.

Shirley E. Hollis,

Assistant Secretary.

Advisory Committee to the United States National Section of the International Commission for the Conservation of Atlantic Tunas; Partially Closed Meeting

Notice is hereby given, pursuant to the provisions of Pub. L. 92–463, that a meeting of the Advisory Committee to the United States National Section of the International Commission for the Conservation of Atlantic Tunas will be held on October 29 and 30, 1987 beginning at 9:30 a.m. The meetings will be held at the offices of the National Marine Fisheries Service, Room 928, Universal Building (South), 1825 Connecticut Avenue NW., Washington, DC.

On October 29 and the morning of October 30 the meeting will be open to the public, and the public may participate in the discussions subject to the instructions of the Committee Chairman. Items on the agenda include overview of preparations for the Standing Committee on Research and Statistics (SCRS) meeting, review of research concerning Bluefin Tuna and Billfish, review of ICCAT Activities with respect to Tropical tunas and Albacore, report of Bluefin Tuna Fishery conducted in the U.S. and Canadian Zones, estimates of Japanese Harvest of Tunas and Billfish in the U.S. EEZ, review of the progress of the Swordfish Working Group, and review of the Large Pelagic Research Program.

The Advisory Committee will meet in closed session on the afternoon of October 30, 1987. At this session documents classified in accordance with Executive Order 12356 of April 2, 1982, will be circulated and discussed and matters will be considered which the public interest requires be withheld from disclosure. Accordingly, a determination has been made to close this session pursuant to section 10(d) of the Federal Advisory Committee Act, 5 U.S.C. App. I, s.10(d) and 5 U.S.C. 552b (c)(1) and (c)(9).

Requests for further information should be directed to Barbara Rothschild, Office of International Fisheries Affairs, National Marine Fisheries Service, Department of Commerce. She may be reached by telephone on (202) 673–5281.

Date: September 21, 1987.

Edward E. Wolfe,

Deputy Assistant Secretary for Oceans and Fisheries Affairs.

BILLING CODE 4710–09–M

[CM–8/1120]

Shipping Coordinating Committee, National Committee for the Prevention of Marine Pollution; Meeting

The National Committee for the Prevention of Marine Pollution (NCPMP) will conduct a special meeting on October 26, 1987, at 1:30 p.m. in Room 2415 of U.S. Coast Guard Headquarters. 2100 Second Street, SW., Washington, DC.

The purpose of this special meeting will be to receive comments from the public to ascertain the desirability of having the Gulf of Mexico designated a "Special Area" under Annex V (Regulations for the Prevention of Pollution by Garbage from Ships) of the International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 Relating thereto (MARPOL 73/78). U.S. positions on Annex V and progress towards U.S. ratification will also be discussed.

A report from the Texas General Land Office compiling information in support of designating the Gulf of Mexico as a Special Area has been submitted to the Coast Guard. This report forms the basis for this special meeting. A copy of the report is available for review at U.S. Coast Guard Headquarters. A limited number are available upon request.

Annex V Special Area Definition: Special Area means a sea area where for recognized technical reasons in relation to its oceanographical and ecological condition and to the particular character of its traffic the adoption of special mandatory methods for the prevention of sea pollution by garbage is required. Special Areas shall include those listed in Regulation 5 of Annex V.

Annex V Requirements Outside Special Areas: Specifically, these requirements would apply to all ships and would prohibit:

(1) Disposal into the sea of all plastics, including but not limited to synthetic ropes, synthetic fishing nets and plastic garbage bags. The accidental loss of synthetic fishing nets is exempted providing that all reasonable efforts have been taken to prevent such loss;

(2) Disposal of dunnage, lining, and packing materials which will float within 25 nautical miles from the nearest land;

(3) Disposal of food wastes, glass, rags, paper, metal, bottles, crockery and similar refuse within 12 nautical miles from the nearest land.

Annex V would also require adequate reception facilities at ports and

VOL 52 ISS 188 SE 29 1987 UMI

terminals for reception of garbage from ships.

Annex V Requirements Within Special Areas: For an area designated a Special Area under Annex V, more stringent garbage discharge provisions would apply. Specifically, these requirements would apply to all ships and would prohibit the disposal of all garbage described above, except food wastes which may be discharged outside 12 nautical miles from the nearest land.

Members of the public may attend this meeting up to the seating capacity of the room.

For further information or documentation pertaining to the NCPMP meeting, contact either Commander D.B. Pascoe or Lieutenant G.T. Jones, U.S. Coast Guard Headquarters (G-MER-3), 2100 Second Street, SW., Washington, DC 20593-0001, Telephone: (202) 267-0419.

Date: September 22, 1987.

Richard C. Scissors,

Chairman, Shipping Coordinating Committee.

Shipping Coordinating Committee; Subcommittee on Ocean Dumping; Meeting

The Subcommittee on Ocean Dumping of the Shipping Coordinating Committee will hold an open meeting on Friday, October 9, 1987, at the Environmental Protection Agency, Waterside Mall, 401 M Street SW., Washington, DC. The meeting will convene at 10 a.m. in the EPA Conference Center, North Conference Room 9. The Conference Center is located on the first floor with entrance through the Mall commercial area. Members of the public are invited and free to attend up to the seating capacity of the room.

The purpose of the meeting is to discuss (1) U.S. response to a London Dumping Convention questionnaire on disposal of low-level radioactive waste at sea; (2) U.S. participation in a London Dumping Convention Intergovernmental Panel of Experts on Radioactive Waste Disposal at Sea, which will meet in London October 19-23, 1987; and (3) U.S. preparation for the London Dumping Convention Legal Experts Meeting to consider the Law of the Sea and liability, to be held in London simultaneously with the above-named Panel. If further information is needed, please contact Alan Sielen of the Office of International Activities, EPA, at (202) 475-9630.

Richard C. Scissors,

Chairman, Shipping Coordinating Committee.

September 25, 1987.

BILLING CODE 4710-07-M

DEPARTMENT OF TRANSPORTATION

Maritime Administration

Exception to Charter Policy; Hawaiian Submarines, Inc.

SUMMARY: Under 46 App. U.S.C. 808 (Act), it is unlawful, without the approval of the Secretary of Transportation, to charter vessels documented, or last documented, under the laws of the United States to noncitizens. The Secretary has delegated approval authority to the Maritime Administration (MARAD).

On July 3, 1975, MARAD revised its policy regarding bareboat and demise charters to persons who do not meet the standards set forth in 46 App. U.S.C. 802(a) for operation in the coastwise trade, and announced that approval of such transactions would no longer be granted (40 FR 28832, July 9, 1975).

Hawaiian Submarines, Inc., 615 Piikoi Street, Ste. 1510, Honolulu, Hawaii 96814, has filed application for MARAD approval of the bareboat charter of eight groups of vessels (each group being comprised of a submarine, a tender and a passenger launch), more fully described below, to Atlantis Submarines, Inc. (Atlantis), a Hawaiian corporation. Atlantis does not meet the requirements for United States citizenship in 46 App. U.S.C. 802. The vessels would be chartered for a period of 17 years, commencing late 1987, for the carriage of tourists on short underwater trips to view coral reefs, sunken vessels, and the like in Hawaii.

The eight submarines are either under construction at Everett, Washington, or will be constructed in the United States. They are battery powered, 65' in length, 1-2 knots speed, 78 gross tons, and will carry 48 passengers and a crew of three. The applicant has indicated that the submarines are certified to a depth of 150 feet and will comply with all American Bureau of Shipping and U.S. Coast Guard regulations. These submarines will be designated ATLANTIS 4 through ATLANTIS 11.

While being used, each submarine will be followed on the surface by a small tender that is available to assist in surface maneuvering and, if necessary, in the event of a mishap. The applicant has advised that they will acquire eight 20 to 30 foot diesel powered 17 knot vessels from qualified U.S. sources to serve as surface support and communication vessels for the submarines. These vessels, to be designated TENDER 4 through TENDER 11, will either be documented, or redocumented, in Hawaii, and will operate with a complement of one officer.

There will be a passenger launch for each submarine to ferry passengers from shore to the submarine and back. These launches are to be 50 to 60 feet in length, diesel powered 17 knot vessels, and designated LAUNCH 4 through LAUNCH 11. They also are to be acquired from qualified U.S. sources, will either be documented, or redocumented, in Hawaii, and will operate with a complement of two, one officer and one crew.

It is MARAD's opinion that, notwithstanding the policy statement of 1975, approval of the application should be granted for the following reasons:

1. The technology for the construction of the vessels providing the sightseeing service was developed by the Canadian parent of the charterer that proposes to operate the submarines. This technology would be transferred to U.S. shipbuilding and vessel operating interests.

2. Construction of the submarines will provide much-needed employment for U.S. shipyards.

3. The proposed service is unique and one for which there is no known competition.

4. Introduction of the service would increase maritime employment and promote tourism in the State of Hawaii.

Interested parties are invited to submit written comments regarding approval of the above application. MARAD will consider all written comments received on or before 30 days from publication date.

Send the original and one copy of comments to the Secretary, Maritime Administration, Department of Transportation, Rm. 7300, 400 Seventh Street, SW., Washington, DC 20590. Anyone submitting comments who wishes acknowledgment of their receipt by MARAD should include a stamped, self-addressed postcard or envelope.

Dated: September 22, 1987.

By Order of the Maritime Administrator.

James E. Saari,

Secretary.

BILLING CODE 4910-81-M

Research and Special Programs Administration

[Notice No. 87-3]

Compressed Gas Cylinders; DOT or ICC 4-Series Specification Cylinders; Potential Safety Problems

AGENCY: Research and Special Programs Administration, (RSPA), DOT.

ACTION: Advisory notice.

SUMMARY: The purpose of this notice is to advise interested persons that certain compressed gas cylinders, marked as meeting DOT or ICC 4-series specifications, and repaired or rebuilt in Puerto Rico, may not have been manufactured or maintained in full compliance with those specifications. Many of these welded or brazed steel cylinders, which are used for liquefied petroleum gas, are being imported from foreign manufacturers, and are being repaired or rebuilt by companies in Puerto Rico that have not been approved under the requirements of 49 CFR Part 173. Because RSPA is in the process of addressing this problem, it is not yet in a position to assure the public as to which of the DOT or ICC 4-series cylinders, currently in use, are in compliance and therefore presumptively safe for use. In the absence of such assurance, the RSPA is notifying persons in possession of cylinders for which compliance cannot be established that the cylinders may not be transported in commerce and should not be refilled after use.

FOR FURTHER INFORMATION CONTACT: James E. Henderson, Hazardous Materials Enforcement Division (DHM-10), Office of Hazardous Materials Transportation, Research and Special Programs Administration, U.S. Department of Transportation, 400 Seventh Street, SW., Washington, DC 20590. Telephone: (202) 366-4700.

SUPPLEMENTARY INFORMATION: The Hazardous Materials Regulations (HMR), issued under authority of the Hazardous Materials Transportation Act (Pub. L. 93-633; 49 App. U.S.C. 1801 *et seq.*), are found in the Code of Federal Regulations (CFR), Title 49, Subchapter C, which is comprised of Parts 171 through 179. In Subpart C of Part 178, the HMR set forth specifications for cylinders used as packagings for compressed gases.

In 1985, at the request of the Puerto Rican Public Service Commission (PRPSC), RSPA compliance inspectors inspected several Puerto Rican companies that repair or rebuild cylinders marked as meeting specifications in the DOT 4-series, (e.g., DOT 4B, 4BA, etc.). The PRPSC was concerned about the compliance of these cylinders because the DOT had no record indicating that the companies had been approved for repairing (§ 173.34(i)) or rebuilding (§ 173.34(l)). The cylinders at issue are commonly used for the transportation of liquefied petroleum gases, such as butane and propane. During the inspection in 1985, some cylinders were identified as having been made by foreign manufacturers in the Caribbean Islands, and Central and South America. At that time, there were no foreign cylinder manufacturers in these areas approved under § 173.300b to manufacture cylinders for use in the United States.

Inspections performed at six of eight known repair facilities in Puerto Rico revealed that some of these companies were capable of becoming approved to repair non-pressurized parts. However, none had the equipment necessary to rebuild cylinders, which entails access to proper equipment for welding, performing heat treatments, physical testing and pressure testing. In cooperation with the PRPSC, these companies were notified of their noncompliance wtih the HMR, and told to contact the RSPA, Office of Hazardous Materials Transportation, Approvals Branch for approval requests. To date, one application for approval has been received, but none of these companies have been approved by RSPA.

In February 1987, DOT compliance inspectors conducted additional inspections in Puerto Rico in response to a complaint from a local company. During this investigation, the inspectors noticed that there was a marked increase in the number of cylinders in Puerto Rico manufactured by unapproved foreign manufacturers. Information supplied by the U.S. Coast Guard indicated that over 6,000 cylinders, manufactured by CILCASA, (Cilindros De Centro America, S.A.) of Guatemala City, Guatemala, were being imported into Puerto Rico. These cylinders were determined to have been manufactured without DOT approval. To date, the only approved foreign manufacturer of DOT 4-series cylinders, importing to Puerto Rico, in the area of concern, is Mangles Minas Ind., S.A. of Tres Coracoes, Brazil, which received an approval beginning October 8, 1986.

The regulatory issues associated with the manufacture, repairing and rebuilding of compressed gas cylinders, and violation of these requirements, are major concerns of the RSPA. Unapproved manufacture and unapproved repairing and rebuilding of cylinders, and the use of unauthorized cylinders for the transportation of compressed gases, pose unnecessary risks to carrier personnel and the public at large, as well as significant regulatory problems. Each person who manufactures, rebuilds or repairs cylinders is required to comply with all applicable regulations, including the approval to manufacture, repair and rebuild cylinders.

Persons in possession of DOT 4-series cylinders which have been repaired or rebuilt in Puerto Rico are hereby notified that most of these cylinders are not in compliance with the applicable DOT specifications. They are not authorized for the transportation of hazardous materials, and may be unsafe. Cylinders repaired or rebuilt by approved companies can be identified by the letter "K" with 3 numbers (e.g., K123) stamped in a square pattern between the month and year of repairing or rebuilding. Example: A cylinder retested in August, 1987 by an approved retester who has been issued identification number K123 would be stamped as follows:

K1

8 87

32

The RSPA is currently developing a comprehensive strategy to resolve the problem of unapproved and potentially unsafe cylinders in Puerto Rico. The strategy, of which this notice is but a first step, will utilize enforcement, both within and outside Puerto Rico. Other measures under consideration include conducting a compliance program to bring existing rebuilders and retesters into conformance with applicable regulations by providing on site technical/regulatory assistance. The RSPA intends to institute an inspection and hydrostatic testing program to determine which cylinders are unsafe. This strategy will also involve substantial assistance of the Puerto Rican Public Service Commission and the U.S. Customs Service. In addition, anyone with information concerning potential violations of the HMR with regard to the manufacture and repair of cylinders in Puerto Rico is requested to submit that information to Mr. James E. Henderson, Hazardous Materials Enforcement Division (DHM-40), Office fo Hazardous Materials Transportation, Research and Special Programs

Administration, U.S. Department of Transportation, Washington, DC 20590.

(49 U.S.C. 1802, 1803, 1804, 1805, 1806, 1808; 49 CFR 1.53(e)).

Issued in Washington, DC on September 24, 1987 under the authority delegated in 49 CFR Part 106, Appendix A.

Alan I. Roberts,

Director, Office of Hazardous Materials Transportation.

[FR Doc. 87-22412 Filed 9-28-87; 8:45 am]

BILLING CODE 4910-60-M

DEPARTMENT OF THE TREASURY

Office of the Secretary

[Department Circular—Public Debt Series—No. 25-87]

Treasury Notes of September 30, 1989; Series AD-1989

September 17, 1987.

1. Invitation for Tenders

1.1. The Secretary of the Treasury, under the authority of Chapter 31 of Title 31, United States Code, invites tenders for approximately $9,250,000,000 of United States securities, designated Treasury Notes of September 30, 1989, Series AD-1989 (CUSIP No. 912827 VH 2), hereafter referred to as Notes. The Notes will be sold at auction, with bidding on the basis of yield. Payment will be required at the price equivalent of the yield of each accepted bid. The interest rate on the Notes and the price equivalent of each accepted bid will be determined in the manner described below. Additional amounts of the Notes may be issued to Government accounts and Federal Reserve Banks for their own account in exchange for maturing Treasury securities. Additional amounts of the Notes may also be issued at the average price to Federal Reserve Banks, as agents for foreign and international monetary authorities.

2. Description of Securities

2.1. The Notes will be dated September 30, 1987, and will accrue interest from that date, payable on a semiannual basis on March 31, 1988, and each subsequent 6 months on September 30 and March 31 through the date that the principal becomes payable. They will mature September 30, 1989, and will not be subject to call for redemption prior to maturity. In the event any payment date is a Saturday, Sunday, or other nonbusiness day, the amount due will be payable (without additional interest) on the next business day.

2.2. The Notes are subject to all taxes imposed under the Internal Revenue Code of 1954. The Notes are exempt from all taxation now or hereafter imposed on the obligation or interest thereof by any State, any possession of the United States, or any local taxing authority, except as provided in 31 U.S.C. 3124.

2.3. The Notes will be acceptable to secure deposits of Federal public monies. They will not be acceptable in payment of Federal taxes.

2.4. The Notes will be issued only in book-entry form in denominations of $5,000, $10,000, $100,000 and $1,000,000 and in multiples of those amounts. They will not be issued in registered definitive or in bearer form.

2.5. The Department of the Treasury's general regulations governing United States securities, i.e., Department of the Treasury Circular No. 300, current revision (31 CFR Part 306), as to the extent applicable to marketable securities issued in book-entry form, and the regulations governing book-entry Treasury Bonds, Notes, and Bills, as adopted and published as a final rule to govern securities held in the TREASURY DIRECT Book-Entry Securities System in 51 FR 18260, et seq. (May 16, 1986), apply to the Notes offered in this circular.

3. Sale Procedures

3.1. Tenders will be received at Federal Reserve Banks and Branches and at the Bureau of the Public Debt, Washington, DC 20239, prior to 1:00 p.m., Eastern Daylight Saving Time, Tuesday, September 22, 1987. Noncompetitive tenders as defined below will be considered timely if postmarked no later than Monday, September 21, 1987, and received no later than Wednesday, September 30, 1987.

3.2. The par amount of Notes bid for must be stated on each tender. The minimum bid is $5,000, and larger bids must be in multiples of that amount. Competitive tenders must also show the yield desired, expressed in terms of an annual yield with two decimals, e.g., 7.10%. Fractions may not be used. Noncompetitive tenders must show the term "noncompetitive" on the tender form in lieu of a specified yield.

3.3. A single bidder, as defined in Treasury's single bidder guidelines, shall not submit noncompetitive tenders totaling more than $1,000,000. A noncompetitive bidder may not have entered into an agreement, nor make an agreement to purchase or sell or otherwise dispose of any noncompetitive awards of this issue prior to the deadline for receipt of tenders.

3.4. Commercial banks, which for this purpose are defined as banks accepting demand deposits, and primary dealers, which for this purpose are defined as dealers who make primary markets in Government securities and are on the list of reporting dealers published by the Federal Reserve Bank of New York, may submit tenders for accounts of customers if the names of the customers and the amount of each customer are furnished. Others are permitted to submit tenders only for their own account.

3.5. Tenders for their own account will be received without deposit from commercial banks and other banking institutions; primary dealers, as defined above; Federally-insured savings and loan associations; States, and their political subdivisions or instrumentalities; public pension and retirement and other public funds; international organizations in which the United States holds membership; foreign central banks and foreign states; Federal Reserve Banks; and Government accounts. Tenders from all others must be accompanied by full payment for the amount of Notes applied for, or by a guarantee from a commercial bank or a primary dealer of 5 percent of the par amount applied for.

3.6. Immediately after the deadline for receipt of tenders, tenders will be opened, followed by a public announcement of the amount and yield range of accepted bids. Subject to the reservations expressed in Section 4, noncompetitive tenders will be accepted in full, and then competitive tenders will be accepted, starting with those at the lowest yields, through successively higher yields to the extent required to attain the amount offered. Tenders at the highest accepted yield will be prorated if necessary. After the determination is made as to which tenders are accepted, an interest rate will be established, at a ⅛ of one percent increment, which results in an equivalent average accepted price close to 100.000 and a lowest accepted price above the original issue discount limit of 99.500. That stated rate of interest will be paid on all of the Notes. Based on such interest rate, the price on each competitive tender allotted will be determined and each successful competitive bidder will be required to pay the price equivalent to the yield bid. Those submitting noncompetitive tenders will pay the price equivalent to the weighted average yield of accepted competitive tenders. Price calculations will be carried to three decimal places on the basis of price per hundred, e.g., 99.923, and the determinations of the Secretary of the Treasury shall be final. If the amount of noncompetitive tenders received would absorb all or most of the

offering, competitive tenders will be accepted in an amount sufficient to provide a fair determination of the yield. Tenders received from Government accounts and Federal Reserve Banks will be accepted at the price equivalent to the weighted average yield of accepted competitive tenders.

3.7. Competitive bidders will be advised of the acceptance of their bids. Those submitting noncompetitive tenders will be notified only if the tender is not accepted in full, or when the price at the average yield is over par.

4. Reservations

4.1. The Secretary of the Treasury expressly reserves the right to accept or reject any or all tenders in whole or in part, to allot more or less than the amount of Notes specified in Section 1, and to make different percentage allotments to various classes of applicants when the Secretary considers it in the public interest. The Secretary's action under this Section is final.

5. Payment and Delivery

5.1. Settlement for the Notes allotted must be made at the Federal Reserve Bank or Branch or at the Bureau of the Public Debt, wherever the tender was submitted. Settlement on Notes allotted to institutional investors and to others whose tenders are accompanied by a guarantee as provided in Section 3.5. must be made or completed on or before Wednesday, September 30, 1987. Payment in full must accompany tenders submitted by all other investors. Payment must be in cash; in other funds immediately available to the Treasury: in Treasury bills, notes, or bonds maturing on or before the settlement date but which are not overdue as defined in the general regulations governing United States securities; or by check drawn to the order of the institution to which the tender was submitted, which must be received from institutional investors no later than Monday, September 28, 1987. In addition, Treasury Tax and Loan Note Option Depositories may make payment for the Notes allotted for their own accounts and for accounts of customers by credit to their Treasury Tax and Loan Note Accounts on or before Wednesday, September 30, 1987. When payment has been submitted with the tender and the purchase price of the Notes allotted is over par, settlement for the premium must be completed timely, as specified above. When payment has been submitted with the tender and the purchase price is under par, the discount will be remitted to the bidder.

5.2. In every case where full payment has not been completed on time, an amount of up to 5 percent of the par amount of Notes allotted shall, at the discretion of the Secretary of the Treasury, be forfeited to the United States.

5.3. Registered definitive securities tendered in payment for the Notes allotted and to be held in TREASURY DIRECT are not required to be assigned if the inscription on the registered definitive security is identical to the registration of the note being purchased. In any such case, the tender form used to place the Notes allotted in TREASURY DIRECT must be completed to show all the information required thereon, or the TREASURY DIRECT account number previously obtained.

6. General Provisions

6.1. As fiscal agents of the United States, Federal Reserve Banks are authorized, as directed by the Secretary of the Treasury, to receive tenders, to make allotments, to issue such notices as may be necessary, to receive payment for, and to issue, maintain, service, and make payment on the Notes.

6.2. The Secretary of the Treasury may at any time supplement or amend provisions of this circular if such supplements or amendments do not adversely affect existing rights of holders of the Notes. Public announcement of such changes will be promptly provided.

6.3. The Notes issued under this circular shall be obligations of the United States, and, therefore, the faith of the United States Government is pledged to pay, in legal tender, principal and interest on the Notes.

Gerald Murphy,

Fiscal Assistant Secretary.

BILLING CODE 4810-40-M

[Department Circular—Public Debt Series—No. 26-87]

Treasury Notes of September 30, 1991; Series P-1991

September 17, 1987.

1. Invitation for Tenders

1.1. The Secretary of the Treasury, under the authority of Chapter 31 of Title 31, United States Code, invites tenders for approximately $7,250,000,000 of United States securities, designated Treasury Notes of September 30, 1991, Series P-1991 (CUSIP No. 912827 VJ 8), hereafter referred to as Notes. The Notes will be sold at auction, with bidding on the basis of yield. Payment will be required at the price equivalent of the yield of each accepted bid. The interest rate on the Notes and the price equivalent of each accepted bid will be determined in the manner described below. Additional amounts of the Notes may be issued to Government accounts and Federal Reserve Banks for their own account in exchange for maturing Treasury securities. Additional amounts of the Notes may also be issued at the average price to Federal Reserve Banks, as agents for foreign and international monetary authorities.

2. Description of Securities

2.1. The Notes will be dated September 30, 1987, and will accrue interest from that date, payable on a semiannual basis on March 31, 1988, and each subsequent 6 months on September 30 and March 31 through the date that the principal becomes payable. They will mature September 30, 1991, and will not be subject to call for redemption prior to maturity. In the event any payment date is a Saturday, Sunday, or other nonbusiness day, the amount due will be payable (without additional interest) on the next business day.

2.2. The Notes are subject to all taxes imposed under the Internal Revenue Code of 1954. The Notes are exempt from all taxation now or hereafter imposed on the obligation or interest thereof by any State, any possession of the United States, or any local taxing authority, except as provided in 31 U.S.C. 3124.

2.3. The Notes will be acceptable to secure deposits of Federal public monies. They will not be acceptable in payment of Federal taxes.

2.4. The Notes will be issued only in book-entry form in denominations of $1,000, $5,000, $10,000, $100,000, and $1,000,000, and in multiples of those amounts. They will not be issued in registered definitive or in bearer form.

2.5. The Department of the Treasury's general regulations governing United States securities, i.e., Department of the Treasury Circular No. 300, current revision (31 CFR Part 306), as to the extent applicable to marketable securities issued in book-entry form, and the regulations governing book-entry Treasury Bonds, Notes, and Bills, as adopted and published as a final rule to govern securities held in the TREASURY DIRECT Book-Entry Securities System in 51 FR 18260, et seq. (May 16, 1986), apply to the Notes offered in this circular.

3. Sale Procedures

3.1. Tenders will be received at Federal Reserve Banks and Branches and at the Bureau of the Public Debt, Washington, DC 20239, prior to 1:00 p.m., Eastern Daylight Saving time, Wednesday, September 23, 1987. Noncompetitive tenders as defined below will be considered timely if postmarked no later than Tuesday, September 22, 1987, and received no later than Wednesday, September 30, 1987.

3.2. The par amount of Notes bid for must be stated on each tender. The minimum bid is $1,000, and larger bids must be in multiples of that amount. Competitive tenders must also show the yield desired, expressed in terms of an annual yield with two decimals, e.g., 7.10%. Fractions may not be used. Noncompetitive tenders must show the term "noncompetitive" on the tender form in lieu of a specified yield.

3.3. A single bidder, as defined in Treasury's single bidder guidelines, shall not submit noncompetitive tenders totaling more than $1.000,000. A noncompetitive bidder may not have entered into an agreement, nor make an agreement to purchase or sell or otherwise dispose of any noncompetitive awards of this issue prior to the deadline for receipt of tenders.

3.4. Commercial banks, which for this purpose are defined as banks accepting demand deposits, and primary dealers, which for this purpose are defined as dealers who make primary markets in Government securities and are on the list of reporting dealers published by the Federal Reserve Bank of New York, may submit tenders for accounts of customers if the names of the customers and the amount for each customer are furnished. Others are permitted to submit tenders only for their own account.

3.5. Tenders for their own account will be received without deposit from commercial banks and other banking institutions; primary dealers, as defined above; Federally-insured savings and loan associations; States, and their political subdivisions or instrumentalities; public pension and retirement and other public funds; international organizations in which the United States holds membership; foreign central banks and foreign states; Federal Reserve Banks; and Government accounts. Tenders from all others must be accompanied by full payment for the amount of Notes applied for, or by a guarantee from a commercial bank or a primary dealer of 5 percent of the par amount applied for.

3.6. Immediately after the deadline for receipt of tenders, tenders will be opened, followed by a public announcement of the amount and yield range of accepted bids. Subject to the reservations expressed in Section 4, noncompetitive tenders will be accepted in full, and then competitive tenders will be accepted, starting with those at the lowest yields, through successively higher yields to the extent required to attain the amount offered. Tenders at the highest accepted yield will be prorated if necessary. After the determination is made as to which tenders are accepted, an interest rate will be established, at a ⅛ of one percent increment, which results in an equivalent average accepted price close to 100.000 and a lowest accepted price above the original issue discount limit of 99.000. That stated rate of interest will be paid on all of the Notes. Based on such interest rate, the price on each competitive tender allotted will be determined and each successful competitive bidder will be required to pay the price equivalent to the yield bid. Those submitting noncompetitive tenders will pay the price equivalent to the weighted average yield of accepted competitive tenders. Price calculations will be carried to three decimal places on the basis of price per hundred, e.g., 99.923, and the determinations of the Secretary of the Treasury shall be final. If the amount of noncompetitive tenders received would absorb all or most of the offering, competitive tenders will be accepted in an amount sufficient to provide a fair determination of the yield. Tenders received from Government accounts and Federal Reserve Banks will be accepted at the price equivalent to the weighted average yield of accepted competitive tenders.

3.7. Competitive bidders will be advised of the acceptance of their bids. Those submitting noncompetitive tenders will be notified only if the tender is not accepted in full, or when the price at the average yield is over par.

4. Reservations

4.1. The Secretary of the Treasury expressly reserves the right to accept or reject any or all tenders in whole or in part, to allot more or less than the amount of Notes specified in Section 1, and to make different percentage alltoments to various classes of applicants when the Secretary considers it in the public interest. The Secretary's action under this Section is final.

5. Payment and Delivery

5.1. Settlement for the Notes allotted must be made at the Federal Reserve Bank or Branch or at the Bureau of the Public Debt, wherever the tender was submitted. Settlement on Notes allotted to institutional investors and to others whose tenders are accompanied by a guarantee as provided in Section 3.5. must be made or completed on or before Wednesday, September 30, 1987. Payment in full must accompany tenders submitted by all other investors. Payment must be in cash; in other funds immediately available to the Treasury; in Treasury bills, notes, or bonds maturing on or before the settlement date but which are not ovedue as defined in the general regulations governing United States securities; or by check drawn to the order of the institution to which the tender was submitted, which must be received from institutional investors no later than Monday, September 28, 1987. In addition, Treasury Tax and Loan Note Option Depositaries may make payment for the Notes allotted for their own accounts and for accounts of customers by credit to their Treasury Tax and Loan Note Accounts on or before Wednesday, September 30, 1987. When payment has been submitted with the tender and the purchase price of the Notes allotted is over par, settlement for the premium must be completed timely, as specified above. When payment has been submitted with the tender and the purchase price is under par, the discount wil be remitted to the bidder.

5.2. In every case where full payment has not been completed on time, an amount of up to 5 percent of the par amount of Notes allotted shall, at the discretion of the Secretary of the Treasury, be forfeited to the United States.

5.3. Registered definitive securities tendered in payment for the Notes allotted and to be held in TREASURY DIRECT are not required to be assigned if the inscription on the registered definitive security is identical to the registration of the note being purchased. In any such case, the tender form used to place the Notes allotted in TREASURY DIRECT must be completed to show all the information required thereon, or the TREASURY DIRECT account number previously obtained.

6. General Provisions

6.1. As fiscal agents of the United States, Federal Reserve Banks are authorized, as directed by the Secretary of the Treasury, to receive tenders, to make allotments, to issue such notices as may be necessary, to receive payment for, and to issue, maintain, service, and make payment on the Notes.

6.2. The Secretary of the Treasury may at any time supplement or amend provisions of this circular if such supplements or amendments do not adversely affect existing rights of holders of the Notes. Public announcement of such changes will be promptly provided.

6.3. The Notes issued under this circular shall be obligations of the United States, and, therefore, the faith of the United States Government is pledged to pay, in legal tender, principal and interest on the Notes.

Gerald Murphy,

Fiscal Assistant Secretary.

[FR Doc. 87-22511 Filed 9-25-87; 2:22 pm]

BILLING CODE 4810-40-M

[Department Circular—Public Debt Series—No. 27-87]

Treasury Notes of October 15, 1994; Series G-1994

September 17, 1987.

1. Invitation for Tenders

1.1. The Secretary of the Treasury, under the authority of Chapter 31 of Title 31, United States Code, invites tenders for approximately $6,750,000,000 of United States securities, designated Treasury Notes of October 15, 1994, Series G-1994 (CUSIP No. 912827 VK 5), hereafter referred to as Notes. The Notes will be sold at auction, with bidding on the basis of yield. Payment will be required at the price equivalent of the yield of each accepted bid. The interest rate on the Notes and the price equivalent of each accepted bid will be determined in the manner described below. Additional amounts of the Notes may be issued at the average price to Federal Reserve Banks, as agents for foreign and international monetary authorities.

2. Description of Securities

2.1. The Notes will be dated October 7, 1987, and will accure interest from that date, payable on a semiannual basis on April 15, 1988, and each subsequent 6 months on October 15 and April 15 through the date that the principal becomes payable. They will mature October 15, 1994, and will not be subject to call for redemption prior to maturity. In the event any payment date is a Saturday, Sunday, or other nonbusiness day, the amount due will be payable (without additional interest) on the next business day.

2.2. The Notes are subject to all taxes imposed under the Internal Revenue Code of 1954. The Notes are exempt from all taxation now or hereafter imposed on the obligation or interest thereof by any State, any possession of the United States, or any local taxing authority, except as provided in 31 U.S.C. 3124.

2.3. The Notes will be acceptable to secure deposits of Federal public monies. They will not be acceptable in payment of Federal taxes.

2.4. The Notes will be issued only in book-entry form in denominations of $1,000, $5,000, $10,000 $100,000, and $1,000,000, and in multiples of those amounts. They will not be issued in registered definitive or in bearer form.

2.5. The Department of the Treasury's general regulations governing United States securities, i.e., Department of the Treasury Circular No. 300, current revision (31 CFR Part 306), as to the extent applicable to marketable securities issued in book-entry form, and the regulations governing book-entry Treasury Bonds, Notes, and Bills, as adopted and published as a final rule to govern securities held in the TREASURY DIRECT Book-Entry Securities System in 51 FR 18260, et seq. (May 16, 1986), apply to the Notes offered in this circular.

3. Sale Procedures

3.1. Tenders will be received at Federal Reserve Banks and Branches and at the Bureau of the Public Debt, Washington, DC 20239, prior to 1:00 p.m., Eastern Daylight Saving time, Thursday, September 24, 1987. Noncompetitive tenders as defined below will be considered timely if postmarked no later than Wednesday, September 23, 1987, and received no later than Wednesday, October 7, 1987.

3.2. The par amount of Notes bid for must be stated on each tender. The minimum bid is $1,000, and larger bids must be in multiples of that amount. Competitive tenders must also show the yield desired, expressed in terms of an annual yield with two decimals, e.g., 7.10%. Fractions may not be used. Noncompetitive tenders must show the term "noncompetitive" on the tender form in lieu of a specified yield.

3.3. A single bidder, as defined Treasury's single bidder guidelines, shall not submit noncompetitive tenders totaling more than $1,000,000. A noncompetitive bidder may not have entered into an agreement, nor make an agreement to purchase or sell or otherwise dispose of any noncompetitive awards of this issue prior to the deadline for receipt of tenders.

3.4. Commercial banks, which for this prupose are defined as banks accepting demand deposits, and primary dealers, which for this purpose are defined as dealers who make primary markets in Government securities and are on the list of reporting dealers published by the Federal Reserve Bank of New York, may submit tenders for accounts of customers if the names of the customers and the amount for each customer are furnished. Others are permitted to submit tenders only for their own account.

3.5. Tenders for their own account will be received without deposit from commercial banks and other banking institutions; primary dealers, as defined above; Federally-insured savings and loan associations; States, and their political subdivisions or instrumentalities; public pension and retirement and other public funds; international organizations in which the United States holds membership; foreign central banks and foreign states; Federal Reserve Banks; and Government accounts. Tenders from all others must be accompanied by full payment for the amount of Notes applied for, or by a guarantee from a commercial bank or a primary dealer of 5 percent of the par amount applied for.

3.6. Immediately after the deadline for receipt of tenders, tenders will be opened, followed by a public announcement of the amount and yield range of accepted bids. Subjects to the reservations expressed in section 4, noncompetitive tenders will be accepted in full, and then competitive tenders will be accpeted, starting with those at the lowest yields, through successively higher yields to the extent required to attain the amount offered. Tenders at the highest accepted yield will be prorated if necessary. After the determination is made as to which tenders are accepted, an interest rate will be established, at a 1/8 of one percent increment, which results in an equivalent average accepted price close to 100.000 and a lowest accepted price above the original issue discount limit of 98.250. That stated rate of interest will be paid on all of the Notes. Based on such interst rate, the price on each competitive tender allotted will be determined and each successful competitive bidder will be required to pay the price equivalent to the yield bid. Those submitting noncompetitive tenders will pay the price equivalent to the weighted average yield of accepted competitive tenders. Price calculations will be carried to three decimal places on the basis of price per hundred, e.g., 99.923, and the determinations of the Secretary of the Treasury shall be final. If the amount on noncompetitive tenders received would absorb all or most of the offering, competitive tenders will be accepted in an amount sufficient to

provide a fair determination of the yield. Tenders received from Government accounts and Federal Reserve Banks will be accepted at the price equivalent to the weighted average yield of accepted competitive tenders.

3.7. Competitive bidders will be advised of the acceptance of their bids. Those submitting noncompetitive tenders will be notified only if the tender is not accepted in full, or when the price at the aveage yield is over par.

4. Reservations

4.1. The Department of the Treasury expressly reserves the right to accept or reject any or all tenders in whole or in part, to allot more or less than the amount of Notes specified in Section 1, and to make different percentage allotments to various classes of applicants when the Secretary considers it in the public interest. The Secretary's action under this Section is final.

5. Payment and Delivery

5.1. Settlement for the Notes allotted must be made at the Federal Reserve Bank or Branch or at the Bureau of the Public Debt, wherever the tender was submitted. Settlement on Notes allotted to institutional investors and to others whose tenders are accompanied by a guarantee as provided in Section 3.5. must be made or completed on or before Wednesday, October 7, 1987. Payment in full must accompany tenders submitted by all other investors. Payment must be in cash; in other funds immediately available to the Treasury; in Treasury bills, notes, or bonds maturing on or before the settlement date but which are not overdue as defined in the general regulations governing United States securities; or by check drawn to the order of the institution to which the tender was submitted, which must be received from institutional investors no late than Monday, October 5, 1987. In addition, Treasury Tax and Loan Note Option Depositaries may make payment for the Notes allotted for their own accounts and for accounts of customers by credit to their Treasury Tax and Loan Note Accounts on or before Wednesday, October 7, 1987. When payment has been submitted with the tender and the purchase price of the Notes allotted is over par, settlement for the premium must be completed timely, as specified above. When payment has been submitted with the tender and the purchase price is under par, the discount will be remitted to the bidder.

5.2. In every case where full payment has not been completed on time, an amount of up to 5 percent of the par amount of Notes allotted shall, at the discretion of the Department of the Treasury, be forfeited to the United States.

5.3. Registered definitive securities tendered in payment for the Notes allotted and to be held in TREASURY DIRECT are not required to be assigned if the inscription on the registered definitive security is identical to the registration of the note being purchased. In any such case, the tender form used to place the Notes allotted in TREASURY DIRECT must be completed to show all the information required thereon, or the TREASURY DIRECT account number previously obtained.

6. General Provisions

6.1. As fiscal agents of the United States, Federal Reserve Banks are authorized, as directed by the Department of the Treasury, to receive tenders, to make allotments, to issue such notices as may be necessary, to receive payment for, and to issue, maintain, service, and make payment on the Notes.

6.2. The Department of the Treasury may at any time supplement or amend provisions of this circular if such supplements or amendments do not adversely affect existing rights of holders of the Notes. Public announcement of such changes will be promptly provided.

6.3. The Notes issued under this circular shall be obligations of the United States, and, therefore, the faith of the United States Government is pledged to pay, in legal tender, principal and interest on the Notes.

SECURITIES AND EXCHANGE COMMISSION

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94-409, that the Securities and Exchange Commission will hold the following meetings during the week of September 28, 1987:

An open meeting will be held on Wednesday, September 30, 1987, at 10:00 a.m., followed by a closed meeting.

The Commissioners, Counsel to the Commissioners, the Secretary of the Commission, and recording secretaries will attend the closed meeting. Certain staff members who are responsible for the calendared matter may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(4), (8), (9)(A) and (10) and 17 CFR 200.402(a)(4), (8), (9)(i) and (10), permit consideration of the scheduled matters at a closed meeting.

Commissioner Fleischman, as duty officer, voted to consider the items listed for the closed meeting in closed session.

The subject matter of the open meeting scheduled for Wednesday, September 30, 1987, at 10:00 a.m., will be:

Consideration of whether to recommend to the Congress proposed amendments to the Trust Indenture Act of 1939. If enacted, the amendments would conform the Act to contemporary financing techniques, expand the Commission's exemptive authority, promulgate new conflicts-of-interest standards for indenture trustees, permit certain foreign persons to act as indenture trustees, and effect miscellaneous technical changes. For further information, please contact Michael Hyatte at (202) 272-2573.

The subject matter of the closed meeting scheduled for Wednesday, September 30, 1987, following the 10:00 a.m. open meeting, will be:

Institution of injunctive actions.

Institution of administrative proceedings of an enforcement nature.

Settlement of administrative proceedings of an enforcement nature.

Report of investigation.

Formal orders of investigation.

At times changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Kevin Fogarty at (202) 272-3195.

Shirley E. Hollis,

Assistant Secretary.

September 22, 1987.

BILLING CODE 8010-01-M

UNIFORMED SERVICES UNIVERSITY OF THE HEALTH SCIENCES

TIME AND DATE: 8:00 a.m., October 5, 1987.

PLACE: Uniformed Services University of the Health Sciences, Room D3-001, 4301 Jones Bridge Road, Bethesda, Maryland 20814-4799.

STATUS: Open—under "Government in the Sunshine Act" (5 U.S.C. 552b(e)(3)).

MATTERS TO BE CONSIDERED:

8:00 Meeting—Board of Regents

(1) Approval of Minutes—July 20, 1987; (2) Faculty Matters; (3) Report—Admission; (4) Report—Associate Dean for Operations; (5) Report—President, USUHS: (a) University Awards, (b) Hebert School of Medicine, (c) Post Graduate School of Military Medicine, (d) Henry M. Jackson Foundation for the Advancement of Military Medicine, (e) Civilian Employee Drug Abuse Testing Program, (f) University Advance; (6) Comments—Members, Board of Regents; (7) Comments—Acting Chairman, Board of Regents; (8) Faculty Presentations

New Business

Scheduled Meetings: January 11, 1988.

CONTACT PERSON FOR MORE INFORMATION: Donald L. Hagengruber, Executive Secretary of the Board of Regents, 202/295-3028.

Patricia H. Means,

OSD Federal Register Liaison Officer, Department of Defense.

September 24, 1987.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 20

Migratory Bird Hunting; Late Seasons, and Bag and Possession Limits for Certain Migratory Game Birds in the United States

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: This rule prescribes the late open seasons, hunting hours, hunting areas, and daily bag and possession limits for general waterfowl seasons; special restrictions to reduce the black duck harvest; special seasons for scaup and goldeneyes; extra scaup and teal in regular seasons; additional sandhill crane seasons in the Central Flyway and in Arizona; coots, common moorhens, and snipe in the Pacific Flyway; and additional special extended falconry seasons. Taking of the designated species of migratory birds is prohibited unless open hunting seasons are specifically provided. The rules will permit taking of the designated species during the 1987–88 season within specified periods of time beginning as early as September 26.

EFFECTIVE DATE: September 29, 1987.

FOR FURTHER INFORMATION CONTACT: Rollin D. Sparrowe, Chief, Office of Migratory Bird Management, Matomic Building Room 536, U.S. Fish and Wildlife Service, Department of the Interior, Washington, DC, telephone 202–254–3207.

SUPPLEMENTARY INFORMATION: The Migratory Bird Treaty Act of July 3, 1918 (40 Stat. 755; 16 U.S.C. 703 et seq.), as amended, authorizes and directs the Secretary of the Interior, having due regard for the zones of temperature and for the distribution, abundance, economic value, breeding habits, and times and lines of flight of migratory birds, to determine when, to what extent, and by what means such birds or any part, nest, or egg thereof may be taken, hunted, captured, killed, possessed, sold, purchased, shipped, carried, exported, or transported.

On March 13, 1987, the U.S. Fish and Wildlife Service (hereinafter the Service) published for public comment in the **Federal Register** (52 FR 7900) a proposal to amend 50 CFR Part 20, with comment periods ending June 18, July 14 and August 25, 1987, respectively, for the 1987–88 hunting season frameworks proposed for Alaska, Hawaii, Puerto Rico, and the Virgin Islands; other early seasons; and the late hunting-seasons. That document dealt with the establishment of hunting seasons, hours, areas, and limits for migratory game birds under §§ 20.101 through 20.107 and § 20.109 of Subpart K. On June 3, 1987, the Service published in the **Federal Register** (52 FR 20757) a second document consisting of a supplemental proposed rulemaking dealing with the early- and late-season frameworks. On July 2, 1987, the Service published for public comment in the **Federal Register** (52 FR 25170) a third document consisting of a proposed rulemaking dealing specifically with frameworks for early-season migratory bird hunting regulations. On August 3, 1987, the Service published in the **Federal Register** (52 FR 28717) a fourth document containing final frameworks for Alaska, Puerto Rico, and the Virgin Islands. On August 6, 1987, the Service published a fifth document (52 FR 29187) containing final frameworks for other early-season migratory bird hunting regulations from which State wildlife conservation agency officials selected early-season hunting dates, shooting hours, areas and limits for 1987–88. On August 14, 1987, the Service published in the **Federal Register** (52 FR 30395) a sixth document consisting of proposed frameworks for the late-season migratory bird hunting regulations. On August 24, 1987, the Service published in the **Federal Register** (52 FR 31773) a seventh document consisting of a final rule amending Subpart K of 50 CFR Part 20 to set hunting seasons, hours, areas, and limits for mourning doves, white-winged doves, band-tailed pigeons, rails, woodcock, snipe, and common moorhens and purple gallinules; September teal seasons; sea ducks in certain defined areas of the Atlantic Flyway; ducks in September in Florida, Iowa, Kentucky and Tennessee; Canada geese in September in portions of Illinois, Michigan, and Minnesota; sandhill cranes in the Central and Pacific Flyways; sandhill cranes and Canada geese in southwestern Wyoming; migratory game birds in Alaska, Hawaii, Puerto Rico, and the Virgin Islands; and special extended falconry seasons. On September 18, 1987, the Service published in the **Federal Register** an eighth document (52 FR 35248) consisting of a final rulemaking for the late-season frameworks for migratory game bird hunting regulations from which State wildlife conservation agency officials selected late season hunting dates, hours, areas, and limits for 1987–88.

The final rule described here is the ninth in a series of proposed, supplemental, and final rulemaking documents for migratory game bird hunting regulations and deals specifically with amending Subpart K of 50 CFR Part 20 to set hunting seasons, hours, areas and limits for species subject to late hunting regulations.

Nontoxic Shot Regulations

In the July 21, 1987, **Federal Register** (52 FR 27352) the Service published a final rule describing areas in which lead shot is prohibited for hunting waterfowl, coots and certain other species in the 1987–88 hunting seasons. Waterfowl hunters are advised to become familiar with State and local regulations regarding the use of nontoxic shot for waterfowl hunting.

NEPA Consideration

The "Final Environmental Statement for the Issuance of Annual Regulations Permitting the Sport Hunting of Migratory Birds (FES 75–54)" was filed with the Council of Environmental Quality on June 6, 1975, and notice of availability was published in the **Federal Register** on June 13, 1975, (40 FR 25241). In addition, several environmental assessments have been prepared on specific matters which serve to supplement the material in the Final Environmental Statement. Copies of the environmental assessments are available from the Service at the address indicated under the caption "**ADDRESSES**" in the **Federal Register** of September 18, 1987 (52 FR 35248). As noted in the March 13, 1987, **Federal Register** (52 FR 7905), the Service is preparing a Supplemental Environmental Impact Statement (SEIS) on the FES. A draft SEIS will be available in early October.

Endangered Species Act Consideration

Section 7 of the Endangered Species Act provides that, "The Secretary shall review other programs administered by him and utilize such programs in furtherance of the purposes of this Act "[and shall]" insure that any action authorized, funded, or carried out * * * is not likely to jeopardize the continued existence of such endangered or threatened species or result in the destruction or adverse modification of [critical] habitat * * *." The Service therefore initiated Section 7 consultation under the Endangered Species Act for the proposed hunting season regulations frameworks.

On June 15, 1987, the Office of Endangered Species concluded that the proposed actions were not likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of their critical habitats.

As in the past, hunting regulations this year are designed, among other things, to remove or alleviate chances of conflict between seasons for migratory game birds and the protection and conservation of endangered and threatened species.

The Service's biological opinion resulting from its consultation under Section 7 is considered a public document and is available for public inspection in or available from the Office of Endangered Species and the Office of Migratory Bird Management, Department of the Interior, Washington, DC.

Regulatory Flexibility Act, Executive Order 12291 and Paperwork Reduction Act

In the **Federal Register** dated March 13, 1987 (52 FR 7900), the Service reported measures it had undertaken to comply with requirements of the Regulatory Flexibility Act and the Executive Order. These included preparing a Determination of Effects and an updated Final Regulatory Impact Analysis, and publication of a summary of the latter. These regulations have been determined to be major under Executive Order 12291 and they have a significant economic impact on substantial numbers of small entities under the Regulatory Flexibility Act. This determination is detailed in the aforementioned documents which are available upon request from the Office of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, Washington, DC 20240. These regulations contain no information collections subject to Office of Management and Budget review under the Paperwork Reduction Act of 1980.

Memorandum of Law

The Service published its Memorandum of Law, required by Section 4 of Executive Order 12291, in the **Federal Register** dated August 3, 1987 (52 FR 28717).

Authorship

The primary author of this final rule is Morton M. Smith, Office of Migratory Bird Management, working under the direction of Rollin D. Sparrowe, Chief.

Regulations Promulgation

After analysis of the migratory game bird survey data obtained through investigations conducted by the Service, State conservation agencies, and other sources, and consideration of all comments received on the late season proposals (52 FR 7900, March 13, 1987; 52 FR 20757, June 3, 1987; and 52 FR 30395, August 14, 1987), the Service published in the **Federal Register** on September 18, 1987 (52 FR 35248) final late-season frameworks. Copies of the final frameworks were sent to the officials of the State conservation agencies who were invited to submit recommendations for hunting seasons which complied with the season times and lengths, hours, areas, and limits specified in the frameworks.

The taking of the designated species of migratory birds is prohibited unless open hunting seasons are specifically provided. The following amendments will permit taking of the designated species within specified time periods beginning as early as September 26 and will benefit the public by relieving existing restrictions.

The rulemaking process for migratory game bird hunting, must, by its nature, operate under severe time constraints. However, the Service intends that the public be given the greatest possible opportunity to comment on the regulations. Thus, when proposed rulemakings were published on March 13, June 3, and August 14, 1987, the Service established what it believed were the longest periods possible for public comment. In doing this, the Service recognized that when the comment period closed time would be of the essence. That is, if there were a delay in the effective date of these regulations after this final rulemaking, the States would have insufficient time to select their season dates, shooting hours, hunting areas, and limits; to communicate those selections to the Service; and to establish and publicize the necessary regulations and procedures to implement their decisions. The Service therefore finds that "good cause" exists, within the terms of 5 U.S.C. (d)(3) (Administrative Procedure Act), and these regulations will, therefore, take effect immediately upon publication.

Accordingly, each State conservation agency having had an opportunity to participate in selecting the hunting seasons desired for its State on those species of migratory birds for which open seasons are now to be prescribed, and consideration having been given to all other relevant matters presented, certain sections of Title 50, Chapter I, Subchapter B, Part 20, Subpart K, are hereby corrected and amended as set forth below.

List of Subjects in 50 CFR Part 20

Exports, Hunting, Imports, Transportation, Wildlife.

BILLING CODE 4310-55-M

PART 20 - [AMENDED]

For the reasons set out in the preamble, Title 50, Chapter I, Subchapter B, Part 20, Subpart K is revised as follows.

1. The authority citation for Part 20 continues to read as follows:
Authority: Migratory Bird Treaty Act, sec. 3, Pub. L. 65-186, 40 Stat. 755 (16 U.S.C. 701-708h); sec. 3(h), Pub. L. 95-616, 92 Stat. 3112 (16 U.S.C. 712); Alaska Game Act of 1925, 43 Stat. 739, as amended, 54 Stat. 1103-04.

Note - The following annual hunting regulations provided for by Sections 20.104, 20.105, 20.106, 20.107 and 20.109 of 50 CFR Part 20 will not appear in the Code of Federal Regulations because of their seasonal nature.

2. Section 20.104 is revised to read as follows:

20.104 Seasons, limits, and shooting hours for rails, woodcock, and common snipe.
Subject to the applicable provisions of the preceding sections of this part, the areas open to hunting, the respective open seasons (dates inclusive), the shooting and hawking hours, and the daily bag and possession limits on the species designated in this section are as follows:

	Rails (Sora & Virginia)	Rails (Clapper & King)	Woodcock	Common Snipe
Daily bag limit.....	25 (1)	See footnote (2).	5 (3)	8
Possession limit.....	25 (1)	See footnote (2).	10 (3)	16

Shooting Hours: One-half hour before sunrise until sunset daily on all species, except as noted otherwise.

CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS, INCLUDING AREA DESCRIPTIONS.

(1) The bag and possession limits for sora and Virginia rails apply singly or in the aggregate of these two species.
(2) In addition to the limits on sora and Virginia rails, in Connecticut, Delaware, Maryland, New Jersey, and Rhode Island, there is a daily bag limit of 10 and possession limit of 20 clapper and king rails, singly or in the aggregate of these two species, except that the season is closed on king rails in New Jersey by State regulation. In Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Texas, and Virginia, there is a daily bag limit of 15 and possession limit of 30 clapper and king rails, singly or in the aggregate of these two species.
(3) In States of the Atlantic Flyway, the woodcock bag limit is 3 daily and 6 in possession.
(4) For description of zones or management units within a State, see State regulations.
(5) In Iowa, rail limits are 15 daily and 25 in possession.
(6) See State regulations for listing of certain Great Lakes waters where the season is to open concurrently with the duck season.
(7) The Central Flyway portion consists of: Colorado and Wyoming — the area lying east of the Continental Divide; Montana — the area lying east of Hill, Chouteau, Cascade, Meagher, and Park Counties; New Mexico — the area lying east of the Continental Divide but outside the Jicarilla Apache Indian Reservation. The remaining portions of these States are in the Pacific Flyway.
(8) In Nebraska, the rail limits are 10 daily and 20 in possession.
(9) In South Dakota, the snipe limits are 5 daily and 15 in possession.
(10) In Alabama, the rail limits are 15 daily and 15 in possession.
(11) In New Mexico, the rail limits are 10 daily and 10 in possession.
(12) In Arizona, Ashurst Lake in Unit 5B is closed to common snipe hunting.
(13) Check State regulations for shooting hours restrictions.

3. Section 20.105 is amended to read as follows:

20.105 Seasons, limits, and shooting hours for waterfowl, coots, and gallinules.

Subject to the applicable provisions of the preceding sections of this part, the areas open to hunting, the respective open seasons (dates inclusive), the shooting and hawking hours, and the daily bag and possession limits on the species designated in this section are prescribed as follows:

(a) Waterfowl, coots and gallinules in Atlantic, Mississippi, Central, and Pacific Flyways.

ATLANTIC FLYWAY

The Atlantic Flyway includes Connecticut, Delaware, Florida, Georgia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia and West Virginia.

Flywaywide Restrictions.

Shooting (including hawking) hours: One-half hour before sunrise to sunset daily except as otherwise restricted--Check State regulations.
Canvasbacks - All areas of the Flyway are closed to canvasback hunting.
Black ducks — When the black duck is permitted in the daily bag, it is part of the daily and possession limits for ducks.
Hooded mergansers — In States selecting conventional regulations, no more than 1 hooded merganser may be taken daily nor more than 2 hooded mergansers may be possessed.
CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS AND DELINEATIONS OF GEOGRAPHICAL AREAS. SPECIAL RESTRICTIONS MAY APPLY ON FEDERAL AND STATE PUBLIC HUNTING AREAS AND FEDERAL INDIAN RESERVATIONS.
The season dates for mergansers and coots are the same as those for ducks in the following tables:

	Season Dates	Limits Bag	Possession
Connecticut			
Ducks:			
North Zone (1)			
Black Ducks	Nov. 25-Dec. 26.	1	2
Ducks	Oct. 17-Oct. 24 & Nov. 25-Dec. 26.	4(2)	8(2)
Extra teal during regular season	Oct. 17-Oct. 24.	2(3)	4(3)
South Zone (1)			
Black Ducks	Dec. 9-Jan. 16.	1	2
Ducks	Oct. 17 & Dec. 9-Jan. 16.	4(2)	8(2)
Extra teal during regular season	Oct. 17.	2(3)	4(3)
Scaup-only season (4)	Jan. 18-Jan. 30.	[illegible]	10
Sea ducks (5)(6)(7)	Oct. 2-Jan. 16.	7	14
Mergansers	Same as for ducks.	5	10
Coots	Same as for ducks.	15	30
Gallinules/Moorhens	Sept. 1-Nov. 7.	15(8)	30(8)
Geese:			
Canada:			
North Zone	Oct. 17-Jan. 14.	3	6
South Zone	Oct. 17 & Nov. 9-Jan. 14.	3	6

Brant		2	4
Allegheny Mountain Upland Zone	Nov. 2-Nov. 26.		
Remainder of State	Dec. 23-Jan. 16.		

Point system -- Ducks, mergansers and coots. The Atlantic Flyway States selecting the point system bag limits on designated species are listed in the table above.

The daily bag limit is reached when the point value of the last bird taken added to the sum of the point values of the other birds already taken during that day reaches or exceeds 100 points. The possession limit is the maximum number of birds of species and sex which could have legally been taken in 2 days.

The point values assigned to the species and sexes are as follows:

Atlantic Flyway

100 points	70 points	20 points	35 points
Female mallard	Wood duck	Blue-winged teal	Male mallard
Black duck	Redhead	Green-winged teal	Ring-necked duck
Pintail	Hooded merganser	Shoveler	Bufflehead
Florida tree duck (only in Florida)		Gadwall	and all other species of ducks
Mottled duck (except South Carolina)		Wigeon	
		Scaup	
		Sea ducks	
		Mergansers (except hooded)	

Note: All areas of the Flyway are closed to canvasback hunting.

(1) Described in the September 18, 1987, Federal Register (52 FR 35248) and/or the State Regulations.

(2) The daily bag limit may include no more than 3 mallards of which only 1 may be a hen, 1 pintail, 1 black duck, 2 wood ducks, 2 redheads and 1 fulvous tree duck. The possession limit is twice the daily bag limit.

(3) The daily bag and possession limits specified here are in addition to any other bag and possession limits specified elsewhere.

(4) A special hunting season for scaup only is prescribed in those areas which are described, delineated and designated in the hunting regulations of the State.

(5) An open season for taking scoter, eider, and oldsquaw ducks is prescribed during the period between September 15, 1987, and January 20, 1988, in all coastal waters and all waters of rivers and streams seaward from the first upstream bridge in Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut and New York; in any waters of the Atlantic Ocean and, in addition, in any tidal waters of any bay which are separated by at least one mile of open water from any shore, island, and emergent vegetation in New Jersey,

South Carolina, and Georgia; and in any waters of the Atlantic Ocean and/or in any tidal waters of any bay which are separated by at least 800 yards of open water from any shore, island, and emergent vegetation in Delaware, Maryland, North Carolina, and Virginia; and provided that any such areas have been described, delineated, and designated as special sea duck hunting areas under the hunting regulations adopted by the respective States. In all other areas of these States and in all other States in the Atlantic Flyway, sea ducks may be taken only during the regular open season for ducks and they must be included in the regular duck season conventional or point-system daily bag and possession limits.

(6) The daily bag limit is 7 and possession limit is 14, singly or in the aggregate of these species. Within the special sea duck areas, during the regular duck season in the Atlantic Flyway, States may set, in addition to the regular limits, a daily bag limit of 7 and a possession limit of 14 scoter, eider, and oldsquaw ducks, singly or in the aggregate of these species.

(7) Notwithstanding the provisions of this Part 20 the shooting of crippled waterfowl from a motorboat under power will be permitted in Maine, Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, Delaware, Virginia and Maryland in those areas described, delineated, and designated in their respective hunting regulations as being open to sea duck hunting.

(8) Bag and possession limits given for common moorhens and purple gallinules, are singly or in the aggregate of the two species. In Florida, the gallinule season applies to the common gallinule only. There is no open season on the purple gallinule in Florida.

(9) In Delaware, during October 19 through October 31 the snow goose season is limited to the area bounded on the north by Delaware Route 6, on the west by Delaware Route 9, on the south by the Leipsic River and on the east by the Delaware Bay. Hunting will only be allowed under permits issued by the Delaware Division of Fish and Wildlife or the Refuge Manager of Bombay Hook National Wildlife Refuge.

(10) No special daily bag and possession limit restrictions apply to wood ducks in North Carolina during October 1-October 3, and in Virginia during October 7-October 10.

(11) In the Lake Champlain Zone (described and delineated in the hunting regulations of New York and Vermont) a special hunting season for scaup and goldeneye is prescribed with a daily bag limit of 3 scaup or 3 goldeneyes or 3 in the aggregate and 6 scaup or 6 goldeneyes or 6 in the aggregate in possession.

(12) Only in waters east of U.S. Highway 17, except Currituck Sound north of U.S. Highway 158.

(13) In South Carolina, there is no open season on black ducks in Georgetown, Charleston, Colleton, and Beaufort Counties.

(14) Only in waters east of U.S. Highway 17, north of Charleston, and east of the old Seaboard Railroad bed south of Charleston.

(15) In Virginia, the Back Bay Area is defined for Canada geese as those portions of the cities of Virginia Beach and Chesapeake lying east of U.S. Highway 17 and Interstate 64. Canada geese may only be taken on the waters of Back Bay, November 26-28 and December 17-January 18.

(16) In Virginia, the Back Bay Area is defined for snow (including blue) geese as the waters of Back Bay and its tributaries and the marshes adjacent thereto, and on the land and marshes between Back Bay and the Atlantic Ocean from Sandbridge to the North Carolina line, and on and along the shore of North Landing River and the marshes adjacent thereto, and on and along the shores of Lake Tecumseh and Red Wing Lake and the marshes adajacent thereto.

(17) East of Intracoastal Waterway in Chatham, Bryan, Liberty, McIntosh, Glynn and Camden Counties, Georgia.

(18) In Crawford, Erie, Mercer and Butler Counties, Pennsylvania the Canada goose daily bag limit is 1.

MISSISSIPPI FLYWAY

The Mississippi Flyway includes Alabama, Arkansas, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Ohio, Tennessee and Wisconsin.

Flywaywide Restrictions

Shooting hours: One-half hour before sunrise to sunset daily except as otherwise restricted--Check State regulations.

Canvasbacks - All areas of the Flyway are closed to canvasback hunting.

CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS AND DELINEATIONS OF GEOGRAPHICAL AREAS. SPECIAL RESTRICTIONS MAY APPLY ON FEDERAL AND STATE PUBLIC HUNTING AREAS AND FEDERAL INDIAN RESERVATIONS.

The season dates for mergansers and coots are the same as those for ducks in the following tables.

	Season Dates	Limits	
		Bag	Possession
Alabama			
Ducks:		Point system.

Limits include no more than:			

White-fronted	2	4
Snow (including blue) and brant	5	10

The point values assigned to the species and sexes are as follows:

Mississippi Flyway

100 points	70 points	20 points	35 points
Black duck Female mallard	Wood duck Redhead Hooded merganser	Blue-winged teal Green-winged teal Cinnamon teal Wigeon Shoveler Gadwall Scaup Mergansers (except hooded).	Male mallard, Pintail, and all other species of ducks.

Note: All areas of the Flyway are closed to canvasback hunting.

(1) Described in the September 18, 1987, Federal Register (52 FR 35248) and/or the State Regulations.

(2) Geese taken in Illinois and Missouri and in the Kentucky counties of Ballard, Hickman, Fulton, and Carlisle may not be transported, shipped or delivered for transportation or shipment by common carrier, the Postal Service, or by any person except as the personal baggage of licensed waterfowl hunters, provided that no hunter shall possess or transport more than the legally-prescribed possession limit of geese. Geese possessed or transported by persons other than the taker must be labeled with the name and address of the taker and the date taken.

(3) Harvests of Canada geese will be limited as follows:

Illinois:
- Southern Illinois Quota Zone - 26,300
- Rend Lake Quota Zone - 7,900
- Remainder of State - 18,300

Kentucky:
- West Kentucky Zone:
  - Ballard Subzone - 10,400
  - Henderson-Union Subzone - 3,300
  - Remainder of West Kentucky Zone - 2,800

Wisconsin:
- Horicon and Central Zones - 32,500
- Remainder of State - 17,000

Missouri: Swan Lake Zone - 10,000

Minnesota: Lac qui Parle Quota Zone - 4,000

Michigan:
- Superior Counties Goose Management Area - 6,500
- Allegan County Goose Management Area - 3,000
- Muskegon Wastewater Goose Management Area - 500
- Saginaw County Goose Management Area - 4,500
- Remainder of State - 43,500

Tennessee:
- Northwest Zone:
  - Reelfoot Subzone - 5,000
  - Remainder of Northwest Zone - 2,200

Indiana:
- Posey County - 4,700
- Remainder of State - 11,300

When it has been determined that the quota of Canada geese allotted to the Southern Illinois Quota Zone, the Rend Lake Quota Zone in Illinois, the Swan Lake Zone in Missouri, Posey County in Indiana, the Lac qui Parle Quota Zone in Minnesota, the Ballard and Henderson-Union Subzones in Kentucky, the Reelfoot Subzone in Tennessee, and the Superior Counties, Allegan County, Muskegon Wastewater and Saginaw County Goose Management Areas in Michigan, will have been filled, the season for taking Canada geese in the respective area

will be closed by either the Director upon giving public notice through local information media at least 48 hours in advance of the time and date of closing or by the State through State regulations with such notice and time (not less than 48 hours) as they deem necessary.

(4) A special hunting season for scaup only is prescribed in those areas which are described, delineated and designated in the hunting regulations of the State.

(5) The daily bag and possession limit for purple gallinules and common moorhens is singly or in the aggregate of the two species.

(6) In Kentucky's Western Zone, the season for snow and white-fronted geese and brant will close with the Canada goose season if the Canada goose season closes prior to January 17, 1988.

CENTRAL FLYWAY

The Central Flyway consists of Colorado (east of the Continental Divide), Kansas, Montana (Blaine, Carbon, Fergus, Judith Basin, Stillwater, Sweetgrass, Wheatland, and all counties east thereof), Nebraska, New Mexico (east of the Continental Divide except that the Jicarilla Apache Indian Reservation is in the Pacific Flyway), North Dakota, Oklahoma, South Dakota, Texas, and Wyoming (east of the Continental Divide).

Geese include all species of geese and brant.

Dark Geese include Canada geese, white-fronted geese, and "black" brant.

Light Geese include all other species.

Flywaywide Restrictions

Shooting (including hawking) hours: One-half hour before sunrise to sunset daily except as otherwise restricted--Check State regulations.

Canvasbacks — All areas of the Flyway are closed to canvasback hunting.

Mergansers — All mergansers are to be included within the daily bag and possession limits under conventional and point system regulations.

CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS AND DELINEATIONS OF GEOGRAPHICAL AREAS WITHIN STATES. SPECIAL RESTRICTIONS MAY APPLY ON FEDERAL AND STATE PUBLIC HUNTING AREAS AND FEDERAL INDIAN RESERVATIONS.

	Limits

Zone 4 (15)	Oct. 3-Jan. 3.		

Point system - Ducks, mergansers and coots. The Central Flyway States selecting the point system bag limits on designated species are listed in the table above.

The daily bag limit is reached when the point value of the last bird taken added to the sum of the point values of the other birds already taken during that day reaches or exceeds 100 points. The possession limit is the maximum number of birds of species and sex which could have legally been taken in 2 days. The shooting (including hawking) hours are one-half hour before sunrise until sunset daily unless otherwise indicated.

The point values assigned to the species and sexes are as follows:

Central Flyway

100 points	70 points	20 points	35 points
Female mallard	Wood duck	Blue-winged teal	Male mallard,
Mottled duck	Redhead	Green-winged teal	Pintail, and
Black duck	Hooded merganser	Cinnamon teal	all other
	Texas only:	Shoveler	species of
	Black bellied	Gadwall	ducks*
	and fulvous	Wigeon	
	whistling (tree)	Scaup	
	ducks	Merganser (except	
		hooded).	

BEST COPY AVAILABLE

* In Texas only, there is no open season on the Masked duck.

Note: All areas of the Flyway are closed to canvasback hunting.

(1) North Central Unit: Bounded by the Continental Divide, the northern State line, and highways US-85 to I-76, I-76 to I-25, I-25 to I-70, and I-70 to the Continental Divide. South Park Unit: Chaffee, Fremont, Lake, Park, and Teller Counties. San Luis Valley Unit: Alamosa, Conejos, Costilla, and Rio Grande Counties and the portions of Hinsdale, Mineral, and Saguache Counties east of the Continental Divide. North Park Unit: Jackson County.

(2) In Kansas, exceptions to the dark goose season are as follows: (a) Marais des Cygnes Valley Unit - Season dates: December 19, 1987 through January 10, 1988 - Dark goose permits issued by the Kansas Department of Wildlife and Parks required. One hundred (100) permits are available with one (1) dark goose per permit and one (1) permit per individual. Leg tagging of dark geese is required in this area. The area is bounded by the Missouri State Line to K-68, K-68 to U.S-169, U.S.-169 to K-7, K-7 to K-31, K-31 to U.S.-69, U.S.-69 to K-239, K-239 to the Missouri State Line; (b) South Flint Hills Unit - Dark geese may not be hunted in an area southwest of Emporia bounded by Highways K-57 to U.S.-75, U.S.-75 to K-39, K-39 to K-96, K-96 to U.S.-77, U.S.-77 to U.S.-50, U.S.-50 to K-57; (c) Central Flint Hills Unit - Dark geese may not be hunted in an area southwest of Topeka bounded by Highways U.S.-75 to Interstate 35, Interstate 35 to U.S.-50, U.S.-50 to U.S.-77, U.S.-77 to Interstate 70, Interstate 70 to U.S.-75; and (d) Strip Pits Unit - Dark geese may not be hunted in an area of southeast Kansas bounded by the Missouri State Line to U.S.-160, U.S.-160 to U.S.-69, U.S.-69 to K-57, K-57 to K-3, K-3 to K-146, K-146 to U.S.-59, U.S.-59 to K-47, K-47 to U.S.-169, U.S.-169 to U.S.-160, U.S.-160 to U.S.-59, U.S.-59 to the Oklahoma State Line, and the Oklahoma State Line to the Missouri State Line.

(3) Zone 1: The Central Flyway portion, except Zone 2, of Montana. Zone 2: The counties of Carter, Custer, Dawson, Fallon, Powder River, Prairie, Rosebud, Treasure, and Wibaux.

(4) High Plains: West of Highways US-183 and US-20 from the northern State line to Ainsworth, N-7 and N-91 to Dunning, N-2 to Merna, N-70 to Arnold, N-40 and N-47 and N-47 through Gothenburg to N-23, N-23 to Elwood, and US-283 to the southern State line. Zone 1: Keya Paha (east of US-183) and Boyd Counties including all waters of the Niobrara River. Zone 2: Bounded by Highways and political boundaries starting at the State line near Falls City, US-73 north to N-67; north through Nemaha to US-73-75; north to US-34; west to the Alvo Road; north to US-6; northeast to N-63; north and west to US-77; north to N-92; west to US-81; south to N-66; west to N-14; south to I-80; west to US-34; west to N-10; south to the State line; west to US-283; north to N-23; west to N-47; north to US-30; east to N-14; north to N-52; northwesterly to N-91; west to US-281; north to and including Wheeler, Garfield, and Loup (east US-183) Counties; east on N-70 from Wheeler County to N-14; south to N-39; southeast to N-22; east to US-81; southeast to US-30; east to US-73; north to N-51; east to the State line; and south and west along the State line to US-73. Zone 3: The area, excluding Zone 1, north of Zone 2. Zone 4: The area south of Zone 2.

(5) North Unit: Boyd (west of US-81), Keya Paha (east of US-183), and Knox Counties. East Unit: The area, excluding the North Unit, east of highways US-183 and US-20 from the northern State line to Atkinson, N-11 to Burwell, N-91 to near Taylor, US-183 to Ansley, N-2 to Grand Island, and US-281 to the southern State line. Panhandle Unit: South and west of the northern boundaries of Scotts Bluff, Morrill, and Garden Counties and highways N-2 from Garden County to N-61, N-61 to Grant, and N-23 to the State line. Central Unit: The remainder of the State.

(6) Only 1 Canada goose and 1 white-fronted goose are allowed each day for the entire season in Dodge, Platte and Colfax Counties; in those parts of Butler, Saunders and Polk Counties north of Nebr. 92; and Merrick County along the Platte River where it borders Polk County.

(7) New Mexico: Zone 1: North of highways I-40 and US-54. Zone 2: South of highways I-40 and US-54.

(8) Dark geese may not be hunted in Bernalillo, Sandoval, Sierra, Socorro, and Valencia Counties.

(9) The daily bag and possession limits specified here are in addition to any other bag and possession limits specified elsewhere.

(10) High Plains: Beaver, Cimarron, and Texas Counties. Zone 1: Northwestern Oklahoma, except the Panhandle, bounded by highways OK-33 from the western State line to Roll, OK-47 to US-183, US-183 to Clinton, I-40 to US-177, US-177 to Perkins, OK-33 to Guthrie, I-35 to US-60, US-60 to US-64, US-64 to Nash, and OK-132 to the northern State line. Zone 2: The remainder of the State south and east of Zone 1.

(11) High Plains: West of highways and political boundaries starting at the State line north of Herreid; US-83 and US-14 to Blunt, Blunt-Canning Road to SD-34, a line across the Missouri River to the northwestern corner of the Lower Brule Indian Reservation, the Reservation Boundary and Lyman County Road through Presho to I-90, and US-183 to the southern State line. North Zone: East of the High Plains except the South Zone. South Zone: Bon Homme County (south of S.D. Highway 50), Yankton County (south of S.D. Highway 50), and Clay County (south of S.D. Highway 50); Charles Mix County (south and west of a line formed by S.D. Highway 50 from Douglas County to Geddes, Highways CFAS 6198 and CFAS 6516 to Lake Andes, and S.D. Highway 50 to Bon Homme County); Gregory County; and Union County (south and west of S.D. Highway 50 and Interstate Highway 29).

(12) Missouri River Unit: The Counties of Bon Homme, Brule, Buffalo, Campbell, Charles Mix, Corson (east of highway SD-65), Dewey, Gregory, Haakon (north of Kirley Road and part of Plum Creek), Hughes, Hyde, Lyman (north and east of highways I-90 and US-183), Potter, Stanley, Sully, Tripp (east of highway US-183), Walworth, and Yankton (west of highway US-81).

(13) High Plains: West of highways US-183 from the northern State line to Vernon, US-283 to Albany, T-6 and T-351 to Abilene, US-277 to Del Rio, and the Del Rio International Toll Bridge access road.

(14) In Texas, the season on Canada geese is closed in Anderson and Henderson Counties.

(15) Zone 1: The Counties of Campbell, Converse, Crook, Johnson, Natrona, Niobrara, Sheridan, and Weston. Zone 2: The Counties of Goshen, Laramie, and Platte. Zone 3: The Counties of Albany and Carbon. Zone 4: The Counties of Big Horn, Fremont, Hot Springs, Park and Washakie. Goose management units, respectively, coincide with duck zones.

(16) The daily bag and possession limit of purple gallinules and common moorhens is singly or in the aggregate of the two species.

(17) See State regulations for areas closed to Canada goose hunting except by State permit.

PACIFIC FLYWAY

The Pacific Flyway includes the States of Arizona, California, Colorado (west of the Continental Divide), Idaho, Montana (including and to the west of Hill, Chouteau, Cascade, Meagher, and Park Counties), Nevada, New Mexico (the Jicarilla Apache Indian Reservation and west of the Continental Divide), Oregon, Utah, Washington, and Wyoming (west of the Continental Divide including the Great Divide Basin).

Flywaywide Restrictions

Shooting (including hawking) hours: One-half hour before sunrise to sunset daily, except as otherwise restricted--Check State regulations.

Aleutian Canada Geese: The season is closed on Aleutian Canada geese throughout the Flyway.

White Geese and Dark Geese: Unless otherwise noted, seasons and limits for white geese are for snow, including blue, and Ross' geese, either singly or in the aggregate; and seasons and limits for dark geese are for Canada and white-fronted geese, brant, and all other species of geese, either singly or in the aggregate, except in

Washington, Oregon, and California where there are separate seasons and limits on brant.

CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS AND DELINEATION OF GEOGRAPHICAL AREAS OR ZONES WITHIN STATES. SPECIAL RESTRICTIONS MAY APPLY ON FEDERAL AND STATE PUBLIC HUNTING AREAS AND FEDERAL INDIAN RESERVATIONS.

(1) Duck Limits. Basic daily bag and possession limits on ducks (including mergansers, and in Wyoming including coots) throughout the entire Flyway is 5, including no more than 4 mallards but only 1 female (hen) mallard, 4 pintails but only 1 female (hen) pintail and either 2 canvasbacks or 2 redheads or 1 of each. The possession limit is twice the daily limit. Additionally, the following restrictions apply to limits in Arizona and Idaho. In Arizona, the daily limit may include no more than either 1 female (hen) mallard or 1 Mexican-like duck, but not both; and not more than 2 female (hen) mallards or 2 Mexican-like ducks may be in possession. In Idaho, in the counties of Benewah, Bonner, Boundary, Kootenai, and Shoshone, the daily bag and possession limits, each, may not include more than two wood ducks.

(2) In California, no hunting of ducks, coots, geese and brant is authorized in the following areas unless and until the State approves the nontoxic shot requirements and the Service subsequently publishes final frameworks for these areas: Butte, Colusa, Contra Costa, Glenn, Imperial, Merced, Sacramento, San Joaquin, Solano, Sutter, Yolo and Yuba Counties; and those portions of Siskiyou, Shasta, Sierra, Tehama, and Plumas Counties, and all of Lesser and Modoc Counties, bounded by the following line: Beginning at Interstate 5 at the Oregon border, southerly on Interstate 5 to State Highway 89, thence

southeasterly on State Highway 89 to State Highway 70, thence easterly on State Highway 70 to U.S. Highway 395, thence southerly on U.S. Highway 395 to the Nevada border.

(3) Zone/Area boundaries described in the September 18, 1987, Federal Register and/or State regulations.

(4) The season on cackling Canada geese and Aleutian Canada geese is closed.

(5) The dark goose limits may be expanded to 2 per day and 4 in possession provided they are Canada geese, except for cackling Canada and Aleutian Canada geese for which the season is closed.

(6) The season on white geese is closed in Fremont and Teton Counties.

(7) In Montana, check State regulations for special seasons/exceptions in Freezeout Lake WMA; Canyon Ferry; Flathead; Deer Lodge County; Benton Lake; Missoula County; and Kleinschmidt Lake.

(8) Western Oregon consists of all counties west of the summit of the Cascades excluding Kalmath and Hood River Counties. Eastern Oregon consists of all counties east of the simmit of the Cascades, including all of Kalmath and Hood River Counties. Those portions of Coos, Curry, Douglas and Lane Counties lying west of U.S. Highway 101, that portion of western Oregon north of Highway 126 and west of Interstate 5 are closed to all goose hunting, except for a special Northwest Oregon permit goose hunt.

(9) Northwest Oregon Special Permit Goose Season - November 14-November 29 and December 7-January 17 on Sauvie Island Wildlife Area (excluding North Unit and Columbia River Beaches), Private lands of Sauvie Island (including Scappoose Flat), Ankeny NWR, Private lands adjacent to William L. Finley NWR, and Private lands adjacent to Baskett Slough NWR. See State regulations for specific places, times, days and other conditions of the permit season.

(10) Eastern Washington includes all areas lying east of the Pacific Crest Trail and east of the Big White Salmon River in Klickitat County. Western Washington includes all areas lying to the west of Eastern Washington.

(11) Geese may be hunted only on Saturdays, Sundays, and Wednesdays, and on November 11, 26 and 27, and December 25 and January 1 in Adams, Benton, Douglas, Franklin, Grant, Kittitas, Lincoln, Okanogan, Spokane, and Walla Walla Counties and east of Satus Pass (U.S. Highway 97) in Klickitat County. Geese may be hunted every day during January 11-17 in Adams, Benton, Douglas, Franklin, Grant, Kittitas, Klickitat, Lincoln, Walla Walla, and Yakima Counties.

(12) The hunting season for all geese except Canada geese in Clark, Cowlitz, Pacific and Whakiakum Counties is October 10 thorugh January 17; 3 geese may be taken daily and 6 may be in possession. The Canada goose season is closed in Clark, Cowlitz, Pacific and Whakiakum Counties except in the following areas: (a) in Clark and Cowlitz Counties all lands south of the Kalama grain elevator in Cowlitz County and west of Interstate 5 in Clark and Cowlitz Counties, and (b) in Pacific County all lands west of Highway 101, Highway 4 or Highway 401. Canada goose hunting in these two areas is by permit only. See State regulations for times, days and specific conditions of the permit hunts.

4. Section 20.106 is revised to read as follows:

20.106 Seasons, limits, and shooting hours for sandhill cranes.

Central Flyway: Subject to the applicable provisions of the preceding sections of this part, open seasons are prescribed for taking sandhill cranes with a daily bag limit of 3 and a possession limit of 6 cranes (unless otherwise noted), and with shooting hours from one-half hour before sunrise until sunset (unless otherwise noted) in the following areas for the dates indicated:

(a) In Colorado (the Central Flyway portion except the San Luis Valley and North Park) the inclusive dates are October 3 through November 29, 1987.

(b) In New Mexico (a) in the counties of Chaves, Curry, De Baca, Eddy, Lea, Quay, and Roosevelt, the inclusive dates for the regular season are October 24, 1987, through January 24, 1988; (b) in the Middle Rio Grande Valley Hunt Area (described in State regulations) the inclusive dates for the two experimental seasons are October 17 through October 24, 1987, and October 25 through October 31, 1987. Hunting in the experimental seasons is by State permit only, the daily bag limit is 3 sandhill cranes and the seasonal bag limit is 9, and shooting hours are sunrise to sunset.

(c) In Oklahoma (that portion west of I-35) the inclusive dates are October 10 through November 20, 1987, and November 28, 1987 through January 17, 1988.

(d) In Texas, in Zone A the inclusive dates are November 14, 1987, through February 14, 1988. In Zone B the inclusive dates are November 28, 1987, through February 7, 1988. In Zone C the inclusive dates are January 2, 1988, through February 7, 1988. In the remainder of the State, the season is closed. See State regulations for description of zones.

(e) In North Dakota, in Zone 1 (the area east of a line starting on the east shore of Lake Oahe at the South Dakota border, then north on this shore to Bismarck, then north on U.S. Highway 83 to the north shore of Lake Sakakawea, then west along the north shore of Lake Sakakawea to ND No. 23, then east on ND No. 23 to ND No. 8, then north on ND No. 8 to the Canadian line; and west of a line starting where ND No. 14 enters Canada, then south on ND No. 14 to U.S. Highway 83, then south on U.S. Highway 83 to South Dakota) the inclusive dates are September 5 through November 1, 1987, in Zone 2 (that area east of Zone 1 and west of U.S. Highway 281) the inclusive dates are September 5 through October 2, 1987.

(f) In South Dakota, the inclusive season dates are September 26 through November 1, 1987.

(g) In Montana (the Central Flyway portion except that area south of I-90 and west of the Bighorn River), the inclusive dates are October 3 through November 29, 1987.

(h) In Wyoming, in Campbell, Converse, Crook, Goshen, Laramie, Niobrara, Platte, and Weston Counties, the inclusive season dates are September 19 through November 15, 1987.

Each hunter participating in the regular sandhill crane hunting season must obtain and carry in his possession while hunting sandhill cranes a valid Federal sandhill crane hunting permit available without cost from conservation agencies in the States where crane hunting seasons are allowed. The permit must be displayed to any authorized law enforcement official upon request.

Pacific Flyway

(a) In Arizona (within Game Management Units 30A, 30B, 31, and 32), the season dates are November 6-8, November 10-12, November 14-16 and November 18-20, 1987. Hunting will be by special permit to be issued by the State. Each permittee may take 2 sandhill cranes per season.

(b) In Wyoming's sandhill crane-Canada goose hunt areas: Hunting is by State permit only.

Bear River area in Lincoln County - the season dates are September 5 through September 7, 1987. Season limits are 2 sandhill cranes per hunter.

Riverton Boysen Unit in Fremont County - the season dates are September 12 through September 13, 1987, and September 19 through September 20, 1987. Season limits are 2 sandhill cranes per hunter.

VOL 52 ISS 188 SE 29 1987 UMI

Salt River (Star Valley) area in Lincoln County - the season dates are September 1 through September 7, 1987. Season limits are 2 sandhill cranes and 2 Canada geese per hunter.

Eden - Farson Agricultural Project in Sweetwater and Sublette Counties - the season dates are September 5 through September 7, 1987. Season limits are 3 sandhill cranes and 1 Canada goose per hunter.

5. Section 20.107 is revised as follows:

20.107 Seasons, limits, and shooting hours for tundra (whistling) swans.

Whistling swans may be taken only by State-issued permit. Permittees may take only one whistling swan per season. Successful permittees must immediately validate their harvest by that method required in State regulations. Shooting hours are from one-half before sunrise to sunset daily except as otherwise restricted--Check State hunting regulations. Seasons are:

Central Flyway: (a) In Montana, tundra swans may be hunted from October 3, 1987, through January 3, 1988.

Pacific Flyway: (a) In Montana, whistling swans may be hunted only in Teton and Cascade Counties from October 3 through December 20, 1987; (b) In Nevada, tundra swans may be hunted only in Churchill, Lyon and Pershing Counties from October 17, 1987, through January 3, 1988; (c) In Utah, tundra swans may be hunted from October 3 through December 6, 1987, and December 21, 1987, through January 3, 1988.

Atlantic Flyway: (a) In North Carolina, tundra swans may be hunted from November 2, 1987, through January 30, 1988.

6. Section 20.109 is revised to read as follows:

20.109 Extended seasons, limits, and hours for taking migratory game birds by falconry.

Subject to the applicable provisions of this part, the areas open to hunting, the respective open seasons (dates inclusive), the hawking hours, and the daily bag and possession limits on the species designated in this section are prescribed as follows:

Daily bag limit..... 3 singly or in the aggregate.
Possession limit..... 6 singly or in the aggregate.
These limits apply during both regular hunting seasons and extended falconry seasons.
Hawking hours: One-half hour before sunrise until sunset daily.
CHECK STATE REGULATIONS FOR ADDITIONAL RESTRICTIONS.

Atlantic Flyway

Florida:

Mourning doves and white-winged doves..... Sept. 26-Dec. 4.

Band-tailed pigeons..... Sept. 7-Dec. 16.

Ducks, coots, and snipe..... Oct. 3-Jan. 10.

Utah:

Ducks, geese, mergansers, coots, and snipe..... Oct. 3-Jan. 10.

Washington:

Ducks, geese, mergansers, and coots..... Oct. 3-Jan. 10.

Wyoming

Mourning doves..... Sept. 1-Oct. 15

Snipe and rails..... Sept. 19-Nov. 27.

Ducks, mergansers, coots, and geese(1).... Oct. 3-Jan. 3.

---

(1) In Wyoming, the aggregate daily bag and possession limits of all ducks, mergansers, coots and geese are 2.

(2) In Idaho, the Pacific Population is that portion of Idaho lying west of the line formed by U.S. Highway 93 north from the Nevada border to Shoshone, thence northerly on Idaho State Highway 75 (formerly U.S. 93) to Challis, thence northerly on U.S. Highway 93 to

the Montana border; the Rocky Mountain Population is that portion of Idaho lying east of the line described above.

Note: See waterfowl season footnotes for descriptions of zones. For some States, the extended falconry season dates also include general season dates.

Date: September 23, 1987.

Susan Recce,

Acting Assistant Secretary for Fish and Wildlife and Parks.

DEPARTMENT OF ENERGY

Low-Level Radioactive Waste; Procedures for Submitting Documentation and Guidelines for Evaluating State and Regional Compliance With the January 1, 1988, Milestone

AGENCY: Office of Nuclear Energy, DOE.

ACTION: Notice respecting compliance with the Low-Level Radioactive Waste Program, January 1, 1988, Milestone.

SUMMARY: The Low-Level Radioactive Waste Policy Amendments Act of 1985 establishes milestones for the development of new disposal facilities in compact regions and States that do not currently have operating disposal facilities. These non-sited compact regions and nonmember States must meet the milestones in order to receive rebates of a portion of the surcharges paid by their generators to the three States with operating disposal sites. Twenty-five percent of the applicable surcharges are received from these sited States and held in an escrow account maintained by the Department of Energy (DOE), which disburses the rebates upon determining that a State has complied with the applicable milestone.

Part I of this Notice discusses comments received on a March 5, 1987, **Federal Register** Notice of Inquiry (52 FR 6942), which contained draft Guidelines for DOE to determine the compliance of non-sited compact regions and nonmember States with the second milestone specified in section 5(e)(1)(B) of the Low-Level Radioactive Waste Policy Amendments Act of 1985, which occurs on January 1, 1988. Part II contains procedures for submitting information to DOE and DOE's guidelines for evaluating compliance with the January 1, 1988 milestone. The information collections contained in these procedures are covered under the Paperwork Reduction Act of 1980, as amended, and are approved by the Office of Management and Budget (OMB) under OMB control number 1910–0900.

EFFECTIVE DATE: September 29, 1987.

FOR FURTHER INFORMATION CONTACT: Jeffrey L. Smiley, Program Manager, Low-Level Waste Management Program, NE–24, U.S. Department of Energy, Washington, DC 20545, (301–353–4216).

SUPPLEMENTARY INFORMATION:

Background

The Low-Level Radioactive Waste Policy Amendments Act of 1985 (Pub. L. 99–240) (the Act), sets out milestones at section 5(e)(1) for the development of new low-level radioactive waste disposal facilities in non-sited compact regions and nonmember States. Non-sited compact regions and nonmember States that are in compliance with a milestone received a rebate of 25 percent of the applicable surcharges paid by generators in their compact regions or States on waste disposed in the three State disposal facilities that are currently operating. Non-sited compact regions and nonmember States that are not in compliance with a milestone forfeit their potential rebate to the sited States in which the waste was disposed.

As trustee for the surcharge escrow account, DOE must determine whether each non-sited compact region and nonmember State is in compliance with the milestone and eligible for a rebate.

Non-sited compact regions and nonmember States must meet the requirements of section 5(e)(1)(B) of the Act in order to be found in compliance with the January 1, 1988, milestone. Section 5(e)(1)(B) of Pub. L. 99–240, states:

> By January 1, 1988—
>
> (i) each non-sited compact region shall identify the State in which its low-level radioactive waste disposal facility is to be located, or shall have selected the developer for such facility and the site to be developed, and each compact region or the State in which its low-level radioactive waste disposal facility is to be located shall develop a siting plan for such facility providing detailed procedures and a schedule for establishing a facility location and preparing a facility license application and shall delegate authority to implement such plan;
>
> (ii) each non-member State shall develop a siting plan providing detailed procedures and a schedule for establishing a facility location and preparing a facility license application for a low-level radioactive waste disposal facility and shall delegate authority to implement such plan; and
>
> (iii) the siting plan required pursuant to this paragraph shall include a description of the optimum way to attain operation of the low-level radioactive waste disposal facility involved, within the time period specified in the Act. Such plan shall include a description of the objectives and a sequence of deadlines for all entities to take action to implement such plan, including, to the extent practicable, an identification of the activities in which a delay in the start, or completion, of such activities will cause a delay in beginning facility operation. Such plan shall also identify to the extent practicable, the process for (1) screening for broad siting areas; (2) identifying and evaluating specific candidate sites; and (3) characterizing the preferred site(s), completing all necessary environmental assessments, and preparing a license application for submission to the Nuclear Regulatory Commission or an Agreement State.

In Part II of this notice, DOE is issuing final procedures for non-sited compact regions and nonmember States to use in submitting milestone compliance documentation and guidelines for DOE to use in evaluating such documentation

Part I—Comments received on the Federal Register Notice of Inquiry

In order to solicit comments on the issues surrounding the submission and evaluation of milestone compliance documentation and also to solicit comments on DOE's procedures for administering the Surcharge Escrow Account, DOE published a Notice of Inquiry in the **Federal Register**, 52 FR 6942 (March 5, 1987), entitled, "Proposed Criteria for Complying with the Low-Level Waste Program, January 1, 1988, Milestone." Seventeen entities provided comments on (1) DOE's proposed criteria for evaluating compliance with the January 1, 1988, milestone, and (2) DOE's procedures for administering the Surcharge Escrow Account.

The milestone guidelines contained herein reflect the milestone requirements prescribed in the Act, and are responsive to the comments received from interested parties. The final DOE guidelines include the following changes from the earlier draft:

- The requirement that the siting plan include the signature(s) of the person(s) designated to approve the plan has been deleted.
- The proposed prescriptive list of siting plan elements implied by the Act has been deleted.
- Guidance on siting plan format and documentation requirements has been included.
- The requirement for demonstrating the "critical path" for the site development schedule has been deleted.
- Guidance has been added that the siting plan include a schedule that demonstrates operation of a low-level waste disposal facility within the time period specified in the Act.
- Guidance has been added that authority be legally delegated by January 1, 1988, to an entity or entities responsible for implementing the siting plan.

Comments submitted to DOE on the Notice of Inquiry and DOE's responses are discussed below.

A. Comments on Proposed Criteria for the January 1, 1988, Milestone

Fifteen entities commented on the proposed DOE compliance criteria. Most of these comments focused on the requirements for the siting plan. No comments were received concerning the requirement for designation of a host

State for a low-level waste disposal facility, or on the requirements for delegation of authority to implement the siting plan. The following summarizes these comments and DOE's resolution of the issues they raised:

1. One commentor felt that DOE should allow each non-sited compact region and nonmember State to establish its own protocol for submission of the siting plan because there may not be a person legally authorized by such State or compact region "to approve the siting plan." The final guidelines do not require the signature of a person authorized to approve the plan.

2. Nine commentors stated that the proposed guidelines exceeded the provisions of the Act in both the requirements for siting plan content and the level of detail required. The proposed guidelines included in the table of requirements certain tasks that DOE felt would necessarily have to be accomplished before a disposal facility could become operational. This list of implied tasks has been deleted from the final guidelines so as to permit States and compact regions to develop siting plans tailored to the circumstances prevailing in their particular jurisdictions.

3. Five commentors emphasized that DOE's siting plan requirements should be prefaced by the phrase, "to the extent practicable," wherever this phrase is included in the corresponding provision of the Act. The final guidelines incorporate this suggestion and DOE will evaluate documentation in these areas accordingly.

4. Four commentors expressed concern that DOE was requiring information on processes or tasks that would not be available by the January 1, 1988, milestone date. Neither the proposed nor final guidelines require that siting plans include the actual results or conclusions of tasks that have not yet been completed. The final guidelines do, however, require that siting plans include a general description of the processes that will lead to the development and operation of a disposal facility.

5. Eight commentors felt that the proposed guidelines required that siting plans adhere to a format that did not take into account the various approaches that would be taken by different entities preparing siting plans. However, the proposed guidelines did not specify any particular format. The final guidelines provide that no particular format is required as long as the documentation is complete. However, where a siting plan consists of a collection of documents, DOE has provided that this documentation should be cross-referenced to the provisions of the Act to which it is responsive, in order to ensure that such documentation is complete.

6. Two commentors felt that the proposed criteria for siting plan content should have been promulgated in accordance with substantive rulemaking procedures. However, the final guidelines on siting plan content reflect specific provisions of the Act without adding any new substantive material; in this sense, they are only "interpretive" and need not be adopted in accordance with substantive rulemaking procedures.

7. Eight commentors expressed concern that development of a siting plan with the level of detail required in the proposed guidelines would divert resources from more important aspects of site development. The Act is clear in its requirement for a siting plan that includes detailed descriptions. The final guidelines reflect the specific requirements of the Act.

8. Two commentors suggested that the DOE criteria be similar to the compliance criteria issued by the sited States. The final DOE guidelines are similar in many respects to the guidelines issued by the sited States, but must reflect DOE's interpretation of the Act and its responsibilities thereunder.

9. Two commentors suggested deleting the recommendation in the proposed criteria that non-sited compact regions and nonmember States send a copy of the request for rebate to the Governors or their designees in the three sited States. In view of the fact that DOE has no authority to specify informational procedures to be applied by the sited States, this requirement has been deleted. The commentors also suggested that the final guidelines be revised to indicate that DOE would make compliance determinations independently of evaluations made by the sited States and sited compact regions. The guidelines have never provided that DOE and the sited States and compact regions would make joint determinations regarding milestone compliance. DOE may discuss issues involving milestone compliance with the sited States, but in every instance will make its own determinations.

10. At the July 27, 1987, quarterly meeting of the Low-Level Radioactive Waste Forum, DOE representatives discussed with representatives of States and compact regions the provision of the Act requiring siting plans to "describe the optimum way to attain operation of a (facility) within the time period specified in the Act." (Sec. (5)(e)(1)(B)(iii)) In interpreting this provision, DOE proposed that each siting plan contain a schedule indicating compliance with the January 1, 1990, and the January 1, 1992, milestones, and that the siting plan indicate that the region or State would take title to the waste if a facility were not available by January 1, 1996.

Following these discussions DOE determined that 1996 could not serve as the deadline for the time period specified in the Act for operation of new disposal facilities. The various penalties and liabilities that are prescribed in the Act for the period between January 1, 1993, and January 1, 1996, were meant to reinforce the January 1, 1993, deadline, and were not intended to substitute 1996 as the deadline. Instead, 1996 applies to an entirely separate responsibility. On January 1, 1996, a State is required to assume liability for low-level radioactive waste generated within its borders if the State cannot provide for disposal of the waste or fails to take possession of the waste.

The final guidelines include an evaluation criterion that siting plans describe the optimum way to attain operation of a disposal facility by January 1, 1993. January 1, 1993, is identified at section 5(d)(2)(C) of the Act as the "deadline" for providing for the disposal of all low-level waste generated within a State or region. That date marks the end of the "interim access period," the period during which low-level waste generators in nonmember States and non-sited compact regions have conditional access to the three existing disposal sites. Moreover, Congress included in the Act provisions for penalizing regions and States that have not provided for the disposal of their waste by January 1, 1993. After January 1, 1993, regions and States that have not provided for such disposal will forfeit to generators in their regions surcharges in incremental proportions until such time as they can provide for disposal.

It also has been suggested that, by permitting a "Governor's certification", Congress implied that the region or State could manage its waste without a disposal facility after 1992 if it were unable to develop a disposal site by that date. By another amendment advancing the final date that a region or State could submit a disposal site license application from January 1, 1990, to January 1, 1992, some States have suggested that Congress implicitly abandoned January 1, 1993, as the deadline specified in the Act for the operation of new disposal facilities. Both the Governor's certification and the January 1, 1992, license application milestone are contingencies for regions

VOL 52 ISS 188 SEP 29 1987 UMI

and States that cannot submit a license application for a disposal facility by January 1, 1990. DOE feels that these provisions were not meant as an invitation to delay submission of a license application beyond January 1, 1990. The Act recognizes that various regions or States might not attain operation of a disposal facility by January 1, 1993, but such an observation is not equivalent to a postponement of January 1, 1993, as the time period specified in the Act for establishment of new disposal facilities.

Therefore, DOE believes that the siting plan submitted in response to the January 1, 1988, milestone should describe the optimum way to attain by January 1, 1993, operation of a facility for the disposal of all low-level waste generated within a nonmember State or non-sited compact region.

DOE encourages each entity preparing a Siting Plan to develop a plan whose schedule, required under section 5(e)(3)(1)(B)(i) and (ii) of the Act, and sequence of deadlines required under section 5(e)(1)(B)(iii), reflect the optimum way to attain operation of a facility by January 1, 1993. DOE also encourages each entity to provide sufficient flexibility in the overall schedule and sequence of deadlines so that, notwithstanding any potential deviation, it will be able to attain operation of a facility by January 1, 1993.

In the event that the planned schedule and sequence of deadlines described in the Siting Plan for establishing a disposal facility may materially deviate from the optimum way to attain operation of a facility by January 1, 1993, then the Siting Plan should indicate why the planned schedule and sequence of deadlines may so deviate.

B. Comments on Administration of the Surcharge Escrow Account

1. Four commentors requested that DOE make rebate disbursements to a non-sited compact region or nonmember State as soon as that entity demonstrates compliance with a forthcoming milestone. One commenter stated that the current disbursement policy is "contrary to Congress' clear intent to encourage the expeditious development of new LLW sites." DOE feels that the Act clearly directs that rebates be made after the milestone date. If surcharge funds were disbursed before the milestone dates, a region which had earlier demonstrated compliance could retract the legal basis for the compliance determination, leaving no means for DOE to recover the funds for redistribution to the sited states in accordance with the Act. DOE provides quarterly reports to non-sited compact regions and nonmember States regarding the amount of funds in their surcharge rebate accounts.

2. One commentor encouraged DOE to take a more active role in assuring that the sited States transfer all surcharges on a timely basis in order to avoid delays in disbursing rebate funds. DOE actively works with the sited States to establish appropriate procedures for payments into and disbursements from the escrow account and will continue to do so.

3. Two commentors requested that the deadline for transfer of surcharge funds by the sited States to DOE, announced in the **Federal Register** notice at 51 FR 23030 (June 24, 1986) dealing with the first milestone, be extended by five days to the 25th day of each month in order to allow the site operators and sited States additional time for processing and verification of the sources of the funds. DOE will continue its current policy of requiring these transfers by the 20th of each month in order to maximize investment earinings, and so that quarterly reports may be prepared and rebate disbursements can be made in as timely a manner as possible. DOE recognizes, however, that processing and verification procedures may sometimes delay submission of the surcharge funds.

II. Procedures for Submitting Documentation and for Evaluation Compliance with the January 1, 1988, milestone

A. Submitting Documentation

The Governor or authorized agent of a nonmember State or Executive Director, Chairman, or authorized agent of a non-sited comact region must send a request for rebate along with a complete siting plan by January 1, 1988, to: Manager, Low-Level Waste Management Program, U.S. Department of Energy, NE–24, Washington, DC 20545. The request should state that the nonmember State or nonsited compact region has met the requirements of the January 1, 1988, milestone as prescribed in section 5(e)(1)(B) of the Act. The request should include five copies of all applicable documentation. These copies are needed to permit the necessary reviews within the time limits of the program.

DOE encourages early submission of rebate requests and compliance documentation in order to facilitate the timely disbursement of surcharge funds from the Escrow Account following the January 1, 1988, milestone date.

B. Guidelines for Evaluation Milestone Compliance Documentation

1. Host State Identification.

Requirements of the Act: "* * * each non-sited compact region shall identify the State in which its low-level radioactive waste disposal facility is to be located, or shall have selected the developer for such facility and the site to be developed * * *" (5(e)(1)(B)(i))

DOE evaluation guideline: The Compact Commission Chairman, Executive Director, or designated agent of the non-sited compact region shall submit documentation to DOE that identifies (1) the State in which its low-level waste disposal facility will be located and the legal documents committing the developer to develop that site.

2. Development of a Siting Plan

Requirements of the Act: "* * * each compact region or the State in which its low-level radioactive waste disposal facility is to be located, shall develop a siting plan * * *" (5(e)(1)(B)(i)) "* * * each non-member State shall develop a siting plan * * *" (5(e)(1)(B)(ii))

DOE evaluation guideline:

a. The Commission Chairman, Executive Director, or designated agent of each non-sited compact region should submit one siting plan to DOE. The Governor or designated agent of each nonmember State should submit one siting plan to DOE.

b. Although there is no prescribed format or organizational layout for the siting plan, the plan should address all requirements prescribed in the Act at section 5(e)(1)(B).

c. Siting plans consisting of various documents, e.g., legislation, regulations, technical reports, supporting plans, should be accompanied by a summary which cross references the siting plan requirements cited in the Act to the corresponding siting plan documentation. A collection of documents not accompanied by such cross referencing will not be considered an acceptable siting plan.

3. Siting Plan Contents

a. Requirements of the Act: The siting plan shall "* * * provide detailed procedures and a schedule for establishing a facility location and preparing a facility license application * * *" (5)(e)(1)(B)(i) and (ii))

DOE evaluation guideline:

The siting plan should include a schedule for filing a disposal site license application and provide detailed procedures as described in the guidelines below.

b. Requirements of the Act: "Such plan shall also identify, to the extent practicable, the process for (1) screening for broad siting areas; (2) identifying and evaluating specific candidate site(s); and (3) characterizing the preferred site(s), completing all necessary environmental assessments, and preparing a license application for submission to the Nuclear Regulatory Commission or an Agreement State." (5)(e)(1)(B)(i) and (iii))

DOE evaluation guideline:

The siting plan should describe, to the extent practicable, the process for completing each of the tasks leading to submission of the license application. These descriptions should indicate the objective of the tasks, identify the compact region or State entity(ies) that are or are expected to be responsible for ensuring completion of the tasks, provide general information on how each task will be completed, and provide a schedule for completion of each task.

c. Requirements of the Act: "The siting plan * * * shall include a description of the optimum way to attain operation of the low-level radioactive waste disposal facility involved, within the time period specified in this Act * * *" (5)(e)(1)(B)(iii)) DOE evaluation guideline:

In the event that the planned schedule and sequence of deadlines described in the Siting Plan for establishing a disposal facility may materially deviate from the optimum way to attain operation of a facility by January 1, 1993, then the Siting Plan should indicate why the planned schedule and sequence of deadlines may so deviate.

d. Requirements of the Act: "Such plan shall include a description of the objectives and a sequence of deadlines for all entities required to take action to implement such plan, including, to the extent practicable, an identification of the activities in which a delay in the start, or completion of such activities will cause a delay in beginning facility operation." (5)(e)(1)(B)(iii)).

DOE evaluation guidelines:

1. To the extent practicable, the siting plan should identify those scheduled tasks whose delay may lead to a delay in facility operation. The siting plan may identify such tasks by indicating critical deadlines for the completion of such tasks along with the scheduled date of completion.

2. If any tasks have been completed before the siting plan is prepared, the siting plan should indicate the date that the tasks were completed, briefly describe the significant accomplishments or conclusions of such tasks, and cite any published reports or documents that resulted from execution of the tasks.

4. Delegation of Authority

Requirements of the Act: Each (non-sited) compact region or the State in which its low-level radioactive waste disposal facility is to be located "shall delegate authority to implement such plan * * *" (5(e)(1)(B)(i)) Each nonmember State "* * * shall delegate authority to implement such plan * * *" (5(e)(1)(B)(ii)) DOE evaluation guideline:

a. The siting plan may demonstrate that authority has been delegated either by providing evidence that a lead entity has been legally delegated the authority for coordinating the implementation of the tasks described in the plan, or by providing evidence that each entity identified in the siting plan has the legal authority and responsibility to implement the task or tasks assigned to it in the siting plan.

b. If a non-sited compact region submits a siting plan that is to be implemented by the compact commission on behalf of such compact region, the compact commission should demonstrate that it has legal authority, in the State in which its low-level radioactive waste disposal facility is to be located, to implement each planned activity.

Issued in Washington, DC, on September 22, 1987.

William R. Voigt, Jr.,

Director, Office of Remedial Action and Waste Technology, Office of Nuclear Energy.

Consistency for Food Stamp Program, Aid to Families with Dependent Children (AFDC) Program and Adult Assistance Programs

AGENCIES: Food and Nutrition Service, USDA, and Family Support Administration, HHS.

ACTION: Proposed rules.

SUMMARY: A Notice of Intent to Develop Regulations was published on February 19, 1985 (50 FR 6970). The purpose of that notice was to solicit comments and recommendations from the public on ways the Family Support Administration (FSA) which administers the Aid to Families with Dependent Children (AFDC) Program and the Food and Nutrition Service (FNS) which administers the Food Stamp Program could enhance consistency between the two programs given existing statutory constraints. This rulemaking is the result of that notice of intent and sets forth proposed changes to the regulations of both the AFDC and Food Stamp programs for greater consistency. It also applies to the Adult Assistance Programs (Titles I, X, XIV, and XVI (Aid to the Aged, Blind or Disabled) of the Social Security Act).

This proposal does not address the provision on the categorical eligibility of certain AFDC, Adult Assistance and SSI households for food stamps contained in the Food Security Act of 1985 (Pub. L. 99–198; December 23, 1985). However, the manner in which categorical eligibility affects the issues in this proposal is discussed, where applicable: e.g., the preamble section on verification.

DATES: Comments must be received on or before November 30, 1987.

ADDRESSES: Comments should be submitted in writing to the Administrator of the Family Support Administration, Attention: Mark Ragan, Acting Director, Office of Policy, Office of Family Assistance, Department of Heath and Human Services (HHS), 330 Independence Avenue SW., Room 5600, Washington, DC 20201, or delivered to the Office of Family Assistance, Family Support Administration, Room B–448, Transpoint Building, 2100 Second Street SW., Washington, DC 20201, between 8:00 a.m. and 4:30 p.m., on regular business days. Comments received may be inspected during these same hours by making arrangements with the contact persons shown below.

FOR FURTHER INFORMATION CONTACT: At the Family Support Administration: Mark Ragan, Office of Family Assistance, Family Support Administration, Transpoint Building, 2100 Second Street SW., Washington, DC 20201, telephone (202) 245–3290.

At the Department of Agriculture: Ms. Bonny O'Neil, Food and Nutrition Service, 3101 Park Center Drive, Alexandria, Va. 22302, telephone (703) 756–3414.

SUPPLEMENTARY INFORMATION:

Classification

Executive Order 12291

This action has been reviewed under Executive Order 12291 and the Secretary of Agriculture's Memorandum No. 1512–11. The Departments have classified this action as non-major. The effect of this action on the economy will be less than $100 million and will have an insignificant effect on costs or prices. Competition, employment, investment, productivity, and innovation will remain unaffected. There will be no effect on the competition of United States-based enterprises with foreign-based enterprises.

Executive Order 12372

The Food Stamp Program is listed in the Catalog of Federal Domestic Assistance under No. 10.551. For the reasons set forth in the final rule related Notice(s) of 7 CFR Part 3015, Subpart V (Cite 48 FR 29115, June 24, 1983; or 48 FR 54317, December 1, 1983, as appropriate, and any subsequent notices that may apply), this program is excluded from the scope of Executive Order 12372 which requires intergovernmental consultation with State and local officials.

Regulatory Flexibility Act

This action has been reviewed with regard to the requirements of the Regulatory Flexibility Act of 1980 (Pub. L. 96–354, Stat. 1164, September 19, 1980). Anna Kondratas, Administrator of the Food and Nutrition Service, and Wayne Stanton, Administrator, Family Support Administration, have certified that this rule does not have a significant economic impact on a substantial number of small entities. State and local welfare agencies will be the most affected to the extent that they administer the programs. Potential and current participants will be affected because of changes to various policies and procedures for both programs.

Paperwork Reduction Act

Food Stamp Program

The proposed § 273.2(e)(3)(i) requiring the State agency to advise households of its policy to immediately deny an application after the household misses one interview does not significantly alter or change burden estimates for application processing approved under the Office of Management and Budget's (OMB) No. 0584–0064. The reporting and recordkeeping requirements contained in proposed §§ 273.2(g)(3), 273.10(g)(1)(i), (ii) and (iii), 273.12(a), 273.13, and 273.15(q) are approved under OMB No. 0584–0064. The remaining provisions do not contain any reporting or recordkeeping requirements subject to approval by OMB under the Paperwork Reduction Act of 1980 (44 U.S.C. 3507).

AFDC Program

The reporting and recordkeeping requirements contained in proposed § 205.10 are approved under OMB No. 0960–0260. The remaining provisions do not contain any reporting or recordkeeping requirements subject to OMB approval under the Paperwork Reduction Act of 1980.

Background

An on-going initiative for both the Department of Health and Human Services and the Department of Agriculture has been to bring about increased consistency to the AFDC and Food Stamp Programs by eliminating unnecessary differences. Both Departments recognize that many individuals participate in both programs and similar information is required in each program's eligibility determination process. In proposing changes to certain policies in order to achieve consistency, this proposed rule is intended to reduce unnecessary burdens on recipients as well as on the States in the administration of the programs. Suggestions for additional modifications or improvements which would further these purposes are welcomed.

Format

This preamble is divided into four sections. This first section provides the rationale for the proposed rule, definitions, and explanations on other related regulatory changes. The second section clarifies existing policies which currently permit consistency between the programs without regulatory change. The third section discusses regulatory

changes proposed for the AFDC, Adult Assistance and Food Stamp programs. The last section concerns commenters' recommendations for changes which were not adopted.

Rationale, Definitions and Other Related Rules

These proposed changes are designed to remove barriers to consistent administration of the AFDC, Adult Assistance and Food Stamp Programs and are based primarily on the comments received on the Notice of Intent to Develop Regulations. Additional changes are proposed which did not result from comments or legislative amendments but are changes which we believe will further contribute to greater consistency. An example of such a change for the Food Stamp Program is how households with fluctuating income are to report status changes rather than changes in dollar amounts. For AFDC and the Adult Assistance Programs, the fair hearings regulations were reviewed for consistency changes that were not necessarily addressed by commenters. Any issues dealing with monthly reporting/retrospective budgeting (MRRB) are being handled separately by both Departments.

All comments received in response to the Notice were reviewed but only those issues that were either repeatedly addressed or those over which the programs have some regulatory flexibility are discussed in any detail. Comments concerning policies which have been adopted by State option rather than required by Federal regulation and comments which were unclear or not pertinent are not addressed in this preamble.

Definitions

The Food Stamp Program defines (7 CFR 271.2) public assistance (PA) as the following programs under Titles I, IV–A, X, XIV, and XVI (AABD) authorized by the Social Security Act of 1935, as amended:

- Aid to Families with Dependent Children (AFDC) (all States, the District of Columbia, Puerto Rico, Guam and the Virgin Islands).
- Old-Age Assistance (OAA) (Guam, Virgin Islands).
- Aid to the Blind (AB) (Guam, Virgin Islands).
- Aid to the Permanently and Totally Disabled (APTD) (Guam, Virgin Islands).
- Aid to the Aged, Blind or Disabled (AABD) (Puerto Rico).

The last four programs are in operation in the areas specified above instead of the SSI program. Therefore, whenever a proposed change is applicable to households in which all members receive some type of PA benefits, all of the programs in the definition are included. The HHS rules refer to the latter four programs as the Adult Assistance programs. In the food stamp portion of this docket, the terms "PA" and "AFDC and Adult Assistance programs" are used interchangeably.

Categorical Eligibility

A number of commenters asked that PA recipients be categorically eligible, that is eligible to receive food stamps simply because of their eligibility for PA benefits. At the time of intent to propose rulemaking this could not be done by regulations. However, section 1507(a) of the Food Security Act amended section 5(a) of the Food Stamp Act to mandate categorical eligibility for households containing only recipients of AFDC, SSI, and Adult Assistance under titles, I, X, XIV and XVI of the Social Security Act within certain restrictions for "pure" PA/SSI households. This provision expires September 30, 1989 and USDA must evaluate the provision and report to Congress on the results of categorical eligibility.

The revisions needed to implement categorical eligibility and a discussion of issues are contained in a separate interim rulemaking published August 5, 1986. The information on categorical eligibility is provided to assist readers of this docket with how categorical eligibility will affect the various issues discussed herein.

Clarification of Existing Policy

The following discusses issues raised by commenters on which some degree of consistency can now be reached without any regulatory amendments.

Verification

A number of comments were received on verification requirements, especially those for citizenship. These comments were nearly evenly divided as to whether AFDC or food stamp's methods should be adopted. Food Stamp regulations set minimum requirements on what factors must be verified, and specify minimums on the types of acceptable documentation. The AFDC and Adult Assistance programs' regulations require substantiation of eligibility but do not set specific verification requirements for the eligibility worker. Consistency can be achieved within current regulatory provisions since State PA agencies are free to establish their own requirements. As States are ultimately held responsible for the accuracy of their determinations through quality control reviews, it is important for States to verify any information which affects eligibility or payments as thoroughly as possible. Since the Food Stamp Program's verification requirements are the more specific, State agencies may wish to consider applying those specific requirements to the AFDC and Adult Assistance programs. This proposed rule solicits comments regarding any limitations on the ability of States to verify the same information for all the programs involved.

Terminology

A number of commenters asked that the AFDC and Food Stamp programs come into closer conformity on the terminology used. A number of the terms involved were reviewed. We found that many terms have a specific meaning for each program. For example, "household" for the Food Stamp Program is defined, in short, as persons who eat together. "Assistance unit", for the AFDC Program, is defined, in short, as persons included in the AFDC payment. Additionally, the persons who eat together may include persons who are not eligible for AFDC, e.g., unrelated persons. One food stamp household may contain a number of AFDC assistance units because food stamps is interested in who purchases and prepares food together. So, in actuality, these terms are not comparable even though, on the surface, they appear to be. We are making the terminology in the area of notices to households after certification more consistent. The Food Stamp Program proposes to define notice as "timely and adequate" or simply "adequate" as does the AFDC Program. It should be noted that this change is one in terminology and that current time frames remain the same. We encourage commenters to provide specific examples when recommending changes for consistency in terminology. We would also like to point out that States could now use consistent terminology in developing their internal handbooks and instructions.

Rounding

Several commenters proposed that the AFDC and Food Stamp Programs use the same methods for rounding. Under current statutes and regulations at 7 CFR 273.10(e)(2)(ii)(A)(2) and 45 CFR 233.20(a)(2)(iv), State agencies are required to round down the AFDC payment amounts and the Food Stamp allotment amounts. In addition, for the AFDC Program, both the statute and regulations require rounding down of the standard of need. In all other levels of computation, i.e., income, payment

standard deductions. States may round in either direction when determining need and the AFDC payment. Also, the Food Stamp Program regulations at 7 CFR 273.10(e)(1)(ii) permit States to apply the same rounding precedures used by the AFDC Program. States may round in either direction when determining need and the amount of an Adult Assistance payment. Therefore, there are no inconsistencies which would necessitate a change in regulations.

Verification for Denials of Food Stamp Applications

A comment was raised that the Food Stamp Program should not require verification of household circumstances when an application is denied. There is apparently some confusion since the programs do not require verification under these circumstances. For example, if a household reports information which clearly makes it ineligible (such as a savings account with $10,000 in it), verification is not required unless the household wishes to provide it or if the reported information is somehow questionable. For quality control purposes, the household's statement would be considered adequate. No regulatory changes are needed for conformance. This procedure is of valuable assistance to State agencies as it saves eligibility workers time and frees them to devote time to more difficult cases.

Continuation of Food Stamp Benefits When AFDC Benefits Are Terminated

Several commenters asked that a household's food stamp benefits be terminated when its PA benefits are terminated. Pursuant to section 11(i) of the Food Stamp Act, as revised by Pub. L. 99–198, and 7 CFR 273.12(f) when a household's PA benefits are terminated, food stamp benefits can be denied only if the household is not eligible for food stamps. For example, food stamp benefits would be continued if the factor causing termination of the PA benefits did not affect eligibility for food stamps. However, if the factor (such as an increase in countable income) also affected the household's food stamp benefits, action is taken as appropriate to adjust the household's food stamp benefits. A single notice of adverse action is sent if there is sufficient information to make the food stamp change. If there is insufficient information, the household is provided a notice of expiration so that the household's situation can be explored in more detail. By this method, both the State agency and the household have some flexibility in handling the change. No revisions are being made on handling changes on jointly processed cases in this proposed rule.

Additional Conditions of Eligibility for AFDC and Adult Assistance

Commenters raised a number of issues about areas of eligibility conditions which must be met in the Food Stamp Program but not in the AFDC Program. Within certain limitations, specified at 45 CFR 233.10(a)(1)(ii)(B), States may now adopt parallel requirements in the AFDC and Adult Assistance programs. This regulation, to promote efficient administration and independent State welfare policies, permits the States to impose additional conditions of eligibility as long as the conditions are consistent with Title IV–A of the Social Security Act and are in keeping with its statutory goals. For example, a State could require cooperation with a Quality Control reviewer as a condition of AFDC eligibility, or it could specify periods of ineligibility for those individuals or assistance groups who transfer assets to be eligible for assistance.

Work Registration Procedures for AFDC

One commenter suggested that the AFDC Program conform to the Food Stamp Program which requires that work registration be performed by the State agency. Although it is a statutory requirement that registration for the regular Work Incentive Program (WIN) must be with the State employment services agency (SESA), under a memorandum of agreement the State welfare agency could perform the registration function for SESA. In States which have chosen to operate a WIN Demonstration Program, work registration is the responsibility of the IV–A State agency.

Treatment of the Earned Income Credit for AFDC

Another commenter suggested that the AFDC Program follow the Food Stamp Program's practice of treating the Earned Income Credit as income only when it is received. The Deficit Reduction Act of 1984 (DEFRA) has made this a statutory requirement, and a revised regulation has already been published at 45 CFR 233.20(a)(6)(ix).

Bilingual Requirements for AFDC and Adult Assistance

Several commenters suggested that the AFDC program amend its rules to require certain State agencies, serving a substantial number of non-English-speaking households, to have bilingual personnel and printed material. Another commenter proposed that the Food Stamp Program's multilingual requirement for notices by replaced with a multilingual label for the notice telling households to have the notice translated.
